Contracting Parties shall establish, starting in 2018 and for each subsequent year, an inventory of SO$_2$, NO$_x$ and dust emissions from all combustion plants with a rated thermal input of 50 MW or more. The competent authority shall obtain for each plant operated under the control of one operator at a given location the following data:

- the total annual emissions of SO$_2$, NO$_x$ and dust (as total suspended particles);
- the total annual amount of energy input, related to the net calorific value, broken down in terms of the five categories of fuel: biomass, other solid fuels, liquid fuels, natural gas, other gases.

A summary of the results of this inventory that shows the emissions from refineries separately shall be communicated to the Secretariat every three years within twelve months from the end of the three-year period considered. The yearly plant-by-plant data shall be made available to the Secretariat upon request. The Secretariat shall make available to the Contracting Parties a summary of the comparison and evaluation of the national inventories within twelve months of receipt of the national inventories.

Contracting Parties implementing a national emission reduction plan in accordance with Article 4(6) shall report annually to the Secretariat the plant-by-plant fuel use and emission data for
all plants covered by the plan. With the aim of demonstrating progress in implementation, this report shall also include emission projections for scenarios taking into account ongoing investments for which financing is secured and a well-defined implementation timeline is drawn up.\textsuperscript{7}

C. Determination of the total annual emissions of existing plants until and including 2003.

1. **Contracting Parties** shall establish, starting in 1990 and for each subsequent year until and including 2003, a complete emission inventory for existing plants covering SO\textsubscript{2} and NO\textsubscript{x}:
   - on a plant by plant basis for plants above 300 MWth and for refineries;
   - on an overall basis for other combustion plants to which this Directive applies.

2. The methodology used for these inventories shall be consistent with that used to determine SO\textsubscript{2} and NO\textsubscript{x} emissions from combustion plants in 1980.

3. The results of this inventory shall be communicated to the **Secretariat** in a conveniently aggregated form within nine months from the end of the year considered. The methodology used for establishing such emission inventories and the detailed base information shall be made available to the **Secretariat** at its request.

4. The **Secretariat** shall organise a systematic comparison of such national inventories and, if appropriate, shall submit proposals to the Council aiming at harmonising emission inventory methodologies, for the needs of an effective implementation of this Directive.

\textsuperscript{7} The text displayed here corresponds to Article 6 of Decision 2013/05/MC-EnC.
DIRECTIVE 2010/75/EU of 24 November 2010 on industrial emissions (integrated pollution prevention and control)\textsuperscript{1,2}

The adaptations made by Ministerial Council Decision 2013/06/MC-EnC are highlighted in \textbf{bold and blue}.

\textbf{CHAPTER III}

\textbf{SPECIAL PROVISIONS FOR COMBUSTION PLANTS}

\textbf{Article 28}

\textit{Scope}

This Chapter shall apply to combustion plants, the total rated thermal input of which is equal to or greater than 50 MW, irrespective of the type of fuel used.

This Chapter shall not apply to the following combustion plants:

\begin{itemize}
    \item (a) plants in which the products of combustion are used for the direct heating, drying, or any other treatment of objects or materials;
    \item (b) post-combustion plants designed to purify the waste gases by combustion which are not operated as independent combustion plants;
    \item (c) facilities for the regeneration of catalytic cracking catalysts;
    \item (d) facilities for the conversion of hydrogen sulphide into sulphur;
    \item (e) reactors used in the chemical industry;
    \item (f) coke battery furnaces;
    \item (g) cowpers;
    \item (h) any technical apparatus used in the propulsion of a vehicle, ship or aircraft;
    \item (i) gas turbines and gas engines used on offshore platforms;
    \item (j) plants which use any solid or liquid waste as a fuel other than waste referred to in point (b) of point 31 of Article 3.
\end{itemize}

\textsuperscript{1} Since Ministerial Council Decision 2013/06/MC-EnC incorporated only Chapter III, Annex V, and Article 72(3)-(4) of Directive 2010/75/EU into the Energy Community acquis communautaire, only the text of those provisions are displayed here.

\textsuperscript{2} Recommendation 2018/03/MC-EnC to prepare the implementation of Chapter II, Chapter IV and Annex VI of Directive 2010/75/EU has incorporated other parts of this Directive into the Energy Community acquis communautaire, albeit in an on-legally binding manner.
**Article 29**

**Aggregation rules**

1. Where the waste gases of two or more separate combustion plants are discharged through a common stack, the combination formed by such plants shall be considered as a single combustion plant and their capacities added for the purpose of calculating the total rated thermal input.

2. Where two or more separate combustion plants which have been granted a permit for the first time on or after 1 July 1987, or the operators of which have submitted a complete application for a permit on or after that date, are installed in such a way that, taking technical and economic factors into account, their waste gases could in the judgement of the competent authority, be discharged through a common stack, the combination formed by such plants shall be considered as a single combustion plant and their capacities added for the purpose of calculating the total rated thermal input.

3. For the purpose of calculating the total rated thermal input of a combination of combustion plants referred to in paragraphs 1 and 2, individual combustion plants with a rated thermal input below 15 MW shall not be considered.

**Article 30**

**Emission limit values**

1. Waste gases from combustion plants shall be discharged in a controlled way by means of a stack, containing one or more flues, the height of which is calculated in such a way as to safeguard human health and the environment.

2. All permits for installations containing combustion plants which have been granted a permit before 1 January 2018\(^3\), or the operators of which have submitted a complete application for a permit before that date, provided that such plants are put into operation no later than 1 January 2019, shall include conditions ensuring that emissions into air from these plants do not exceed the emission limit values set out in Part 1 of Annex V.

All permits for installations containing combustion plants which had been granted an exemption as referred to in Article 4(4) of Directive 2001/80/EC and which are in operation after 1 January 2024\(^4\), shall include conditions ensuring that emissions into the air from these plants do not exceed the emission limit values set out in Part 2 of Annex V.

3. All permits for installations containing combustion plants not covered by paragraph 2 shall include conditions ensuring that emissions into the air from these plants do not exceed the emission limit values set out in Part 2 of Annex V.

4. The emission limit values set out in Parts 1 and 2 of Annex V as well as the minimum rates of desulphurisation set out in Part 5 of that Annex shall apply to the emissions of each common stack in relation to the total rated thermal input of the entire combustion plant. Where Annex V provides that emission limit values may be applied for a part of a combustion plant with a limited number of operating hours, those limit values shall apply to the emissions of that part of the plant, but shall be set in relation to the total

---

\(^3\) The text displayed here corresponds to Point 5 of Annex II of the Treaty.

\(^4\) Article 4(4) of Directive 2001/80/EC as amended by Article 4 of Decision 2013/05/MC-EnC.
rated thermal input of the entire combustion plant.

5. The competent authority may grant a derogation for a maximum of 6 months from the obligation to comply with the emission limit values provided for in paragraphs 2 and 3 for sulphur dioxide in respect of a combustion plant which to this end normally uses low-sulphur fuel, in cases where the operator is unable to comply with those limit values because of an interruption in the supply of low-sulphur fuel resulting from a serious shortage.

Member States shall immediately inform the Commission of any derogation granted under the first subparagraph.

6. The competent authority may grant a derogation from the obligation to comply with the emission limit values provided for in paragraphs 2 and 3 in cases where a combustion plant using only gaseous fuel has to resort exceptionally to the use of other fuels because of a sudden interruption in the supply of gas and for this reason would need to be equipped with a waste gas purification facility. The period for which such a derogation is granted shall not exceed 10 days except where there is an overriding need to maintain energy supplies.

The operator shall immediately inform the competent authority of each specific case referred to in the first subparagraph.

Member States shall inform the Commission immediately of any derogation granted under the first subparagraph.

7. Where a combustion plant is extended, the emission limit values set out in Part 2 of Annex V shall apply to the extended part of the plant affected by the change and shall be set in relation to the total rated thermal input of the entire combustion plant. In the case of a change to a combustion plant, which may have consequences for the environment and which affects a part of the plant with a rated thermal input of 50 MW or more, the emission limit values as set out in Part 2 of Annex V shall apply to the part of the plant which has changed in relation to the total rated thermal input of the entire combustion plant.

8. The emission limit values set out in Parts 1 and 2 of Annex V shall not apply to the following combustion plants:
   (a) diesel engines;
   (b) recovery boilers within installations for the production of pulp.

9. For the following combustion plants, on the basis of the best available techniques, the Commission shall review the need to establish Union-wide emission limit values and to amend the emission limit values set out in Annex V:
   (a) the combustion plants referred to in paragraph 8;
   (b) combustion plants within refineries firing the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, taking into account the specificity of the energy systems of refineries;
   (c) combustion plants firing gases other than natural gas;
   (d) combustion plants in chemical installations using liquid production residues as non-commercial fuel for own consumption.

The Commission shall, by 31 December 2013, report the results of this review to the European Parliament and to the Council accompanied, if appropriate, by a legislative proposal.

5 Decision 2013/06/MC-EnC incorporating this Directive is addressed to the Contracting Parties.
**Article 31**

Desulphurisation rate

1. For combustion plants firing indigenous solid fuel, which cannot comply with the emission limit values for sulphur dioxide referred to in Article 30(2) and (3) due to the characteristics of this fuel, Member States may apply instead the minimum rates of desulphurisation set out in Part 5 of Annex V, in accordance with the compliance rules set out in Part 6 of that Annex and with prior validation by the competent authority of the technical report referred to in Article 72(4)(a).

2. For combustion plants firing indigenous solid fuel, which co-incinerate waste, and which cannot comply with the \( C_{\text{proc}} \) values for sulphur dioxide set out in points 3.1 or 3.2 of Part 4 of Annex VI due to the characteristics of the indigenous solid fuel, Member States may apply instead the minimum rates of desulphurisation set out in Part 5 of Annex V, in accordance with the compliance rules set out in Part 6 of that Annex. If Member States choose to apply this paragraph, \( C_{\text{waste}} \) as referred to in point 1 of Part 4 of Annex VI shall be equal to 0 mg/Nm\(^3\).

3. The Commission shall, by 31 December 2019, review the possibility of applying minimum rates of desulphurisation set out in Part 5 of Annex V, taking into account, in particular, the best available techniques and benefits obtained from reduced sulphur dioxide emissions.

**Article 32**

Transitional National Plan

<...>\(^6\)

**Article 33**

Limited life time derogation

<...>\(^7\)

**Article 34**

Small isolated systems

1. Until 31 December 2019, combustion plants being, on 6 January 2011, part of a small isolated system may be exempted from compliance with the emission limit values referred to in Article 30(2) and the rates of desulphurisation referred to in Article 31, where applicable. Until 31 December 2019, the emission limit values set out in the permits of these combustion plants, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, shall at least be maintained.

---

\(^6\) Article 4(6) of Directive 2001/80/EC as amended by Decision 2013/05/MC-EnC applies.

\(^7\) Article 4(4) of Directive 2001/80/EC as amended by Decision 2013/05/MC-EnC applies.
PART II
ACQUIS COMMUNAUTAIRE / ENVIRONMENT / Directive 2010/75/EC

2. Combustion plants with a total rated thermal input of more than 500 MW firing solid fuels, which were granted the first permit after 1 July 1987, shall comply with the emission limit values for nitrogen oxides set out in Part 1 of Annex V.

3. Where there are, on the territory of a Member State combustion plants covered by this Chapter that are part of a small isolated system, that Member State shall report to the Commission before 7 January 2013 a list of those combustion plants, the total annual energy consumption of the small isolated system and the amount of energy obtained through interconnection with other systems.

**Article 35**

**District heating plants**

1. Until 31 December 2022, a combustion plant may be exempted from compliance with the emission limit values referred to in Article 30(2) and the rates of desulphurisation referred to in Article 31 provided that the following conditions are fulfilled:
   
   (a) the total rated thermal input of the combustion plant does not exceed 200 MW;
   
   (b) the plant was granted a first permit before 27 November 2002 or the operator of that plant had submitted a complete application for a permit before that date, provided that it was put into operation no later than 27 November 2003;
   
   (c) at least 50% of the useful heat production of the plant, as a rolling average over a period of 5 years, is delivered in the form of steam or hot water to a public network for district heating; and
   
   (d) the emission limit values for sulphur dioxide, nitrogen oxides and dust set out in its permit applicable on 31 December 2015, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, are at least maintained until 31 December 2022.

2. At the latest on 1 January 2016, each Member State shall communicate to the Commission a list of any combustion plants to which paragraph 1 applies, including their total rated thermal input, the fuel types used and the applicable emission limit values for sulphur dioxide, nitrogen oxides and dust. In addition, Member States shall, for any combustion plants to which paragraph 1 applies and during the period mentioned in that paragraph, inform the Commission annually of the proportion of useful heat production of each plant which was delivered in the form of steam or hot water to a public network for district heating, expressed as a rolling average over the preceding 5 years.

**Article 36**

**Geological storage of carbon dioxide**

1. Member States shall ensure that operators of all combustion plants with a rated electrical output of 300 megawatts or more for which the original construction licence or, in the absence of such a procedure, the original operating licence is granted after the entry into force of Directive 2009/31/EC of the European Parliament and of the Council of 23 April 2009 on the geological storage of carbon dioxide, have assessed whether the following conditions are met:

   (a) suitable storage sites are available,
(b) transport facilities are technically and economically feasible,
(c) it is technically and economically feasible to retrofit for carbon dioxide capture.

2. If the conditions laid down in paragraph 1 are met, the competent authority shall ensure that suitable space on the installation site for the equipment necessary to capture and compress carbon dioxide is set aside. The competent authority shall determine whether the conditions are met on the basis of the assessment referred to in paragraph 1 and other available information, particularly concerning the protection of the environment and human health.

**Article 37**

**Malfunction or breakdown of the abatement equipment**

1. Member States shall ensure that provision is made in the permits for procedures relating to malfunction or breakdown of the abatement equipment.

2. In the case of a breakdown, the competent authority shall require the operator to reduce or close down operations if a return to normal operation is not achieved within 24 hours, or to operate the plant using low polluting fuels.

The operator shall notify the competent authority within 48 hours after the malfunction or breakdown of the abatement equipment.

The cumulative duration of unabated operation shall not exceed 120 hours in any 12-month period.

The competent authority may grant a derogation from the time limits set out in the first and third subparagraphs in one of the following cases:
(a) there is an overriding need to maintain energy supplies;
(b) the combustion plant with the breakdown would be replaced for a limited period by another plant which would cause an overall increase in emissions.

**Article 38**

**Monitoring of emissions into air**

1. Member States shall ensure that the monitoring of air polluting substances is carried out in accordance with Part 3 of Annex V.

2. The installation and functioning of the automated monitoring equipment shall be subject to control and to annual surveillance tests as set out in Part 3 of Annex V.

3. The competent authority shall determine the location of the sampling or measurement points to be used for the monitoring of emissions.

4. All monitoring results shall be recorded, processed and presented in such a way as to enable the competent authority to verify compliance with the operating conditions and emission limit values which are included in the permit.
Article 39
Compliance with emission limit values

The emission limit values for air shall be regarded as being complied with if the conditions set out in Part 4 of Annex V are fulfilled.

Article 40
Multi-fuel firing combustion plants

1. In the case of a multi-fuel firing combustion plant involving the simultaneous use of two or more fuels, the competent authority shall set the emission limit values in accordance with the following steps:
   (a) taking the emission limit value relevant for each individual fuel and pollutant corresponding to the total rated thermal input of the entire combustion plant as set out in Parts 1 and 2 of Annex V;
   (b) determining fuel-weighted emission limit values, which are obtained by multiplying the individual emission limit value referred to in point (a) by the thermal input delivered by each fuel, and dividing the product of multiplication by the sum of the thermal inputs delivered by all fuels,
   (c) aggregating the fuel-weighted emission limit values.
2. In the case of multi-fuel firing combustion plants covered by Article 30(2), which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, the following emission limit values may be applied instead of the emission limit values set according to paragraph 1:
   (a) where, during the operation of the combustion plant, the proportion contributed by the determinative fuel to the sum of the thermal inputs delivered by all fuels is 50% or more, the emission limit value set in Part 1 of Annex V for the determinative fuel;
   (b) where the proportion contributed by the determinative fuel to the sum of the thermal inputs delivered by all fuels is less than 50%, the emission limit value determined in accordance with the following steps:
      (i) taking the emission limit values set out in Part 1 of Annex V for each of the fuels used, corresponding to the total rated thermal input of the combustion plant;
      (ii) calculating the emission limit value of the determinative fuel by multiplying the emission limit value, determined for that fuel according to point (i), by a factor of two, and subtracting from this product the emission limit value of the fuel used with the lowest emission limit value as set out in Part 1 of Annex V, corresponding to the total rated thermal input of the combustion plant;
      (iii) determining the fuel-weighted emission limit value for each fuel used by multiplying the emission limit value determined under points (i) and (ii) by the thermal input of the fuel concerned and by dividing the product of this multiplication by the sum of the thermal inputs delivered by all fuels;
      (iv) aggregating the fuel-weighted emission limit values determined under point (iii).
3. In the case of multi-fuel firing combustion plants covered by Article 30(2), which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, the average emission limit values for sulphur dioxide set out in Part 7 of Annex V may be applied instead of
the emission limit values set according to paragraphs 1 or 2 of this Article.

**Article 41**

Implementing rules

Implementing rules shall be established concerning:
(a) the determination of the start-up and shut-down periods referred to in point 27 of Article 3 and in point 1 of Part 4 of Annex V; and
(b) the transitional national plans referred to in Article 32 and, in particular, the setting of emission ceilings and related monitoring and reporting.

Those implementing rules shall be adopted in accordance with the regulatory procedure referred to in Article 75(2). The Commission shall make appropriate proposals not later than 7 July 2011.

**Article 72**

Reporting by Member States

3. For all combustion plants covered by Chapter III of this Directive, Member States shall, from 1 January 2018 establish an annual inventory of the sulphur dioxide, nitrogen oxides and dust emissions and energy input.

Taking into account the aggregation rules set out in Article 29, the competent authority shall obtain the following data for each combustion plant:
(a) the total rated thermal input (MW) of the combustion plant;
(b) the type of combustion plant: boiler, gas turbine, gas engine, diesel engine, other (specifying the type);
(c) the date of the start of operation of the combustion plant;
(d) the total annual emissions (tonnes per year) of sulphur dioxide, nitrogen oxides and dust (as total suspended particles);
(e) the number of operating hours of the combustion plant;
(f) the total annual amount of energy input, related to the net calorific value (TJ per year), broken down in terms of the following categories of fuel: coal, lignite, biomass, peat, other solid fuels (specifying the type), liquid fuels, natural gas, other gases (specifying the type).

The annual plant-by-plant data contained in these inventories shall be made available to the Commission upon request.

A summary of the inventories shall be made available to the Commission every 3 years within 12 months from the end of the three-year period considered. This summary shall show separately the data for combustion plants within refineries.

The Commission shall make available to the Member States and to the public a summary of the comparison

---

9 The text displayed here corresponds to Article 2(1) of Decision 2013/06/MC-EnC.
and evaluation of those inventories in accordance with Directive 2003/4/EC within 24 months from the end of the three-year period considered.

4. Member States shall, from 1 January 2018\(^{10}\) report the following data annually to the Commission:
   (a) for combustion plants to which Article 31 applies, the sulphur content of the indigenous solid fuel used and the rate of desulphurisation achieved, averaged over each month. For the first year where Article 31 is applied, the technical justification of the non-feasibility of complying with the emission limit values referred to in Article 30(2) and (3) shall also be reported; and
   (b) for combustion plants which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, the number of operating hours per year.

   <...>

**Article 80**

Transposition\(^{10}\)

1. Each Contracting Party shall bring into force the laws, regulations and administrative provisions necessary to comply with Chapter III, Annex V and Article 72(3)-(4) of Directive 2010/75/EU by 1 January 2018\(^{11}\). They shall forthwith inform the Energy Community Secretariat thereof.

2. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by the present Decision.

**Article 83**

Entry into force\(^{12}\)

This Decision shall enter into force upon its adoption by the Ministerial Council.

**Article 84**

Addressees\(^{13}\)

This Decision is addressed to the Contracting Parties.

ANNEX V

TECHNICAL PROVISIONS RELATING TO COMBUSTION PLANTS

PART 1

Emission limit values for combustion plants referred to in Article 30(2)

1. All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O₂ content of 6% for solid fuels, 3% for combustion plants, other than gas turbines and gas engines using liquid and gaseous fuels and 15% for gas turbines and gas engines.

2. Emission limit values (mg/Nm³) for SO₂ for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines:

<table>
<thead>

Combustion plants, using solid fuels which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for SO₂ of 800 mg/Nm³.

Combustion plants using liquid fuels, which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for SO₂ of 850 mg/Nm³ in case of plants with a total rated thermal input not exceeding 300 MW and of 400 mg/Nm³ in case of plants with a total rated thermal input greater than 300 MW.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding two paragraphs in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

3. Emission limit values (mg/Nm³) for SO₂ for combustion plants using gaseous fuels with the exception of gas turbines and gas engines:

(1) The emission limit value is 450 mg/Nm$^3$ for the firing of distillation and conversion residues from the refining of crude-oil for own consumption in combustion plants with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

Combustion plants in chemical installations using liquid production residues as non-commercial fuel for own consumption with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, shall be subject to an emission limit value for NO$_x$ of 450 mg/Nm$^3$.

Combustion plants using liquid fuels with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO$_x$ of 450 mg/Nm$^3$.

Combustion plants using solid fuels with a total rated thermal input greater than 500 MW, which were granted a permit before 1 July 1987 and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO$_x$ of 450 mg/Nm$^3$.

Combustion plants using liquid fuels, with a total rated thermal input greater than 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO$_x$ of 400 mg/Nm$^3$.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding three paragraphs in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

5. Gas turbines (including combined cycle gas turbines (CCGT)) using light and middle distillates as liquid
fuels shall be subject to an emission limit value for NO of 90 mg/Nm³ and for CO of 100 mg/Nm³.

Gas turbines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

6. Emission limit values (mg/Nm³) for NO and CO for gas fired combustion plants

(1) Natural gas is naturally occurring methane with not more than 20% (by volume) of inerts and other constituents.

(2) 75 mg/Nm³ in the following cases, where the efficiency of the gas turbine is determined at ISO base load conditions:
   (i) gas turbines, used in combined heat and power systems having an overall efficiency greater than 75%;
   (ii) gas turbines used in combined cycle plants having an annual average overall electrical efficiency greater than 55%;
   (iii) gas turbines for mechanical drives.

(3) For single cycle gas turbines not falling into any of the categories mentioned under note (2), but having an efficiency greater than 35% – determined at ISO base load conditions – the emission limit value for NOx shall be 50/35x where x is the gas turbine efficiency at ISO base load conditions expressed as a percentage.

(4) 300 mg/Nm³ for such combustion plants with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

For gas turbines (including CCGT), the NOx and CO emission limit values set out in the table contained in this point apply only above 70% load.

For gas turbines (including CCGT) which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1500 operating hours per year as a rolling average over a period of 5 years, the emission limit value for NOx is 150 mg/Nm³ when firing natural gas and 200 mg/Nm³ when firing other gases or liquid fuels.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding paragraph in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

Gas turbines and gas engines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

PART 2

Emission limit values for combustion plants referred to in Article 30(3)

1. All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O₂ content of 6% for solid fuels, 3% for combustion plants other than gas turbines and gas engines using liquid and gaseous fuels and 15% for gas turbines and gas engines.

In case of combined cycle gas turbines with supplementary firing, the standardised O₂ content may be defined by the competent authority, taking into account the specific characteristics of the installation concerned.

2. Emission limit values (mg/Nm³) for SO₂ for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

**PART 3**

**Emission monitoring**

1. The concentrations of SO₂, NOₓ, and dust in waste gases from each combustion plant with a total rated thermal input of 100 MW or more shall be measured continuously.

The concentration of CO in waste gases from each combustion plant firing gaseous fuels with a total rated thermal input of 100 MW or more shall be measured continuously.

2. The competent authority may decide not to require the continuous measurements referred to in point 1 in the following cases:

   (a) for combustion plants with a life span of less than 10 000 operational hours;
   
   (b) for SO₂ and dust from combustion plants firing natural gas;
   
   (c) for SO₂ from combustion plants firing oil with known sulphur content in cases where there is no waste gas desulphurisation equipment;
   
   (d) for SO₂ from combustion plants firing biomass if the operator can prove that the SO₂ emissions can under no circumstances be higher than the prescribed emission limit values.

3. Where continuous measurements are not required, measurements of SO₂, NOₓ, dust and, for gas fired plants, also of CO shall be required at least once every 6 months.

4. For combustion plants firing coal or lignite, the emissions of total mercury shall be measured at least once per year.

5. As an alternative to the measurements of SO₂ and NOₓ referred to in point 3, other procedures, verified and approved by the competent authority, may be used to determine the SO₂ and NOₓ emissions. Such procedures shall use relevant CEN standards or, if CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality.

6. The competent authority shall be informed of significant changes in the type of fuel used or in the mode of operation of the plant. The competent authority shall decide whether the monitoring requirements laid down in points 1 to 4 are still adequate or require adaptation.

7. The continuous measurements carried out in accordance with point 1 shall include the measurement of the oxygen content, temperature, pressure and water vapour content of the waste gases. The continuous measurement of the water vapour content of the waste gases shall not be necessary, provided that the sampled waste gas is dried before the emissions are analysed.

8. Sampling and analysis of relevant polluting substances and measurements of process parameters as well as the quality assurance of automated measuring systems and the reference measurement methods to calibrate those systems shall be carried out in accordance with CEN standards. If CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality shall be used.
scientific quality shall apply.

The automated measuring systems shall be subject to control by means of parallel measurements with the reference methods at least once per year.

The operator shall inform the competent authority about the results of the checking of the automated measuring systems.

9. At the emission limit value level, the values of the 95% confidence intervals of a single measured result shall not exceed the following percentages of the emission limit values:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Carbon monoxide</td>
<td>10%</td>
</tr>
<tr>
<td>Sulphur dioxide</td>
<td>20%</td>
</tr>
<tr>
<td>Nitrogen oxides</td>
<td>20%</td>
</tr>
<tr>
<td>Dust</td>
<td>30%</td>
</tr>
</tbody>
</table>

10. The validated hourly and daily average values shall be determined from the measured valid hourly average values after having subtracted the value of the confidence interval specified in point 9.

Any day in which more than three hourly average values are invalid due to malfunction or maintenance of the automated measuring system shall be invalidated. If more than 10 days over a year are invalidated for such situations the competent authority shall require the operator to take adequate measures to improve the reliability of the automated measuring system.

11. In the case of plants which must comply with the rates of desulphurisation referred to in Article 31, the sulphur content of the fuel which is fired in the combustion plant shall also be regularly monitored. The competent authorities shall be informed of substantial changes in the type of fuel used.

**PART 4**

**Assessment of compliance with emission limit values**

1. In the case of continuous measurements, the emission limit values set out in Parts 1 and 2 shall be regarded as having been complied with if the evaluation of the measurement results indicates, for operating hours within a calendar year, that all of the following conditions have been met:
   (a) no validated monthly average value exceeds the relevant emission limit values set out in Parts 1 and 2;
   (b) no validated daily average value exceeds 110% of the relevant emission limit values set out in Parts 1 and 2;
   (c) in cases of combustion plants composed only of boilers using coal with a total rated thermal input below 50 MW, no validated daily average value exceeds 150% of the relevant emission limit values set out in Parts 1 and 2,
   (d) 95% of all the validated hourly average values over the year do not exceed 200% of the relevant emission limit values set out in Parts 1 and 2.

The validated average values are determined as set out in point 10 of Part 3.

For the purpose of the calculation of the average emission values, the values measured during the periods referred to in Article 30(5) and (6) and Article 37 as well as during the start-up and shutdown periods shall be disregarded.

2. Where continuous measurements are not required, the emission limit values set out in Parts 1 and 2 shall be regarded as having been complied with if the results of each of the series of measurements or of the
other procedures defined and determined according to the rules laid down by the competent authorities do not exceed the emission limit values.

PART 5
Minimum rate of desulphurisation

1. Minimum rate of desulphurisation for combustion plants referred to in Article 30(2)

<table>
<thead>
<tr>

<td>97%</td>
</tr>
</tbody>
</table>

PART 6
Compliance with rate of desulphurisation

The minimum rates of desulphurisation set out in Part 5 of this Annex shall apply as a monthly average limit value.

PART 7
Average emission limit values for multi-fuel firing combustion plants within a refinery

Average emission limit values (mg/Nm\(^3\)) for SO\(_2\) for multi-fuel firing combustion plants within a refinery, with the exception of gas turbines and gas engines, which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels:

(a) for combustion plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003: 1 000 mg/Nm\(^3\);

(b) for other combustion plants: 600 mg/Nm\(^3\).

These emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O\(_2\) content of 6% for solid fuels and 3% for liquid and gaseous fuels.
DIRECTIVE 79/409/EEC of 2 April 1979 on the conservation of wild birds

Article 1

1. This Directive relates to the conservation of all species of naturally occurring birds in the wild state in the European territory of the Member States to which the Treaty applies. It covers the protection, management and control of these species and lays down rules for their exploitation.
2. It shall apply to birds, their eggs, nests and habitats.
3. This Directive shall not apply to Greenland.

Article 2

Member States shall take the requisite measures to maintain the population of the species referred to in Article 1 at a level which corresponds in particular to ecological, scientific and cultural requirements, while taking account of economic and recreational requirements, or to adapt the population of these species to that level.

Article 3

1. In the light of the requirements referred to in Article 2, Member States shall take the requisite measures to preserve, maintain or re-establish a sufficient diversity and area of habitats for all the species of birds referred to in Article 1.
2. The preservation, maintenance and re-establishment of biotopes and habitats shall include primarily the following measures:
   (a) creation of protected areas;
   (b) upkeep and management in accordance with the ecological needs of habitats inside and outside the protected zones;
   (c) re-establishment of destroyed biotopes;
   (d) creation of biotopes.

Article 4

1. The species mentioned in Annex I shall be the subject of special conservation measures concerning their habitat in order to ensure their survival and reproduction in their area of distribution.
In this connection, account shall be taken of:
(a) species in danger of extinction;
(b) species vulnerable to specific changes in their habitat;
(c) species considered rare because of small populations or restricted local distribution;
(d) other species requiring particular attention for reasons of the specific nature of their habitat.
Trends and variations in population levels shall be taken into account as a background for evaluations. Member States shall classify in particular the most suitable territories in number and size as special protection areas for the conservation of these species, taking into account their protection requirements in the geographical sea and land area where this Directive applies.

2. Member States shall take similar measures for regularly occurring migratory species not listed in Annex I, bearing in mind their need for protection in the geographical sea and land area where this Directive applies, as regards their breeding, moulting and wintering areas and staging posts along their migration routes. To this end, Member States shall pay particular attention to the protection of wetlands and particularly to wetlands of international importance.

3. Member States shall send the Commission all relevant information so that it may take appropriate initiatives with a view to the coordination necessary to ensure that the areas provided for in paragraphs 1 and 2 above form a coherent whole which meets the protection requirements of these species in the geographical sea and land area where this Directive applies.

4. In respect of the protection areas referred to in paragraphs 1 and 2 above, Member States shall take appropriate steps to avoid pollution or deterioration of habitats or any disturbances affecting the birds, in so far as these would be significant having regard to the objectives of this Article. Outside these protection areas, Member States shall also strive to avoid pollution or deterioration of habitats.

**Article 5**

Without prejudice to Articles 7 and 9, Member States shall take the requisite measures to establish a general system of protection for all species of birds referred to in Article 1, prohibiting in particular:

(a) deliberate killing or capture by any method;
(b) deliberate destruction of, or damage to, their nests and eggs or removal of their nests;
(c) taking their eggs in the wild and keeping these eggs even if empty;
(d) deliberate disturbance of these birds particularly during the period of breeding and rearing, in so far as disturbance would be significant having regard to the objectives of this Directive;
(e) keeping birds of species the hunting and capture of which is prohibited.

**Article 6**

1. Without prejudice to the provisions of paragraphs 2 and 3, Member States shall prohibit, for all the bird species referred to in Article 1, the sale, transport for sale, keeping for sale and the offering for sale of live or dead birds and of any readily recognizable parts or derivatives of such birds.

2. The activities referred to in paragraph 1 shall not be prohibited in respect of the species referred to in Annex III/1, provided that the birds have been legally killed or captured or otherwise legally acquired.

3. Member States may, for the species listed in Annex III/2, allow within their territory the activities referred to in paragraph 1, making provision for certain restrictions, provided the birds have been legally killed or captured or otherwise legally acquired.

---

1 According to Article 16(iv) of the Treaty, the acquis communautaire on environment includes Article 4(2) of Directive 79/409/EEC.
Member States wishing to grant such authorization shall first of all consult the Commission with a view to examining jointly with the latter whether the marketing of specimens of such species would result or could reasonably be expected to result in the population levels, geographical distribution or reproductive rate of the species being endangered throughout the Community. Should this examination prove that the intended authorization will, in the view of the Commission, result in any one of the aforementioned species being thus endangered or in the possibility of their being thus endangered, the Commission shall forward a reasoned recommendation to the Member State concerned stating its opposition to the marketing of the species in question. Should the Commission consider that no such risk exists, it will inform the Member State concerned accordingly.

The Commission’s recommendation shall be published in the Official Journal of the European Communities. Member States granting authorization pursuant to this paragraph shall verify at regular intervals that the conditions governing the granting of such authorization continue to be fulfilled.

4. The Commission shall carry out studies on the biological status of the species listed in Annex III/3 and on the effects of marketing on such status.

It shall submit, at the latest four months before the time limit referred to in Article 18 (1) of this Directive, a report and its proposals to the Committee referred to in Article 16, with a view to a decision on the entry of such species in Annex III/2.

Pending this decision, the Member States may apply existing national rules to such species without prejudice to paragraph 3 hereof.

**Article 7**

1. Owing to their population level, geographical distribution and reproductive rate throughout the Community, the species listed in Annex II may be hunted under national legislation. Member States shall ensure that the hunting of these species does not jeopardize conservation efforts in their distribution area.

2. The species referred to in Annex II/1 may be hunted in the geographical sea and land area where this Directive applies.

3. The species referred to in Annex II/2 may be hunted only in the Member States in respect of which they are indicated.

4. Member States shall ensure that the practice of hunting, including falconry if practised, as carried on in accordance with the national measures in force, complies with the principles of wise use and ecologically balanced control of the species of birds concerned and that this practice is compatible as regards the population of these species, in particular migratory species, with the measures resulting from Article 2. They shall see in particular that the species to which hunting laws apply are not hunted during the rearing season nor during the various stages of reproduction. In the case of migratory species, they shall see in particular that the species to which hunting regulations apply are not hunted during their period of reproduction or during their return to their rearing grounds. Member States shall send the Commission all relevant information on the practical application of their hunting regulations.
**Article 8**

1. In respect of the hunting, capture or killing of birds under this Directive, Member States shall prohibit the use of all means, arrangements or methods used for the large-scale or non-selective capture or killing of birds or capable of causing the local disappearance of a species, in particular the use of those listed in Annex IV (a).

2. Moreover, Member States shall prohibit any hunting from the modes of transport and under the conditions mentioned in Annex IV (b).

**Article 9**

1. Member States may derogate from the provisions of Articles 5, 6, 7 and 8, where there is no other satisfactory solution, for the following reasons:
   (a) - in the interests of public health and safety,
   - in the interests of air safety,
   - to prevent serious damage to crops, livestock, forests, fisheries and water,
   - for the protection of flora and fauna;
   (b) for the purposes of research and teaching, of re-population, of re-introduction and for the breeding necessary for these purposes;
   (c) to permit, under strictly supervised conditions and on a selective basis, the capture, keeping or other judicious use of certain birds in small numbers.

2. The derogations must specify:
   - the species which are subject to the derogations,
   - the means, arrangements or methods authorized for capture or killing,
   - the conditions of risk and the circumstances of time and place under which such derogations may be granted,
   - the authority empowered to declare that the required conditions obtain and to decide what means, arrangements or methods may be used, within what limits and by whom,
   - the controls which will be carried out.

3. Each year the Member States shall send a report to the Commission on the implementation of this Article.

4. On the basis of the information available to it, and in particular the information communicated to it pursuant to paragraph 3, the Commission shall at all times ensure that the consequences of these derogations are not incompatible with this Directive. It shall take appropriate steps to this end.

**Article 10**

1. Member States shall encourage research and any work required as a basis for the protection, management and use of the population of all species of bird referred to in Article 1.
2. Particular attention shall be paid to research and work on the subjects listed in Annex V. Member States shall send the Commission any information required to enable it to take appropriate measures for the coordination of the research and work referred to in this Article.

**Article 11**

Member States shall see that any introduction of species of bird which do not occur naturally in the wild state in the European territory of the Member States does not prejudice the local flora and fauna. In this connection they shall consult the Commission.

**Article 12**

1. Member States shall forward to the Commission every three years, starting from the date of expiry of the time limit referred to in Article 18(1), a report on the implementation of national provisions taken thereunder.
2. The Commission shall prepare every three years a composite report based on the information referred to in paragraph 1. That part of the draft report covering the information supplied by a Member State shall be forwarded to the authorities of the Member State in question for verification. The final version of the report shall be forwarded to the Member States.

**Article 13**

Application of the measures taken pursuant to this Directive may not lead to deterioration in the present situation as regards the conservation of species of birds referred to in Article 1.

**Article 14**

Member States may introduce stricter protective measures than those provided for under this Directive.

**Article 15**

Such amendments as are necessary for adapting Annexes I and V to this Directive to technical and scientific progress and the amendments referred to in the second paragraph of Article 6(4) shall be adopted in accordance with the procedure laid down in Article 17.

**Article 16**

1. For the purposes of the amendments referred to in Article 15 of this Directive, a Committee for the Adaptation to Technical and Scientific Progress (hereinafter called “the Committee”), consisting of rep-
representatives of the Member States and chaired by a representative of the Commission, is hereby set up.

2. The Committee shall draw up its rules of procedure.

Article 17

1. Where the procedure laid down in this Article is to be followed, matters shall be referred to the Committee by its chairman, either on his own initiative or at the request of the representative of a Member State.

2. The Commission representative shall submit to the Committee a draft of the measures to be taken. The Committee shall deliver its opinion on the draft within a time limit set by the chairman having regard to the urgency of the matter. It shall act by a majority of 41 votes, the votes of the Member States being weighted as provided in Article 148(2) of the Treaty. The chairman shall not vote.

3. (a) The Commission shall adopt the measures envisaged where they are in accordance with the opinion of the Committee.

(b) Where the measures envisaged are not in accordance with the opinion of the Committee, or if no opinion is delivered, the Commission shall without delay submit a proposal to the Council concerning the measures to be adopted. The Council shall act by a qualified majority.

(c) If, within three months of the proposal being submitted to it, the Council has not acted, the proposed measures shall be adopted by the Commission.

Article 182

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive within two years of its notification. They shall forthwith inform the Commission thereof.

2. Member States shall communicate to the Commission the texts of the main provisions of national law which they adopt in the field governed by this Directive.

Article 19

This Directive is addressed to the Member States.

---

2 Contracting Parties were obliged to bring into force the laws, regulations and administrative provisions necessary to comply with that Directive until 1 July 2006 (in accordance with their Accession Protocols, 30 December 2010 for Moldova, 1 January 2015 for Ukraine and 1 September 2019 for Georgia).
ANNEX I

1. Gavia immer | Great northern diver
2. Calonectris diomedea | Cory’s shearwater
3. Hydrobates pelagicus | Storm petrel
4. Oceanodroma leucorhoa | Leach’s petrel
5. Phalacrocorax carbo sinensis | Cormorant (continental race)
6. Botaurus stellaris | Bittern
7. Nycticorax nycticorax | Night heron
8. Ardeola ralloides | Squacco heron
9. Egretta garzetta | Little egret
10. Egretta alba | Great white heron
11. Ardea purpurea | Purple heron
12. Ciconia nigra | Black stork
13. Ciconia ciconia | White stork
14. Plegadis falcinellus | Glossy ibis
15. Platalea leucorodia | Spoonbill
16. Phoenicopterus ruber | Greater flamingo
17. Cygnus colombianus bewickii(Cygnus bewickii) | Bewick’s swan
18. Cygnus cygnus | Whooper swan
19. Anser albirostris flavirostris | White-fronted goose (Greenland race)
20. Branta leucopsis | Barnacle goose
21. Aythya nycroca | White-eyed pochard
22. Oxyura leucicephala | White-headed duck
23. Pernis apivorus | Honey buzzard
24. Milvus migrans | Black kite
25. Milvus milvus | Kite
26. Haliaaetus albicilla | White-tailed eagle
27. Gypaetus barbatus | Bearded vulture
28. Neophron percnopterus | Egyptian vulture
29. Gyps fulvus | Griffon vulture
30. Aegypius monachus | Black vulture
31. Circaetus gallicus | Short-toed eagle
32. Circus aeroginosus | Marsh harrier
33. Circus cyaneus | Hen harrier
34. Circus pygargus | Montagu’s harrier
35. Aquila chrysaetus | Golden eagle
36. Hieraaetus pennatus | Booted eagle
37. Hieraaetus fasciatus | Bonelli’s eagle
38. Pandion haliaetus | Osprey
39. Falco eleonorae | Eleonora’s falcon
40. Falco biarmicus | Lanner falcon
41. Falco peregrinus | Peregrine
42. Porphyrio porphyrio | Purple gallinule
43. Grus grus | Crane
44. Tetras tetrax (Otis tetrax) | Little bustard
45. Otis tarda | Great bustard
46. Himantopus himantopus | Black-winged stilt
47. Recurvirostra avosetta | Avocet
48. Burhinus oedicnemus | Stone curlew
49. Glareola pratincola | Pratincole
50. Charadrius morinellus (Endromias morinellus) | Dotterel
51. Pluvialis apricaria | Golden plover
52. Gallinago media | Great snipe
53. Tringa glareola | Wood-sandpiper
54. Phalaropus lobatus | Red-necked phalarope
55. Larus genei | Slender-billed gull
56. Larus audouinii | Audouin’s gull
57. Gelochelidon nilotica | Gull-billed tern
58. Sterna sandvicensis | Sandwich tern
59. Sterna dougallii | Roseate tern
60. Sterna hirundo | Common tern
61. Sterna paradisaea | Arctic tern
62. Sterna albifrons | Little tern
63. Chelidonias niger | Black tern
64. Pterocles alchata | Pin-tailed sandgrouse
65. Bubo bubo | Eagle owl
66. Nyctea scandiaca | Snowy owl
67. Asio flammeus | Short-eared owl
68. Alcedo atthis | Kingfisher
69. Dryocopus martius | Black woodpecker
70. Dendrocopus leucotus | White-backed woodpecker
71. Luscinia svecica | Blue-throat
72. Sylvia undata | Dartford warbler
73. Sylvia nisoria | Barred warbler
74. Sitta whiteheadi | Corsican nuthatch
DIRECTIVE 2004/35/EC of 21 April 2004 on environmental liability with regard to the prevention and remedying of environmental damage

The adaptations made by Ministerial Council Decision 2016/12/MC-EnC are highlighted in bold and blue.

**Article 1**

Subject matter

The purpose of this Directive is to establish a framework of environmental liability based on the “polluter-pays” principle, to prevent and remedy environmental damage.

**Article 2**

Definitions

For the purpose of this Directive the following definitions shall apply:

1. “environmental damage” means:
   (a) damage to protected species and natural habitats, which is any damage that has significant adverse effects on reaching or maintaining the favourable conservation status of such habitats or species. The significance of such effects is to be assessed with reference to the baseline condition, taking account of the criteria set out in Annex I;
   Damage to protected species and natural habitats does not include previously identified adverse effects which result from an act by an operator which was expressly authorised by the relevant authorities in accordance with provisions implementing Article 6(3) and (4) or Article 16 of Directive 92/43/EEC or Article 9 of Directive 79/409/EEC or, in the case of habitats and species not covered by Community law, in accordance with equivalent provisions of national law on nature conservation.
   (b) water damage, which is any damage that significantly adversely affects the ecological, chemical and/or quantitative status and/or ecological potential, as defined in Directive 2000/60/EC, of the waters concerned, with the exception of adverse effects where Article 4(7) of that Directive applies;
   (c) land damage, which is any land contamination that creates a significant risk of human health being adversely affected as a result of the direct or indirect introduction, in, on or under land, of substances, preparations, organisms or micro-organisms;

2. “damage” means a measurable adverse change in a natural resource or measurable impairment of a natural resource service which may occur directly or indirectly;

3. “protected species and natural habitats” means:
   (a) the species mentioned in Article 4(2) of Directive 79/409/EEC or listed in Annex I thereto or listed in
Part II

Annexes II and IV to Directive 92/43/EEC;

(b) the habitats of species mentioned in Article 4(2) of Directive 79/409/EEC or listed in Annex I thereto or listed in Annex II to Directive 92/43/EEC, and the natural habitats listed in Annex I to Directive 92/43/EEC and the breeding sites or resting places of the species listed in Annex IV to Directive 92/43/EEC; and

(c) where a Contracting Party so determines, any habitat or species, not listed in those Annexes which the Contracting Party designates for equivalent purposes as those laid down in these two Directives;

4. “conservation status” means:

(a) in respect of a natural habitat, the sum of the influences acting on a natural habitat and its typical species that may affect its long-term natural distribution, structure and functions as well as the long-term survival of its typical species within, as the case may be, the European territory of the Contracting Parties to which the Treaty applies or the territory of a Contracting Party or the natural range of that habitat;

The conservation status of a natural habitat will be taken as “favourable” when:

- its natural range and areas it covers within that range are stable or increasing,

- the specific structure and functions which are necessary for its long-term maintenance exist and are likely to continue to exist for the foreseeable future, and

- the conservation status of its typical species is favourable, as defined in (b);

(b) in respect of a species, the sum of the influences acting on the species concerned that may affect the long-term distribution and abundance of its populations within, as the case may be, the European territory of the Contracting Parties to which the Treaty applies or the territory of a Contracting Party or the natural range of that species;

The conservation status of a species will be taken as “favourable” when:

- population dynamics data on the species concerned indicate that it is maintaining itself on a long-term basis as a viable component of its natural habitats,

- the natural range of the species is neither being reduced nor is likely to be reduced for the foreseeable future, and

- there is, and will probably continue to be, a sufficiently large habitat to maintain its populations on a long-term basis;

5. “waters” mean all waters covered by Directive 2000/60/EC;

6. “operator” means any natural or legal, private or public person who operates or controls the occupational activity or, where this is provided for in national legislation, to whom decisive economic power over the technical functioning of such an activity has been delegated, including the holder of a permit or authorisation for such an activity or the person registering or notifying such an activity;

7. “occupational activity” means any activity carried out in the course of an economic activity, a business or an undertaking, irrespectively of its private or public, profit or non-profit character;

8. “emission” means the release in the environment, as a result of human activities, of substances, preparations, organisms or micro-organisms;

9. “imminent threat of damage” means a sufficient likelihood that environmental damage will occur in the near future;

10. “preventive measures” means any measures taken in response to an event, act or omission that has
created an imminent threat of environmental damage, with a view to preventing or minimising that damage;
11. “remedial measures” means any action, or combination of actions, including mitigating or interim measures to restore, rehabilitate or replace damaged natural resources and/or impaired services, or to provide an equivalent alternative to those resources or services as foreseen in Annex II;
12. “natural resource” means protected species and natural habitats, water and land;
13. “services” and “natural resources services” mean the functions performed by a natural resource for the benefit of another natural resource or the public;
14. “baseline condition” means the condition at the time of the damage of the natural resources and services that would have existed had the environmental damage not occurred, estimated on the basis of the best information available;
15. “recovery”, including “natural recovery”, means, in the case of water, protected species and natural habitats the return of damaged natural resources and/or impaired services to baseline condition and in the case of land damage, the elimination of any significant risk of adversely affecting human health;
16. “costs” means costs which are justified by the need to ensure the proper and effective implementation of this Directive including the costs of assessing environmental damage, an imminent threat of such damage, alternatives for action as well as the administrative, legal, and enforcement costs, the costs of data collection and other general costs, monitoring and supervision costs.

**Article 3**

**Scope**

1. This Directive shall apply to:
   (a) environmental damage caused by any of the occupational activities listed in Annex III in the field of Network Energy, and to any imminent threat of such damage occurring by reason of any of those activities;
   (b) damage to protected species and natural habitats caused by any occupational activities other than those listed in Annex III, and to any imminent threat of such damage occurring by reason of any of those activities, whenever the operator has been at fault or negligent.
2. This Directive shall apply without prejudice to more stringent Community legislation regulating the operation of any of the activities falling within the scope of this Directive and without prejudice to Community legislation containing rules on conflicts of jurisdiction.
3. Without prejudice to relevant national legislation, this Directive shall not give private parties a right of compensation as a consequence of environmental damage or of an imminent threat of such damage.
Article 4

Exceptions

1. This Directive shall not cover environmental damage or an imminent threat of such damage caused by:
   (a) an act of armed conflict, hostilities, civil war or insurrection;
   (b) a natural phenomenon of exceptional, inevitable and irresistible character.

2. This Directive shall not apply to environmental damage or to any imminent threat of such damage arising from an incident in respect of which liability or compensation falls within the scope of any of the International Conventions listed in Annex IV, including any future amendments thereof, which is in force in the Contracting Party concerned.

3. This Directive shall be without prejudice to the right of the operator to limit his liability in accordance with national legislation implementing the Convention on Limitation of Liability for Maritime Claims (LLMC), 1976, including any future amendment to the Convention, or the Strasbourg Convention on Limitation of Liability in Inland Navigation (CLNI), 1988, including any future amendment to the Convention.

4. This Directive shall not apply to such nuclear risks or environmental damage or imminent threat of such damage as may be caused by the activities covered by the Treaty establishing the European Atomic Energy Community or caused by an incident or activity in respect of which liability or compensation falls within the scope of any of the international instruments listed in Annex V, including any future amendments thereof.

5. This Directive shall only apply to environmental damage or to an imminent threat of such damage caused by pollution of a diffuse character, where it is possible to establish a causal link between the damage and the activities of individual operators.

6. This Directive shall not apply to activities the main purpose of which is to serve national defence or international security nor to activities the sole purpose of which is to protect from natural disasters.

Article 5

Preventive action

1. Where environmental damage has not yet occurred but there is an imminent threat of such damage occurring, the operator shall, without delay, take the necessary preventive measures.

2. Contracting Parties shall provide that, where appropriate, and in any case whenever an imminent threat of environmental damage is not dispelled despite the preventive measures taken by the operator, operators are to inform the competent authority of all relevant aspects of the situation, as soon as possible.

3. The competent authority may, at any time:
   (a) require the operator to provide information on any imminent threat of environmental damage or in suspected cases of such an imminent threat;
   (b) require the operator to take the necessary preventive measures;
   (c) give instructions to the operator to be followed on the necessary preventive measures to be taken; or
   (d) itself take the necessary preventive measures.
4. The competent authority shall require that the preventive measures are taken by the operator. If the operator fails to comply with the obligations laid down in paragraph 1 or 3(b) or (c), cannot be identified or is not required to bear the costs under this Directive, the competent authority may take these measures itself.

**Article 6**

**Remedial action**

1. Where environmental damage has occurred the operator shall, without delay, inform the competent authority of all relevant aspects of the situation and take:

(a) all practicable steps to immediately control, contain, remove or otherwise manage the relevant contaminants and/or any other damage factors in order to limit or to prevent further environmental damage and adverse effects on human health or further impairment of services and

(b) the necessary remedial measures, in accordance with Article 7.

2. The competent authority may, at any time:

(a) require the operator to provide supplementary information on any damage that has occurred;

(b) take, require the operator to take or give instructions to the operator concerning, all practicable steps to immediately control, contain, remove or otherwise manage the relevant contaminants and/or any other damage factors in order to limit or to prevent further environmental damage and adverse effect on human health, or further impairment of services;

(c) require the operator to take the necessary remedial measures;

(d) give instructions to the operator to be followed on the necessary remedial measures to be taken; or

(e) itself take the necessary remedial measures.

3. The competent authority shall require that the remedial measures are taken by the operator. If the operator fails to comply with the obligations laid down in paragraph 1 or 2(b), (c) or (d), cannot be identified or is not required to bear the costs under this Directive, the competent authority may take these measures itself, as a means of last resort.

**Article 7**

**Determination of remedial measures**

1. Operators shall identify, in accordance with Annex II, potential remedial measures and submit them to the competent authority for its approval, unless the competent authority has taken action under Article 6(2)(e) and (3).

2. The competent authority shall decide which remedial measures shall be implemented in accordance with Annex II, and with the cooperation of the relevant operator, as required.

3. Where several instances of environmental damage have occurred in such a manner that the competent authority cannot ensure that the necessary remedial measures are taken at the same time, the competent authority shall be entitled to decide which instance of environmental damage must be remedied first.
In making that decision, the competent authority shall have regard, \textit{inter alia}, to the nature, extent and gravity of the various instances of environmental damage concerned, and to the possibility of natural recovery. Risks to human health shall also be taken into account.

4. The competent authority shall invite the persons referred to in Article 12(1) and in any case the persons on whose land remedial measures would be carried out to submit their observations and shall take them into account.

\textbf{Article 8}

\textbf{Prevention and remediation costs}

1. The operator shall bear the costs for the preventive and remedial actions taken pursuant to this Directive.

2. Subject to paragraphs 3 and 4, the competent authority shall recover, \textit{inter alia}, via security over property or other appropriate guarantees from the operator who has caused the damage or the imminent threat of damage, the costs it has incurred in relation to the preventive or remedial actions taken under this Directive. However, the competent authority may decide not to recover the full costs where the expenditure required to do so would be greater than the recoverable sum or where the operator cannot be identified.

3. An operator shall not be required to bear the cost of preventive or remedial actions taken pursuant to this Directive when he can prove that the environmental damage or imminent threat of such damage:
   \begin{itemize}
   \item[(a)] was caused by a third party and occurred despite the fact that appropriate safety measures were in place; or
   \item[(b)] resulted from compliance with a compulsory order or instruction emanating from a public authority other than an order or instruction consequent upon an emission or incident caused by the operator’s own activities.
   \end{itemize}

In such cases \textbf{Contracting Parties} shall take the appropriate measures to enable the operator to recover the costs incurred.

4. The Contracting Parties may allow the operator not to bear the cost of remedial actions taken pursuant to this Directive where he demonstrates that he was not at fault or negligent and that the environmental damage was caused by:
   \begin{itemize}
   \item[(a)] an emission or event expressly authorised by, and fully in accordance with the conditions of, an authorisation conferred by or given under applicable national laws and regulations which implement those legislative measures adopted by the Community specified in Annex III, as applied at the date of the emission or event;
   \item[(b)] an emission or activity or any manner of using a product in the course of an activity which the operator demonstrates was not considered likely to cause environmental damage according to the state of scientific and technical knowledge at the time when the emission was released or the activity took place.
   \end{itemize}

5. Measures taken by the competent authority in pursuance of Article 5(3) and (4) and Article 6(2) and (3) shall be without prejudice to the liability of the relevant operator under this Directive and without prejudice to Articles 87 and 88 of the Treaty.
Article 9
Cost allocation in cases of multiple party causation

This Directive is without prejudice to any provisions of national regulations concerning cost allocation in cases of multiple party causation especially concerning the apportionment of liability between the producer and the user of a product.

Article 10
Limitation period for recovery of costs

The competent authority shall be entitled to initiate cost recovery proceedings against the operator, or if appropriate, a third party who has caused the damage or the imminent threat of damage in relation to any measures taken in pursuance of this Directive within five years from the date on which those measures have been completed or the liable operator, or third party, has been identified, whichever is the later.

Article 11
Competent authority

1. Contracting Parties shall designate the competent authority(ies) responsible for fulfilling the duties provided for in this Directive.

2. The duty to establish which operator has caused the damage or the imminent threat of damage, to assess the significance of the damage and to determine which remedial measures should be taken with reference to Annex II shall rest with the competent authority. To that effect, the competent authority shall be entitled to require the relevant operator to carry out his own assessment and to supply any information and data necessary.

3. Contracting Parties shall ensure that the competent authority may empower or require third parties to carry out the necessary preventive or remedial measures.

4. Any decision taken pursuant to this Directive which imposes preventive or remedial measures shall state the exact grounds on which it is based. Such decision shall be notified forthwith to the operator concerned, who shall at the same time be informed of the legal remedies available to him under the laws in force in the Contracting Party concerned and of the time-limits to which such remedies are subject.

Article 12
Request for action

1. Natural or legal persons:
   (a) affected or likely to be affected by environmental damage or
   (b) having a sufficient interest in environmental decision making relating to the damage or, alternatively,
(c) alleging the impairment of a right, where administrative procedural law of a Contracting Party requires this as a precondition, shall be entitled to submit to the competent authority any observations relating to instances of environmental damage or an imminent threat of such damage of which they are aware and shall be entitled to request the competent authority to take action under this Directive.

What constitutes a “sufficient interest” and “impairment of a right” shall be determined by the Contracting Parties.

To this end, the interest of any non-governmental organisation promoting environmental protection and meeting any requirements under national law shall be deemed sufficient for the purpose of subparagraph (b). Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (c).

2. The request for action shall be accompanied by the relevant information and data supporting the observations submitted in relation to the environmental damage in question.

3. Where the request for action and the accompanying observations show in a plausible manner that environmental damage exists, the competent authority shall consider any such observations and requests for action. In such circumstances the competent authority shall give the relevant operator an opportunity to make his views known with respect to the request for action and the accompanying observations.

4. The competent authority shall, as soon as possible and in any case in accordance with the relevant provisions of national law, inform the persons referred to in paragraph 1, which submitted observations to the authority, of its decision to accede to or refuse the request for action and shall provide the reasons for it.

5. Contracting Parties may decide not to apply paragraphs 1 and 4 to cases of imminent threat of damage.

Article 13
Review procedures

1. The persons referred to in Article 12(1) shall have access to a court or other independent and impartial public body competent to review the procedural and substantive legality of the decisions, acts or failure to act of the competent authority under this Directive.

2. This Directive shall be without prejudice to any provisions of national law which regulate access to justice and those which require that administrative review procedures be exhausted prior to recourse to judicial proceedings.

Article 14
Financial security

1. Contracting Parties shall take measures to encourage the development of financial security instruments and markets by the appropriate economic and financial operators, including financial mechanisms in case of insolvency, with the aim of enabling operators to use financial guarantees to cover their responsibilities under this Directive.

2. <...>¹

¹ Not applicable in accordance with Article 2(2) of Decision 2016/14/MC-EnC.
Article 15
Cooperation between Contracting Parties

1. Where environmental damage affects or is likely to affect several Contracting Parties, those Contracting Parties shall cooperate, including through the appropriate exchange of information, with a view to ensuring that preventive action and, where necessary, remedial action is taken in respect of any such environmental damage.

2. Where environmental damage has occurred, the Contracting Party in whose territory the damage originates shall provide sufficient information to the potentially affected Contracting Parties.

3. Where a Contracting Party identifies damage within its borders which has not been caused within them it may report the issue to the Secretariat and any other Contracting Party concerned; it may make recommendations for the adoption of preventive or remedial measures and it may seek, in accordance with this Directive, to recover the costs it has incurred in relation to the adoption of preventive or remedial measures.

Article 16
Relationship with national law

1. This Directive shall not prevent Contracting Parties from maintaining or adopting more stringent provisions in relation to the prevention and remedying of environmental damage, including the identification of additional activities to be subject to the prevention and remediation requirements of this Directive and the identification of additional responsible parties.

2. This Directive shall not prevent Contracting Parties from adopting appropriate measures, such as the prohibition of double recovery of costs, in relation to situations where double recovery could occur as a result of concurrent action by a competent authority under this Directive and by a person whose property is affected by environmental damage.

Article 17
Temporal application

This Directive shall not apply to:
- damage caused by an emission, event or incident that took place before the date referred to in Article 19(1),
- damage caused by an emission, event or incident which takes place subsequent to the date referred to in Article 19(1) when it derives from a specific activity that took place and finished before the said date,
- damage, if more than 30 years have passed since the emission, event or incident, resulting in the damage, occurred.
Article 18
Reports and review

1. Contracting Parties shall report to the Secretariat on the experience gained in the application of this Directive by 31 December 2026 at the latest. The reports shall include the information and data set out in Annex VI.

2. <...>

3. <...>

Article 19
Implementation

When Contracting Parties adopt those provisions, they shall contain a reference to this Decision and Directive 2004/35/EC, as amended by Directive 2006/21/EC, Directive 2009/31/EC and Directive 2013/30/EU, or shall be accompanied by such reference on the occasion of their official publication. The methods of making such reference shall be laid down by the Contracting Parties.

2. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by this Decision and Directive 2004/35/EC, as amended by Directive 2006/21/EC, Directive 2009/31/EC and Directive 2013/30/EU.²

Article 20
Entry into force

This Decision shall enter into force on the date of its adoption.³

Article 21
Addressees

This Decision is addressed to the Contracting Parties of the Treaty establishing the Energy Community.⁴

² The text displayed here corresponds to Article 3 of Decision 2016/14/MC-EnC.
³ The text displayed here corresponds to Article 4 of Decision 2016/14/MC-EnC.
⁴ The text displayed here corresponds to Article 5 of Decision 2016/14/MC-EnC.
ANNEX I
CRITERIA REFERRED TO IN ARTICLE 2(1)(A)

The significance of any damage that has adverse effects on reaching or maintaining the favourable conservation status of habitats or species has to be assessed by reference to the conservation status at the time of the damage, the services provided by the amenities they produce and their capacity for natural regeneration. Significant adverse changes to the baseline condition should be determined by means of measurable data such as:

- the number of individuals, their density or the area covered,
- the role of the particular individuals or of the damaged area in relation to the species or to the habitat conservation, the rarity of the species or habitat (assessed at local, regional and higher level including at Community level),
- the species’ capacity for propagation (according to the dynamics specific to that species or to that population), its viability or the habitat’s capacity for natural regeneration (according to the dynamics specific to its characteristic species or to their populations),
- the species’ or habitat’s capacity, after damage has occurred, to recover within a short time, without any intervention other than increased protection measures, to a condition which leads, solely by virtue of the dynamics of the species or habitat, to a condition deemed equivalent or superior to the baseline condition.

Damage with a proven effect on human health must be classified as significant damage. The following does not have to be classified as significant damage:

- negative variations that are smaller than natural fluctuations regarded as normal for the species or habitat in question,
- negative variations due to natural causes or resulting from intervention relating to the normal management of sites, as defined in habitat records or target documents or as carried on previously by owners or operators,
- damage to species or habitats for which it is established that they will recover, within a short time and without intervention, either to the baseline condition or to a condition which leads, solely by virtue of the dynamics of the species or habitat, to a condition deemed equivalent or superior to the baseline condition.
PART II
ACQUIS COMMUNAUTAIRE / ENVIRONMENT / Directive 2004/35/EC

ANNEX II
REMEDYING OF ENVIRONMENTAL DAMAGE

This Annex sets out a common framework to be followed in order to choose the most appropriate measures to ensure the remedying of environmental damage.

1. Remediation of damage to water or protected species or natural habitats

Remedying of environmental damage, in relation to water or protected species or natural habitats, is achieved through the restoration of the environment to its baseline condition by way of primary, complementary and compensatory remediation, where:

(a) "Primary" remediation is any remedial measure which returns the damaged natural resources and/or impaired services to, or towards, baseline condition;

(b) "Complementary" remediation is any remedial measure taken in relation to natural resources and/or services to compensate for the fact that primary remediation does not result in fully restoring the damaged natural resources and/or services;

(c) "Compensatory" remediation is any action taken to compensate for interim losses of natural resources and/or services that occur from the date of damage occurring until primary remediation has achieved its full effect;

(d) "interim losses" means losses which result from the fact that the damaged natural resources and/or services are not able to perform their ecological functions or provide services to other natural resources or to the public until the primary or complementary measures have taken effect. It does not consist of financial compensation to members of the public.

Where primary remediation does not result in the restoration of the environment to its baseline condition, then complementary remediation will be undertaken. In addition, compensatory remediation will be undertaken to compensate for the interim losses.

Remedying of environmental damage, in terms of damage to water or protected species or natural habitats, also implies that any significant risk of human health being adversely affected be removed.

1.1. Remediation objectives

Purpose of primary remediation

1.1.1. The purpose of primary remediation is to restore the damaged natural resources and/or services to, or towards, baseline condition.

Purpose of complementary remediation

1.1.2. Where the damaged natural resources and/or services do not return to their baseline condition, then complementary remediation will be undertaken. The purpose of complementary remediation is to provide a similar level of natural resources and/or services, including, as appropriate, at an alternative site, as would have been provided if the damaged site had been returned to its baseline condition. Where possible and appropriate the alternative site should be geographically linked to the damaged site, taking into account the interests of the affected population.

Purpose of compensatory remediation

1.1.3. Compensatory remediation shall be undertaken to compensate for the interim loss of natural re-
sources and services pending recovery. This compensation consists of additional improvements to protected natural habitats and species or water at either the damaged site or at an alternative site. It does not consist of financial compensation to members of the public.

1.2. Identification of remedial measures

Identification of primary remedial measures

1.2.1. Options comprised of actions to directly restore the natural resources and services towards baseline condition on an accelerated time frame, or through natural recovery, shall be considered.

Identification of complementary and compensatory remedial measures

1.2.2. When determining the scale of complementary and compensatory remedial measures, the use of resource-to-resource or service-to-service equivalence approaches shall be considered first. Under these approaches, actions that provide natural resources and/or services of the same type, quality and quantity as those damaged shall be considered first. Where this is not possible, then alternative natural resources and/or services shall be provided. For example, a reduction in quality could be offset by an increase in the quantity of remedial measures.

1.2.3. If it is not possible to use the first choice resource-to-resource or service-to-service equivalence approaches, then alternative valuation techniques shall be used. The competent authority may prescribe the method, for example monetary valuation, to determine the extent of the necessary complementary and compensatory remedial measures. If valuation of the lost resources and/or services is practicable, but valuation of the replacement natural resources and/or services cannot be performed within a reasonable time-frame or at a reasonable cost, then the competent authority may choose remedial measures whose cost is equivalent to the estimated monetary value of the lost natural resources and/or services.

The complementary and compensatory remedial measures should be so designed that they provide for additional natural resources and/or services to reflect time preferences and the time profile of the remedial measures. For example, the longer the period of time before the baseline condition is reached, the greater the amount of compensatory remedial measures that will be undertaken (other things being equal).

1.3. Choice of the remedial options

1.3.1. The reasonable remedial options should be evaluated, using best available technologies, based on the following criteria:

- The effect of each option on public health and safety,
- The cost of implementing the option,
- The likelihood of success of each option,
- The extent to which each option will prevent future damage, and avoid collateral damage as a result of implementing the option,
- The extent to which each option benefits to each component of the natural resource and/or service,
- The extent to which each option takes account of relevant social, economic and cultural concerns and other relevant factors specific to the locality,
- The length of time it will take for the restoration of the environmental damage to be effective,
- The extent to which each option achieves the restoration of site of the environmental damage,
- The geographical linkage to the damaged site.
1.3.2. When evaluating the different identified remedial options, primary remedial measures that do not fully restore the damaged water or protected species or natural habitat to baseline or that restore it more slowly can be chosen. This decision can be taken only if the natural resources and/or services foregone at the primary site as a result of the decision are compensated for by increasing complementary or compensatory actions to provide a similar level of natural resources and/or services as were foregone. This will be the case, for example, when the equivalent natural resources and/or services could be provided elsewhere at a lower cost. These additional remedial measures shall be determined in accordance with the rules set out in section 1.2.2.

1.3.3. Notwithstanding the rules set out in section 1.3.2. and in accordance with Article 7(3), the competent authority is entitled to decide that no further remedial measures should be taken if:

(a) the remedial measures already taken secure that there is no longer any significant risk of adversely affecting human health, water or protected species and natural habitats, and

(b) the cost of the remedial measures that should be taken to reach baseline condition or similar level would be disproportionate to the environmental benefits to be obtained.

2. Remediation of land damage

The necessary measures shall be taken to ensure, as a minimum, that the relevant contaminants are removed, controlled, contained or diminished so that the contaminated land, taking account of its current use or approved future use at the time of the damage, no longer poses any significant risk of adversely affecting human health. The presence of such risks shall be assessed through risk-assessment procedures taking into account the characteristic and function of the soil, the type and concentration of the harmful substances, preparations, organisms or micro-organisms, their risk and the possibility of their dispersion. Use shall be ascertained on the basis of the land use regulations, or other relevant regulations, in force, if any, when the damage occurred.

If the use of the land is changed, all necessary measures shall be taken to prevent any adverse effects on human health.

If land use regulations, or other relevant regulations, are lacking, the nature of the relevant area where the damage occurred, taking into account its expected development, shall determine the use of the specific area.

A natural recovery option, that is to say an option in which no direct human intervention in the recovery process would be taken, shall be considered.
PART II
ACQUIS COMMUNAUTAIRE / ENVIRONMENT / Directive 2004/35/EC

ANNEX III
ACTIVITIES REFERRED TO IN ARTICLE 3(1)

For the purpose of this Directive, **Contracting Parties** may decide that those operations shall not include the spreading of sewage sludge from urban waste water treatment plants, treated to an approved standard, for agricultural purposes.

5. The discharge or injection of pollutants into surface water or groundwater which require a permit, authorisation or registration in pursuance of Directive 2000/60/EC.

6. Water abstraction and impoundment of water subject to prior authorisation in pursuance of Directive 2000/60/EC.

7. Manufacture, use, storage, processing, filling, release into the environment and onsite transport of
   (a) dangerous substances as defined in Article 2(2) of Council Directive 67/548/EEC of 27 June 1967 on the approximation of the laws, regulations and administrative provisions of the **Contracting Parties** relating to the classification, packaging and labelling of dangerous substances;
   (b) dangerous preparations as defined in Article 2(2) of Directive 1999/45/EC of the European Parliament and of the Council of 31 May 1999 concerning the approximation of the laws, regulations and administrative provisions of the **Contracting Parties** relating to the classification, packaging and labelling of dangerous preparations;

8. Transport by road, rail, inland waterways, sea or air of dangerous goods or polluting goods as defined

ANNEX IV

INTERNATIONAL CONVENTIONS REFERRED TO IN ARTICLE 4(2)

(a) the International Convention of 27 November 1992 on Civil Liability for Oil Pollution Damage;
(b) the International Convention of 27 November 1992 on the Establishment of an International Fund for Compensation for Oil Pollution Damage;
(c) the International Convention of 23 March 2001 on Civil Liability for Bunker Oil Pollution Damage;
(d) the International Convention of 3 May 1996 on Liability and Compensation for Damage in Connection with the Carriage of Hazardous and Noxious Substances by Sea;
(e) the Convention of 10 October 1989 on Civil Liability for Damage Caused during Carriage of Dangerous Goods by Road, Rail and Inland Navigation Vessels.
ANNEX V
INTERNATIONAL INSTRUMENTS REFERRED TO IN ARTICLE 4(4)

(a) the Paris Convention of 29 July 1960 on Third Party Liability in the Field of Nuclear Energy and the Brussels Supplementary Convention of 31 January 1963;
(b) the Vienna Convention of 21 May 1963 on Civil Liability for Nuclear Damage;
(c) the Convention of 12 September 1997 on Supplementary Compensation for Nuclear Damage;
(d) the Joint Protocol of 21 September 1988 relating to the Application of the Vienna Convention and the Paris Convention;
(e) the Brussels Convention of 17 December 1971 relating to Civil Liability in the Field of Maritime Carriage of Nuclear Material.
ANNEX VI
INFORMATION AND DATA REFERRED TO IN ARTICLE 18(1)

The reports referred to in Article 18(1) shall include a list of instances of environmental damage and instances of liability under this Directive, with the following information and data for each instance:

1. Type of environmental damage, date of occurrence and/or discovery of the damage and date on which proceedings were initiated under this Directive.
2. Activity classification code of the liable legal person(s).
3. Whether there has been resort to judicial review proceedings either by liable parties or qualified entities. (The type of claimants and the outcome of proceedings shall be specified.)
4. Outcome of the remediation process.
5. Date of closure of proceedings.

Contracting Parties may include in their reports any other information and data they deem useful to allow a proper assessment of the functioning of this Directive, for example:

1. Costs incurred with remediation and prevention measures, as defined in this Directive:
   - paid for directly by liable parties, when this information is available;
   - recovered ex post facto from liable parties;
   - unrecovered from liable parties. (Reasons for non-recovery should be specified.)
2. Results of the actions to promote and the implementation of the financial security instruments used in accordance with this Directive.
3. An assessment of the additional administrative costs incurred annually by the public administration in setting up and operating the administrative structures needed to implement and enforce this Directive.
DIRECTIVE 2001/42/EC of 27 June 2001 on the assessment of the effects of certain plans and programmes on the environment

The adaptations made by Ministerial Council Decision 2016/13/MC-EnC are highlighted in bold and blue.

Article 1
Objectives

The objective of this Directive is to provide for a high level of protection of the environment and to contribute to the integration of environmental considerations into the preparation and adoption of plans and programmes with a view to promoting sustainable development, by ensuring that, in accordance with this Directive, an environmental assessment is carried out of certain plans and programmes which are likely to have significant effects on the environment.

Article 2
Definitions

For the purposes of this Directive:
(a) “plans and programmes” shall mean plans and programmes, including those co-financed by the European Union, or international financial institutions, as well as any modifications to them:
- which are subject to preparation and/or adoption by an authority at national, regional or local level or which are prepared by an authority for adoption, through a legislative procedure by Parliament or Government, and
- which are required by legislative, regulatory or administrative provisions;
(b) “environmental assessment” shall mean the preparation of an environmental report, the carrying out of consultations, the taking into account of the environmental report and the results of the consultations in decision-making and the provision of information on the decision in accordance with Articles 4 to 9;
(c) “environmental report” shall mean the part of the plan or programme documentation containing the information required in Article 5 and Annex I;
(d) “The public” shall mean one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups.
Article 3

Scope

1. An environmental assessment, in accordance with Articles 4 to 9, shall be carried out for plans and programmes referred to in paragraphs 2 to 4 which are likely to have significant environmental effects.

2. Subject to paragraph 3, an environmental assessment shall be carried out for all plans and programmes,
   (a) which are prepared for network energy, or, provided that they contain network-energy related issues, in the fields of agriculture, forestry, fisheries, industry, transport, waste management, water management, telecommunications, tourism, town and country planning or land use and which set the framework for future development consent of projects listed in Annexes I and II to Directive 2011/92/EU, or
   (b) which, in view of the likely effect on sites, have been determined to require an assessment pursuant to Article 6 or 7 of Directive 92/43/EEC.

3. Plans and programmes referred to in paragraph 2 which determine the use of small areas at local level and minor modifications to plans and programmes referred to in paragraph 2 shall require an environmental assessment only where the Contracting Parties determine that they are likely to have significant environmental effects.

4. Contracting Parties shall determine whether plans and programmes, other than those referred to in paragraph 2, which set the framework for future development consent of projects, are likely to have significant environmental effects.

5. Contracting Parties shall determine whether plans or programmes referred to in paragraphs 3 and 4 are likely to have significant environmental effects either through case-by-case examination or by specifying types of plans and programmes or by combining both approaches. For this purpose Contracting Parties shall in all cases take into account relevant criteria set out in Annex II, in order to ensure that plans and programmes with likely significant effects on the environment are covered by this Directive.

6. In the case-by-case examination and in specifying types of plans and programmes in accordance with paragraph 5, the authorities referred to in Article 6(3) shall be consulted.

7. Contracting Parties shall ensure that their conclusions pursuant to paragraph 5, including the reasons for not requiring an environmental assessment pursuant to Articles 4 to 9, are made available to the public.

8. The following plans and programmes are not subject to this Directive:
   - plans and programmes the sole purpose of which is to serve national defence or civil emergency,
   - financial or budget plans and programmes. 9. <...>1

Article 4

General obligations

1. The environmental assessment referred to in Article 3 shall be carried out during the preparation of a plan or programme and before its adoption or submission to the legislative procedure.

2. The requirements of this Directive shall either be integrated into existing procedures in Contracting...
**Parties** for the adoption of plans and programmes or incorporated in procedures established to comply with this Directive.

3. Where plans and programmes form part of a hierarchy, **Contracting Parties** shall, with a view to avoiding duplication of the assessment, take into account the fact that the assessment will be carried out, in accordance with this Directive, at different levels of the hierarchy. For the purpose of, *inter alia*, avoiding duplication of assessment, **Contracting Parties** shall apply Article 5(2) and (3).

### Article 5

**Environmental report**

1. Where an environmental assessment is required under Article 3(1), an environmental report shall be prepared in which the likely significant effects on the environment of implementing the plan or programme, and reasonable alternatives taking into account the objectives and the geographical scope of the plan or programme, are identified, described and evaluated. The information to be given for this purpose is referred to in Annex I.

2. The environmental report prepared pursuant to paragraph 1 shall include the information that may reasonably be required taking into account current knowledge and methods of assessment, the contents and level of detail in the plan or programme, its stage in the decision-making process and the extent to which certain matters are more appropriately assessed at different levels in that process in order to avoid duplication of the assessment.

3. Relevant information available on environmental effects of the plans and programmes and obtained at other levels of decision-making or through other Community legislation may be used for providing the information referred to in Annex I.

4. The authorities referred to in Article 6(3) shall be consulted when deciding on the scope and level of detail of the information which must be included in the environmental report.

### Article 6

**Consultations**

1. The draft plan or programme and the environmental report prepared in accordance with Article 5 shall be made available to the authorities referred to in paragraph 3 of this Article and the public.

2. The authorities referred to in paragraph 3 and the public referred to in paragraph 4 shall be given an early and effective opportunity within appropriate time frames to express their opinion on the draft plan or programme and the accompanying environmental report before the adoption of the plan or programme or its submission to the legislative procedure.

3. **Contracting Parties** shall designate the authorities to be consulted which, by reason of their specific environmental responsibilities, are likely to be concerned by the environmental effects of implementing plans and programmes.

4. **Contracting Parties** shall identify the public for the purposes of paragraph 2, including the public affected or likely to be affected by, or having an interest in, the decision-making subject to this Directive,
including relevant non-governmental organisations, such as those promoting environmental protection and other organisations concerned.

5. The detailed arrangements for the information and consultation of the authorities and the public shall be determined by the Contracting Parties.

**Article 7**

Transboundary consultations

1. Where a Contracting Party considers that the implementation of a plan or programme being prepared in relation to its territory is likely to have significant effects on the environment in another Contracting Party, or where a Contracting Party likely to be significantly affected so requests, the Contracting Party in whose territory the plan or programme is being prepared shall, before its adoption or submission to the legislative procedure, forward a copy of the draft plan or programme and the relevant environmental report to the other Contracting Party as well as to the Secretariat.

2. Where a Contracting Party is sent a copy of a draft plan or programme and an environmental report under paragraph 1, it shall indicate to the other Contracting Party whether it wishes to enter into consultations before the adoption of the plan or programme or its submission to the legislative procedure and, if it so indicates, the parties concerned shall enter into consultations concerning the likely transboundary environmental effects of implementing the plan or programme and the measures envisaged to reduce or eliminate such effects.

Where such consultations take place, the parties concerned shall agree on detailed arrangements to ensure that the authorities referred to in Article 6(3) and the public referred to in Article 6(4) in the Contracting Party likely to be significantly affected are informed and given an opportunity to forward their opinion within a reasonable time-frame.

3. Where Contracting Parties are required under this Article to enter into consultations, they shall agree, at the beginning of such consultations, on a reasonable timeframe for the duration of the consultations.

**Article 8**

Decision making

The environmental report prepared pursuant to Article 5, the opinions expressed pursuant to Article 6 and the results of any transboundary consultations entered into pursuant to Article 7 shall be taken into account during the preparation of the plan or programme and before its adoption or submission to the legislative procedure.
Article 9
Information on the decision

1. Contracting Parties shall ensure that, when a plan or programme is adopted, the authorities referred to in Article 6(3), the public and any party consulted under Article 7 are informed and the following items are made available to those so informed:
   (a) the plan or programme as adopted;
   (b) a statement summarising how environmental considerations have been integrated into the plan or programme and how the environmental report prepared pursuant to Article 5, the opinions expressed pursuant to Article 6 and the results of consultations entered into pursuant to Article 7 have been taken into account in accordance with Article 8 and the reasons for choosing the plan or programme as adopted, in the light of the other reasonable alternatives dealt with; and,
   (c) the measures decided concerning monitoring in accordance with Article 10.

2. The detailed arrangements concerning the information referred to in paragraph 1 shall be determined by the Contracting Parties.

Article 10
Monitoring

1. Contracting Parties shall monitor the significant environmental effects of the implementation of plans and programmes in order, inter alia, to identify at an early stage unforeseen adverse effects, and to be able to undertake appropriate remedial action.

2. In order to comply with paragraph 1, existing monitoring arrangements may be used if appropriate, with a view to avoiding duplication of monitoring.

Article 11
Relationship with other Community legislation

1. An environmental assessment carried out under this Directive shall be without prejudice to any requirements under Directive 2011/92/EU and to any other Community law requirements.

2. For plans and programmes for which the obligation to carry out assessments of the effects on the environment arises simultaneously from this Directive and other Energy Community legislation, Contracting Parties may provide for coordinated or joint procedures fulfilling the requirements of the relevant Energy Community legislation in order, inter alia, to avoid duplication of assessment.

3. For plans and programmes co-financed by international financial institutions, the environmental assessment in accordance with this Directive shall be carried out in conformity with the specific provisions in relevant Energy Community legislation.
**Article 12**

Information, reporting and review

1. **Contracting Parties** and the **Secretariat** shall exchange information on the experience gained in applying this Directive.

2. **Contracting Parties** shall ensure that environmental reports are of a sufficient quality to meet the requirements of this Directive and shall communicate to the **Secretariat** any measures they take concerning the quality of these reports.

3. <...>

4. <...>2

**Article 13**

Implementation of the Directive

1. **Contracting Parties** shall inform the Energy Community Secretariat of the laws, regulations and administrative provisions brought into force to comply with the relevant provisions of Directive 2001/42/EC in accordance with Article 12 of the Treaty establishing the Energy Community by 1 January 2018.

When Contracting Parties adopt those provisions, they shall contain a reference to this Decision and Directive 2001/42/EC or shall be accompanied by such reference on the occasion of their official publication. The methods of making such reference shall be laid down by the Contracting Parties.

2. **Contracting Parties** shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by this Decision and Directive 2001/42/EC.

**Contracting Parties** shall implement the provisions adopted according to this Decision by 31 March 2018.3

3. The obligation referred to in Article 4(1) shall apply to the plans and programmes of which the first formal preparatory act is subsequent to the date referred to in paragraph 1. Plans and programmes of which the first formal preparatory act is before that date and which are adopted or submitted to the legislative procedure more than 24 months thereafter, shall be made subject to the obligation referred to in Article 4(1) unless **Contracting Parties** decide on a case by case basis that this is not feasible and inform the public of their decision.

4. Before 21 July 2004, **Contracting Parties** shall communicate to the **Secretariat**, in addition to the measures referred to in paragraph 1, separate information on the types of plans and programmes which, in accordance with Article 3, would be subject to an environmental assessment pursuant to this Directive. The **Secretariat** shall make this information available to the **Contracting Parties**. The information will be updated on a regular basis.

---

2 Not applicable in accordance with Article 2(2) of Decision 2016/13/MC-EnC.
3 The text displayed here corresponds to Article 3 of Decision 2016/13/MC-EnC.
**Article 14**

Entry into force

This Decision shall enter into force on the date of its adoption.  

**Article 15**

Addressees

This Decision is addressed to the Contracting Parties of the Treaty establishing the Energy Community.

4 The text displayed here corresponds to Article 4 of Decision 2016/13/MC-EnC.
ANNEX I
Information referred to in Article 5(1)

The information to be provided under Article 5(1), subject to Article 5(2) and (3), is the following:

(a) an outline of the contents, main objectives of the plan or programme and relationship with other relevant plans and programmes;

(b) the relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme;

(c) the environmental characteristics of areas likely to be significantly affected;

(d) any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC;

(e) the environmental protection objectives, established at international, Community or Contracting Party level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation;

(f) the likely significant effects\(^5\) on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors;

(g) the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme;

(h) an outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of knowhow) encountered in compiling the required information;

(i) a description of the measures envisaged concerning monitoring in accordance with Article 10;

(j) a non-technical summary of the information provided under the above headings.

\(^5\) These effects should include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects.
ANNEX II

Criteria for determining the likely significance of effects referred to in Article 3(5)

1. The characteristics of plans and programmes, having regard, in particular, to
   - the degree to which the plan or programme sets a framework for projects and other activities, either with
     regard to the location, nature, size and operating conditions or by allocating resources,
   - the degree to which the plan or programme influences other plans and programmes including those in
     a hierarchy,
   - the relevance of the plan or programme for the integration of environmental considerations in particular
     with a view to promoting sustainable development,
   - environmental problems relevant to the plan or programme,
   - the relevance of the plan or programme for the implementation of Community legislation on the envi-
     ronment (e.g. plans and programmes linked to waste-management or water protection).

2. Characteristics of the effects and of the area likely to be affected, having regard, in particular, to
   - the probability, duration, frequency and reversibility of the effects,
   - the cumulative nature of the effects,
   - the transboundary nature of the effects,
   - the risks to human health or the environment (e.g. due to accidents),
   - the magnitude and spatial extent of the effects (geographical area and size of the population likely to
     be affected),
   - the value and vulnerability of the area likely to be affected due to:
     - special natural characteristics or cultural heritage,
     - exceeded environmental quality standards or limit values,
     - intensive land-use,
   - the effects on areas or landscapes which have a recognised national, Community or international pro-
     tection status.
PART II

ACQUIS COMMUNAUTAIRE

GOVERNANCE AND CLIMATE
REGULATION (EU) 2018/1999 of 11 December 2018 on the Governance of the Energy Union and Climate Action

The adaptations made by Ministerial Council Decision 2021/14/MC-EnC are highlighted in **bold and blue**.

CHAPTER 1
General provisions

Article 1
Subject matter and scope

1. This Regulation establishes a governance mechanism to:

   (a) implement strategies and measures designed to meet the objectives and targets of the **Contracting Parties** and the **Contracting Parties’** long-term greenhouse gas emissions commitments consistent with the Paris Agreement, and for the first <...> period, from 2025 to 2030, in particular the **Energy Community’s** 2030 targets for energy and climate;

   (b) stimulate cooperation between **Contracting Parties**, and between **Contracting Parties** and **Member States of the European Union**, including, where appropriate, at regional level, designed to achieve the objectives and targets of the **Contracting Parties**;

   (c) ensure the timeliness, transparency, accuracy, consistency, comparability and completeness of reporting by the **Contracting Parties** to the UNFCCC and Paris Agreement secretariat;

   (d) contribute to greater regulatory certainty as well as contribute to greater investor certainty and help take full advantage of opportunities for economic development, investment stimulation, job creation and social cohesion.

The governance mechanism is based on long-term strategies, integrated national energy and climate plans covering **firstly a period from 2025 to 2030 and thereafter** ten-year periods starting from **2031 to 2040**, corresponding integrated national energy and climate progress reports by the **Contracting Parties** and integrated monitoring arrangements by the **Energy Community Secretariat**. The governance mechanism ensures effective opportunities for the public to participate in the preparation of those national plans and those long-term strategies. It comprises a structured, transparent, iterative process between the **Secretariat** and **Contracting Parties** for the purpose of the finalisation of the integrated national energy and climate plans and their subsequent implementation, including with regard to regional cooperation, and corresponding **Secretariat** action.

2. This Regulation applies to the five dimensions of the Energy Union, which are closely related and mutually reinforcing:
(a) energy security;
(b) internal energy market;
(c) energy efficiency;
(d) decarbonisation; and
(e) research, innovation and competitiveness.

**Article 2**

**Definitions**

The following definitions apply:

(1) ‘policies and measures’ means all instruments which contribute to meeting the objectives of the integrated national energy and climate plans and/or to implement commitments under points (a) and (b) of Article 4(2) of the UNFCCC, which may include those that do not have the limitation and reduction of greenhouse gas emissions or change in the energy system as a primary objective;

(2) ‘existing policies and measures’ means implemented policies and measures and adopted policies and measures;

(3) ‘implemented policies and measures’ means policies and measures for which one or more of the following applies at the date of submission of the integrated national energy and climate plan or of the integrated national energy and climate progress report: directly applicable Energy Community or national law is in force, one or more voluntary agreements have been established, financial resources have been allocated, human resources have been mobilised;

(4) ‘adopted policies and measures’ means policies and measures for which an official government decision has been made by the date of submission of the integrated national energy and climate plan or of the integrated national energy and climate progress report and there is a clear commitment to proceed with implementation;

(5) ‘planned policies and measures’ means options that are under discussion and that have a realistic chance of being adopted and implemented after the date of submission of the integrated national energy and climate plan or of the integrated national energy and climate progress report;

(6) ‘system for policies and measures and projections’ means a system of institutional, legal and procedural arrangements established for reporting policies and measures and projections relating to anthropogenic emissions by sources and removals by sinks of greenhouse gases and to the energy system, inter alia as required by Article 39;

(7) ‘projections’ means forecasts of anthropogenic greenhouse gas emissions by sources and removals by sinks or developments of the energy system, including at least quantitative estimates for a sequence of six future years ending with 0 or 5 immediately following the reporting year;

(8) ‘projections without measures’ means projections of anthropogenic greenhouse gas emissions by sources and removals by sinks that exclude the effects of all policies and measures which are planned, adopted or implemented after the year chosen as the starting point for the relevant projection;

(9) ‘projections with measures’ means projections of anthropogenic greenhouse gas emissions by sources
and removals by sinks that encompass the effects, in terms of greenhouse gas emission reductions or developments of the energy system, of policies and measures that have been adopted and implemented;

(10) ‘projections with additional measures’ means projections of anthropogenic greenhouse gas emissions by sources and removals by sinks or developments of the energy system that encompass the effects, in terms of greenhouse gas emission reductions, of policies and measures which have been adopted and implemented to mitigate climate change or meet energy objectives, as well as policies and measures which are planned for that purpose;

(11) ‘the Energy Community 2030 targets for energy and climate’, ‘the Energy Community 2030 targets’ or ‘the 2030 targets of the Energy Community’ means the value calculated on the basis of the targets adopted for each Contracting Party as follows: a minimum domestic reduction in economy-wide greenhouse gas emissions as compared to 1990 to be achieved by 2030, a minimum share of renewable energy consumed in the Energy Community in 2030, a minimum headline target for improving energy efficiency in 2030, and a minimum percentage of electricity interconnection target for 2030, or any subsequent targets in the terms to be adopted in this regard by the Ministerial Council for 2030 on the basis of the study(ies) carried out to this effect.

(11bis) ‘the Energy Community 2030 headline target for energy efficiency’ means the target for reduction of primary and/or final energy consumption of the Contracting Parties by 2030, in the terms to be adopted by the Ministerial Council, as appropriate, on the basis of the study(ies) carried out to this effect;

(11cis) ‘Energy Community’s energy consumption’ means the energy consumption of the Contracting Parties, in the terms to be adopted by the Ministerial Council, as appropriate, on the basis of the study(ies) carried out to this effect;

(12) ‘national inventory system’ means a system of institutional, legal and procedural arrangements established within a Contracting Party for estimating anthropogenic emissions by sources and removals by sinks of greenhouse gases, and for reporting and archiving inventory information;

(13) ‘indicator’ means a quantitative or qualitative factor or variable that contributes to better understanding progress in implementing;

(14) ‘key indicators’ mean the indicators for the progress made with regard to the five dimensions of the Energy Union as proposed by the European Commission;

(15) ‘technical corrections’ means adjustments to the national greenhouse gas inventory estimates made in the context of the review carried out pursuant to Article 38 when the submitted inventory data are incomplete or are prepared in a way that is not consistent with relevant international or Energy Community rules or guidelines and that are intended to replace originally submitted estimates;

(16) ‘quality assurance’ means a planned system of review procedures to ensure that data quality objectives are met and that the best possible estimates and information are reported to support the effectiveness of the quality control programme and to assist Contracting Parties;

(17) ‘quality control’ means a system of routine technical activities to measure and control the quality of the information and estimates compiled with the purpose of ensuring data integrity, correctness and completeness, identifying and addressing errors and omissions, documenting and archiving data and other material used, and recording all quality assurance activities;
(18) ‘energy efficiency first’ means taking utmost account in energy planning, and in policy and investment decisions, of alternative cost-efficient energy efficiency measures to make energy demand and energy supply more efficient, in particular by means of cost-effective end-use energy savings, demand response initiatives and more efficient conversion, transmission and distribution of energy, whilst still achieving the objectives of those decisions;

(19) <…>

(20) ‘early efforts’ means:

(a) in the context of the assessment of a potential gap between the Contracting Party’s reference point in its trajectory and its 2030 target for energy from renewable sources <…> a Contracting Party’s achievement of a share of energy from renewable sources above its national binding target for 2020 as set out in Annex I to Directive (EU) 2018/2001 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, or a Contracting Party’s early progress towards its national binding target for 2020;

(b) in the context of Secretariat recommendations based on the assessment pursuant to point (b) of Article 29(1) with regard to energy from renewable sources, a Contracting Party’s early implementation of its <…> reference point in the trajectory towards its 2030 target <…>;

(21) ‘regional cooperation’ means cooperation between two or more Contracting Parties and/or Member States of the European Union engaged in a partnership covering one or more of the five dimensions of the Energy Union;

(22) ‘energy from renewable sources’ or ‘renewable energy’ means energy from renewable sources or renewable energy as defined in point (1) of Article 2 of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(27) ‘district heating’ or ‘district cooling’ means district heating or district cooling as defined in point (19) of Article 2 of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(42) ‘primary energy consumption’ means primary energy consumption as defined in point (2) of Article 2 of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(43) ‘final energy consumption’ means final energy consumption as defined in point (3) of Article 2 of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(48) ‘total useful floor area’ means total useful floor area as defined in point (10) of Article 2 of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC
and 2021/14/MC-EnC;

(49) ‘energy management system’ means energy management system as defined in point (11) of Article 2 of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(55) ‘retail energy sales company’ means retail energy sales company as defined in point (22) of Article 2 of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and b 2021/14/MC-EnC;

(60) ‘nearly zero-energy building’ means a nearly zero-energy building as defined in point (2) of Article 2 of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC;

(62) ‘fossil fuel’ means non-renewable carbon-based energy sources such as solid fuels, natural gas and oil.
CHAPTER 2
INTEGRATED NATIONAL ENERGY AND CLIMATE PLANS

Article 3
Integrated national energy and climate plans

1. By 30 June 2024, and subsequently by 1 January 2029 and every ten years thereafter, each Contracting Party shall notify to the Secretariat an integrated national energy and climate plan. The plans shall contain the elements set out in paragraph 2 of this Article and in Annex I. The first plan shall cover the period from 2025 to 2030, taking into account the longer term perspective. The subsequent plans shall cover the ten-year period immediately following the end of the period covered by the previous plan.

2. The integrated national energy and climate plans shall consist of the following main sections:
   (a) an overview of the process followed for establishing the integrated national energy and climate plan consisting of an executive summary, a description of the public consultation and involvement of stakeholders and their results, and of regional cooperation with other Contracting Parties in preparing the plan, as established in Articles 10, 11 and 12 and in point 1 of Section A of Part I of Annex I;
   (b) a description of national objectives, targets and contributions relating to the dimensions of the Energy Union, as set out in Article 4 and Annex I;
   (c) a description of the planned policies and measures in relation to the corresponding objectives, targets and contributions set out under point (b) as well as a general overview of the investment needed to meet the corresponding objectives, targets and contributions;
   (d) a description of the current situation of the five dimensions of the Energy Union, including with regard to the energy system and greenhouse gas emissions and removals as well as projections with regard to the objectives referred to in point (b) with already existing policies and measures;
   (e) where applicable, a description of the regulatory and non-regulatory barriers and hurdles to delivering the objectives, targets or contributions related to renewable energy and energy efficiency;
   (f) an assessment of the impacts of the planned policies and measures to meet the objectives referred to in point (b) of this paragraph, including their consistency with the long-term greenhouse gas emission reduction objectives under the Paris Agreement and the long-term strategies as referred to in Article 15;
   (g) a general assessment of the impacts of the planned policies and measures on competitiveness linked to the five dimensions of the Energy Union;
   (h) an annex, drawn up in accordance with the requirements and structure laid down in Annex III to this Regulation, setting out the Contracting Party’s methodologies and policy measures for achieving the energy savings requirement in accordance with Article 7 of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC and Annex V thereto.

3. With regard to their integrated national energy and climate plans, Contracting Parties shall:
   (a) limit administrative complexity and costs for all relevant stakeholders;
   (b) take into account the interlinkages between the five dimensions of the Energy Union, in particular the energy efficiency first principle;
(c) use robust and consistent data and assumptions across the five dimensions where relevant;
(d) assess the number of households in energy poverty taking into account the necessary domestic energy
services needed to guarantee basic standards of living in the relevant national context, existing social policy
and other relevant policies, as well as indicative European Commission guidance on relevant indicators
for energy poverty, as adapted for the Energy Community by the Energy Community Secretariat.

In the event that a Contracting Party finds, pursuant to point (d) of the first subparagraph, that it has a
significant number of households in energy poverty, on the basis of its assessment of verifiable data, it shall
include in its plan a national indicative objective to reduce energy poverty. The Contracting Parties
concerned shall outline in their integrated national energy and climate plans, the policies and measures, which
address energy poverty, if any, including social policy measures and other relevant national programmes.

4. Each Contracting Party shall make its integrated national energy and climate plan submitted to the
Secretariat pursuant to this Article publicly available.

5. The Secretariat shall inform the Permanent High Level Group about any delegated acts
adopted pursuant to Article 3(5) of Regulation (EU) 2018/1999 within one week of their
adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the
Energy Community Treaty to take measures to incorporate the relevant delegated acts into
the Energy Community acquis.

Article 4
National objectives, targets and contributions for the five dimensions of the Energy Union

Each Contracting Party shall set out in its integrated national energy and climate plan the following main
objectives, targets and contributions, as specified in point 2 of section A of Annex I:
(a) as regards the dimension ‘Decarbonisation’:
(1) with respect to greenhouse gas emissions and removals and with a view to contributing to the achieve-
ment of the economy wide Contracting Parties’ greenhouse gas emission reduction target:
   (i) the Contracting Party’s binding national target for greenhouse gas emissions <...>;
   (ii) <...>;
   (iii) where applicable to meet the objectives <...> of the Energy Union, the targets of the Contracting
       Parties and the Contracting Party’s long-term greenhouse gas emissions commitments consistent
       with the Paris Agreement, other objectives and targets, including sector targets and adaptation goals.
(2) with respect to renewable energy:
   With a view to achieving the Contracting Parties’ economy-wide target of the relevant share
   of renewable energy in 2030 a contribution to that target in terms of each Contracting Party’s share of
   energy from renewable sources in gross final consumption of energy in 2030 not lower than the share
to be adopted by Ministerial Council Decision with an indicative trajectory for that contribution from
2025 onwards. <...> By 2027, the indicative trajectory shall reach a reference point of at least 65
% of the total increase in the share of energy from renewable sources between that Contracting Party
binding 2020 national target and its contribution to the 2030 target.
By 2030, the indicative trajectory shall reach at least the Contracting Party’s planned contribution. If a
**Contracting Party** expects to surpass its binding 2020 national target, its indicative trajectory may start at the level it is projected to achieve. The **Contracting Parties’** indicative trajectories, taken together, shall add up to the **Contracting Parties’** reference point in 2027 and to the **Contracting Parties’** target of renewable energy in 2030. Separately from its contribution to the **Contracting Parties’** target and its indicative trajectory for the purposes of this Regulation, each **Contracting Party** shall be free to indicate higher ambitions for national policy purposes;

(b) as regards the dimension ‘Energy Efficiency’:

(1) the indicative national energy efficiency contribution to achieving the **Energy Community 2030 headline target for energy efficiency** as referred to in Article 1(1) and Article 3(5) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC, based on either primary or final energy consumption, primary or final energy savings, or energy intensity. **Contracting Parties** shall express their contribution in terms of absolute level of primary energy consumption and final energy consumption in 2020, and in terms of absolute level of primary energy consumption and final energy consumption in 2030, with an indicative trajectory for that contribution from 2025 onwards. They shall explain their underlying methodology and the conversion factors used;

(2) the cumulative amount of end-use energy savings to be achieved over the period 2025-2030 under point (b) of Article 7(1) on the energy saving obligations pursuant to Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(3) the indicative milestones of the long-term strategy for the renovation of the national stock of residential and non-residential buildings, both public and private, the roadmap with domestically established measurable progress indicators, an evidence-based estimate of expected energy savings and wider benefits, and the contributions to the **Energy Community’s** energy efficiency 2030 target pursuant to Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC in accordance with Article 2a of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC;

(4) the total floor area to be renovated or equivalent annual energy savings to be achieved from 2025 to 2030 under Article 5 of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC on the exemplary role of public bodies’ buildings;

(c) as regards the dimension ‘Energy Security’:

(1) national objectives with regard to:

- increasing the diversification of energy sources and supply from third countries, the purpose of which may be to reduce energy import dependency;

- increasing the flexibility of the national energy system, and

- addressing constrained or interrupted supply of an energy source, for the purpose of improving the resilience of regional and national energy systems, including a timeframe for when the objectives should be met;

(d) as regards the dimension ‘Internal Energy Market’:

(1) the level of electricity interconnectivity that the **Contracting Party** aims for in 2030 in consideration of the electricity interconnection target for 2030 <…>, with a strategy with the level from 2025 onwards defined in close cooperation with the **Contracting Parties** and Member States of the European Union affected, taking into account <…> the indicators of the urgency of action based on price differential in
the wholesale market, nominal transmission capacity of interconnectors in relation to peak load and to installed renewable generation capacity as set out in point 2.4.1 of Section A of Part I of Annex I. Each new interconnector shall be subject to a socioeconomic and environmental cost-benefit analysis and implemented only if the potential benefits outweigh the costs;

(2) key electricity and gas transmission infrastructure projects, and, where relevant, modernisation projects, that are necessary for the achievement of objectives and targets under the five dimensions of the Energy Union;

(3) national objectives related to other aspects of the internal energy market such as: increasing system flexibility, in particular through policies and measures related to market-based price formation in compliance with applicable law; market integration and coupling, aiming to increase the tradeable capacity of existing interconnectors, smart grids, aggregation, demand response, storage, distributed generation, mechanisms for dispatching, re-dispatching and curtailment and real-time price signals, including a timeframe for when the objectives should be met, and other national objectives related to the internal energy market as set out in point 2.4.3 of Section A of Part 1 of Annex I;

(e) as regards the dimension ‘Research, Innovation and Competitiveness’:

(1) national objectives and funding targets for public and, where available, private research and innovation relating to the Energy Union, including, where appropriate, a timeframe for when the objectives should be met; reflecting the priorities of the Energy Union Strategy <...>. In setting out its objectives, targets and contributions, the Contracting Party may build upon existing national strategies or plans that are compatible with Energy Community law;

(2) where available, national 2050 objectives related to the promotion of clean energy technologies.

Article 5

Contracting Parties’ contribution setting process in the area of renewable energy

1. In its contribution for its share of energy from renewable sources in gross final consumption of energy in 2030 and the last year of the period covered for the subsequent national plans, pursuant to point (a)(2) of Article 4, each Contracting Party shall take into account all of the following:

(a) the measures provided for in Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(b) the measures adopted to reach its energy efficiency target adopted pursuant to Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(c) any other existing measures to promote renewable energy within the Contracting Party and, where relevant, at Energy Community level;

(d) the binding 2020 national target of energy from renewable sources in its gross final consumption of energy set out in Annex I to Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(e) any relevant circumstances affecting renewable energy deployment, such as:

(i) equitable distribution of deployment across the Energy Community;

(ii) economic conditions and potential, including GDP per capita;
(iii) potential for cost-effective renewable energy deployment;
(iv) geographical, environmental and natural constraints, including those of non-interconnected areas and regions;
(v) the level of power interconnection between Contracting Parties and between Contracting Parties and Member States of the European Union;
(vi) other relevant circumstances, in particular early efforts.

With regard to point (e) of the first subparagraph, each Contracting Party shall indicate in its integrated national energy and climate plan which relevant circumstances affecting renewable energy deployment it has taken into account.

2. Contracting Parties shall <…> ensure that the sum of their contributions amounts to a target of energy from renewable sources in gross final energy consumption at Energy Community level by 2030.

*Article 6*

**Contracting Parties’ contribution setting process in the area of energy efficiency**

1. In its indicative national energy efficiency contribution for 2030 and for the last year of the period covered for the subsequent national plans pursuant to point (b)(1) of Article 4, each Contracting Party shall take into account that, in accordance with Article 3 of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC, the Energy Community’s energy consumption in 2020 is to be no more than 187 Mtoe of primary energy or no more than 137 Mtoe of final energy and Energy Community’s energy consumption in 2030 is to be no more than a quantity of Mtoe of primary energy and/or no more than a quantity of Mtoe of final energy to be decided by the Ministerial Council on the basis of the relevant study(ies) to this effect.

In addition, each Contracting Party shall take into account:

(a) the measures provided for in Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(b) other measures to promote energy efficiency within the Contracting Party and at Energy Community level.

2. In its contribution referred to in paragraph 1, each Contracting Party may take into account national circumstances affecting primary and final energy consumption, such as:

(a) remaining cost-effective energy-saving potential;

(b) evolution and forecast of gross domestic product;

(c) changes of energy imports and exports;

(d) changes in the energy mix and the development of carbon capture and storage; and

(e) early actions.

With regard to the first subparagraph, each Contracting Party shall indicate in its integrated national energy and climate plan which relevant circumstances affecting primary and final energy consumption it has taken into account, if any.
Article 7

National policies and measures for each of the five dimensions of the Energy Union

Contracting Parties shall describe, in accordance with Annex I, in their integrated national energy and climate plan, the main existing and planned policies and measures to achieve in particular the objectives set out in the national plan, including, where applicable, measures providing for regional cooperation and appropriate financing at national and regional level, including mobilisation of programmes and instruments by international financial organisations.

Contracting Parties shall provide a general overview of the investment needed to achieve the objectives, targets and contributions set out in the national plan, as well as a general assessment on the sources of that investment.

Article 8

Analytical basis of the integrated national energy and climate plans

1. Contracting Parties shall describe, in accordance with the structure and format specified in Annex I, the current situation for each of the five dimensions of the Energy Union, including of the energy system and greenhouse gas emissions and removals at the time of submission of the integrated national energy and climate plan or on the basis of the latest available information. Contracting Parties shall also set out and describe projections for each of the five dimensions of the Energy Union, for at least the duration of that plan, expected to result from existing policies and measures. Contracting Parties shall endeavour to describe additional longer term perspectives for the five dimensions beyond the duration of the integrated national energy and climate plan, where relevant and possible.

2. Contracting Parties shall describe in their integrated national energy and climate plan their assessment, at national and, where applicable, regional level, of:

(a) the impacts on the development of the energy system and greenhouse gas emissions and removals for the duration of the plan and for a period of ten years following the latest year covered by the plan, under the planned policies and measures or groups of measures, including a comparison with the projections based on existing policies and measures or groups of measures as referred to in paragraph 1;

(b) the macroeconomic and, to the extent feasible, the health, environmental, skills and social impact of the planned policies and measures or groups of measures referred to in Article 7 and further specified in Annex I, for the first ten-year period at least until the year 2030, including a comparison with the projections based on existing policies and measures or groups of measures as referred to in paragraph 1 of this Article. The methodology used to assess those impacts shall be made public;

(c) interactions between existing policies and measures or groups of measures and planned policies and measures or groups of measures within a policy dimension and between existing policies and measures or groups of measures and planned policies and measures or groups of measures of different dimensions for the first ten-year period at least until the year 2030. Projections concerning security of supply, infrastructure and market integration shall be linked to robust energy efficiency scenarios;

(d) the manner in which existing policies and measures and planned policies and measures are to attract
the investment necessary for their implementation.

3. **Contracting Parties** shall make available to the public comprehensive information concerning the assumptions, parameters and methodologies used for the final scenarios and projections, taking into account statistical restrictions, commercially sensitive data, and compliance with the data protection rules.

**Article 9**

**Draft integrated national energy and climate plans**

1. By **30 June 2023**, and subsequently by 1 January 2028 and every ten years thereafter, each **Contracting Party** shall prepare and submit to the **Secretariat** a draft of the integrated national energy and climate plan in accordance with Article 3(1) and Annex I.

2. The **Secretariat** shall assess the draft integrated national energy and climate plans and may issue country-specific recommendations to **Contracting Parties** in accordance with Article 34 no later than six months before the deadline for submitting those integrated national energy and climate plans. Those recommendations may, in particular address:

   (a) the level of ambition of objectives, targets and contributions with a view to <...> achieving the Energy Union objectives and, in particular, the **Energy Community**’s 2030 targets for renewable energy and energy efficiency as well as the level of electricity interconnectivity that the **Contracting Party** aims for in 2030 as referred to in point (d) of Article 4, taking due account of relevant circumstances affecting the deployment of renewable energy and energy consumption, as indicated by the **Contracting Party** concerned in the draft integrated national energy and climate plan and the indicators of the urgency of action for interconnectivity established in point 2.4.1 of Section A of Part 1 of Annex I;

   (b) policies and measures relating to **Contracting Party** - and **Energy Community**-level objectives and other policies and measures of potential cross-border relevance;

   (c) any additional policies and measures that might be required in the integrated national energy and climate plans;

   (d) interactions between and consistency of existing and planned policies and measures included in the integrated national energy and climate plan within one dimension and among different dimensions of the Energy Union.

3. Each **Contracting Party** shall take due account of any recommendations from the **Secretariat** in its integrated national energy and climate plan. If the **Contracting Party** concerned does not address a recommendation or a substantial part thereof, that **Contracting Party** shall provide and make public its reasons.

4. In the context of the public consultation as referred to in Article 10, each **Contracting Party** shall make available to the public its draft integrated national energy and climate plan.
Article 10
Public consultation

Without prejudice to any other Energy Community law requirements, each Contracting Party shall ensure that the public is given early and effective opportunities to participate in the preparation of the draft integrated national energy and climate plan — as regards the plans for the 2025 to 2030 period, in the preparation of the final plan well before its adoption — as well as of the long-term strategies referred to in Article 15. Each Contracting Party shall attach to the submission of such documents to the Secretariat a summary of the public’s views or provisional views. In so far as Directive 2001/42/EC, as adapted and adopted by Ministerial Council Decision 2016/13/MC-EnC is applicable, consultations undertaken on the draft in accordance with that Directive shall be deemed to satisfy the obligations to consult the public under this Regulation.

Each Contracting Party shall ensure that the public is informed. Each Contracting Party shall set reasonable timeframes allowing sufficient time for the public to be informed, to participate and express its views. Each Contracting Party shall limit administrative complexity when implementing this Article.

Article 11
Multilevel climate and energy dialogue

Each Contracting Party shall establish a multilevel climate and energy dialogue pursuant to national rules, in which local authorities, civil society organisations, business community, investors and other relevant stakeholders and the general public are able actively to engage and discuss the different scenarios envisaged for energy and climate policies, including for the long term, and review progress, unless it already has a structure which serves the same purpose. Integrated national energy and climate plans may be discussed within the framework of such a dialogue.

Article 12
Regional cooperation

1. Contracting Parties shall cooperate with each other and with Member States of the European Union, taking account of all existing and potential forms of regional cooperation, to meet the objectives, targets and contributions set out in their integrated national energy and climate plan effectively.

2. Each Contracting Party shall, well before submitting its draft integrated national energy and climate plan to the Energy Community Secretariat pursuant to Article 9(1) — as regards the plans for the 2025 to 2030 period, in the preparation of the final plan well before its adoption — identify opportunities for regional cooperation and consult neighbouring Contracting Parties and Member States of the European Union, including in the Energy and Climate Committee and regional cooperation fora. If deemed appropriate by the Contracting Party authoring the plan, that Contracting Party may consult other Contracting Parties, Member States of the European Union or third countries that have expressed an interest. Contracting Parties without energy interconnections to other Contracting Parties and Member States of the European Union shall carry out such consultations with neighbouring...
Contracting Parties and Member States of the European Union with maritime borders. The Contracting Parties and Member States of the European Union consulted should be given a reasonable time within which to react. Each Contracting Party shall set out in its draft integrated national energy and climate plan — as regards the plans for the 2025-2030 period, in its final national energy and climate plan — at least the provisional results of such regional consultations, including, where applicable, how the comments of the Contracting Parties, Member States of the European Union or third countries consulted have been taken into account.

3. Contracting Parties may engage in voluntary joint drafting of parts of their integrated national energy and climate plans and progress reports, including in the Energy and Climate Committee and regional cooperation fora. If they do so, the result shall replace the equivalent parts of their integrated national energy and climate plan and progress reports. Upon a request by two or more Contracting Parties, the Secretariat shall facilitate that exercise.

4. In order to facilitate market integration and cost-efficient policies and measures, Contracting Parties shall, in the period between the deadline for submission of their draft integrated national energy and climate plans and the deadline for submission of their final plans, present the relevant parts of their draft integrated national energy and climate plan in the Energy and Climate Committee and relevant regional cooperation fora with a view to their finalisation. Where necessary, the Secretariat shall facilitate such cooperation and consultation among the Contracting Parties, and if it identifies opportunities for further regional cooperation, it may provide Contracting Parties with indicative guidance in order to facilitate the effective cooperation and consultation process.

5. Contracting Parties shall consider the comments received from other Contracting Parties and Member States of the European Union pursuant to paragraphs 2 and 3 in their final integrated national energy and climate plan, and explain in those plans how such comments have been considered.

6. For the purposes referred to in paragraph 1, Contracting Parties shall continue to cooperate at regional level, and, as appropriate, in the Energy and Climate Committee and regional cooperation fora, when implementing the relevant policies and measures of their integrated national energy and climate plans.

7. <...>  

8. In so far as the provisions of Directive 2001/42/EC, as adapted and adopted by Ministerial Council Decision 2016/13/MC-EnC are applicable, transboundary consultation undertaken on the draft in accordance with Article 7 of that Directive shall be deemed to satisfy the obligations on regional cooperation pursuant to this Regulation, provided that the requirements of this Article are complied with.

Article 13
Assessment of the integrated national energy and climate plans

On the basis of the integrated national energy and climate plans and their updates as notified pursuant to Articles 3 and 14, the Secretariat shall assess, in particular, whether:

(a) the objectives, targets and contributions are sufficient for the achievement of the Energy Union objectives and, for the first five-year period in particular, the Energy Community’s 2030 targets;
(b) the plans comply with requirements of Articles 3 to 12 and Contracting Parties have taken due account of the Secretariat recommendations issued pursuant to Article 34.
Article 14
Update of the integrated national energy and climate plan

1. By <…> 1 January 2033 and subsequently every 10 years thereafter, each Contracting Party shall submit to the Secretariat a draft update of the latest notified integrated national energy and climate plan or shall provide the Secretariat with reasons justifying why the plan does not require updating.

2. By <…> 1 January 2034 and subsequently every 10 years thereafter, each Contracting Party shall submit to the Secretariat an update of its latest notified integrated national energy and climate plan, unless they have provided reasons why the plan does not require updating pursuant to paragraph 1.

3. In the update referred to in paragraph 2, each Contracting Party shall modify its national objective, target or contribution with regard to any of the quantified Contracting Parties’ objectives, targets or contributions set out in point (a)(1) of Article 4 in order to reflect an increased ambition as compared to that set out in its latest notified integrated national energy and climate plan. In the update referred to in paragraph 2, each Contracting Party shall modify its national objective, target, or contribution with regard to any of the quantified Contracting Parties’ objectives, targets or contributions set out in points (a)(2) and (b) of Article 4 only in order to reflect an equal or increased ambition as compared to that set out in its latest notified integrated national energy and climate plan.

4. Contracting Parties shall make efforts to mitigate in their updated integrated national energy and climate plan any adverse environmental impacts that become apparent as part of the integrated reporting pursuant to Articles 17 to 25.

5. In its updates referred to in paragraph 2, Contracting Parties shall take into consideration <…> obligations deriving from the Paris Agreement.

6. The procedures laid down in Article 9(2) and Articles 10 and 12 shall apply to the preparation and assessment of the updated integrated national energy and climate plans.

7. This Article is without prejudice to the right of Contracting Parties to make changes and adaptations in national policies set out or referred to in their integrated national energy and climate plans at any time, provided such changes and adaptations are included in the integrated national energy and climate progress report.

CHAPTER 3
LONG-TERM STRATEGIES

Article 15
Long-term strategies

1. By the time this Regulation comes into force, and subsequently by 1 January 2029 and every 10 years thereafter, each Contracting Party shall prepare and submit to the Secretariat its long-term strategy with a 30 years perspective and consistent with the Energy Community’s climate-neutrality objective. Contracting Parties should, where necessary, update those strategies every five years.
2. <…>

3. The Contracting Parties’ strategies shall contribute to:

(a) fulfilling the Contracting Parties’ commitments under the UNFCCC and the Paris Agreement to reduce anthropogenic greenhouse gas emissions and enhance removals by sinks and to promote increased carbon sequestration;

(b) fulfilling the objective of the Paris Agreement of holding the increase in the global average temperature to well below 2 °C above pre-industrial levels and to pursue efforts to limit the temperature increase to 1,5 °C above pre-industrial levels;

(c) achieving long-term greenhouse gas emission reductions and enhancements of removals by sinks in all sectors in accordance with the Energy Community’s objective, in the context of necessary reductions and enhancements of removals by sinks according to the Intergovernmental Panel on Climate Change (IPCC) to reduce the Contracting Parties’ greenhouse gas emissions in a cost-effective manner and enhance removals by sinks in pursuit of the long-term temperature goals in the Paris Agreement so as to achieve a balance between anthropogenic emissions by sources and removals by sinks of greenhouse gases within the Energy Community and, as appropriate, achieve negative emissions thereafter;

(d) a highly energy efficient and highly renewables-based energy system within the Energy Community.

4. Contracting Parties’ long-term strategies should contain the elements set out in Annex IV. Furthermore, the Contracting Parties’ long-term strategies shall cover:

(a) total greenhouse gas emission reductions and enhancements of removals by sinks;

(b) emission reductions and enhancements of removals in individual sectors, including electricity, industry, transport, the heating and cooling and buildings sector (residential and tertiary), agriculture, waste and land use, land-use change and forestry (LULUCF);

(c) expected progress on transition to a low greenhouse gas emission economy, including greenhouse gas intensity, CO₂ intensity of gross domestic product, related estimates of long-term investment, and strategies for related research, development and innovation;

(d) to the extent feasible, expected socio-economic effect of the decarbonisation measures, including, inter alia, aspects related to macro-economic and social development, health risks and benefits and environmental protection;

(e) links to other national long-term objectives, planning and other policies and measures, and investment.

5. The Secretariat shall inform the Permanent High Level Group about any delegated acts adopted pursuant to Article 15 paragraph 5 of Regulation (EU) 2018/1999 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis.

6. The integrated national energy and climate plans shall be consistent with the long-term strategies referred to in this Article.

7. Contracting Parties shall inform and make available to the public forthwith their respective long-term strategies and any updates thereof, including by means of the dedicated section of the Energy Community e-platform referred in Article 28. Contracting Parties shall make relevant data of the final results available to the public, taking into account commercially sensitive data and compliance with
the data protection rules.

8. The Secretariat shall support Contracting Parties in the preparation of their long-term strategies by providing information on the state of the underlying scientific knowledge and opportunities for sharing knowledge and best practices, including, where relevant, guidance for Contracting Parties during the development and implementation phase of their strategies.

9. The Energy Community Secretariat shall assess whether the national long-term strategies are adequate for the achievement of the objectives ... of the Energy Union and the targets of the Energy Community set out in Article 1 and shall provide information on any remaining gap.

**Article 16**

Strategic plan for methane

Given the high global warming potential and relatively short atmospheric lifetime of methane, the purpose of reducing the short- and middle-term impact of methane emissions on Contracting Parties’ greenhouse gas emissions, as well as taking into account the circular economy objectives as appropriate, the Contracting Parties assisted by the Energy Community Secretariat shall consider policy options for rapidly addressing methane emissions and shall put forward a strategic plan for methane at Energy Community level.

**CHAPTER 4**

**REPORTING**

**Section 1**

Biennial progress reports and their follow up

**Article 17**

Integrated national energy and climate progress reports

1. Without prejudice to Article 26, by 15 March 2025, and every two years thereafter, each Contracting Party shall report to the Secretariat on the status of implementation of its integrated national energy and climate plan by means of an integrated national energy and climate progress report covering all five dimensions of the Energy Union.

2. The integrated national energy and climate progress report shall cover the following elements:

(a) information on the progress accomplished towards reaching the objectives, including progress towards the Energy Community’s climate-neutrality objective, targets and contributions set out in the integrated national energy and climate plan, and towards financing and implementing the policies and measures necessary to meet them, including a review of actual investment against initial investment assumptions;
(b) where applicable, information on the progress in establishing the dialogue referred to in Article 11;
(c) the information referred to in Articles 20 to 25 and, where appropriate, updates on policies and measures, in accordance with those articles;
(d) information on adaptation in accordance with point (a)(1) of Article 4;
(e) as far as possible quantification of the impact of the policies and measures in the integrated national energy and climate plan on air quality and on emissions of air pollutants.

3. The integrated national energy and climate progress report shall cover the information contained in the annual reports referred to in Article 26(3) and the information on policies and measures and projections of anthropogenic greenhouse gas emissions by sources and removals by sinks contained in the reports referred to in Article 18.

4. The Secretariat shall inform the Permanent High Level Group about any implementing acts adopted pursuant to Article 17(4) of Regulation (EU) 2018/1999 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing acts into the Energy Community acquis.

5. The frequency and scale of the information and updates referred to in point (c) of paragraph 2 shall be balanced against the need to ensure sufficient certainty for investors.

6. Where the Secretariat has issued recommendations pursuant to Article 32(1) or (2), the Contracting Party concerned shall include in its integrated national energy and climate progress report information on the policies and measures adopted, or intended to be adopted and implemented, to address those recommendations. Where applicable, such information shall include a detailed timetable for implementation. Where the Contracting Party concerned decides not to address a recommendation or a substantial part thereof, it shall provide its reasoning.

7. Contracting Parties shall make available to the public the reports submitted to the Secretariat pursuant to this Article.

**Article 18**

Integrated reporting on greenhouse gas policies and measures and on projections

1. **Contracting Parties** shall report to the Secretariat information on:
   (a) their national policies and measures or group of measures as set out in Annex VI by 15 March 2023 and every two years thereafter, and
   (b) their national projections of anthropogenic greenhouse gas emissions by sources and removals by sinks, organised by gas or group of gases (Hydrofluorocarbons and Perfluorocarbons) listed in Part 2 of Annex V, by 15 March 2025 and every two years thereafter. National projections shall take into consideration any policies and measures adopted at Energy Community level and shall include the information set out in Annex VII.

2. **Contracting Parties** shall report the most up-to-date projections available. Where a Contracting
Party does not submit complete projection estimates by 15 March every second year, and the Secretariat has established that gaps in the estimates cannot be filled by that Contracting Party once identified through the Secretariat’s quality assurance or quality control procedures, the Secretariat may prepare estimates as required to compile Contracting Parties’ projections, in consultation with the Contracting Party concerned.

3. A Contracting Party shall communicate to the Secretariat any substantial changes to the information reported pursuant to paragraph 1 during the first year of the reporting period, by 15 March of the year following the previous report.

4. Contracting Parties shall make available to the public, in electronic form, their national projections pursuant to paragraph 1 and any relevant assessment of the costs and effects of national policies and measures on the implementation of Contracting Parties’ policies relevant for limiting greenhouse gas emissions along with any relevant underpinning technical reports. Those projections and assessments should include descriptions of the models and methodological approaches used, definitions and underlying assumptions.

**Article 19**

Integrated reporting on national adaptation actions, financial and technology support provided to developing countries and carbon price revenues

1. By 15 March 2023, and every two years thereafter, Contracting Parties shall report to the Secretariat information on their national climate change adaptation planning and strategies, outlining their implemented and planned actions to facilitate adaptation to climate change, including the information specified in Part 1 of Annex VIII and in accordance with the reporting requirements agreed upon under the UNFCCC and the Paris Agreement.

2. By 31 July 2023 and every year thereafter (year X), Contracting Parties shall report to the Energy Community Secretariat information on the use of any revenues generated by the Contracting Party from carbon price mechanisms, including the information specified in Part 3 of Annex VIII.

3. By 30 September 2025 and every year thereafter (year X), Contracting Parties shall report to the Secretariat information on support to developing countries, including the information specified in Part 2 of Annex VIII and in accordance with the relevant reporting requirements agreed upon under the UNFCCC and the Paris Agreement.

4. Contracting Parties shall make available to the public the reports submitted to the Secretariat pursuant to this Article, with the exception of the information specified in point (b) of Part 2 of Annex VIII.

5. The Secretariat shall inform the Permanent High Level Group about any implementing acts adopted pursuant to Article 19(5) of Regulation (EU) 2018/1999 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing acts into the Energy Community acquis.
Article 20

Integrated reporting on renewable energy

Contracting Parties shall include in the integrated national energy and climate progress reports information:

(a) on the implementation of the following trajectories and objectives:

(1) indicative national trajectory for the overall share of renewable energy in gross final energy consumption from 2025 to 2030;

(2) estimated trajectories for the sectoral share of renewable energy in final energy consumption from 2025 to 2030 in the electricity, heating and cooling and transport sector;

(3) estimated trajectories per renewable energy technology to achieve the overall and sectoral trajectories for renewable energy from 2025 to 2030, including total expected gross final energy consumption per technology and sector in Mtoe and total planned installed capacity per technology and sector in MW;

(4) trajectories on bioenergy demand, disaggregated between heat, electricity and transport, and on biomass supply, by feedstock and origin (distinguishing between domestic production and imports). For forest biomass, an assessment of its source and impact on the LULUCF sink;

(5) where applicable, other national trajectories and objectives, including those that are long-term and sectoral (such as share of electricity produced from biomass without the utilisation of heat, share of renewable energy in district heating, renewable energy use in buildings, renewable energy produced by cities, renewable energy communities and renewables self-consumers), energy recovered from the sludge acquired through the treatment of wastewater;

(b) on the implementation of the following policies and measures:

(1) implemented, adopted and planned policies and measures to achieve the national contribution to the 2030 Energy Community target for renewable energy as indicated in point (a)(2) of Article 4 of this Regulation, including sector- and technology-specific measures, with a specific review of the implementation of measures laid down in Articles 23 to 28 of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(2) where available, specific measures for regional cooperation;

(3) without prejudice to Articles 18 and 19 of the Energy Community Treaty, specific measures on financial support, <…> for the promotion of the use of energy from renewable sources in electricity, heating and cooling, and transport;

(4) when applicable, the assessment of the support for electricity from renewable sources that Contracting Parties are to carry out pursuant to Article 6(4) of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(5) specific measures to fulfil the requirements of Articles 15 to 18 of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(6) where applicable, specific measures to assess, make transparent and reduce the need for must-run capacity that can lead to curtailment of energy from renewable sources;

(7) a summary of the policies and measures under the enabling framework Contracting Parties are to put in place pursuant to Article 21(6) and Article 22(5) of Directive (EU) 2018/2001, as adapted and ad-
opted by Ministerial Council Decision 2021/14/MC-EnC to promote and facilitate the development of renewables self-consumption and renewable energy communities;

(8) measures promoting the use of energy from biomass, especially for new biomass mobilisation taking into account biomass, including sustainable biomass availability as well as measures for the sustainability of biomass produced and used;

(9) measures in place to increase the share of renewable energy in the heating and cooling and transport sector;

(10) policies and measures facilitating the uptake of power purchase agreements;

(c) as set out in Part 1 of Annex IX.

**Article 21**

**Integrated reporting on energy efficiency**

**Contracting Parties** shall include in the integrated national energy and climate progress reports information:

(a) on the implementation of the following national trajectories, objectives and targets:

(1) the indicative trajectory for primary and final annual energy consumption from 2025 to 2030 as the national energy savings contribution to achieving the Energy Community-level 2030 target, including the underlying methodology;

(2) the indicative milestones of the long-term strategy for the renovation of the national stock of residential and non-residential buildings, both public and private, and the contributions to the Contracting Parties’ energy efficiency targets pursuant to Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC in accordance with Article 2a of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC;

(3) where applicable, an update of other national objectives set out in the national plan;

(b) on the implementation of the following policies and measures:

(1) implemented, adopted and planned policies, measures and programmes to achieve the indicative national energy efficiency contribution for 2030 as well as other objectives referred to in Article 6, including planned measures and instruments (also of a financial nature) to promote the energy performance of buildings, measures to utilise energy efficiency potentials of gas and electricity infrastructure and other measures to promote energy efficiency;

(2) where applicable, market-based instruments that incentivise energy efficiency improvements, including but not limited to energy taxes, levies and allowances;

(3) national energy efficiency obligation scheme and alternative measures pursuant to Article 7a and 7b of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC and in accordance with Annex III to this Regulation;

(4) long-term renovation strategies in accordance with Article 2a of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC;
(5) policy and measures to promote energy services in the public sector and measures to remove regulatory and non-regulatory barriers that impede the uptake of energy performance contracting and other energy efficiency service models;

(6) regional cooperation in the area of energy efficiency, where applicable;

(7) without prejudice to Articles 18 and 19 of the Energy Community Treaty, financing measures, <...> in the area of energy efficiency at national level, where applicable;

(c) as set out in Part 2 of Annex IX.

**Article 22**

Integrated reporting on energy security

**Contracting Parties** shall include in the integrated national energy and climate progress reports information on the implementation of:

(a) national objectives for the diversification of energy sources and supply;

(b) where applicable, national objectives with regard to reducing energy import dependency from third countries;

(c) national objectives for the development of the ability to cope with constrained or interrupted supply of an energy source, including gas and electricity;

(d) national objectives with regard to increasing the flexibility of the national energy system, in particular by means of deploying domestic energy sources, demand response and energy storage;

(e) implemented, adopted and planned policies and measures to achieve the objectives referred to in points (a) to (d);

(f) regional cooperation in implementing the objectives and policies referred to in points (a) to (d);

(g) without prejudice to Articles 18 and 19 of the Energy Community Treaty, financing measures <...> in this area at national level, where applicable.

**Article 23**

Integrated reporting on the internal energy market

1. **Contracting Parties** shall include in their integrated national energy and climate progress reports information on the implementation of the following objectives and measures:

(a) the level of electricity interconnectivity that the **Contracting Party** aims for in 2030 in consideration of the Energy Community’s electricity interconnection target for 2030 <...> and the indicators set out in point 2.4.1 of Section A of Part I of Annex I, as well as measures for the implementation of the strategy for the achievement of this level, including those relating to the granting of authorisations;

(b) key electricity and gas transmission infrastructure projects that are necessary for the achievement of objectives and targets under the five dimensions of the Energy Union;

(c) where applicable, main infrastructure projects envisaged other than Projects of **Energy Community**
Interest or Projects of Mutual Interest, including infrastructure projects involving Member States of the European Union and third countries, and, to the extent feasible, a general assessment of their compatibility with, and contribution to, the aims and targets of the Contracting Parties;

(d) national objectives related to other aspects of the internal energy market such as increasing system flexibility, market integration and coupling, aiming to increase the tradeable capacity of existing interconnectors, smart grids, aggregation, demand response, storage, distributed generation, mechanisms for dispatching, re-dispatching and curtailment, real-time price signals;

(e) where applicable, national objectives and measures related to the non-discriminatory participation of renewable energy, demand response and storage, including via aggregation, in all energy markets;

(f) where applicable, national objectives and measures with regard to ensuring that consumers participate in the energy system and benefits from self-generation and new technologies, including smart meters;

(g) measures with regard to ensuring electricity system adequacy;

(h) implemented, adopted and planned policies and measures to achieve the objectives referred to in points (a) to (g);

(i) regional cooperation in implementing the objectives and policies referred to in points (a) to (h);

(j) without prejudice to Articles 18 and 19 of the Energy Community Treaty, financing measures at national level in the area of the internal energy market, including for the electricity interconnection target, where applicable;

(k) measures to increase the flexibility of the energy system with regard to renewable energy production, including the roll-out of intraday market coupling and cross-border balancing markets.

2. The information provided by Contracting Parties under paragraph 1 shall be consistent with and as appropriate be based on the report by the national regulators referred to in point (e) of Article 37(1) of Directive 2009/72/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC and point (e) of Article 41(1) of Directive 2009/73/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC.

Article 24

Integrated Reporting on Energy Poverty

Where the second subparagraph of point (d) of Article 3(3) applies, the Contracting Party concerned shall include in its integrated national energy and climate progress report:

(a) information on progress towards the national indicative objective to reduce the number of households in energy poverty; and

(b) quantitative information on the number of households in energy poverty, and, where available, information on policies and measures addressing energy poverty.

The Secretariat shall share data communicated by Contracting Parties pursuant to this Article with the European Energy Poverty Observatory.
Article 25
Integrated reporting on research, innovation and competitiveness

Contracting Parties shall include in their integrated national energy and climate progress reports information on the implementation of the following objectives and measures:

(a) <…>

(b) national objectives for total public and, where available, private spending in research and innovation relating to clean energy technologies as well as for technology cost and performance development;

(c) where appropriate, national objectives, including long-term targets for 2050 for the deployment of technologies for decarbonising energy- and carbon-intensive industrial sectors and, where applicable, for related carbon transport, use, and storage infrastructure;

(d) national objectives to phase out energy subsidies, in particular for fossil fuels;

(e) implemented, adopted and planned policies and measures to achieve the objectives referred to in points (b) and (c);

(f) cooperation with other Contracting Parties or Member States of the European Union in implementing the objectives and policies referred to in points (b) to (d), such as alignment of research programmes and common programmes;

(g) financing measures <…> in this area at national level and from non-domestic sources, where applicable.

Section 2
Annual reporting

Article 26
Annual Reporting

1. By 15 March 2023, and every year thereafter (year X), Contracting Parties shall report to the Secretariat:

(a) the information referred to in Article 6(2) of Directive 2009/119/EC, as adapted and adopted by Ministerial Council Decision 2012/03/MC-EnC;

(b) <…>

2. By 31 July 2025, and every year thereafter (year X), Contracting Parties shall report to the Secretariat their approximated greenhouse gas inventories for the year X-1.

For the purposes of this paragraph, the Secretariat shall, on the basis of the Contracting Parties’ approximated greenhouse gas inventories or, if a Contracting Party has not communicated its approximated inventories by that date, on the basis of its own estimates, annually compile a Contracting Parties’ approximated greenhouse gas inventory. The Secretariat shall make that information available to the
public by 30 September every year.

3. From **2025**, Contracting Parties shall determine and report to the Secretariat final greenhouse gas inventory data by 15 March each year (year X) and preliminary data by 15 January each year **in line with timelines under UNFCCC flexibilities**, including the greenhouse gases and the inventory information listed in Annex V. The report on the final greenhouse gas inventory data shall also include a complete and up-to-date national inventory report. Within three months of receiving the reports, the Secretariat shall make the information referred to in point (n) of Part I of Annex V available to the Energy and Climate Committee referred to in point (a) of Article 44(1).

4. <…> The Secretariat shall, in cooperation with the Contracting Parties, <…> compile an Energy Community greenhouse gas inventory and prepare an Energy Community greenhouse gas inventory report <…>.

5. <…>

6. <…>

7. The Secretariat shall inform the Permanent High Level Group about any implementing acts pursuant to Article 26(6) of Regulation (EU) 2018/1999 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing acts into the Energy Community acquis.

**Article 27**

**Reporting on the 2020 targets**

By 30 April 2022, each Contracting Party shall report to the Secretariat on the achievement of its 2020 energy efficiency national target established pursuant to Article 3(1) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC by providing the information set out in Part 2 of Annex IX to this Regulation, and of the national overall targets for the share of energy from renewable sources in 2020 as set out in Annex I to 2009/28/EC, as adapted and adopted by Ministerial Council Decision 2018/02/MC-EnC amending Decision 2012/04/MC-EnC by providing the following information:

(a) the sectoral (electricity, heating and cooling, and transport) and overall shares of energy from renewable sources in 2020;

(b) the measures taken to achieve the 2020 national renewable energy targets, including measures related to support schemes, guarantees of origin and simplification of administrative procedures;

(c) the share of energy from biofuels and bioliquids produced from cereal and other starch-rich crops, sugars and oil crops in energy consumption in transport;

(d) the share of energy from biofuels and biogas for transport produced from feedstocks and of other fuels listed in Part A of Annex IX to Directive (EU) 2018/2001 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in energy consumption in transport.
Section 3

Reporting platform

Article 28

Energy Community E-platform

1. The Secretariat shall establish an online platform (Energy Community e-platform) to facilitate communication between the Secretariat and Contracting Parties, to promote cooperation among Contracting Parties and to facilitate public access to information.

2. Contracting Parties shall use the e-platform for the purposes of submitting to the Secretariat the reports referred to in this Chapter once it becomes operational.

3. The Energy Community e-platform shall become operational by 1 January 2023. The Secretariat shall use the Energy Community e-platform to facilitate public online access to the reports referred to in this Chapter, the final integrated national energy and climate plans, the updates thereof, and the long-term strategies referred to in Article 15, taking into account commercially sensitive data and compliance with the data protection rules.

CHAPTER 5

AGGREGATE ASSESSMENT OF PROGRESS AND POLICY RESPONSE TO ENSURE CONTRACTING PARTIES’ TARGETS ACHIEVEMENT — SECRETARIAT MONITORING

Article 29

Assessment of progress

1. By 31 October 2025 and every two years thereafter, the Secretariat shall assess, in particular on the basis of the integrated national energy and climate progress reports, of other information reported under this Regulation, of the indicators and of <…> statistics and data where available:

(a) the progress made at Contracting Parties’ level as a whole towards meeting the objectives of the Energy Union, including for the first ten-year period the Energy Community’s 2030 targets for energy and climate, in particular for the purpose of avoiding any gaps to the Energy Community’s 2030 targets for renewable energy and energy efficiency;

(b) the progress made by each Contracting Party towards meeting its objectives, including progress towards the Energy Community’s climate-neutrality objective, targets and contributions and implementing the policies and measures set out in its integrated national energy and climate plan;

(c) the overall impact of aviation on the global climate, including through non-CO₂ emissions or effects, based on the emission data provided by Contracting Parties pursuant to Article 26, and improve that assessment by reference to scientific advancements and air traffic data, as appropriate;
(d) the overall impact of the policies and measures of the integrated national energy and climate plans on the operation of the Energy Community climate and energy policy measures;

(e) <…>  

2. In the area of renewable energy, as part of its assessment referred to in paragraph 1, the Secretariat shall assess the progress made in the share of energy from renewable sources in the Contracting Parties’ gross final consumption on the basis of an indicative Contracting Parties’ trajectory that starts <…> in 2020, reaches reference points of at least <…> 65 % in 2027 of the total increase in the share of energy from renewable sources between the Contracting Parties’ 2020 renewable energy target and the Contracting Parties’ 2030 renewable energy target, and reaches the Contracting Parties’ 2030 renewable energy target <…> in 2030.

3. In the area of energy efficiency, as part of its assessment referred to in paragraph 1, the Energy Community Secretariat shall assess progress towards achieving a maximum energy consumption at Contracting Parties’ level of <…> primary energy and <…> of final energy in 2030 in accordance with Article 3(5) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC. In carrying out its assessment, the Secretariat shall take the following steps:

(a) consider whether the Contracting Parties’ milestone of <…> primary energy and of <…> final energy in 2020 is achieved;

(b) assess whether Contracting Parties’ progress indicates that the Contracting Parties as a whole are on track towards the level of energy consumption in 2030 as referred to in Article 2(11), taking into account the assessment of information provided by Contracting Parties in their integrated national energy and climate progress reports;

(c) use results from modelling exercises in relation to future trends in energy consumption at level of Contracting Parties as a whole and national level and use other complementary analysis;

(d) take due account of relevant circumstances affecting primary and final energy consumption indicated by the Contracting Parties in their integrated national energy and climate plans, in accordance with Article 6(2).

4. In the area of the internal energy market, as part of its assessment referred to in paragraph 1, the Secretariat shall assess the progress made towards the level of electricity interconnectivity that the Contracting Party aims for in 2030.

5. By 31 October 2023 and every year thereafter, the Secretariat shall assess, in particular on the basis of the information reported pursuant to this Regulation, whether the <…> Contracting Parties have made sufficient progress towards meeting the following requirements:

(a) commitments under Article 4 of the UNFCCC and under Article 3 of the Paris Agreement as set out in decisions adopted by the Conference of the Parties to the UNFCCC, or by the Conference of the Parties to the UNFCCC serving as the meeting of the Parties to the Paris Agreement;

(b) <…>  

(c) the objectives set out in the integrated national energy and climate plan with a view to achieving the Energy Union objectives and for the first five-year period with a view to fulfilling the 2030 targets for energy and climate.
6. <…>

7. The Energy Community Secretariat shall report on its assessment in accordance with this Article as part of the annual implementation report.

Article 30
Inconsistencies with overarching Energy Union objectives <…>

1. Based on the assessment pursuant to Article 29, the Secretariat shall issue recommendations to a Contracting Party pursuant to Article 34 if policy developments in that Contracting Party show inconsistencies with the overarching objectives of the Energy Union.

2. <…>

Article 31
Response to insufficient ambition of integrated national energy and climate plans

1. Where, on the basis of its assessment of the draft integrated national energy and climate plans pursuant to Article 9 or its assessment of the draft updates of the final plans pursuant to Article 14, and as part of the iterative process, the Energy Community Secretariat concludes that the objectives, targets and contributions of the Contracting Parties are insufficient for the achievement of the Energy Union objectives and in particular, for the 2025 to 2030 period, for the Energy Community’s 2030 target for renewable energy and the Energy Community 2030 headline target for energy efficiency, it shall — as regards the Energy Community’s target for renewable energy — and may — as regards the other Energy Union objectives — issue recommendations to Contracting Parties whose contributions it deems insufficient to increase their ambition in order to ensure a sufficient level of ambition.

2. Where a gap between the Energy Community’s 2030 target and the contributions of Contracting Parties occurs in the area of renewable energy, the Secretariat shall base its assessment on Annex II which is based on the objective criteria listed in point (e)(i) to (v) of the first subparagraph of Article 5(1), whilst having due regard to relevant circumstances affecting renewable energy deployment as indicated by the Contracting Party in accordance with the second subparagraph of Article 5(1).

Where a gap between the Energy Community’s 2030 target and the sum of the national contributions occurs in the area of energy efficiency, the Secretariat shall, in particular, evaluate the relevant circumstances listed in Article 6(2), information provided by Contracting Parties in their integrated national energy and climate plans, results from modelling exercises in relation to future trends in energy consumption and other complementary analysis as appropriate.

Without prejudice to the other provisions of this Article, and for the sole purpose of assessing whether a gap between the Energy Community’s 2030 target and the contributions of Contracting Parties occurs, the Secretariat shall, in its assessment, assume a national contribution of the Contracting Party which did not submit their draft integrated national energy and climate plans in accordance with Article 9(1).

In its assumption, in the area of renewable energy, the Secretariat shall take into account the Contracting Party’s national binding target for 2020 as set out in Annex I to Directive (EU) 2018/2001, as adapted
and adopted by Ministerial Council Decision 2021/14/MC-EnC results from modelling exercises on renewable energy development and <…> Annex II to this Regulation. In the area of energy efficiency, it shall take into account modelling exercises in relation to future trends in energy consumption and other complementary analysis as appropriate.

In its assessment of the renewable energy contributions, based on Annex II, the Secretariat shall take into consideration any potential negative impacts on the security of supply and grid stability in small or isolated energy systems or in Contracting Parties’ systems where there may be significant implications due to the change of synchronous area.

In its assessment of the energy efficiency contributions, the Secretariat shall take into consideration the potential impact on electricity system operation and grid stability in Contracting Parties where there may be significant implications due to the change of synchronous area.

3. Where, on the basis of its assessment of the integrated national energy and climate plans and their updates pursuant to Article 14, the Secretariat concludes that the objectives, targets and contributions of the integrated national energy and climate plans or their updates are insufficient for the <…> achievement of the Energy Union objectives and, in particular, for the 2025 to 2030 period, for the Energy Community’s 2030 targets for renewable energy and energy efficiency, it shall propose measures and exercise its powers at Energy Community level in order to ensure the <…> achievement of those objectives and targets. With regard to renewable energy, such measures shall take into consideration the level of ambition of contributions to the Energy Community’s 2030 target by Contracting Parties set out in the integrated national energy and climate plans and their updates.

Article 32
Response to insufficient progress towards the <…> energy and climate objectives and targets of Contracting Parties as a whole

1. Where, on the basis of its assessment pursuant to point (b) of Article 29(1), the Secretariat concludes that insufficient progress is made by a Contracting Party towards meeting its objectives, targets and contributions, its reference points for renewable energy, or in implementing the policies and measures set out in its integrated national climate and energy plan, it shall issue recommendations to the Contracting Party concerned pursuant to Article 34.

In its recommendations in the area of renewable energy, the Secretariat shall take into consideration the relevant circumstances indicated by the Contracting Party in accordance with the second subparagraph of Article 5(1). The Secretariat shall also take into consideration renewable energy projects for which a final investment decision has been taken, provided that those projects become operational in the period 2025 to 2030 and have a significant impact on a Contracting Party’s national contribution.

In its recommendations in the area of energy efficiency, the Secretariat shall take due account of the objective criteria listed in points (a) and (b) of Article 6(1) and the relevant national circumstances indicated by the Contracting Party in accordance with Article 6(2).

2. Where, on the basis of its aggregate assessment of Contracting Parties’ integrated national energy and climate progress reports pursuant to point (a) of Article 29(1), and supported by other information sources, as appropriate, the Energy Community Secretariat concludes that the Contracting Parties are
at risk of not meeting the objectives of the Energy Union and, in particular, for the 2025 to 2030 period, the targets of the Energy Community’s 2030 targets, it may issue recommendations to all Contracting Parties pursuant to Article 34 to mitigate such a risk.

In the area of renewable energy, the Secretariat shall assess if the national measures provided for in paragraph 3 are sufficient to achieve the Energy Community’s renewable energy targets. In the case of insufficient national measures, the Secretariat shall, as appropriate, propose measures and exercise its power at Energy Community level in addition to those recommendations in order to ensure, in particular, the achievement of the Energy Community’s 2030 target for renewable energy.

In the area of energy efficiency, the Secretariat shall as appropriate, propose measures and exercise its powers at Energy Community level in addition to those recommendations in order to ensure, in particular the achievement of the Energy Community’s 2030 target for energy efficiency.

In the area of energy efficiency, such additional measures may in particular improve the energy efficiency of:

(a) products, pursuant to <…> Regulation (EU) 2017/1369, as adapted and adopted by Ministerial Council Decision 2018/03/MC-EnC;

(c) transport.

3. Where, in the area of renewable energy the Energy Community Secretariat concludes, based on its assessment pursuant to Article 29(1) and (2), that the reference point of the indicative Contracting Parties’ trajectory in 2027 referred to in Article 29(2) was not met, Contracting Parties that have fallen below their national reference point in 2027 as referred to in point (a)(2) of Article 4 shall ensure that additional measures are implemented within one year following the date of reception of the Secretariat’s assessment in order to cover the gap compared to their national reference point, such as:

(a) national measures to increase deployment of renewable energy;

(b) adjusting the share of renewable energy in the heating and cooling sector set out in Article 23(1) of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(c) adjusting the share of renewable energy in the transport sector set out in Article 25(1) of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(d) making a voluntary financial payment to the Energy Community renewable energy financing mechanism once set up, contributing to renewable energy projects <…> as set out in Article 33;

Such measures shall take into account the Secretariat’s considerations as set out in the second subparagraph of paragraph 1 of this Article. The Contracting Parties concerned shall include those measures as part of their integrated national energy and climate progress report.

4. From 1 January 2022 onwards, the share of energy from renewable sources in each Contracting Party’s gross final consumption of energy shall not be lower than a baseline share that is equal to its mandatory national overall target for the share of energy from renewable sources in 2020 set out in Article 3(4) of Directive (EU) 2018/2001 as adapted and adopted by Ministerial Council Decision 2021/14/MC-
If a Contracting Party does not maintain its baseline share as measured over a one-year period, the Contracting Party concerned shall take, within one year, additional measures such as those as set out in points (a) to (e) of the first subparagraph of paragraph 3 of this Article sufficient to cover the gap within one year.

Contracting Parties fulfilling the obligation to cover the gap to the baseline shall be deemed to be in compliance with the obligations set out in the first sentence of the first subparagraph of this paragraph and in Article 3(4) of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC throughout the period where the gap occurred.

Where a Contracting Party’s share of energy from renewable sources falls below one or more of its national reference points as referred to in point (a)(2) of Article 4, it shall include in the next integrated report submitted to the Secretariat pursuant to Article 17 an explanation of how it will cover the gap compared to its national reference points.

Where, in the area of energy efficiency, without prejudice to other measures at Energy Community level pursuant to the third subparagraph of paragraph 2 of this Article, the Secretariat concludes, based on its assessment pursuant to Article 29(1) and (3), carried out by the years 2025 and 2027 that progress towards achieving the Contracting Parties’ energy efficiency targets referred to in the first subparagraph of Article 29(3) is insufficient, it shall propose measures and exercise its power at Energy Community level in addition to those set out in Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC and by the Ministerial Council Decision 2021/14/MC-EnC and Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC to ensure that the Contracting Parties’ 2030 energy efficiency targets are met.

Each Contracting Party concerned referred to in paragraph 3 of this Article shall detail the additional implemented, adopted and planned measures as part of its following progress report referred to in Article 17.

Where, in the area of interconnections, the Secretariat concludes, based on its assessment pursuant to Article 29(1) and (4), in the year 2025 that progress is insufficient, the Secretariat shall cooperate with the Contracting Party concerned by the year 2026 with the aim of addressing the circumstances encountered.

Article 33

Energy Community renewable energy financing mechanism

1. By 2023, the European Commission may make a proposal to include the Contracting Parties in the European Union’s renewable energy financing mechanism as established in accordance with Article 33 of Regulation (EU) 1999/2018.

<...>
**Article 34**

**Secretariat recommendations to Contracting Parties**

1. The Secretariat shall as appropriate issue recommendations to Contracting Parties to ensure the achievement of the objectives of the Energy Union. The Secretariat shall make such recommendations publicly available forthwith.

2. Where reference in this Regulation is made to this Article the following principles shall apply:

   (a) the Contracting Party concerned shall take due account of the recommendation in a spirit of solidarity between Contracting Parties and the Energy Community and between Contracting Parties and Member States of the European Union;

   (b) the Contracting Party shall set out, in its integrated national energy and climate progress report made in the year following the year the recommendation was issued, how it has taken due account of the recommendation. If the Contracting Party concerned decides not to address a recommendation or a substantial part thereof, that Contracting Party shall provide its reasoning;

   (c) <…>

**Article 35**

**Implementation report**

1. By 31 October of every year, the Energy Community Secretariat shall submit to Ministerial Council its annual Implementation Report.

2. Besides the state of implementation by Contracting Parties of the acquis communautaire under the Energy Community Treaty, the Implementation Report shall include the following elements:

   (a) the assessment carried out pursuant to Article 29;

   (b) where appropriate, recommendations pursuant to Article 34;

   (c) the report on the development of carbon pricing instruments in the Contracting Parties and in the Energy Community and when relevant, a report on the functioning of the carbon market or any carbon pricing instruments;

   (d) biennially, from 2023, a report on bioenergy sustainability of Contracting Parties as a whole, containing the information specified in Annex X;

   (e) biennially, a report on voluntary schemes in respect of which the Secretariat has issued an opinion pursuant to Article 30(4) of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC containing the information specified in Annex XI to this Regulation;

   (f) an overall progress report on the application of Directive 2009/72/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC;

   (g) an overall progress report on the application of Directive 2009/73/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC <…>;

   (h) an overall progress report on energy efficiency obligation schemes and alternative policy measures as referred to in Articles 7a and 7b of Directive 2012/27/EU, as adapted and adopted by Ministerial

(i) biennially, an overall progress report on the renovation of the national stock of residential and non-residential buildings, both public and private, in line with the roadmaps set out in the long-term renovation strategies that each Contracting Party shall establish in accordance with Article 2a of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC;

(j) every four years, an overall progress report on Contracting Parties’ increase in the number of nearly zero-energy buildings in accordance with Article 9(5) of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC;

(k) an overall progress report on Contracting Parties’ progress in creating a complete and operational energy market;

(l) <…>

(m) a progress report on competitiveness;

(n) Contracting Parties’ progress towards phasing out energy subsidies, in particular for fossil fuels;

(o) other issues of relevance to the implementation of the acquis communautaire under the Energy Community Treaty, including public and private support;

(p) <…>

Article 36
Monitoring of the governance mechanism

In the context of the Implementation Report as referred to in Article 35, the Secretariat shall inform the Ministerial Council on the implementation of the integrated national energy and climate plans. The Ministerial Council shall, on an annual basis, address the progress achieved by the Contracting Parties in this respect.

CHAPTER 6
NATIONAL SYSTEMS ON GREENHOUSE GAS EMISSIONS AND REMOVALS BY SINKS

Article 37
Energy Community and national inventory systems

1. By 1 January 2023, Contracting Parties shall establish, operate and seek to continuously improve national inventory systems to estimate anthropogenic emissions by sources and removals by sinks of greenhouse gases listed in Part 2 of Annex V and to ensure the timeliness, transparency, accuracy, consistency, comparability and completeness of their greenhouse gas inventories.

2. Contracting Parties shall ensure that their competent inventory authorities have access to the infor-
mation specified in Annex XII to this Regulation, <…> and are able to undertake the annual consistency checks referred to in point (j) of Part 1 of Annex V to this Regulation.

3. Unless Contracting Parties can be included in the European Union’s inventory system established in accordance with Article 37 of Regulation (EU) 1999/2018, an Energy Community inventory system to ensure the timeliness, transparency, accuracy, consistency, comparability and completeness of national inventories with regard to the Energy Community greenhouse gas inventory shall be established. The Secretariat shall manage, maintain and seek to continuously improve that system which shall include the setting of a quality assurance and quality control programme, setting quality objectives and drafting an inventory quality assurance and quality control plan, procedures for completing emission estimates to compile the Energy Community inventory pursuant to paragraph 5 of this Article and the reviews referred to in Article 38.

4. In the case envisaged by paragraph 3, the Secretariat shall perform an initial check of the accuracy of the preliminary greenhouse gas inventory data to be submitted by Contracting Parties pursuant to Article 26(3). It shall send the results of that check to Contracting Parties within six weeks of the submission deadline. Contracting Parties shall respond to any relevant questions raised by the initial check by 15 March, together with the final inventory submission for the year X-2.

5. In the case envisaged by paragraph 3, where a Contracting Party does not submit the inventory data required to compile the Energy Community inventory by 15 March, the Secretariat may prepare estimates to complete the data submitted by the Contracting Party, in consultation and close cooperation with the Contracting Party concerned. The Secretariat shall use, for that purpose, the guidelines applicable for preparing the national greenhouse gas inventories.

6. <…>

7. The Secretariat shall inform the Permanent High Level Group about any implementing and delegated acts adopted pursuant to Article 37(6) and (7), respectively, of Regulation (EU) 2018/1999 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing and delegated acts into the Energy Community acquis.

Article 38
Inventory review

1. With a view to monitoring Contracting Parties’ greenhouse gas emission reductions or limitation <…> targets set out in Energy Community law, the Energy Community Secretariat shall, in 2027 and 2032, carry out a comprehensive review of the national inventory data submitted by Contracting Parties <…>. Contracting Parties shall participate fully in that process.

2. The comprehensive review referred to in paragraph 1 shall include:

(a) checks to verify the transparency, accuracy, consistency, comparability and completeness of information submitted;

(b) checks to identify cases where inventory data are prepared in a manner which is inconsistent with UNFCCC guidance documentation or Energy Community rules;
(d) where appropriate, calculating the resulting technical corrections necessary, in consultation with the Contracting Parties.

3. The Secretariat shall inform the Permanent High Level Group about any implementing acts adopted pursuant to Article 38(3) of Regulation (EU) 2018/1999 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing acts into the Energy Community acquis.

4. The Energy Community Secretariat shall <…> determine the total sum of emissions for the relevant years arising from the corrected inventory data for each Contracting Party upon completion of the review of <…> emission data referred to in point (c) of Part 1 of Annex V to this Regulation <…>.

5. <…>

6. <…>

**Article 39**

<…> National systems for policies and measures and projections

1. By 1 January 2023, Contracting Parties and the Secretariat shall operate and seek to continuously improve national and Energy Community systems <…> for reporting on policies and measures and for reporting on projections of anthropogenic greenhouse gas emissions by sources and removals by sinks. Those systems shall include the relevant institutional, legal and procedural arrangements established within a Contracting Party and the Energy Community for evaluating policy and making projections of anthropogenic greenhouse gas emissions by sources and removals by sinks.

2. Contracting Parties and the Secretariat shall aim to ensure the timeliness, transparency, accuracy, consistency, comparability and completeness of the information reported on policies and measures and projections of anthropogenic greenhouse gas emissions by sources and removals by sinks, as referred to in Article 18, including the use and application of data, methods and models, and the implementation of quality assurance and quality control activities and sensitivity analysis.

3. The Secretariat shall inform the Permanent High Level Group about any implementing acts adopted pursuant to Article 39 paragraph 3 of Regulation (EU) 2018/1999 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing acts into the Energy Community acquis.

**Article 40**

<…>
CHAPTER 7
COOPERATION AND SUPPORT

Article 41
Cooperation between the Contracting Parties and Energy Community Secretariat

1. The Contracting Parties shall cooperate with each other and with Member States of the European Union and the Energy Community Secretariat and coordinate fully with each other in relation to obligations under this Regulation, in particular concerning:

(a) the process for preparing, adopting, notifying and assessing the integrated national energy and climate plans pursuant to Articles 9 to 13;
(b) the process for preparing, adopting, notifying and assessing the integrated national energy and climate progress report pursuant to Article 17 and annual reporting pursuant to Article 26;
(c) the process related to the Secretariat recommendations and addressing those recommendations pursuant to Article 9(2) and (3), Article 17(6), Article 30(1), Article 31(1) and Article 32(1) and (2);
(d) compiling the Energy Community greenhouse gas inventory and preparing the Energy Community greenhouse gas inventory report, pursuant to Article 26(4);
(e) <…>
(f) <…>
(g) <…>
(h) compiling the Energy Community approximated greenhouse gas inventory, pursuant to Article 26(2).

2. The Secretariat may provide technical support to the Contracting Parties in relation to obligations under this Regulation upon request from a Contracting Party.

Article 42
Role of the European Environment Agency

The European Environment Agency, based on a bilateral arrangement, may assist the Energy Community Secretariat in its work as regards the decarbonisation and energy efficiency dimensions to comply with Articles 15 to 21, 26, 28, 29, 35, 37, 38, 39 and 41 in accordance with its annual work programme. That shall include assistance, as required, with:

(a) compiling the information reported by Contracting Parties on policies and measures and projections;
(b) performing quality assurance and quality control procedures on the information reported by Contracting Parties on projections and policies and measures;
(c) preparing estimates or complementing those available to the Secretariat for data on projections not reported by the Contracting Parties;
(d) compiling data, wherever available taken from European statistics and appropriate in terms of timing, as required for Implementation Report prepared by the Energy Community Secretariat;
(e) <...>

(f) performing quality assurance and quality control procedures in the preparation of the Energy Community greenhouse gas inventory;

(g) compiling the Contracting Parties’ greenhouse gas inventory and preparing the Contracting Parties’ greenhouse gas inventory report;

(h) preparing estimates for data not reported in the national greenhouse gas inventories;

(i) conducting the review referred to in Article 38;

(j) compiling the Energy Community approximated greenhouse gas inventory.

CHAPTER 8

FINAL PROVISIONS

Article 43

<...>

Article 44

Committees

The Energy Community Secretariat shall closely cooperate with the Energy and Climate Committee of the Energy Community.

Article 45

<...>

Article 46

<...>

Article 47

<...>

Article 48

<...>
Article 49

<…>

Article 50

Article 51

Directive 2009/73/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC, is amended as follows:

(1) Article 5 is deleted;
(2) Article 52 is replaced by the following:

‘Article 52

Reporting

The Secretariat shall monitor and review the application of this Directive and submit an annual Implementation Report to the Ministerial Council.’

Article 52

In Article 6 of Directive 2009/119/EC, paragraph 2 as adapted and adopted by Ministerial Council Decision 2012/03/MC-EnC is replaced by the following:

‘2. By 15 March each year, each Contracting Party shall send the Secretariat a summary copy of the stock register referred to in paragraph 1 showing at least the quantities and nature of the emergency stocks included in the register on the last day of the preceding calendar year.’
Article 53
Amendments to Directive 2010/31/EU as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC;

Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC is amended as follows:

(1) An Article 2a is included as follows:

Article 2a
Long-term renovation strategy

1. Each Contracting Party shall establish a long-term renovation strategy to support the renovation of the national stock of residential and non-residential buildings, both public and private, into a highly energy efficient and decarbonised building stock by 2050, facilitating the cost-effective transformation of existing buildings into nearly zero-energy buildings. Each long-term renovation strategy shall encompass:

(a) an overview of the national building stock, based, as appropriate, on statistical sampling and expected share of renovated buildings in 2020;
(b) the identification of cost-effective approaches to renovation relevant to the building type and climatic zone, considering potential relevant trigger points, where applicable, in the life-cycle of the building;
(c) policies and actions to stimulate cost-effective deep renovation of buildings, including staged deep renovation, and to support targeted cost-effective measures and renovation for example by introducing an optional scheme for building renovation passports;
(d) an overview of policies and actions to target the worst performing segments of the national building stock, split-incentive dilemmas and market failures, and an outline of relevant national actions that contribute to the alleviation of energy poverty;
(e) policies and actions to target all public buildings;
(f) an overview of national initiatives to promote smart technologies and well-connected buildings and communities, as well as skills and education in the construction and energy efficiency sectors; and
(g) an evidence-based estimate of expected energy savings and wider benefits, such as those related to health, safety and air quality.

2. In its long-term renovation strategy, each Contracting Party shall set out a roadmap with measures and domestically established measurable progress indicators, with a view to the long-term 2050 goal of reducing greenhouse gas emissions in the Energy Community by 80-95 % compared to 1990, in order to ensure a highly energy efficient and decarbonised national building stock and in order to facilitate the cost-effective transformation of existing buildings into nearly zero-energy buildings. The roadmap shall include indicative milestones for 2030, 2040 and 2050, and specify how they contribute to achieving the Energy Community’s energy efficiency targets in accordance with Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decision 2015/08/MC-EnC and by the Ministerial Council Decision
To support the mobilisation of investments into the renovation needed to achieve the goals referred to in paragraph 1, Contracting Parties shall facilitate access to appropriate mechanisms for:

(a) the aggregation of projects, including by investment platforms or groups, and by consortia of small and medium-sized enterprises, to enable investor access as well as packaged solutions for potential clients;

(b) the reduction of the perceived risk of energy efficiency operations for investors and the private sector;

(c) the use of public funding to leverage additional private-sector investment or address specific market failures;

(d) guiding investments into an energy efficient public building stock, in line with Eurostat guidance; and

(e) accessible and transparent advisory tools, such as one-stop-shops for consumers and energy advisory services, on relevant energy efficiency renovations and financing instruments.

4. The Energy Community Secretariat shall collect and disseminate, at least to public authorities, best practices on successful public and private financing schemes for energy efficiency renovation as well as information on schemes for the aggregation of small-scale energy efficiency renovation projects. The Energy Community Secretariat shall identify and disseminate best practices on financial incentives to renovate from a consumer perspective taking into account cost-efficiency differences between Contracting Parties.

5. To support the development of its long-term renovation strategy, each Contracting Party shall carry out a public consultation on its long-term renovation strategy prior to submitting it to the Energy Community Secretariat. Each Contracting Party shall annex a summary of the results of its public consultation to its long-term renovation strategy.

Each Contracting Party shall establish the modalities for consultation in an inclusive way during the implementation of its long-term renovation strategy.

6. Each Contracting Party shall annex the details of the implementation of its most recent long-term renovation strategy to its long-term renovation strategy, including on the planned policies and actions.

7. Each Contracting Party may use its long-term renovation strategy to address fire safety and risks related to intense seismic activity affecting energy efficiency renovations and the lifetime of buildings.

8. Each Contracting Party’s long-term renovation strategy shall be submitted to the Energy Community Secretariat as part of its final integrated national energy and climate plan referred to in Article 3 of Regulation (EU) 2018/1999, as incorporated in the Energy Community. As a derogation from Article 3(1) of that Regulation, the first long-term renovation strategy under paragraph 1 of this Article shall be submitted to the Secretariat by 10 March 2023.

(2) in the second subparagraph of Article 5(2), the sentence ‘The report may be included in the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC’ is deleted;
(3) in Article 9, paragraph 5 is replaced by the following:

‘5. As part of its annual Implementation Report, the Secretariat shall report every four years to the Ministerial Council on the progress of Contracting Parties in increasing the number of nearly zero-energy buildings. On the basis of this reported information the Secretariat shall, where necessary, develop an action plan and propose recommendations and measures in accordance with Article 34 of Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC to increase the number of those buildings and encourage best practices as regards the cost-effective transformation of existing buildings into nearly zero-energy buildings.’;

(4) in Article 10, paragraphs 2 and 3 are deleted;

(5) in Article 14(3), the third subparagraph is replaced by the following:

‘Such a report shall be submitted to the Secretariat as part of the Contracting Parties’ integrated national energy and climate plans referred to in Article 3 of Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC’;

(6) in Article 15(3), the third subparagraph is replaced by the following:

‘Such a report shall be submitted to the Secretariat as part of the Contracting Parties’ integrated national energy and climate plans referred to in Article 3 of Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC’.

Article 54

Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decision 2015/08/MC-EnC is amended as follows:

(1) Article 4 is deleted;

(2) in Article 18(1), point (e) is deleted;

(3) Article 24 is amended as follows:

(a) paragraphs 1, 3 <…> and 11, are deleted;

(b) paragraph 2 is deleted;

(4) Annex XIV is deleted.

Article 58

Transitional provisions

Until adoption by the Ministerial Council of the Energy Community 2030 targets, including the energy efficiency headline target, and/or the targets for energy and climate of each Contracting Party, as appropriate, this Regulation shall be applied on the basis of Contracting Parties’ National Domestic Contributions or targets or any other more ambitious targets or contributions that they have undertaken under any national or international legal and/or policy text.

Article 59

Entry into force

This decision shall enter into force on the date of its adoption.¹

¹ The text displayed here corresponds to Article 10 of Decision 2021/14/MC-EnC.
ANNEX I

GENERAL FRAMEWORK FOR INTEGRATED NATIONAL ENERGY AND CLIMATE PLANS

Part 1
General framework

SECTION A: NATIONAL PLAN

1. OVERVIEW AND PROCESS FOR ESTABLISHING THE PLAN

1.1. Executive summary
   i. Political, economic, environmental, and social context of the plan
   ii. Strategy relating to the five dimensions of the Energy Union
   iii. Overview table with key objectives, policies and measures of the plan

1.2. Overview of current policy situation
   i. National and Energy Community energy system and policy context of the national plan
   ii. Current energy and climate policies and measures relating to the five dimensions of the Energy Union
   iii. Key issues of cross-border relevance
   iv. Administrative structure of implementing national energy and climate policies

1.3. Consultations and involvement of national and Energy Community entities and their outcome
   i. Involvement of the national parliament
   ii. Involvement of local and regional authorities
   iii. Consultations of stakeholders, including the social partners, and engagement of civil society and the general public
   iv. Consultations of other Contracting Parties and Member States of the European Union
   v. Iterative process with the Secretariat

1.4. Regional cooperation in preparing the plan
   i. Elements subject to joint or coordinated planning with other Contracting Parties and Member States of the European Union
   ii. Explanation of how regional cooperation is considered in the plan

2. NATIONAL OBJECTIVES AND TARGETS

2.1. Dimension decarbonisation

2.1.1. GHG emissions and removals

2 Consistency to be ensured with long-term strategies pursuant to Article 15.
i. The elements set out in point (a)(1) of Article 4

ii. Where applicable, other national objectives and targets consistent with the Paris Agreement and the existing long-term strategies. Where applicable for the contribution to the overall Contracting Parties’ commitment of reducing the GHG emissions, other objectives and targets, including sector targets and adaptation goals, if available

2.1.2. Renewable energy

i. The elements set out in point (a)(2) of Article 4

ii. Estimated trajectories for the sectoral share of renewable energy in final energy consumption from 2025 to 2030 in the electricity, heating and cooling, and transport sector

iii. Estimated trajectories by renewable energy technology that the Contracting Party projects to use to achieve the overall and sectoral trajectories for renewable energy from 2025 to 2030, including expected total gross final energy consumption per technology and sector in Mtoe and total planned installed capacity (divided by new capacity and repowering) per technology and sector in MW

iv. Estimated trajectories on bioenergy demand, disaggregated between heat, electricity and transport, and on biomass supply by feedstocks and origin (distinguishing between domestic production and imports). For forest biomass, an assessment of its source and impact on the LULUCF sink

v. Where applicable, other national trajectories and objectives, including those that are long term or sectoral (e.g. share of renewable energy in district heating, renewable energy use in buildings, renewable energy produced by cities, renewable energy communities and renewables self-consumers, energy recovered from the sludge acquired through the treatment of wastewater)

2.2. Dimension energy efficiency

i. The elements set out in point (b) of Article 4

ii. The indicative milestones for 2030, 2040 and 2050, the domestically established measurable progress indicators, an evidence-based estimate of expected energy savings and wider benefits, and their contributions as included in the roadmaps set out in the long-term renovation strategies for the national stock of residential and non-residential buildings, both public and private, in accordance with Article 2a of Directive 2010/31/EU as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC

iii. Where applicable, other national objectives, including long-term targets or strategies and sectoral targets, and national objectives in areas such as energy efficiency in the transport sector and with regard to heating and cooling

2.3. Dimension energy security

i. The elements set out in point (c) of Article 4

ii. National objectives with regard to increasing: the diversification of energy sources and supply from third countries for the purpose of increasing the resilience of regional and national energy systems

iii. Where applicable, national objectives with regard to reducing energy import dependency from third countries, for the purpose of increasing the resilience of regional and national energy systems

iv. National objectives with regard to increasing the flexibility of the national energy system, in particular by means of deploying domestic energy sources, demand response and energy storage

2.4. Dimension internal energy market
2.4.1. Electricity interconnectivity

i. The level of electricity interconnectivity that the Contracting Party aims for in 2030 in consideration of the electricity interconnection target for 2030 in accordance with Article 4(d)(1) with a strategy with the level from 2025 onwards defined in close cooperation with affected Contracting Parties and/or Member States of the European Union, taking into account the 2020 interconnection target and the following indicators of the urgency of action:

   (1) Price differential in the wholesale market exceeding an indicative threshold of EUR 2/MWh between Contracting Parties and/or Member States of the European Union, regions or bidding zones;

   (2) Nominal transmission capacity of interconnectors below 30 % of peak load;

   (3) Nominal transmission capacity of interconnectors below 30 % of installed renewable generation.

Each new interconnector shall be subject to a socioeconomic and environmental cost-benefit analysis and implemented only if the potential benefits outweigh the costs.

2.4.2. Energy transmission infrastructure

i. Key electricity and gas transmission infrastructure projects, and, where relevant, modernisation projects, that are necessary for the achievement of objectives and targets under the five dimensions of the Energy Union Strategy.

ii. Where applicable, main infrastructure projects envisaged other than Projects of Energy Community Interest (PECIs) and Projects of Mutual Interest (PMIs)3

2.4.3. Market integration

i. National objectives related to other aspects of the internal energy market such as increasing system flexibility, in particular related to the promotion of competitively determined electricity prices in line with relevant sectoral law, market integration and coupling, aimed at increasing the tradeable capacity of existing interconnectors, smart grids, aggregation, demand response, storage, distributed generation, mechanisms for dispatching, re-dispatching and curtailment, and real-time price signals, including a timeframe for when the objectives shall be met.

ii. Where applicable, national objectives related to the non-discriminatory participation of renewable energy, demand response and storage, including via aggregation, in all energy markets, including a timeframe for when the objectives are to be met.

iii. Where applicable, national objectives with regard to ensuring that consumers participate in the energy system and benefit from self-generation and new technologies, including smart meters.

iv. National objectives with regard to ensuring electricity system adequacy, as well as for the flexibility of the energy system with regard to renewable energy production, including a timeframe for when the objectives are to be met.

v. Where applicable, national objectives to protect energy consumers and improve the competitiveness of the retail energy sector.

2.4.4. Energy poverty

Where applicable, national objectives with regard to energy poverty, including a timeframe for when the objectives are to be met.

---

2.5. Dimension research, innovation and competitiveness

i. National objectives and funding targets for public and, where available, private research and innovation, including, where appropriate, a timeframe for when the objectives are to be met

ii. Where available, national 2050 objectives related to the promotion of clean energy technologies and, where appropriate, national objectives, including long-term targets (2050) for deployment of low-carbon technologies, including for decarbonising energy and carbon-intensive industrial sectors and, where applicable, for related carbon transport and storage infrastructure

iii. Where applicable, national objectives with regard to competitiveness

3. POLICIES AND MEASURES

3.1. Dimension decarbonisation

3.1.1. GHG emissions and removals

i. Policies and measures to achieve the economy-wide target covering all key emitting sectors and sectors for the enhancement of removals, with an outlook to the long-term vision and goal to become a low emission economy and achieving a balance between emissions and removals in accordance with the Paris Agreement

ii. Where relevant, regional cooperation in this area

iii. Without prejudice to the applicability of State aid rules, financing measures in this area at national level, where applicable

iv. Development of carbon pricing instruments and when relevant, functioning of the carbon market or any carbon pricing instruments

3.1.2. Renewable energy

i. Policies and measures to achieve the national contribution to the 2030 Energy Community target for renewable energy and trajectories as referred to in point (a)(2) Article 4, and, where applicable or available, the elements referred to in point 2.1.2 of this Annex, including sector- and technology-specific measures

ii. Where relevant, specific measures for regional cooperation, as well as, as an option, the estimated excess production of energy from renewable sources which could be transferred to other Contracting Parties and/or Member States of the European Union in order to achieve the national contribution and trajectories referred to in point 2.1.2

iii. Specific measures on financial support, where applicable for the promotion of the production and use of energy from renewable sources in electricity, heating and cooling, and transport

iv. Where applicable, the assessment of the support for electricity from renewable sources that Contracting Parties are to carry out pursuant to Article 6(4) of Directive (EU) 2018/2001, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC

v. Specific measures to introduce one or more contact points, streamline administrative procedures, provide information and training, and facilitate the uptake of power purchase agreements

Summary of the policies and measures under the enabling framework Contracting Parties have

---

4 When planning those measures, Contracting Parties shall take into account the end of life of existing installations and the potential for repowering.
to put in place pursuant to Article 21(6) and Article 22(5) of Directive (EU) 2018/2001 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, to promote and facilitate the development of self-consumption and renewable energy communities

vi. Assessment of the necessity to build new infrastructure for district heating and cooling produced from renewable sources

vii. Where applicable, specific measures on the promotion of the use of energy from biomass, especially for new biomass mobilisation taking into account:

- biomass availability, including sustainable biomass: both domestic potential and imports from third countries
- other biomass uses by other sectors (agriculture and forest-based sectors); as well as measures for the sustainability of biomass production and use

3.1.3. Other elements of the dimension

i. <…>

ii. Policies and measures to achieve other national targets, where applicable

iii. Policies and measures to achieve low emission mobility (including electrification of transport)

iv. Where applicable, national policies, timelines and measures planned to phase out energy subsidies, in particular for fossil fuels

3.2. Dimension energy efficiency

Planned policies, measures and programmes to achieve the indicative national energy efficiency contributions for 2030 as well as other objectives referred to in point 2.2, including planned measures and instruments (also of a financial nature) to promote the energy performance of buildings, in particular with regard to the following:

i. Energy efficiency obligation schemes and alternative policy measures under Articles 7a and 7b and Article 20(6) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC, and to be prepared in accordance with Annex III to this Regulation

ii. Long-term renovation strategy to support the renovation of the national stock of residential and non-residential buildings, both public and private, including policies, measures and actions to stimulate cost-effective deep renovation and policies and actions to target the worst performing segments of the national building stock, in accordance with Article 2a of Directive 2010/31/EU as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC

iii. Description of policy and measures to promote energy services in the public sector and measures to remove regulatory and non-regulatory barriers that impede the uptake of energy performance contracting and other energy efficiency service models

iv. Other planned policies, measures and programmes to achieve the indicative national energy efficiency contributions for 2030 as well as other objectives referred to in point 2.2 (for example measures to promote the exemplary role of public buildings and energy-efficient public procurement, measures to promote energy audits and energy management systems, consumer information and training

measures\textsuperscript{7}, and other measures to promote energy efficiency\textsuperscript{8}.

v. Where applicable, a description of policies and measures to promote the role of local renewable energy communities in contributing to the implementation of policies and measures in points i, ii, iii and iv.

vi. Description of measures to develop measures to utilise energy efficiency potentials of gas and electricity infrastructure\textsuperscript{9}.

vii. Regional cooperation in this area, where applicable.

viii. Financing measures, in the area at national level.

3.3. Dimension energy security\textsuperscript{10}

i. Policies and measures related to the elements set out in point 2.3\textsuperscript{11}

ii. Regional cooperation in this area.

iii. Where applicable, financing measures in this area at national level.

3.4. Dimension internal energy market\textsuperscript{12}

3.4.1. Electricity infrastructure

i. Policies and measures to achieve the targeted level of interconnectivity as set out in point (d) of Article 4.

ii. Regional cooperation in this area\textsuperscript{13}.

iii. Where applicable, financing measures in this area at national level.

3.4.2. Energy transmission infrastructure

i. Policies and measures related to the elements set out in point 2.4.2, including, where applicable, specific measures to enable the delivery of Projects of Energy Community Interest (PECIs), Projects of Mutual Interest and other key infrastructure projects.

ii. Regional cooperation in this area\textsuperscript{14}.

iii. Where applicable, financing measures in this area at national level.

3.4.3. Market integration

i. Policies and measures related to the elements set out in point 2.4.3.

ii. Measures to increase the flexibility of the energy system with regard to renewable energy production such as smart grids, aggregation, demand response, storage, distributed generation, mechanisms for dispatching, re-dispatching and curtailment, real-time price signals, including the roll-out of intraday market coupling and cross-border balancing markets.

---

\textsuperscript{7} In accordance with Articles 12 and 17 of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and b 2021/14/MC-EnC.

\textsuperscript{8} In accordance with Article 19 of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC.

\textsuperscript{9} In accordance with Article 15(2) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC.

\textsuperscript{10} Policies and measures shall reflect the energy efficiency first principle.

\textsuperscript{11} Consistency shall be ensured with the preventive action and emergency plans under Regulation (EU) 2017/1938 as adapted and adopted by Ministerial Council Decisions 2021/15/MC-EnC, as well as the risk preparedness plans under Regulation (EU) 2019/941 as adapted and adopted by Ministerial Council Decision 2021/13/MC-EnC.

\textsuperscript{12} Policies and measures shall reflect the energy efficiency first principle.

\textsuperscript{13} Other than the PCI Regional Groups established under Regulation (EU) No 347/2013 as adapted and adopted by Ministerial Council Decision 2015/09/MC-EnC.

\textsuperscript{14} Other than the PCI Regional Groups established under Regulation (EU) No 347/2013 as adapted and adopted by Ministerial Council Decision 2015/09/MC-EnC.
iii. Where applicable, measures to ensure the non-discriminatory participation of renewable energy, demand response and storage, including via aggregation, in all energy markets
iv. Policies and measures to protect consumers, especially vulnerable and, where applicable, energy poor consumers, and to improve the competitiveness and contestability of the retail energy market
v. Description of measures to enable and develop demand response, including those addressing tariffs to support dynamic pricing

3.4.4. Energy poverty
Where applicable, policies and measures to achieve the objectives set out in point 2.4.4

3.5. Dimension research, innovation and competitiveness
i. Policies and measures related to the elements set out in point 2.5
ii. Where applicable, cooperation with other Contracting Parties and/or Member States of the European Union in this area
iii. Where applicable, financing measures in this area at national

SECTION B: ANALYTICAL BASIS

4. CURRENT SITUATION AND PROJECTIONS WITH EXISTING POLICIES AND MEASURES

4.1. Projected evolution of main exogenous factors influencing energy system and GHG emission developments
i. Macroeconomic forecasts (GDP and population growth)
ii. Sectoral changes expected to impact the energy system and GHG emissions
iii. Global energy trends, international fossil fuel prices, EU ETS carbon price
iv. Technology cost developments

4.2. Dimension Decarbonisation
4.2.1. GHG emissions and removals
i. Trends in current GHG emissions and removals across the economy and different sectors
ii. Projections of sectoral developments with existing national, Energy Community and European Union policies and measures at least until 2040 (including for the year 2030)

4.2.2. Renewable energy
i. Current share of renewable energy in gross final energy consumption and in different sectors (heating and cooling, electricity and transport) as well as per technology in each of these sectors
ii. Indicative projections of development with existing policies for the year 2030 (with an outlook to the year 2040)

16 See Part 2 for a detailed list of parameters and variables to be reported in Section B of the Plan.
17 Current situation shall reflect the date of submission of the national plan (or latest available date). Existing policies and measures encompass implemented and adopted policies and measures. Adopted policies and measures are those for which an official government decision has been made by the date of submission of the national plan and there is a clear commitment to proceed with implementation. Implemented policies and measures are those for which one or more of the following applies at the date of submission of the integrated national energy and climate plan or the integrated national energy and climate progress report: directly applicable European legislation or national legislation is in force, one or more voluntary agreements have been established, financial resources have been allocated, human resources have been mobilised.
4.3. Dimension Energy efficiency

i. Current primary and final energy consumption in the economy and per sector (including industry, residential, service and transport)

ii. Current potential for the application of high-efficiency cogeneration and efficient district heating and cooling

iii. Projections considering existing energy efficiency policies, measures and programmes as described in point 1.2.(ii) for primary and final energy consumption for each sector at least until 2040 (including for the year 2030)

iv. Cost-optimal levels of minimum energy performance requirements resulting from national calculations, in accordance with Article 5 of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC and by the Ministerial Council Decision 2021/14/MC-EnC.

4.4. Dimension energy security

i. Current energy mix, domestic energy resources, import dependency, including relevant risks

ii. Projections of development with existing policies and measures at least until 2040 (including for the year 2030)

4.5. Dimension internal energy market

4.5.1. Electricity interconnectivity

i. Current interconnection level and main interconnectors

ii. Projections of interconnector expansion requirements (including for the year 2030)

4.5.2. Energy transmission infrastructure

i. Key characteristics of the existing transmission infrastructure for electricity and gas

ii. Projections of network expansion requirements at least until 2040 (including for the year 2030)

4.5.3. Electricity and gas markets, energy prices

i. Current situation of electricity and gas markets, including energy prices

ii. Projections of development with existing policies and measures at least until 2040 (including for the year 2030)

4.6. Dimension research, innovation and competitiveness

i. Current situation of the low-carbon-technologies sector and, to the extent possible, its position on the global market (that analysis is to be carried out at regional or global level)

ii. Current level of public and, where available, private research and innovation spending on low-carbon-technologies, current number of patents, and current number of researchers

iii. Breakdown of current price elements that make up the main three price components (energy, network, taxes/levies)

---

19 This reference business as usual projection shall be the basis for the 2030 final and primary energy consumption target which is described in 2.3 and conversion factors.

20 With reference to overviews of existing transmission infrastructure by Transmission System Operators (TSOs).

21 With reference to national network development plans and regional investment plans of TSOs.

22 With reference to overviews of existing transmission infrastructure by TSOs.

23 With reference to national network development plans and regional investment plans of TSOs.
iv. Description of energy subsidies, including for fossil fuels

5. IMPACT ASSESSMENT OF PLANNED POLICIES AND MEASURES

5.1. Impacts of planned policies and measures described in section 3 on energy system and GHG emissions and removals, including comparison to projections with existing policies and measures (as described in section 4).

   ii. Assessment of policy interactions (between existing policies and measures and planned policies and measures within a policy dimension and between existing policies and measures and planned policies and measures of different dimensions) at least until the last year of the period covered by the plan, in particular to establish a robust understanding of the impact of energy efficiency / energy savings policies on the sizing of the energy system and to reduce the risk of stranded investment in energy supply.

   iii. Assessment of interactions between existing policies and measures and planned policies and measures, and between those policies and measures and Energy Community climate and energy policy measures.

5.2. Macroeconomic and, to the extent feasible, the health, environmental, employment and education, skills and social impacts, including just transition aspects (in terms of costs and benefits as well as cost-effectiveness) of the planned policies and measures described in section 3 at least until the last year of the period covered by the plan, including comparison to projections with existing policies and measures.

5.3. Overview of investment needs

   i. existing investment flows and forward investment assumptions with regard to the planned policies and measures

   ii. sector or market risk factors or barriers in the national or regional context

   iii. analysis of additional public finance support or resources to fill identified gaps identified under point ii

5.4. Impacts of planned policies and measures described in section 3 on other Contracting Parties and/or Member States of the European Union and regional cooperation at least until the last year of the period covered by the plan, including comparison to projections with existing policies and measures

   i. Impacts on the energy system in neighbouring and other Contracting Parties and/or Member States of the European Union in the region to the extent possible

   ii. Impacts on energy prices, utilities and energy market integration

   iii. Where relevant, impacts on regional cooperation

24 Planned policies and measures are options under discussion and having a realistic chance of being adopted and implemented after the date of submission of the national plan. The resulting projections under section 5.1.i shall therefore include not only implemented and adopted policies and measures (projections with existing policies and measures), but also planned policies and measures.
Part 2

List of parameters and variables to be reported in
Section B of National Plans

The following parameters, variables, energy balances and indicators are to be reported in Section B ‘Analytical Basis’ of the National Plans, if used:

1. General parameters and variables
   (1) Population [million]
   (2) GDP [euro million]
   (3) Sectoral gross value added (including main industrial, construction, services, and agriculture sectors) [euro million]
   (4) Number of households [thousands]
   (5) Household size [inhabitants/households]
   (6) Disposable income of households [euro]
   (7) Number of passenger-kilometres: all modes, i.e. split between road (cars and buses separated if possible), rail, aviation and domestic navigation (when relevant) [million pkm]
   (8) Freight transport tonnes-kilometres: all modes excluding international maritime, i.e. split between road, rail, aviation, domestic navigation (inland waterways and national maritime) [million tkm]
   (9) International oil, gas and coal fuel import prices [EUR/GJ or euro/toe]
   (10) Carbon price
   (11) Exchange rates to EUR and to USD (where applicable) assumptions [euro/currency and USD/currency]
   (12) Number of Heating Degree Days (HDD)
   (13) Number of Cooling Degree Days (CDD)
   (14) Technology cost assumptions used in modelling for main relevant technologies

2. Energy balances and indicators

2.1. Energy supply
   (1) Indigenous Production by fuel type (all energy products that are produced in significant quantities) [ktoe]
   (2) Net imports by fuel type (including electricity and split into intra- and extra EU net imports) [ktoe]
   (3) Import dependency from third countries [%]
   (4) Main import sources (countries) for main energy carriers (including gas and electricity)
   (5) Gross Inland Consumption by fuel type source (including solids, all energy products: coal, crude oil and petroleum products, natural gas, nuclear energy, electricity, derived heat, renewables, waste) [ktoe]

---

25 For the plan covering the period from 2025 to 2030: For each parameter/variable in the list, trends over the years 2005-2040 (2005-2050 where appropriate) including for the year 2030 in five-year intervals shall be reported both in Section 4 and 5. Parameter based on exogenous assumptions v modelling output shall be indicated.
26 As far as possible, reported data and projections shall build on and be consistent with Eurostat data and methodology used for reporting European statistics in the relevant sectoral law.
27 Note: all projections are to be performed on the basis of constant prices (2016 prices used as base year)
28 The Secretariat will provide recommendations for key parameters for projections, at least covering oil, gas, and coal import prices as well as EU ETS carbon prices.
2.2. Electricity and heat

(1) Gross electricity generation [GWh]

(2) Gross electricity generation by fuel (all energy products) [GWh]

(3) Share of combined heat and power generation in total electricity and heat generation [%]

(4) Capacity electricity generation by source, including retirements and new investment [MW]

(5) Heat generation from thermal power generation

(6) Heat generation from combined heat and power plants, including industrial waste heat

(7) Cross-border interconnection capacities for gas and electricity [Definition for electricity in line with outcome of ongoing discussions on basis for 15 % interconnection target] and their projected usage rates

2.3. Transformation sector

(1) Fuel inputs to thermal power generation (including solids, oil, gas) [ktoe]

(2) Fuel inputs to other conversion processes [ktoe]

2.4. Energy consumption

(1) Primary and final energy consumption [ktoe]

(2) Final energy consumption by sector (including industry, residential, tertiary, agriculture and transport (including split between passenger and freight transport, when available)) [ktoe]

(3) Final energy consumption by fuel (all energy products) [ktoe]

(4) Final non-energy consumption [ktoe]

(5) Primary energy intensity of the overall economy (primary energy consumption per GDP [toe/euro]

(6) Final energy intensity by sector (including industry, residential, tertiary and transport (including split between passenger and freight transport, when available))

2.5. Prices

(1) Electricity prices by type of using sector (residential, industry, tertiary)

(2) National retail fuel prices (including taxes, per source and sector) [euro/ktoe]

2.6. Investment

Investment costs in energy transformation, supply, transmission and distribution sectors

2.7. Renewables

(1) Gross final consumption of energy from renewable sources and share of renewable energy in gross final energy consumption and by sector (electricity, heating and cooling, transport) and by technology

(2) Electricity and heat generation from renewable energy in buildings; this shall include, where available, disaggregated data on energy produced, consumed and injected into the grid by solar photovoltaic systems, solar thermal systems, biomass, heat pumps, geothermal systems, as well as all other decentralised renewables systems

(3) Where applicable, other national trajectories, including those that are long-term or sectoral the share of food-based and advanced biofuels, the share of renewable energy in district heating, as well as the renewable energy produced by cities and renewable energy communities.

3. GHG emissions and removals related indicators
(1) GHG emissions by policy sector, **including LULUCF**

(2) GHG emissions by IPCC sector and by gas [tCO$_2$eq]

(3) Carbon Intensity of the overall economy [tCO$_2$eq/GDP]

(4) CO$_2$ emission related indicators

(a) GHG intensity of domestic power and heat generation [tCO$_2$eq/MWh]

(b) GHG intensity of final energy consumption by sector [tCO$_2$eq/toe]

(5) Non-CO$_2$ emission related parameters

(a) Livestock: dairy cattle [1 000 heads], non-dairy cattle [1 000 heads], sheep [1 000 heads], pig [1 000 heads], poultry [1 000 heads]

(b) Nitrogen input from application of synthetic fertilisers [kt nitrogen]

(c) Nitrogen input from application of manure [kt nitrogen]

(d) Nitrogen fixed by N-fixing crops [kt nitrogen]

(e) Nitrogen in crop residues returned to soils [kt nitrogen]

(f) Area of cultivated organic soils [hectares]

(g) Municipal solid waste (MSW) generation

(h) Municipal solid waste (MSW) going to landfills

(i) Share of CH$_4$ recovery in total CH$_4$ generation from landfills [%]
ANNEX II

NATIONAL CONTRIBUTIONS FOR THE SHARE OF ENERGY FROM RENEWABLE SOURCES IN GROSS FINAL CONSUMPTION OF ENERGY IN 2030

<...>
ANNEX III

NOTIFICATION OF CONTRACTING PARTIES’ MEASURES AND METHODOLOGIES TO IMPLEMENT ARTICLE 7 OF DIRECTIVE 2012/27/EU AS ADAPTED AND ADOPTED BY MINISTERIAL COUNCIL DECISION 2015/08/MC-ENC AND BY THE MINISTERIAL COUNCIL DECISION 2021/14/MC-ENC,

Contracting Parties shall notify to the Secretariat their proposed detailed methodology pursuant to point 5 of Annex V to Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-ENC and 2021/14/MC-ENC for the operation of the energy efficiency obligation schemes and alternative policy measures referred to in Articles 7a and 7b and Article 20(6) of that Directive.

1. Calculation of the level of the energy savings requirement to be achieved over the whole period from 1 January 2024 to 31 December 2030, showing how the following elements are taken into account:
   (a) the annual final energy consumption, averaged over the most recent three-year period prior to 1 January 2022 [in ktoe];
   (b) the total cumulative amount of end-use energy savings to be achieved [in ktoe] in accordance with point (b) of Article 7(1) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-ENC and 2021/14/MC-ENC;
   (c) data used in the calculation of final energy consumption and sources of such data, including justification for the use of alternative statistical sources and any differences of the resulting quantities (if other sources than Eurostat are used);

2. Contracting Parties that decide to use any of the possibilities under Article 7(2) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-ENC and 2021/14/MC-ENC, shall also notify their calculation of the level of the energy savings requirement to be achieved over the whole period from 1 January 2025 to 31 December 2030, showing how the following elements are taken into account:
   (a) their own annual savings rate;
   (b) their own calculation baseline and energy used in transport, in whole or in part, excluded from the calculation [in ktoe];
   (c) calculated cumulative amount of energy savings over the whole period from 1 January 2025 to 31 December 2030 (before application of the options referred to in points (b) to (g) of Article 7(4) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-ENC and 2021/14/MC-ENC) [in ktoe];
   (d) application of the options referred to in points (b) to (g) of Article 7(4) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-ENC and 2021/14/MC-ENC:
      (i) <…>
(iii) amount of energy savings [in ktoe] resulting from individual actions newly implemented since 31 December 2008 that continue to have an impact in 2020 and beyond, in accordance with point (d) of Article 7(4) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(iv) amount of energy savings [in ktoe] that stem from policy measures, provided it can be demonstrated that those policy measures result in individual actions carried out from 1 January 2018 and until 31 December 2020, which deliver savings after 31 December 2020, in accordance with point (e) of Article 7(4) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(v) amount of energy generated [in ktoe] on or in buildings for own use as a result of policy measures promoting new installation of renewable energy technologies, in accordance with point (f) of Article 7(4) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(vi) amount of energy savings [in ktoe] that exceed the cumulative energy savings required in the period from 1 January 2018 to 31 December 2020, which Contracting Parties count towards the period from 1 January 2025 to 31 December 2030 in accordance with point (g) of Article 7(4) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(e) total cumulative amount of energy savings (after application of the options referred to in points (b) to (g) of Article 7(4) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC).

(a) description of the energy efficiency obligation scheme;
(b) expected cumulative and annual amount of savings and duration of the obligation period(s);
(c) obligated parties and their responsibilities;
(d) target sectors;
(e) eligible actions provided for under the measure;
(f) information on the application of the following provisions of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and by the Ministerial Council Decision 2021/14/MC-EnC:
   (i) where applicable, specific actions, share of savings to be achieved in households affected by energy poverty in accordance with Article 7(11);
   (ii) savings achieved by energy service providers or other third parties in accordance with point (a) of Article 7a(6);
   (iii) ‘banking and borrowing’ in accordance with point (b) of Article 7a(6);
(g) where relevant, information on trading of energy savings.

(a) type of policy measure;
(b) brief description of the policy measure, including the design features per each policy measure notified;
(c) expected total cumulative and annual amount of savings per each measure and/or amount of energy savings in relation to any intermediate periods;
(d) implementing public authorities, participating or entrusted parties and their responsibilities for implementing the policy measure(s);
(e) target sectors;
(f) eligible actions provided for under the measure;
(g) where applicable, specific policy measures or individual actions targeting energy poverty.

3.3. Information on taxation measures:

(a) brief description of taxation measure;
(b) duration of taxation measure;
(c) implementing public authority;
(d) expected cumulative and annual amount of savings per measure;
(e) target sectors and segment of taxpayers;
(f) calculation methodology, including which price elasticities are used and how they have been established, in accordance with point (4) of Annex V to Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EN and 2021/14/MC-ENC.

(a) measurement methods used referred to in point 1 of Annex V to Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EN and 2021/14/MC-ENC;
(b) method to express the energy savings (primary or final energy savings);
(c) lifetimes of measures, rate at which the savings decline over time and approach used to take into account the lifetime of savings;
(d) brief description of the calculation methodology, including how additionality and materiality of savings are ensured and which methodologies and benchmarks are used for deemed and scaled savings;
(e) information on how the possible overlaps between the measures and individual actions are addressed to avoid double counting of energy savings;
(f) where relevant, climatic variations and approach used.

5. Monitoring and verification

(a) brief description of the monitoring and verification system and the process of the verification;
(b) implementing public authority and its main responsibilities in charge of monitoring and verification system in relation to the energy efficiency obligation scheme or alternative measures;
(c) independence of monitoring and verification from the obligated, participating or entrusted parties;
(d) statistically significant proportion of energy efficiency improvement measures and proportion and criteria used to define and select a representative sample;
(e) reporting obligations for obligated parties (savings achieved by each obligated party, or each sub-category of obligated party, and in total under the scheme).
(f) publication of energy savings achieved (each year) under the energy efficiency obligation scheme and alternative measures;
(g) information on Contracting Party law on penalties to be applied in the case of non-compliance;
(h) Information on policy measures provided for in the event that progress is not satisfactory.
ANNEX IV

GENERAL FRAMEWORK FOR LONG-TERM STRATEGIES

1. OVERVIEW AND PROCESS FOR DEVELOPING THE STRATEGIES
   1.1. Executive summary
   1.2. Legal and policy context
   1.3. Public consultation

2. CONTENT
   2.1. TOTAL GHG EMISSION REDUCTIONS AND ENHANCEMENTS OF REMOVALS BY SINKS
       2.1.1. Projected emission reductions and enhancement of removals by 2050
       2.1.2. National target for 2030 and beyond, if available, and indicative milestones for 2040 and 2050
       2.1.3. Adaptation policies and measures
   2.2. RENEWABLE ENERGY
       2.2.1. To the extent feasible, the estimated likely share of renewable energy in final energy consumption by 2050
   2.3. ENERGY EFFICIENCY
       2.3.1. To the extent feasible, the estimated likely energy consumption by 2050
   2.4. SECTOR-SPECIFIC RELATED CONTENT
       2.4.1. Energy system
           2.4.1.1. Intended or likely future emissions trajectory or range
           2.4.1.2. General description of main drivers for energy efficiency, demand-side flexibility and energy consumption and their evolution from 2025 and beyond
       2.4.2. Industry
           2.4.2.1. Expected emission reductions by sector and energy demands
           2.4.2.2. General overview of the policies, existing plans and measures for decarbonisation as described in point 2.1 of Section A of Part I of Annex I
       2.4.3. Transport
           2.4.3.1. Expected emissions and energy sources by transport type (e.g. cars and vans, heavy duty road transport, shipping, aviation, rail)
           2.4.3.2. Decarbonisation options
       2.4.4. Agriculture and land use, land-use change and forestry (LULUCF)
           2.4.4.1. To the extent feasible, expected emissions by sources and by individual GHGs
           2.4.4.2. Emission reduction options envisaged
           2.4.4.3. Links to agricultural and rural development policies
3. FINANCING

3.1. Estimates of investment needed

3.2. Policies and measures for related research, development and innovation

4. IMPACT ASSESSMENT OF THE SOCIO-ECONOMIC ASPECTS

5. ANNEXES (as necessary)

5.1. Details on modelling (including assumptions) and/or analysis, indicators, etc.
ANNEX V

GHG INVENTORIES INFORMATION

Part 1

Information to be included in the reports referred to in Article 26(3):

(a) their anthropogenic emissions of GHGs listed in Part 2 of this Annex;

(b) data on their anthropogenic emissions of carbon monoxide (CO), sulphur dioxide (SO\textsubscript{2}), nitrogen oxides (NO\textsubscript{x}) and volatile organic compounds, consistent with data already reported for the year X-2;

(c) their anthropogenic GHG emissions by sources and removals of CO\textsubscript{2} by sinks resulting from LULUCF, for the year X-2, in accordance with the methodologies specified in Part 3 of this Annex.

(d) any changes to the information referred to in points (a), (b) and (c) for the years between the relevant base year or period and the year X-3, indicating the reasons for those changes;

(e) information on indicators, as set out in Part 4 of this Annex, for the year X-2;

(f) <…>

(g) information on the steps taken to improve inventory estimates, in particular in areas of the inventory that have been subject to adjustments or recommendations following expert reviews;

(h) the actual or estimated allocation of the verified emissions reported by installation operators to the source categories of the national GHG inventory and the ratio of those verified emissions to the total reported GHG emissions in those source categories, for the year X-2;

(i) where relevant, the results of the checks performed on the consistency of the data used to estimate emissions in preparation of the GHG inventories, for the year X-2, with:

   (i) <…>;

   (ii) <…>;

   (iii) the energy data reported pursuant to Article 4 of, and Annex B to, Regulation (EC) No 1099/2008, as adapted and adopted by Ministerial Council Decision 2012/02/MC-EnC, amended by Decisions 2013/02/MC-EnC and 2015/02/MC-EnC;

(j) a description of changes to their national inventory system, if any;

(k) a description of changes to the national registry, if any;

(l) information on their quality assurance and quality control plans, a general uncertainty assessment, a general assessment of completeness and, any other elements of the national GHG inventory report needed to prepare the Contracting Parties’ GHG inventory report;

(m) <…>

A Contracting Party may request to be granted a derogation by the Secretariat from point (c) of the first paragraph to apply a different methodology from that specified in Part 3 of this Annex where the methodology improvement required cannot be achieved in time for the improvement to be taken into account in the GHG inventories for the period from 2025 to 2030, or where the cost of the methodology
improvement would be disproportionately high compared to the benefits of applying such methodology to improve accounting for emissions and removals due to the low significance of the emissions and removals from the carbon pools concerned. **Contracting Party** wishing to benefit from this derogation shall submit a reasoned request to the **Secretariat** by 31 December **2023**, indicating by which time the methodology improvement could be implemented, the alternative methodology proposed or both, and an assessment of the potential impacts on the accuracy of accounting. The **Secretariat** may request additional information to be submitted within a specific, reasonable time period. Where the **Secretariat** considers that the request is justified, it shall grant the derogation. If the **Secretariat** rejects the request, it shall give reasons for its decision.

### Part 2

The GHGs to be covered are:
- Carbon dioxide (CO$_2$)
- Methane (CH$_4$)
- Nitrous Oxide (N$_2$O)
- Sulphur hexafluoride (SF$_6$)
- Nitrogen trifluoride (NF$_3$)
- Hydrofluorocarbons (HFCs):
  - HFC-23 CHF$_3$
  - HFC-32 CH$_2$F$_2$
  - HFC-41 CH$_3$F
  - HFC-125 CHF$_2$CF$_3$
  - HFC-134 CHF$_2$CHF$_2$
  - HFC-134a CH$_2$FCF$_3$
  - HFC-143 CH$_2$FCHF$_2$
  - HFC-143a CH$_3$CF$_3$
  - HFC-152 CH$_2$FCH$_2$F
  - HFC-152a CH$_3$CHF$_2$
  - HFC-161 CH$_3$CH$_2$F
  - HFC-227ea CF$_3$CHFCF$_3$
  - HFC-236cb CF$_3$CF$_2$CH$_2$F
  - HFC-236ea CF$_3$CHFCHF$_2$
  - HFC-236fa CF$_3$CH$_2$CF$_3$
  - HFC-245fa CHF$_2$CH$_2$CF$_3$
  - HFC-245ca CH$_2$FCH$_2$CHF$_2$
  - HFC-365mfc CH$_3$CF$_2$CH$_2$CF$_3$
- HFC-43-10mee CF₃CHFCHFCF₂CF₃ or (C₅H₂F₁₀)

Perfluorocarbons (PFCs):
- PFC-14, Perfluoromethane, CF₄
- PFC-116, Perfluoroethane, C₂F₆
- PFC-218, Perfluoropropane, C₃F₈
- PFC-318, Perfluorocyclobutane, c-C₄F₈
- Perfluorocyclopropane c-C₃F₆
- PFC-3-1-10, Perfluorobutane, C₄F₁₀
- PFC-4-1-12, Perfluoropentane, C₅F₁₂
- PFC-5-1-14, Perfluorohexane, C₆F₁₄
- PFC-9-1-18, C₁₀F₁₈

Part 3

Methodologies for monitoring and reporting in the LULUCF sector

Geographically explicit land-use conversion data in accordance with the 2006 IPCC Guidelines for national GHG inventories.

Tier 1 methodology in accordance with the 2006 IPCC guidelines for national GHG inventories. For emissions and removals for a carbon pool that accounts for at least 25-30% of emissions or removals in a source or sink category which is prioritised within a Contracting Party’s national inventory system because its estimate has a significant influence on a country’s total inventory of GHGs in terms of the absolute level of emissions and removals, the trend in emissions and removals, or the uncertainty in emissions and removals in the land-use categories, at least Tier 2 methodology in accordance with the 2006 IPCC guidelines for national GHG inventories.

Contracting Parties are encouraged to apply Tier 3 methodology, in accordance with the 2006 IPCC guidelines for national GHG inventories.

ANNEX VI

POLICIES AND MEASURES INFORMATION IN THE AREA OF GHG EMISSIONS

Information to be included in the reports referred to in Article 18:

(a) a description of their national system for reporting on policies and measures, or groups of measures, and for reporting on projections of anthropogenic GHG emissions by sources and removals by sinks pursuant to Article 39(1) or information on any changes made to that system where such a description has already been provided;

(b) updates relevant to their long-term strategies referred to in Article 15 and progress in implementing those strategies;

(c) information on national policies and measures, or groups of measures, and on implementation of Energy Community policies and measures, or groups of measures, that limit or reduce GHG emissions by sources or enhance removals by sinks, presented on a sectoral basis and organised by gas or group of gases (HFCs and PFCs) listed in Part 2 of Annex V. That information shall refer to applicable and relevant national or Energy Community policies and shall include:

   (i) the objective of the policy or measure and a short description of the policy or measure;

   (ii) the type of policy instrument;

   (iii) the status of implementation of the policy or measure or group of measures;

   (iv) indicators used to monitor and evaluate progress over time;

   (v) where available, quantitative estimates of the effects on emissions by sources and removals by sinks of GHGs broken down into:

      — the results of ex ante assessments of the effects of individual or groups of policies and measures on the mitigation of climate change. Estimates shall be provided for a sequence of four future years ending with 0 or 5 immediately following the reporting year,

      — the results of ex post assessments of the effects of individual or groups of policies and measures on the mitigation of climate change where available;

   (vi) available estimates of the projected costs and benefits of policies and measures, as well as estimates of the realised costs and benefits of policies and measures;

   (vii) all existing references to the assessments of the costs and effects of national policies and measures, to information in the implementation of Energy Community and Union policies and measures that limit or reduce GHG emissions by sources or enhance removals by sinks and to the underpinning technical reports;

   (viii) an assessment of the contribution of the policy or measure to the achievement of the long-term strategy referred to in Article 15;

(d) information on planned additional national policies and measures, or groups of measures, envisaged with a view to limiting GHG emissions;

(e) information regarding the links between the different policies and measures, or groups of measures, reported pursuant to point (c) and the way such policies and measures, or groups of measures, contribute to different projection scenarios.
ANNEX VII

PROJECTIONS INFORMATION IN THE AREA OF GHG EMISSIONS

Information to be included in the reports referred to in Article 18:

(a) projections without measures where available, projections with measures, and, where available, projections with additional measures;

(b) total GHG projections;

(c) the impact of policies and measures identified pursuant to point (a) of Article 18(1). Where such policies and measures are not included, this shall be clearly stated and explained;

(d) results of the sensitivity analysis performed for the projections and information on the models and parameters used;

(e) all relevant references to the assessment and the technical reports that underpin the projections referred to in Article 18(4).
ANNEX VIII

INFORMATION ON NATIONAL ADAPTATION ACTIONS, FINANCIAL AND TECHNOLOGY SUPPORT PROVIDED TO DEVELOPING COUNTRIES AND CARBON PRICE REVENUES

Part 1
Reporting on adaptation actions

Information to be included in the reports referred to in Article 19(1):

(a) the main goals, objectives and institutional framework for adaptation;
(b) climate change projections, including weather extremes, climate-change impacts, assessment of climate vulnerability and risks and key climate hazards;
(c) adaptive capacity;
(d) adaptation plans and strategies;
(e) monitoring and evaluation framework;
(f) progress made in implementation, including good practices and changes to governance.

Part 2
Reporting on support provided to developing countries

Information to be included in the reports referred to in Article 19(3):

(a) information on financial support committed and provided to developing countries for the year X-1 including:
   (i) quantitative information on public and mobilised financial resources by the Contracting Party. The information on financial flows is to be based on the so-called ‘Rio markers’ for climate change mitigation-related support and climate change adaptation-related support and other tracking systems introduced by the OECD Development Assistance Committee;
   (ii) qualitative methodological information explaining the method used to calculate the quantitative information, including an explanation of methodology for quantifying their data, and, where relevant, other information on the definitions and methodologies used to determine any figures, in particular for information reported on mobilised financial flows;
   (iii) available information on activities by the Contracting Party related to public-funded technology transfer projects and capacity-building projects for developing countries under the UNFCCC, including whether the technology transferred or capacity-building project was used for mitigating or adapting to the effects of climate change, the recipient country, where possible the amount of support provided, and the type of technology transferred or capacity-building project;
(b) available information for the year X and subsequent years on the planned provision of support, includ-
ing information on planned activities related to public-funded technology transfer projects or capacity building projects for developing countries under the UNFCCC and on technologies to be transferred and capacity-building projects, including whether the technology transferred or capacity-building project is intended for mitigating or adapting to the effects of climate change, the recipient country, where possible the amount of support to be provided, and the type of technology transferred or capacity-building project.

Part 3

Reporting on revenues from carbon price

Information to be included in the reports referred to in Article 19(2):
(a) information on the use of any revenues during the year X-1 generated by the Contracting Party on carbon pricing;
(b) <…>;

Revenues not disbursed at the time a Contracting Party submits a report to the Secretariat pursuant to Article 19(2) shall be quantified and reported in reports for subsequent years.
ANNEX IX

ADDITIONAL REPORTING OBLIGATIONS

Part 1

Additional reporting obligations in the area of renewable energy

The following additional information shall, unless otherwise stated, be included pursuant to point (c) of Article 20:

(a) the functioning of the system of guarantees of origin for electricity, gas and heating and cooling from renewable sources, the levels of issuance and cancellation of guarantees of origin and the resulting annual national renewable energy consumption, as well as the measures taken to ensure the reliability and protection against fraud of the system;

(b) amounts of biofuels, biogas renewable transport fuels of non-biological origin, recycled carbon fuels and renewable electricity consumed in the transport sector and, where relevant, their greenhouse saving performance, distinguishing between fuels produced from different types of food and feed crops and each type of feedstock listed in Annex IX to Directive (EU) 2018/2001, as adopted and adapted by Ministerial Council Decision 2021/14/MC-EnC;

(c) developments in the availability, origin and use of biomass resources for energy purposes;

(d) changes in commodity prices and land use within the Contracting Party associated with its increased use of biomass and other forms of energy from renewable sources;

(e) the estimated excess production of energy from renewable sources which could be transferred to other Contracting Parties or Member States of the European Union so that these comply with Article 3(3) of Directive (EU) 2018/2001, as adopted and adapted by Ministerial Council Decision 2021/14/MC-EnC and achieve the national contributions and trajectories referred to in point (a)(2) of Article 4 of this Regulation;

(f) where applicable, the estimated demand for energy from renewable sources to be satisfied by means other than domestic production until 2030, including imported biomass feedstock;

(g) the technological development and deployment of biofuels made from feedstocks listed in Annex IX to Directive (EU) 2018/2001, as adopted and adapted by Ministerial Council Decision 2021/14/MC-EnC;

(h) where available, the estimated impact of the production or use of biofuels, bioliquids and biomass fuels on biodiversity, water resources, water availability and quality, soils and air quality within the Contracting Party;

(i) observed cases of fraud in the chain of custody of biofuels, bioliquids and biomass fuels;

(j) information on how the share of biodegradable waste in waste used for producing energy has been estimated, and what steps have been taken to improve and verify such estimates;

(k) electricity and heat generation from renewable energy in buildings, including disaggregated data on energy produced, consumed and injected into the grid by solar photovoltaic systems, solar thermal systems,
biomass, heat pumps, geothermal systems, as well as all other decentralised renewables systems;

(l) where applicable, the share of renewable energy in district heating, as well as the renewable energy produced by cities and renewable energy communities;

(m) primary supply of solid biomass (in 1 000 m³, except with regard to point (1)(b)(iii), which will be provided in tonnes)

(1) Forest biomass used for energy production (domestic production and import)

(a) Primary biomass from forest used directly for energy production
   
   (i) Where available, branches and tree tops (reporting is voluntary)
   
   (ii) Where applicable, stumps (reporting is voluntary)
   
   (iii) Round wood (split into industrial roundwood and fuelwood)

(b) Where applicable, forest-based industry co-products used directly for energy
   
   (i) Where applicable, bark
   
   (ii) Chips, sawdust and other wood particles
   
   (iii) Where applicable, black liquor and crude tall oil

(c) Where available, post-consumer wood used directly for energy production

(d) Processed wood-based fuel, produced from feedstocks not accounted under point (1)(a), (b) or (c):
   
   (i) Where applicable, wood charcoal
   
   (ii) Wood pellets and wood briquettes

(2) Where available, agricultural biomass used for energy production (domestic production, import and export)

(a) Energy crops for electricity or heat (including short rotation coppice)

(b) Agricultural crop residues for electricity or heat

(3) Where available, organic waste biomass for energy production (domestic production, import and export)

(a) Organic fraction of industrial waste

(b) Organic fraction of municipal waste

(c) Waste sludges

(n) final energy consumption of solid biomass (amount of solid biomass used for energy production in the following sectors):

(1) Energy sector

(a) Electricity

(b) Combined heat and power

(c) Heat

(2) Industry sector internal (consumed and autoproduced electricity, CHP and heat)

(3) Direct final consumption residential

(4) Other
Part 2

Additional reporting obligations in the area of energy efficiency

In the area of energy efficiency, the following additional information shall be included pursuant to point (c) of Article 21:

(a) major legislative and non-legislative policies, measures, financing measures and programmes implemented in year X-2 and X-1 (with X as the year when the report is due) to achieve their objectives referred to in point (b) of Article 4 which promote energy service markets, improve the energy performance of buildings, measures to utilise energy efficiency potentials of gas and electricity infrastructure and heating and cooling, improve information and qualification, other measures to promote energy efficiency;

(b) the cumulative amount of energy savings achieved through Article 7 of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC in years X-3 and X-2;

(c) the amount of savings achieved by policy measures aimed at alleviation of energy poverty in line with Article 7(11) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(d) where applicable, the amount of savings achieved in accordance with point (c) of Article 7(4) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(e) progress in each sector and reasons why energy consumption remained stable or was growing in year X-3 and X-2 in final energy consumption sectors;

(f) total building floor area of the buildings with a total useful floor area over 250 m² owned and occupied by the Contracting Parties’ central government that, on 1 January in year X-2 and X-1, which did not meet the energy performance requirements referred to in Article 5(1) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(g) total building floor area of heated and/or cooled buildings owned and occupied by the Contracting Parties’ central government that was renovated in year X-3 and X-2 referred to in Article 5(1) of the Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and Decision 2021/14/MC-EnC or the amount of energy savings in eligible buildings owned and occupied by their central government as referred to in Article 5(6) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(h) number of energy audits carried out in in year X-3 and X-2. In addition, the total estimated number of large companies in their territory to which Article 8(4) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC is applicable and the number of energy audits carried out in those enterprises in the year X-3 and X-2;

(i) applied national primary energy factor for electricity and a justification if this is different from the default coefficient referred to in footnote (3) of Annex IV to Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC;

(j) number and floor area of new and renovated nearly zero-energy buildings in year X-2 and X-1, as provided in Article 9 of the Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decisions 2010/02/MC-EnC and 2021/14/MC-EnC where necessary based on statistical sampling.
PART II ACQUIS COMMUNAUTAIRE / GOVERNANCE AND CLIMATE / Regulation (EU) 2018/1999

(k) the internet link to the website where the list or the interface of energy services providers referred to in point (c) of Article 18(1) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC and 2021/14/MC-EnC can be accessible.
ANNEX X

ENERGY COMMUNITY BIOENERGY SUSTAINABILITY REPORT

The Energy Community bioenergy sustainability report on energy from biomass to be drafted biennially by the Secretariat together with the implementation report pursuant to point (d) of Article 35(2), shall contain as a minimum the following information:

(a) the relative environmental benefits and costs of different biofuels, bioliquids and biomass fuels, the effects of the Contracting Parties’ import policies thereon, the security of supply implications and the ways of achieving a balanced approach between domestic production and imports;

(b) the impact of the production and use of biomass on sustainability in the Energy Community and in third countries, including impacts on biodiversity;

(c) data and analysis of current and projected sustainable biomass availability and demand, including the impact of increased demand for biomass on biomass using sectors;

(d) the technological development and deployment of biofuels made from feedstocks listed in Annex IX to Directive (EU) 2018/2001, as adopted and adapted by Ministerial Council Decision 2021/14/MC-EnC, and an assessment of the feedstock availability and resource competition taking into account the principles of the circular economy;

(e) information on, and analysis of, the available scientific research results regarding indirect land-use change in relation to all production pathways, accompanied by an assessment of whether the range of uncertainty identified in the analysis underlying the estimations of indirect land-use change emissions may be narrowed and the possible impact of Energy Community and national policies, such as environment, climate and agricultural policies, may be factored in;

(f) in respect of both third countries and Contracting Parties that are a significant source of biofuels, bioliquids and biomass fuels consumed within the Energy Community, on national measures taken to respect the sustainability criteria and GHG saving criteria set out in Article 29(2) to (7) and (10), of Directive (EU) 2018/2001, as adopted and adapted by Ministerial Council Decision 2021/14/MC-EnC for soil, water and air protection; and

(g) aggregated information from the database referred in Article 28(2) of Directive (EU) 2018/2001, as adopted and adapted by Ministerial Council Decision 2021/14/MC-EnC.

In reporting on GHG emission savings from the use of biomass, the Secretariat shall use the amounts reported by Contracting Parties in accordance with point (b) of Part 1 of Annex IX to this Regulation, including the provisional mean values of the estimated indirect land-use change emissions and the associated range derived from the sensitivity analysis as set out in Annex VIII to Directive (EU) 2018/2001, as adopted and adapted by Ministerial Council Decision 2021/14/MC-EnC. The Commission shall make data on the provisional mean values of the estimated indirect land-use change emissions and the associated range derived from the sensitivity analysis publicly available. In addition, the Secretariat shall evaluate whether and how the estimate for direct emission savings would change if co-products were accounted for using the substitution approach.
ANNEX XI

VOLUNTARY SCHEMES IN RESPECT OF WHICH THE SECRETARIAT HAS ISSUED AN OPINION PURSUANT TO ARTICLE 30(4) OF DIRECTIVE (EU) 2018/2001 AS ADOPTED AND ADAPTED BY MINISTERIAL COUNCIL DECISION 2021/14/MC-EnC;

The report on voluntary schemes in respect of which the Secretariat has issued an opinion pursuant to Article 30(4) of Directive (EU) 2018/2001, as adopted and adapted by Ministerial Council Decision 2021/14/MC-EnC, to be adopted biennially by the Secretariat together with the Implementation Report pursuant to point (e) of Article 35(2) of this Regulation, shall contain the Secretariat’s assessment of, as a minimum, the following:

(a) the independence, modality and frequency of audits, both in relation to what is stated on those aspects in the scheme documentation, at the time the scheme concerned was acknowledged by the Secretariat, and in relation to industry best practices;

(b) the availability of, and experience and transparency in the application of, methods for identifying and dealing with non-compliance, with particular regard to dealing with situations or allegations of serious wrongdoing on the part of members of the scheme;

(c) transparency, particularly in relation to the accessibility of the scheme, the availability of translations in the applicable languages of the countries and regions from which raw materials originate, the accessibility of a list of certified operators and relevant certificates, and the accessibility of auditor reports;

(d) stakeholder involvement, particularly as regards the consultation of indigenous and local communities prior to decision making during the drafting and reviewing of the scheme as well as during audits and the response to their contributions;

(e) the overall robustness of the scheme, particularly in light of rules on the accreditation, qualification and independence of auditors and relevant scheme bodies;

(f) where available, market updates of the scheme, the amount of feedstocks and biofuels certified, by country of origin and type, the number of participants;

(g) the ease and effectiveness of implementing a system that tracks the proofs of conformity with the sustainability criteria that the scheme gives to its member(s), such a system intended to serve as a means of preventing fraudulent activity with a view, in particular, to the detection, treatment and follow-up of suspected fraud and other irregularities and where appropriate, number of cases of fraud or irregularities detected;

(h) options for entities to be authorised to recognise and monitor certification bodies;

(i) criteria for the recognition or accreditation of certification bodies;

(j) rules on how the monitoring of the certification bodies is to be conducted;

(k) ways to facilitate or improve the promotion of best practices.
Information referred to in Article 37 includes the following:

(a) <…>

(b) data collected through the reporting systems on fluorinated gases in the relevant sectors [pursuant to Montreal Protocol] for the purpose of preparing national GHG inventories;

(c) <…>

(d) data reported under Regulation (EC) No 1099/2008, as adapted and adopted by Ministerial Council Decision 2012/02/MC-EnC, amended by Decisions 2013/02/MC-EnC and 2015/02/MC-EnC;

(e) data collected via the geographical tracking of land areas in the context of existing Energy Community and Contracting Party programmes and surveys, including the LUCAS Land Use Cover Area frame Survey and the Copernicus Programme.
ANNEX XIII

CORRELATION TABLE

<...>
COMMISSION DELEGATED REGULATION (EU) 2020/1044 of 8 May 2020 supplementing Regulation (EU) 2018/1999 with regard to values for global warming potentials and the inventory guidelines and with regard to the Union inventory system

*The adaptations made by Ministerial Council Decision 2021/14/MC-EnC are highlighted in bold and blue.*

**Article 1**

Scope

This Regulation applies to the reports submitted by the Contracting Parties containing data required for the year 2023 onwards.

**Article 2**

Global warming potentials

The Contracting Parties and the Energy Community Secretariat shall use the global warming potentials listed in Annex I to this Regulation for the purpose of determining and reporting greenhouse gas inventories data pursuant to paragraphs 3 <…> of Article 26 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

**Article 3**

Greenhouse gas inventory guidelines

The Contracting Parties and the Energy Community Secretariat shall determine greenhouse gas inventories referred to in paragraphs 3 <…> of Article 26 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with:

(a) the 2006 Intergovernmental Panel on Climate Change (IPCC) Guidelines for National Greenhouse Gas Inventories;

(b) the modalities, procedures and guidelines for the transparency framework for action and support referred to in Article 13 of the Paris Agreement set out in the Annex to Decision 18/CMA.1 of the Conference of the Parties serving as the meeting of the Parties to the Paris Agreement (‘Decision 18/ CMA.1’).
Article 4
Quality assurance and quality control programme objectives

1. The Energy Community Secretariat shall manage, maintain and seek to continuously improve the Contracting Parties greenhouse gas inventory system based on the following quality assurance and quality control programme objectives:

   (a) that the Contracting Parties greenhouse gas inventory is complete by, where relevant, applying the procedure set out in Article 37(5) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, in consultation with the Contracting Party concerned;

   (b) that the Contracting Parties greenhouse gas inventory system provides a transparent aggregation of Contracting Parties’ greenhouse gas emissions by sources and removals by sinks as well as overviews of methodological descriptions for Contracting Parties key categories, and reflects in a transparent manner the contribution of Contracting Parties’ emissions by sources and removals by sinks to the Contracting Parties greenhouse gas inventory;

   (c) that the total of the Contracting Parties greenhouse gas emissions by sources and removals by sinks for a reporting year is equal to the sum of Contracting Parties’ greenhouse gas emissions by sources and removals by sinks reported pursuant to paragraphs 3 [...] of Article 26 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC for that same year;

   (d) that the Contracting Parties greenhouse gas inventory includes a consistent time series of emissions by sources and removals by sinks for all reported years.

2. The Energy Community Secretariat and the Contracting Parties shall increase, where possible, the comparability of national greenhouse gas inventories by seeking synergy of methods, activity data, notation keys and the allocation of emissions by sources and removals by sinks by Contracting Parties, where appropriate.

3. The quality assurance and quality control programme objectives of the Contracting Parties inventory shall complement the quality assurance and quality control programmes objectives implemented by the Contracting Parties.

4. Contracting Parties shall ensure the quality of activity data, emission factors and other parameters used for their national greenhouse gas inventory.

Article 5
Gap filling

1. The Energy Community Secretariat estimates for completing the inventory data submitted by a Contracting Party as referred to in Article 37(5) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC shall be based on the following methodologies and data:

   (a) where a Contracting Party has submitted in the previous reporting year a consistent time series of estimates for the relevant source category and:

      (i) that Contracting Party has submitted an approximated greenhouse gas inventory for the
year X – 1 pursuant to Article 26(2) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC that includes the missing estimate, on the data from that approximated greenhouse gas inventory;

(ii) that Contracting Party has not submitted an approximated greenhouse gas inventory for the year X – 1 under Article 26(2) of Regulation (EU) 2018/1999, but the Energy Community Secretariat has estimated approximated greenhouse gas emissions for the year X – 1 for that Contracting Party in accordance with Article 26(2) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC on the data from that Energy Community approximated greenhouse gas inventory;

(iii) the use of the data from the approximated greenhouse gas inventory of the Contracting Party is not possible or may lead to a highly inaccurate estimation, for missing estimates in the energy sector, on the energy statistics data obtained in accordance with Regulation (EC) No 1099/2008 of the European Parliament and of the Council, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(iv) the use of the data from the approximated greenhouse gas inventory is not possible or may lead to a highly inaccurate estimation, for missing estimates in non-energy sectors, on estimation methodologies consistent with the technical advice on gap filling in Section 2.2.3 of the 2006 IPCC Guidelines for National Greenhouse Gas Inventories (Vol. 1) using, where appropriate, European statistics;

(b) where an estimate of an emission by source or removal by sink for the relevant category was subject to technical corrections in accordance with Article 38(2)(d) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in the latest review prior to the submission and the Contracting Party concerned has not submitted a revised estimate, on the method used by the technical expert review team to calculate the technical correction;

(c) where a consistent time series of reported estimates for the relevant source category is not available, on estimation methodologies consistent with the technical advice on gap filling in Section 2.2.3 of the 2006 IPCC Guidelines for National Greenhouse Gas Inventories (Vol. 1).

2. The Energy Community Secretariat shall prepare the estimates referred to in paragraph 1 by 31 March of the reporting year in consultation and close cooperation with the Contracting Party concerned.

3. <…>

Article 6

Initial checks

The initial checks performed by the Energy Community Secretariat pursuant to Article 37(4) of Regulation (EU) 2018/1999 may include:

(a) an assessment whether all categories required under the modalities, procedures and guidelines for the transparency framework for action and support referred to in Article 13 of the Paris Agreement set out in the Annex to Decision 18/CMA.1 and all greenhouse gases referred to in Annex V of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC are reported by the Contracting Party;
(b) an assessment whether emissions by sources and removals by sinks data time series are consistent;
(c) an assessment whether implied emission factors across Contracting Parties are comparable taking into account the IPCC default emission factors for different national circumstances;
(d) an assessment of the use of ‘Not Estimated’ notation keys where IPCC Tier 1 methodologies exist and where the use of the notation key is not justified in accordance with point 32 of the Annex to Decision 18/CMA.1;
(e) an analysis of recalculation performed for the greenhouse gas inventory submission, including whether the recalculation are based on methodological changes;
(f) a comparison of the verified greenhouse gas emissions reported under the Energy Community information system with the greenhouse gas emissions reported pursuant to Article 26(3) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;
(g) a comparison of the results of Eurostat’s reference approach with the Contracting Parties’ reference approach;
(h) a comparison of the results of Eurostat’s sectoral approach with the Contracting Parties’ sectoral approach;
(i) an assessment whether issues from earlier Energy Community Secretariat initial checks and reviews as well as recommendations from UNFCCC reviews where applicable have been implemented by the Contracting Party;
(j) an assessment of the accuracy of Contracting Parties’ emissions by sources and removals by sinks estimates in relation to Energy Community key categories;
(k) an assessment of the transparency and completeness of the methodological descriptions reported by Contracting Parties for the Energy Community key categories.
(l) an assessment of monitoring and reporting of emissions by sources and removals by sinks in the land use, land use change and forestry (LULUCF) sector pursuant to Part 3 of Annex V to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, including the assignment of key categories, Tier methodology applied, and a comparison of reported land use and land use change activity data with information derived from the Union and Member State programmes and surveys.

CHAPTER I
SUBJECT MATTER, SCOPE AND DEFINITIONS

Article 1
Subject matter

This Regulation establishes rules implementing Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC as regards the following:

(a) Contracting Parties’ reporting on national adaptation actions, the use of carbon price mechanism revenues and financial and technology support provided to developing countries pursuant to Article 19 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(b) Contracting Parties’ reporting on approximated greenhouse gas (or GHG) inventories, greenhouse gas inventories and accounted greenhouse gas emissions and removals pursuant to Article 26 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(c) requirements on the establishment, operation and functioning of national inventory systems pursuant to Article 37 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(d) the timing and the procedure for carrying out the comprehensive review pursuant to Article 38 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(e) Contracting Parties’ reporting on national system for policies and measures and projections pursuant to Article 39 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.
Article 2
Scope

This Regulation applies to the reports submitted by the Contracting Parties containing data required for the year 2023 onwards.

Article 3
Definitions

For the purposes of this Regulation, the following definitions shall apply:

(1) ‘common reporting table’, or ‘CRT’, means a table for information on anthropogenic greenhouse gas emissions by sources and removals by sinks included in Annex II to Decision 24/CP.19 of the Conference of the Parties to the United Nations Framework Convention on Climate Change (UNFCCC) (Decision 24/CP.19);

(2) ‘reference approach’ means the reference approach by the Intergovernmental Panel on Climate Change (IPCC), as set out in the 2006 IPCC Guidelines for National Greenhouse Gas Inventories (‘2006 IPCC Guidelines’);

(3) ‘approach 1’ means the basic method for the estimation of uncertainties included in the 2006 IPCC Guidelines;

(4) ‘key category’ means a category which has a significant influence on a Contracting Party’s or the Energy Community total inventory of greenhouse gases in terms of the absolute level of emissions and removals, the trend in emissions and removals, or uncertainty in emissions and removals;

(5) ‘sectoral approach’ means the IPCC sectoral approach as set out in the 2006 IPCC Guidelines;

(6) ‘outline for greenhouse gas inventory documents’ means the outline set out in the Appendix to the UNFCCC reporting guidelines on annual greenhouse gas inventories as included in Annex I to Decision 24/CP.19;

(7) ‘transparency MPGs’ means the modalities, procedures and guidelines for the transparency framework for action and support referred to in Article 13 of the Paris Agreement, as set out in in the Annex to Decision 18/CMA.1 of the Conference of the Parties to the UNFCCC serving as meeting of the Parties to the Paris Agreement;

(9) ‘recalculation’ is a procedure for re-estimating, in accordance with the greenhouse gas inventory guidelines anthropogenic GHG emissions by sources and removals by sinks of previously submitted GHG inventories as a consequence of changes in methodologies, changes in the manner in which emission factors and activity data are obtained and used, or the inclusion of new source and sink categories.
CHAPTER II
REPORTING BY CONTRACTING PARTIES ON NATIONAL ADAPTATION ACTIONS, CARBON PRICE MECHANISM REVENUES AND SUPPORT TO DEVELOPING COUNTRIES

Article 4
Information on national adaptation actions

Contracting Parties shall report the information on their national adaptation actions pursuant to Article 19(1) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the format set out in Annex I to this Regulation.

Article 5
Information on the use of carbon price mechanism revenues

Contracting Parties shall report the information on the use of revenues generated by carbon price mechanisms pursuant to Article 19(2) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the formats set out in Annex II to this Regulation.

Article 6
Information on financial and technology support provided to developing countries

1. Contracting Parties shall report the quantitative information on public and mobilised financial resources referred to in point (a)(i) and available information on activities by the Member State related to public-funded technology transfer projects and capacity-building projects for developing countries under the UNFCCC referred to in point (a)(iii) of Part 2 of Annex VIII to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, in accordance with the common tabular format introduced by the Organisation for Economic Cooperation and Development (OECD) Development Assistance Committee for reporting to the Creditor Reporting System (CRS) or the formats set out in Annex III to this Regulation.

2. Contracting Parties shall report the qualitative methodological information explaining the method used to calculate the quantitative information referred to in point (a)(ii) of Part 2 of Annex VIII to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the format set out in Annex IV to this Regulation.

3. Contracting Parties shall report available information on the planned provision of support referred to in point (b) of Part 2 of Annex VIII to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the format set out in Annex V to this Regulation.
CHAPTER III
REPORTING BY CONTRACTING PARTIES ON APPROXIMATED GREENHOUSE GAS INVENTORIES, GREENHOUSE GAS INVENTORIES AND ACCOUNTED GREENHOUSE GAS EMISSIONS AND REMOVALS

Article 7
Reporting on approximated greenhouse gas inventories

(a) 1. Contracting Parties shall report their approximated greenhouse gas inventories pursuant to Article 26(2) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the format set out in Annex VI, at a level of disaggregation of categories reflecting the activity data and methods available for the preparation of estimates for the year X-1;
(b) <…>
2. Contracting Parties shall provide explanations including on the main drivers for the key changes in emissions and removals reported in accordance with the format set out in Annex VI compared to the most recent final greenhouse gas inventory reported.

Article 8
General rules for reporting on greenhouse gas inventories

1. Contracting Parties shall report the information referred to in Article 26(3) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC by completing, in accordance with the greenhouse gas inventory guidelines and with the rules provided for in this Regulation:
(a) the common reporting tables by providing a complete set of spread sheets or Extensible Markup Language (XML) files, depending on the availability of the appropriate software, and covering Contracting Party’s geographical scope under Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;
(b) the information as specified in Articles 9 to 23 of this Regulation.
2. Contracting Parties shall draft the national inventory report referred to in Article 26(3) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC (‘national inventory report’, ‘NIR’) based on the outline for greenhouse gas inventory documents, and following the rules provided for in this Regulation. Contracting Parties shall include the information reported pursuant to Articles 9, 10, 12 and 14 to 18 of this Regulation in the national inventory report or in a separate Annex to the national inventory report and indicate clearly in accordance with Annex VII where the information is provided.
Article 9
Reporting on recalculations

Contracting Parties shall report the reasons for recalculations of greenhouse gas emissions and removals referred to in point (d) of Part 1 of Annex V to Regulation (EU) 2018/1999 in the years 1990, 2005 and X-3; how the time series consistency for all reported years is maintained in writing in the form of a draft of the dedicated summary chapter on recalculations of the national inventory report.

Article 10
Reporting on implementation of recommendations

1. Contracting Parties shall report the information on the steps taken to improve inventory estimates referred to in point (g) of Part 1 of Annex V to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the formats set out in Annex VIII to this Regulation.

2. In their reports referred to in paragraph 1, Contracting Parties shall cover both issues raised for the first time in the most recent respective review reports and issues repeated from previous review reports.

Article 11
Reporting on inventory methods, emission factors and on related methodological descriptions for Energy Community key categories

1. Contracting Parties shall provide the following information for the preparation of the Energy Community inventory report referred to in point (m) of Part 1 of Annex V of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC:

(a) summary information on the methods and emission factors used for the Energy Community’s key categories within the relevant XML files of the common reporting tables;

(b) for those Energy Community key categories, where information on methods and emission factors is not contained in the common reporting tables, information in accordance with Part 3 of Annex IX of this Regulation;

(c) updated summary methodological descriptions for the Energy Community’s key categories in accordance with the format set out in Part 4 of Annex IX.

2. For the purpose of reporting under paragraph 1, the Energy Community Secretariat shall provide the Contracting Parties with the following:

(a) the list of the most recent Energy Community’s key categories by 31 October in accordance with the format set out in Part 1 of Annex IX;

(b) the updated list referred to in paragraph 2(a) with changes highlighted by 28 February;

(c) where available, information on inventory methods, emission factors and on summary methodological descriptions by 31 October in accordance with the format set out in Part 2 of Annex IX;

(d) the updated information referred to in paragraph 2(c) by 28 February.
**Article 12**

**Reporting on uncertainty and completeness**

1. **Contracting Parties** shall report at least approach 1 uncertainty estimates referred to in point (m) of Part 1 of Annex V to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the format set out in Annex X to this Regulation.

2. **Contracting Parties shall** report the information on the general assessment of completeness referred to in point (m) of Part 1 of Annex V to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in the national inventory report, specifying:

   (a) the categories, which were reported as not estimated (NE), as defined in the transparency MPGs, and detailed explanations for the use of this notation key especially where the greenhouse gas inventory guidelines provide methods for estimation of greenhouse gases;

   (b) the geographical coverage of the greenhouse gas inventory, and any differences between the geographical coverage under the UNFCCC and the Paris Agreement and under Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

**Article 13**

**Reporting on indicators**

**Contracting Parties** shall report information on indicators referred to in point (e) of Part 1 of Annex V to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the format set out in Annex XI.

**Article 14**

**Reporting on consistency of reported emissions**

1. **Contracting Parties** shall report the information referred to in point (h) of Part 1 of Annex V to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in accordance with the format set out in Annex XII to this Regulation.

**Article 15**

<...>
**Article 16**

**Reporting on consistency of the data reported on fluorinated greenhouse gases**

Contracting Parties who have incorporated Regulation (EU) 517/2014 shall report the information on the results of the checks referred to in point (j)(ii) of Part 1 of Annex V to Regulation (EU) 2018/1999 in a textual format, specifying:

(a) the checks performed by the Member State concerning the level of detail, the data sets and the submissions compared;

(b) the main results of the checks and explanations for the main inconsistencies;

(c) whether the data collected by operators under Article 6(1) of Regulation (EU) No 517/2014 of the European Parliament and of the Council (10) were made use of and how;

(d) the reasons why the checks were not considered to be relevant, where those checks were not performed.

**Article 17**

**Reporting on consistency with energy statistics**

2. Contracting Parties shall report the quantitative information and explanations for differences of more than +/- 2 % in the total national apparent fossil fuel consumption at aggregate level for all fossil fuel categories for the year X-2 referred to in paragraph 1 in accordance with Annex XIV to this Regulation.

**Article 18**

**Reporting on changes in descriptions of national inventory systems or registries**

Contracting Parties shall clearly state in the relevant chapters of the national inventory report if there were no changes in the description of their national inventory systems or, if applicable, of their national registries referred to in points (k) and (l) of Part 1 of Annex V to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC since the previous submission of the national inventory report.

Article 25
Timescales for cooperation and coordination in preparing the Energy Community greenhouse gas inventory <...>

1. Contracting Parties and the Energy Community Secretariat shall cooperate and coordinate in preparing the Energy Community greenhouse gas inventory and of the Energy Community inventory report in accordance with the timescales set out in Annex XXI.

2. When a Contracting Party re-submits its inventory to the UNFCCC Secretariat that Contracting Party shall provide the Energy Community Secretariat with a summary of the changes made in the re-submitted inventory, no later than within one week of the re-submission.

3. <...>
CHAPTER IV
REQUIREMENTS ON THE ESTABLISHMENT, OPERATION AND FUNCTIONING OF NATIONAL INVENTORY SYSTEMS

Article 26
Functions of national inventory systems

In the implementation of the national inventory systems pursuant to Article 37 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, each Contracting Party shall:

(a) establish and maintain the institutional, legal and procedural arrangements necessary to perform the functions pursuant to Articles 27 to 29, between the government agencies and other entities responsible for the performance of all functions;

(b) ensure sufficient capacity for timely performance of the functions pursuant to Articles 27 to 29, including data collection for estimating anthropogenic GHG emissions by sources and removals by sinks and arrangements for technical competence of the staff involved in the inventory development process.

Article 27
Inventory planning

1. As part of its inventory planning, each Contracting Party shall:

(a) designate a single national entity with overall responsibility for the national inventory and make available its postal and electronic addresses;

(b) define and allocate specific responsibilities in the inventory development process, including those relating to choice of methods, data collection, particularly activity data and emission factors from statistical services and other entities, processing and archiving, and quality control and quality assurance;

(c) elaborate an inventory quality assurance and quality control plan which describes specific quality control procedures to be implemented during the inventory development process, facilitate the overall quality assurance procedures to be conducted and establish quality objectives;

(d) consider establishing processes for the official consideration and approval of the inventory, if relevant including any recalculations, prior to its submission and to respond to any issues raised by the inventory review processes.

2. As part of its inventory planning, each Contracting Party shall where relevant consider ways to improve the quality of activity data, emission factors, methods and other relevant technical elements of inventories. Information obtained from the implementation of the quality assurance and quality control plan, from reviews under Article 19 of Regulation (EU) No 525/2013, Article 38 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC and under the UNFCCC shall where appropriate be considered in the development and/or revision of the quality assurance and quality control plan and the quality objectives.
**Article 28**

**Inventory preparation**

1. In accordance with the greenhouse gas inventory guidelines, each **Contracting Party** shall:
   (a) identify key categories and prepare estimates applying appropriate methods to estimate emissions and removals from key categories;
   (b) collect sufficient activity data, process information and emission factors necessary to support the methods selected for estimating anthropogenic GHG emissions by sources and removals by sinks;
   (c) make a quantitative estimate of inventory uncertainty for each category and for the inventory in total and prepare recalculations of previously submitted estimates of anthropogenic GHG emissions by sources and removals by sinks;
   (d) compile the national inventory and implement general inventory quality control procedures in accordance with their quality assurance and quality control plan.

2. As part of its inventory preparation, each **Contracting Party** shall where appropriate:
   (a) apply category-specific quality control procedures for key categories and for individual categories where significant methodological and/or data revisions have occurred, in accordance with the greenhouse gas inventory guidelines;
   (b) provide for a basic review of the inventory by an independent third party or personnel not involved in the inventory development, before the submission of the inventory, in accordance with the planned quality assurance procedures referred to in Article 27(1)(c);
   (c) provide for a more extensive review for key categories and categories where significant changes in methods occurred;
   (d) based on the reviews according to the transparency MPGs and in accordance with Article 38 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC and periodic internal evaluations of the inventory preparation process, re-evaluate the inventory planning process in order to meet the established quality objectives referred to in Article 27(1)(c) of this Regulation.

**Article 29**

**Inventory management**

1. As part of their inventory management, each **Contracting Party** shall:
   (a) each year for the reported time series, archive inventory information including: all disaggregated emission factors, activity data, and documentation about how these were generated and aggregated; internal documentation on quality assurance and quality control procedures, external and internal reviews, documentation on annual key sources and key source identification and planned inventory improvements.
   (b) provide review teams under the transparency MPGs and Article 38 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC with access to all archived information used by the Member State to prepare the inventory, taking into account country-specific confidentiality rules.
(c) respond to requests for clarifying inventory information resulting from the different stages of the review processes of the inventory information, and information on the national system, in a timely manner.

2. As part of their inventory management, each Contracting Party shall where appropriate make the collection of archived information easily accessible.

CHAPTER V
PROCEDURE AND SCHEDULE FOR CARRYING OUT THE COMPREHENSIVE REVIEW

Article 30
Procedure for the comprehensive review

1. When conducting the comprehensive review (or ‘review’) referred to in Article 38(1) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, the Energy Community Secretariat and the European Environment Agency shall be assisted by a technical experts review team and follow the procedure set out in Annex XXII.

2. The European Environment Agency shall perform the secretarial tasks for the comprehensive reviews as specified in Annex XXII.

3. The Energy Community Secretariat, assisted by the European Environment Agency, shall select a sufficient number of review experts to cover the appropriate inventory sectors. The review experts selected shall have experience in the area of greenhouse gas inventories compilation and, where possible, be active in greenhouse gas review processes. Technical experts who have contributed to the compilation of an individual Contracting Party’s greenhouse gas inventory, or are national of that Contracting Party, shall not take part in the review of that inventory.

4. The comprehensive reviews shall be carried out as desk-based and centralized reviews, as specified in Annex XXII. In addition, in-country visits may be organised upon recommendation of the technical experts review team and in consultation with the Contracting Party concerned.

5. The checks pursuant to Article 38(2)(b) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC shall include, where appropriate, information specified in Annex XXII.

6. The checks referred to in Article 38(2)(c) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC shall include, where appropriate, a detailed examination on consistency of the accounted emissions and removals with Union rules.

7. The comprehensive reviews shall include, where appropriate, checks to identify whether areas of improvement identified for one Contracting Party in the UNFCCC or Energy Community reviews may also constitute an area of improvement for other Contracting Parties.

8. The review of greenhouse gas inventories shall be performed consistently for all Contracting Parties concerned and in an objective manner.
**Article 31**

**Technical corrections**

1. A technical correction of an emission estimate within the meaning of Article 38(2)(d) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC shall be deemed necessary if an underestimate or overestimate exceeds the threshold of significance established in paragraph 2 of this Article. Details of the technical corrections are specified in Annex XXII to this Regulation.

2. The threshold of significance for a given source or sink amounts to 0.05 % of a Contracting Party's total national greenhouse gas emissions without LULUCF for the year of the inventory under review, or 500 kt CO₂ equivalent, whichever is smaller.

3. In response to a finding by the Energy Community Secretariat communicated to a Contracting Party during the review, the Contracting Party may request a change of their estimates of emissions or accounted emissions and removals by providing revised estimates. If a revised estimate is deemed appropriate by the technical review team, it shall be included in the review report referred to in Article 32 and accompanied by a justification.

**Article 32**

**Final review reports**

The Energy Community Secretariat shall inform the Contracting Party concerned of the end of the comprehensive review and provide the Contracting Party with a final review report by 30 August 2027 and 30 August 2032 respectively.

**Article 33**

**Cooperation with Contracting Parties**

1. Contracting Parties shall:
   (a) participate in the review pursuant to the schedule set out in Annex XXII;
   (b) nominate a National contact point for the Energy Community's review;
   (c) participate in and facilitate the organisation of an in-country visit, if needed;
   (d) provide answers and additional information and comment on the review reports as relevant.

2. Upon request by the Contracting Parties, the Energy Community Secretariat shall include comments regarding the review findings in the final review report referred to in Article 32.

3. The Energy Community Secretariat shall inform the Contracting Parties of the composition of the technical experts review team selected pursuant to Article 30.
Article 34
Schedule for the comprehensive reviews

The comprehensive review shall be carried out pursuant to the time schedule set out in Annex XXII.

CHAPTER VI
POLICIES AND MEASURES AND PROJECTIONS

Article 35
Submission processes for reporting

Contracting Parties shall use the e-platform referred to in Article 28 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC and linked tools and templates of the Commission, assisted by the European Environment Agency pursuant to Article 42 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, for the submission of the information pursuant to this Chapter.

Article 36
Reporting on national systems for policies and measures and projections

Contracting Parties shall provide the description of their national systems for reporting on policies and measures, or groups of measures, and projections referred to in point (a) of Annex VI to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in the format set out in Annex XXIII to this Regulation.

Article 37
Reporting on national policies and measures

1. Contracting Parties shall report the information on their national policies and measures, or groups of measures, referred to in point (c) of Annex VI to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in the formats set out in Annex XXIV to this Regulation.

2. Contracting Parties shall report the following information in a textual format:

(a) the updates relevant to their long-term strategies referred to in point (b) of Annex VI to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(b) planned additional policies and measures referred to in point (d) of Annex VI to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC;

(c) links between different policies and measures and the contribution of those policies and measures to different projection scenarios, as referred to in point (e) of Annex VI to Regulation (EU) 2018/1999 as
adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

Article 38
Reporting on national projections

1. **Contracting Parties** shall report the information on their national projections of anthropogenic greenhouse gas emissions by sources and removals by sinks, organised by gas or group of gases, referred to in Article 18(1)(b) and point (a) of Annex VII of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in the format set out in Annex XXV to this Regulation.

2. **Contracting Parties** shall provide the additional information on their national projections of anthropogenic greenhouse gas emissions by sources and removals by sinks referred to in Annex VII to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC in a textual format, specifying:
   (a) <...>
   (b) the results of the sensitivity analysis performed pursuant to point (d) of Annex VII of Regulation (EU) 2018/1999;
   (1) for the total reported greenhouse gas emissions, together with a brief explanation of which parameters were varied and how;
   (2) <...>
   (c) the year of the inventory data (base year) and the year of the inventory report used as a starting point for the projections;
   (d) the methodologies used for the projections, including a brief description of the models used and their sectoral, geographical and temporal coverage, references to further information on the models and information on data sources, key exogenous assumptions and on the parameters used; pursuant to point (e) of Annex VII of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

3. In the reports on projections to be provided pursuant to Article 18(1) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, **Contracting Parties** shall take into account the harmonised values for key parameters for projections – at least for oil, gas, and coal import prices as well as for carbon prices under national mechanism or carbon price mechanism – which the **Secretariat** has recommended, in consultation with the Contracting Parties, 12 months before the deadline for submission of the reports.
CHAPTER VII
TRANSITIONAL AND FINAL PROVISIONS

Article 39
<...>

Article 40
<...>

Article 41
Entry into force and application

This decision shall enter into force on the date of its adoption.
ANNEX I

Information on national adaptation actions pursuant to Article 4

1. National circumstances, impacts, vulnerabilities, risks and adaptive capacity

1.1 National circumstances relevant to adaptation actions:
   a) biogeophysical characteristics;
   b) demographics;
   c) economy and infrastructure.

1.2 Climate monitoring and modelling framework:
   a) main activities on climate monitoring, modelling, projections and scenarios;
   b) main approaches, methodologies and tools, and associated uncertainties and challenges.

1.3 Assessment of climate impacts, vulnerability and risks, including adaptive capacity:
   a) overview of observed climate hazards among the ones listed in Table 1 and existing pressures;
   b) identification of key future climate hazards from the ones listed in Table 1 and key affected sectors

Table 1 - Classification of climate-related hazards

1 ‘Adaptive capacity’ as defined in the Fifth Assessment Report of the United Nations Intergovernmental Panel on Climate Change (IPCC AR5): ‘The ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or to respond to consequences.’

2 The list is not exhaustive.

3 Contracting Parties shall report existing environmental, economic and social pressures that are likely to be significantly affected by climate change: e.g. loss of biodiversity, poor harvest, energy poverty, unemployment, migration.

4 Contracting Parties shall select key sectors among the following: Agriculture and food, biodiversity (including ecosystem-based approaches), buildings, coastal areas, civil protection and emergency management, energy, finance and insurance, forestry, health, marine and fisheries, transport, urban, water management, ICT (information and communications technology), land use planning, business, industry, tourism, rural development, other (please specify).

5 Where relevant, Contracting Parties shall also consider secondary effects of these hazards, such as forest fires, spread of invasive species and tropical diseases, cascading effects, and multiple hazards occurring at the same time.
<table>

</tbody>
</table>

c) For each key affected sector, overview of the following, rated on qualitative scales of high/medium/low/not applicable, with accompanying explanation as appropriate:

i. observed impacts of key hazards, including changes in frequency and magnitude;
ii. likelihood of the occurrence of key hazards and exposure to them under future climate, drawing upon the best available climate modelling science;
iii. vulnerability, including adaptive capacity;
iv. risk of potential future impacts.

2. Legal and policy frameworks and institutional arrangements

2.1 Legal and policy frameworks and regulations, including National Adaptation Strategies (NAS), National Adaptation Plans (NAP) and any sectoral adaptation plans.

2.2 Overview of institutional arrangements and governance at the national level for:

a) assessing climate vulnerability and risks;
b) planning, implementing, monitoring, evaluating and revising adaptation policy;
c) integrating climate change impacts and resilience into environmental assessment procedures;
d) collection, ownership and re-use of relevant data (such as climate-related disaster loss data or risk data) and access to it;
e) integrating climate change impacts and adaptation planning into disaster risk management frameworks and vice versa.

2.3 Overview of institutional arrangements and governance at the sub-national level:

a) legal requirements and strategic documents;
b) networks or other collaborations on adaptation across national authorities;
c) good practice examples of networks or other collaborations on adaptation across local and regional authorities.

---

6 The analysis outlined in points (i) to (iv) shall apply the best available science for vulnerability and risk analysis by the Intergovernmental Panel on Climate Change and the latest Commission guidance on the climate proofing of the Union-funded projects.

7 Contracting Parties shall report the title, year of adoption and status [superseded / adopted / completed and submitted for adoption / being developed] of each NAS and NAP.

8 Aspects to consider include decision making, planning and coordination related to adaptation strategies, policies, plans and goals, addressing cross-cutting issues, adjusting adaptation priorities and activities, implementing adaptation actions, including facilitating action to avert, minimise and address the adverse effect of climate change.

9 <...>

10 Throughout the Annex, ‘sub-national’ refers to local and regional.
3. Adaptation strategies, policies, plans and goals

3.1 Adaptation priorities

3.2 Challenges, gaps and barriers to adaptation

3.3 Summaries of national strategies, policies, plans and efforts, with a focus on goals and objectives, foreseen actions, budget and timeline

3.4 Overview of the content of sub-national strategies, policies, plans and efforts

3.5 Overview of efforts to integrate climate change adaptation into sectoral policies, plans and programs, including disaster risk management strategies and action plans

3.6 Stakeholder engagement

Overview of measures in adaptation policy at the national level and good practice examples from the sub-national levels to engage with:

a) stakeholders particularly vulnerable to climate change impacts;

b) the private sector.

4. Monitoring and evaluation of adaptation actions and processes

4.1 Monitoring and evaluation methodology related to:

a) reducing climate impacts, vulnerabilities, risks, and increasing adaptive capacity;

b) implementation of adaptation actions.

4.2 State of play of the implementation of measures planned under points 3.3 to 3.6, including an overview of the subnational level and the disbursement of funding to increase climate resilience. The reporting on funding shall cover:

a) spending earmarked for climate adaptation including in disaster risk management;

b) to the extent possible, the share of spending used to support climate adaptation in each sector.

4.3 Evaluating progress towards the following:

a) reducing climate impacts, vulnerabilities and risks;

b) increasing adaptive capacity;

c) meeting adaptation priorities;

d) addressing barriers to adaptation.

4.4 Steps taken to review and update the following:

a) vulnerability and risk assessments;

---

11 Including those institutional, governance-related and other barriers that restrict the adaptive capacity as identified in the vulnerability assessment.

12 Including nature-based solutions and actions leading to mitigation co-benefits and other relevant co-benefits.

13 The summaries shall cover also efforts to build resilience and avert, minimise and address the adverse consequences of climate change, and include an explanation how gender perspectives have been taken into account.

14 Contracting Parties shall provide an overview of available information on private sector plans, priorities, actions and programmes, public/private partnerships, and other relevant private adaptation initiatives and/or projects.

15 Contracting Parties shall report on approaches, systems used, transparency and indicators.

16 The additional investment that makes a project (that would have been realised anyway) climate resilient.

17 Contracting Parties shall report on investment in adaptation actions by the following sectors: Agriculture and food, biodiversity (including ecosystem-based approaches), buildings, coastal areas, civil protection and emergency management, energy, finance and insurance, forestry, health, marine and fisheries, transport, urban, water management, ICT (information and communications technology), land use planning, business, industry, tourism, rural development; other [please specify].

18 Based on the monitoring and evaluation methodology as reported under point 4.1.
b) national adaptation policies, strategies, plans, and measures.

4.5 Overview of good practice with regard to steps taken to review and update subnational adaptation plans, policies, strategies and measures.

5. Cooperation, good practices, synergies, experience and lessons learned in the field of adaptation

5.1 Good practices and lessons learnt, including at sub-national level\textsuperscript{19}

5.2 Synergies of adaptation actions with other international frameworks and/or conventions, in particular the Sustainable Development Goals and the Sendai Framework for Disaster Risk Reduction

5.3 Cooperation with Contracting Parties <…> Member States of the European Union, international cooperation, and with regional and international organisations\textsuperscript{20}:

a) cooperation to share information and to strengthen science, institutions and adaptation knowledge;

b) cooperation to enhance adaptation action at the sub-national, national, macro-regional and international level, including the area, scale and types of cooperation.

6. Any other information related to climate change impacts and adaptation

6.1 Key contact details of national coordinator and organisation

6.2 Relevant websites and social media sources used for communication on adaptation action at national and sub-national level, as appropriate

6.3 Key reports and publications at national and sub-national level

6.4 Any other relevant information.

\textsuperscript{19} Contracting Parties may report on the good practices and lessons learnt in the following areas, when relevant: Climate modelling activities and methodologies; assessment of climate impacts, vulnerability and risks to climate change, including adaptive capacity; institutional arrangements and governance at the national level; policy and regulatory changes; coordination mechanisms; adaptation priorities; adaptation barriers; adaptation goals, objectives, undertakings, efforts, strategies, policies and plans; efforts to integrate climate change adaptation into development and sectoral policies, plans and programs; integration of gender perspectives into climate adaptation; integration of indigenous, traditional and local knowledge into climate adaptation; stakeholder engagement; climate risk communication; monitoring and evaluation; strengthening scientific research and knowledge; disaster risk reduction and management, innovative adaptation solutions and innovative financing mechanisms.

5

6 Total amount of revenues or equivalent financial value used

<table>
<thead>
<tr>
<th></th>
<th>Sum of column C</th>
<th>Sum of column D</th>
</tr>
</thead>
</table>

Notation: x = reporting year

Notes:

(1) An average annual exchange rate for the year X-1 or the real exchange rate applied to the amount disbursed shall be used for the currency conversion.

(2) Contracting Parties shall provide the definitions used for ‘commitment’ and ‘disbursement’ as part of their report. If part of the reported amount is committed and another part disbursed related to a specific programme/project, two separate rows should be used. If Contracting Parties are not able to distinguish between committed and disbursed amounts, the most appropriate category should be selected for the reported amounts. Consistent definitions should be used across the Tables.

Generally, ‘committed’ auction revenues are those which have been legally committed to be used for climate and energy purposes, but in some cases may not have yet been spent at the time of reporting. ‘Disbursed’ auction revenues are those which have been spent at the time of reporting. However, in some cases, ‘Commitment’ can refer to revenues that are only preliminarily planned to be used and ‘disbursement’ are those which have been transferred to a specific State Agency for a specific purpose or to a regional government.

(3) Categories of uses mentioned in Article 10(3) of Directive 2003/87/EC as follows:

— funding of research and development and demonstration projects for reducing emissions and for adaptation;
— funding of initiatives within the framework of the European Strategic Energy Technology Plan and the European Technology Platforms;
— development of renewable energies to meet the commitment of the Union;
— development of other technologies contributing to the transition to a safe and sustainable low-carbon economy;
— development of technologies that help meet the commitment of the Union to increase energy efficiency;
— forestry sequestration in the Union;
— environmentally safe capture and geological storage of CO₂;
— encouragement of a shift to low-emission and public forms of transport;
— financing of research and development in energy efficiency and clean technologies;
— measures intended to increase energy efficiency and insulation or to provide financial support in order to address social aspects in lower and middle income households;
— coverage of administrative expenses of the management of the EU ETS;
— promotion of skill formation and reallocation of labour in order to contribute to a just transition to a low carbon economy;
— other reduction of greenhouse gas emissions;
— adaptation to the impacts of climate change;
— other domestic uses.

Categories mentioned in Article 3d(4) of Directive 2003/87/EC, but not specifically mentioned in Article 10(3) as follows:
— funding of common projects to reduce greenhouse gas emissions from the aviation sector;
— measures to avoid deforestation.

**Contracting Parties** shall avoid double counting of amounts in this Table. If a specific use fits to several types of uses, several types can be selected; however, the amount indicated is not to be multiplied but additional rows for types of uses are to be linked with one entry field for that amount.

(4) Several categories can be selected if several financial instruments are relevant for the reported programme or project.

Notes:

(1) The information elements marked with * shall be completed as available.

(2) The information shall be reported per calendar year (X-1).

(a) Amount shall be reported in domestic currency.

(b) This information is to be provided as reported to the UN or the Organisation for Economic Cooperation and Development (OECD) in accordance with any internationally agreed information requirements.

(c) The five-digit purpose codes introduced by the OECD Development Assistance Committee for reporting to the Creditor Reporting System (DAC CRS) may be used when reporting sub-sector information.

(d) Contracting Parties shall indicate ‘T’ if the activity contributes to technology development and transfer objectives, ‘C’ if it contributes to capacity building objectives, ‘Both’ if cross-cutting and ‘N/A’ if not applicable.

(e) Additional information shall be provided, such as a link to relevant program documentation or a description of the project.

# ANNEX IV

## Qualitative methodological information pursuant to Article 6(2)

*Template 1: Provision of qualitative methodological information as applicable and other information on definitions and methodologies*

1. Climate finance

2. New and additional

3. Developing Country

4. Core/general

5. Climate-specific

6. Financial instruments (e.g. grant, concessional loan, non-concessional loan, equity, guarantee, insurance, other (specify))

7. Funding source (ODA, OOF, other)

8. Status (committed and provided)

9. Support mobilised (e.g. (i) Identifying a clear causal link between a public intervention and mobilized private finance, where the activity would not have moved forward, or moved forward at scale, in the absence of the Party’s intervention; (ii) Providing information on the point of measurement (e.g. point of commitment, point of disbursement) of the private finance mobilized as a result of the public intervention, to the extent possible in relation to the type of instrument or mechanism used for the mobilization; (iii) Providing information on the boundaries used to identify finance as mobilized by public intervention)

10. Sector, sub-sector
11. Type of support (climate mitigation/ climate adaptation/ cross-cutting)

12. Public finance/private finance (e.g. in particular where entities or funds are mixed)

13. Application of Rio Markers (coefficients)

14. Determining grant-equivalent component of support provided and support mobilised when grant-equivalent information has been reported

15. Methodologies used to determine figures on support mobilized

16. How double counting was avoided between the resources reported as committed or provided, and the resources used in accordance with Article 6 of the Paris Agreement by the acquiring Party for use towards the achievement of its Nationally Determined Contribution

17. A description of the systems and processes used to identify, track, and report on support committed, provided and mobilised through public interventions

18. A description of the national systems and institutional arrangements for the provision of information on planned provision of support, including information on planned activities related to public-funded technology transfer projects and capacity-building projects for developing countries under the UNFCCC

19. Information, as available, a description of national systems and institutional arrangements for the provision of technology transfer and capacity building support, including on the underlying assumptions, definitions and methodologies used to provide information on technology transfer and capacity-building support

20. Information on channels and barriers encountered, lessons learned and measures to taken to overcome them

21. Information on how it has been sought to ensure that support committed, provided and mobilised through public interventions is in line with the long-term goals of the Paris Agreement
22. Information on how support committed, provided and mobilised is targeted at helping developing countries in their efforts to meet the long-term goals of the Paris Agreement, including by assisting them in efforts to make financial flows consistent with a pathway towards low-greenhouse gas emissions and climate-resilient development.

23. Information on how the information provided reflects a progression from previous levels in the provision of support and mobilisation of finance under the Paris Agreement.

24. How it seeks to ensure that support provided and mobilized through public interventions effectively addresses the needs and priorities of developing country Parties for the implementation of the Paris Agreement, as identified in country-driven strategies and instruments, such as biennial transparency reports, NDCs and national adaptation plans.

25. Information on actions and plans to mobilise additional climate finance as part of the global effort to mobilise climate finance from a wide variety of sources, including on the relationship between the public intervention to be used and the private finance mobilised.

26. Information on reporting on multilateral finance, including: (i) Whether the multilateral finance reported is based on the Party's inflow contribution to a multilateral institution and/or on the Party's share in the outflow of the multilateral institution; (ii) Whether and how multilateral finance has been reported as climate-specific and how the climate-specific share was calculated, including by, for example, using existing international standards; (iii) Whether multilateral finance has been reported as core/general, with the understanding that the actual climate finance amount it would transfer into depends on the programming choices of the multilateral institutions; (iv) Whether and how multilateral finance has been attributed to the reporting Party.
ANNEX V

Available information on the planned provision of support pursuant to Article 6(3)

Table: Available information on the planned provision of support

<table>
<thead>
<tr>

Notes:
(a) **Contracting Parties** shall provide information on the recipient country/region at the preferred level of disaggregation.
(b) Where possible, **Contracting Parties** shall provide the amount of support to be provided in domestic currency (recommended to provide face-value on a commitment basis).
(c) **Contracting Parties** shall indicate ‘T’ if the activity contributes to technology development and transfer objectives, ‘C’ if it contributes to capacity building objectives, ‘Both’ if cross-cutting and ‘N/A’ if not applicable.
(d) Additional information shall be provided, such as a link to relevant program documentation, a description of the project, or available information in accordance with Article 9(5) of the Paris Agreement.

Template 1: Available information on the planned provision of support per activity/program/project to be used in cases where it is impossible for a **Contracting Party** to fill in Table 1

Title of activity/program/project

1. Year

2. Recipient (a)

3. Projected amount to be provided (b)

4. Type of support

5. Technology transfer/Capacity Building (c)

6. Additional Information (d)
Notes:

(a) Contracting Parties shall provide information on the recipient country/region at the preferred level of disaggregation.

(b) Where possible, Contracting Parties shall provide the amount of support to be provided in domestic currency (recommended to provide face-value on a commitment basis).

(c) Contracting Parties shall indicate ‘T’ if the activity contributes to technology development and transfer objectives, ‘C’ if it contributes to capacity building objectives, ‘Both’ if cross-cutting and ‘N/A’ if not applicable.

(d) Additional information shall be provided, such as a link to relevant program documentation, a description of the project, or available information in accordance with Article 9(5) of the Paris Agreement.

</table>

Notes:
(1) For carbon dioxide (CO₂) from land use, land-use change and forestry the net emissions/removals are to be reported. For the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+).
(2) For Contracting Parties that report indirect CO₂ the national totals shall be provided with and without indirect CO₂.
(3) Emissions within the scope of Regulation (EU) 2018/842.

Brief description of the key drivers underpinning the increase or decrease in GHG emissions in x-1 (proxy) compared to x-2 (inventory). If this information is publicly available please include the hyperlink to the relevant website.

Information on the uncertainties associated with the estimations for the LULUCF sector may also be provided.

</tbody>
</table>

**Information to be provided by the Secretariat**

- Identification of **Energy Community** key categories
- Information related to the **Energy Community** key categories

**Information to be reported by Contracting Parties**

- **By 31 October of the year previous to the submission and by 28 February of the current inventory submission**
- For **Energy Community** key categories identified in column B, by 15 January and 15 March
- For **Energy Community** key categories identified in column A, by 15 January and 15 March

#### List of **Energy Community** key categories (a)

- tick to identify key categories where the information on methods and emission factors are not available or reported by Contracting Party in the CRT

#### Methods used in the Contracting Party’s latest inventory (b)

- tick to identify as a new **Energy Community** key category compared to the previous **Energy Community** greenhouse gas inventory

#### Emission factors used in the **Energy Community** greenhouse gas inventory (c)

- reference (section number) to the description in the final NIR (g)

#### Methods used in the Contracting Party’s summary methodological descriptions in the latest inventory (d)

- tick to identify if the methods used in the latest inventory (column I) deviate from the methods used in the previous inventory (column D)

#### Emission factors used in the Contracting Party’s summary methodological descriptions in the latest inventory (e)

- tick to identify if the emission factors used in the latest inventory (column J) deviate from the emission factors used in the previous inventory (column E)

#### Summary methodological descriptions in the latest inventory (f)

- reference (section number) to the description in the final NIR (g)

### Notes:

(a) The categories used in the Union key category analysis shall be specified by the Commission by category code, category title, assessed greenhouse gas and, where applicable, fuel type. For example: 1.A.1.a, Public Electricity and Heat Production, Gaseous Fuels, CO₂.

(b) Notation keys (abbreviations) for ‘method applied’ and ‘emission factors’ used in the common reporting tables’ summary sheet on methods and emission factors used.

(c) Information of the previous year’s description to be included by 31 October 2023, for the first time.

(d) Column H is to be provided by the Commission.

(e) Information in column F is to be provided by the Commission by 31 October 2023, for the first time.
(f) Changes related to information reported in columns I, J, K and L shall only be reported, if applicable, for key categories identified in column B.

(g) ‘Final NIR’ means the latest available complete NIR submitted to the EU.

Notation: x = reporting year

Notes:

1. **Contracting Parties** shall report numerator and denominator, if not included in the CRT.
2. **Contracting Parties** shall follow this guidance. If they cannot follow exactly this guidance or if numerator and denominator are not entirely consistent, **Contracting Parties** shall clearly indicate this.
3. The references to IPCC source categories refer to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories.
4. One billion means one thousand millions.
### ANNEX XII

**Reporting on consistency of reported emissions with data from the EU Emissions Trading System pursuant to Article 14**

Allocation of verified emissions reported by installations and operators under Directive 2003/87/EC to source categories of the national greenhouse gas inventory **Contracting Party**

**Reporting year:**

**Basis for data:** verified ETS emissions and greenhouse gas emissions as reported in inventory submission for the year X-2

**Notes:**
- The allocation of verified emissions to disaggregated inventory categories at four digit level must be reported where such allocation of verified emissions is possible and emissions occur. The following notation keys should be used:
  - NO = not occurring; IE = included elsewhere; C = confidential;
  - Negligible = small amount of verified emissions may occur in respective CRT category, but amount is < 5 % of the category.
- The column comment should be used to give a brief summary of the checks performed and if a Contracting Party wants to provide additional explanations with regard to the allocation reported.
- Data to be reported up to one decimal point for kt and % values.
- To be filled on the basis of combined CRT categories pertaining to ‘Iron and Steel’, to be determined individually by each Contracting Party; the stated formula is for illustration purposes only.

ANNEX XXII

<...>
ANNEX XXIII

Format for reporting on national systems for policies and measures and projections pursuant to Article 36

The first report submitted pursuant to Article 36 shall provide a full description and contain all of the information listed in the Table below. For subsequent reporting years, only modifications of the national system for policies and measures and projections need to be reported.

<table>
<thead>
<tr>
<th>Reporting obligation</th>
<th>Fields for textual information</th>
<th>Examples of details that could be reported under this specific reporting obligation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name and contact information for the entities with overall responsibility for the National Systems for policies and measures and projections</td>
<td>• List the responsible entity or entities, and their specific roles and responsibilities. Identify the lead entity. • If such a description has already been provided, report changes to the name and contact information.</td>
<td></td>
</tr>
<tr>
<td>Institutional arrangements in place for preparation of reports on policies and measures and of projections as well as for reporting on them, including an organogram</td>
<td>• Define the overall structure/set-up of your national system. List all organisations involved in the preparation of the report on policies and measures and projections and in the archiving of information, their responsibilities, and their interactions. • Provide a description of the organogram to show the organisational structure of the National System for policies and measures and projections, including the functional and hierarchical interrelationships between organisations. • If such a description of the national system has already been provided, report and explain changes to institutional arrangements.</td>
<td></td>
</tr>
<tr>
<td>Legal arrangements in place for preparation of reports on policies and measures and of projections</td>
<td>• Are there any legal arrangements in place to ensure reporting is completed, and/or data provided? Report the legislation and its scope. • If such a description has already been provided, report the changes to legal arrangements in place for the preparation of the report on policies and measures and projections.</td>
<td></td>
</tr>
<tr>
<td>Procedural and administrative arrangements and timescales in place for the preparation of reports on policies and measures and of projections, to ensure the timeliness, transparency, accuracy, consistency, comparability and completeness of the information reported.</td>
<td>• Report the cycle for preparation of report on policies and measures and of projections. • Summarise the methodologies and mechanisms how timeliness, transparency, accuracy, consistency, comparability and completeness of the information reported are ensured. • Report on assurance of consistency with preparation of reports on policies and measures, where relevant, and of projections under Directive (EU)2016/2284. • Optionally, provide diagrams that show the processes involved in the national system. These diagrams could include the information flows through the system, and at which points QC and QA measures are applied. • If such a description has already been provided, report the changes to procedural and administrative arrangements.</td>
<td></td>
</tr>
</tbody>
</table>
| Description of the information collection process | • Provide a summary of the process for collecting information for developing policies and measures, evaluating policies and measures and for developing projections. Explain if and how consistent processes are used for collecting and using information for policies and measures and projections.  
• If such a description has already been provided, report the changes to the data collection process. |
| Description of the alignment with the national inventory system | • Provide information on the alignment with the national system for the GHG inventory, such as processes to ensure consistency of the data used.  
• Option to provide details of links to other climate reporting systems if relevant.  
• If such a description has already been provided, report changes to the links to the national system for greenhouse gas inventories. |
| Description of the links to arrangements on integrated national energy and climate-reports pursuant to Art. 17 of Regulation (EU) 2018/1999 | • Provide a summary of the linkages between the processes used to collect data related to policies and measures and projections, and relevant processes to report on progress other dimensions of the Energy Union, e.g. processes to foster consistent use of energy-related data for the development of policies and measures and projections and  
• for integrated progress reporting.  
• If such a description has already been provided, report changes to the links to energy-related reporting systems. |
| Description of the quality assurance and quality control activities for reporting of policies and measures and projections | • Provide a summary of the Quality Control activities applied to help ensure accuracy and completeness in the policies and measures and projections reports. Report the Quality Assurance activities in place.  
• If such a description has already been provided, report the changes to the quality control and quality assurance activities. |
| Description of the process for selecting assumptions, methodologies and models for making projections of anthropogenic greenhouse gas emissions | • Describe the process behind the selection of methodologies and models used. Contracting Parties may also report the reasons for their choices, or cross reference to other reports providing this information.  
• If such a description has already been provided, report the changes to these processes. |
| Description of procedures for the official consideration and approval of the Contracting Parties national system for policies and measures and projections | • Describe the process for officially approving the national system or changes to the national system.  
• If such a description has already been provided, report the changes to this process. |
| Information on relevant institutional administrative and procedural arrangements for domestic implementation of the EU’s nationally determined contribution, or changes to such arrangements | • Refer to the arrangements for implementing policies and measures as means of domestic implementation and to the arrangements for national projections of anthropogenic greenhouse gas emissions by sources and removals by sinks as means to track domestic progress.  
• If such a description has already been provided, report the changes to such arrangements. |
| Description of the stakeholder engagement undertaken in relation to the preparation of policies and measures and projections | • Report a description of the stakeholder engagement undertaken in relation to the preparation of policies and measures and projections. Indicate which stakeholders were consulted, and any changes or improvements made. |

Notes: Abbreviations: GHG = greenhouse gas; LULUCF = land use, land-use change and forestry.  
(a) **Contracting Parties** shall select from the following categories: covering two or more countries, national, regional, local.
(b) Contracting Parties shall select from the following sectors (more than one sector can be selected for cross-sectoral policies and measures): energy supply (comprising extraction, transmission, distribution and storage of fuels as well as the transformation of energy for heating and cooling and electricity production); energy consumption (comprising consumption of fuels and electricity by end users such as households, public administration; services, industry and agriculture); transport; industrial processes (comprising industrial activities that chemically or physically transform materials leading to greenhouse gas emissions, use of greenhouse gases in products and non-energy uses of fossil fuel carbon); agriculture; LULUCF; waste management/waste; other sectors.

(c) Contracting Parties shall select from the following GHGs (more than one GHG can be selected): carbon dioxide (CO₂); methane (CH₄); nitrous oxide (N₂O); hydrofluorocarbons (HFC); perfluorocarbons (PFC); sulphur hexafluoride (SF₆); nitrogen trifluoride (NF₃).

(d) Objective means ‘initial statement of the outcomes (including results and impacts) intended to be achieved by the intervention’.

Contracting Parties shall select from the following objectives (more than one objective may be selected, additional objectives may be added and specified under ‘other’):

For energy supply — increase in renewable energy sources in the electricity sector; increase in renewable energy in the heating and cooling sector; switch to less carbon-intensive fuels; enhanced non-renewable low carbon generation (nuclear); reduction of losses; efficiency improvement in the energy and transformation sector; carbon capture and storage or carbon capture and utilisation; control of fugitive emissions from energy production; other energy supply.

For energy consumption — efficiency improvements of buildings; efficiency improvement of appliances; efficiency improvement in services/tertiary sector; efficiency improvement in industrial end-use sectors; demand management/reduction; other energy consumption.

For transport — efficiency improvements of vehicles; modal shift to public transport or non-motorized transport; low carbon fuels; electric road transport; demand management/reduction; improved behaviour; improved transport infrastructure; reduce emissions from international air or maritime transport; other transport.

For industrial processes — installation of abatement technologies; improved control of fugitive emissions from industrial processes; improved control of manufacturing, fugitive and disposal emissions of fluorinated gases; replacement of fluorinated gases by gases with a lower GWP value; other industrial processes.

For waste management/waste — demand management/reduction; enhanced recycling; enhanced CH₄ collection and use; improved treatment technologies; improved landfill management; waste incineration with energy use; improved wastewater management systems; reduced landfilling; other waste.

For agriculture — reduction of fertilizer/manure use on cropland; other activities improving cropland management; improved livestock management; improved animal waste management systems; activities improving grazing land or grassland management; improved management of organic soils; other agriculture.

For LULUCF — afforestation and reforestation; conservation of carbon in existing forests; enhancing production in existing forests; increasing the harvested wood products pool; enhanced forest management; prevention of deforestation; strengthening protection against natural disturbances; substitution of GHG intensive feedstocks and materials with harvested wood products; prevention of drainage or rewetting of wetlands; restoration of degraded lands; other LULUCF.

For Other — Contracting Parties shall provide a brief description of the objective.

(e) Contracting Parties shall include, as a minimum, the figure(s), unit(s), end year and base year if the objective(s) is(are) quantified. Quantified objectives shall be specific, measurable, achievable, relevant and time-related.

(f) Contracting Parties shall select from the following policy types: economic; fiscal; voluntary/negotiated agreements; regulatory; information; education; research; planning; other.

(g) List here only Union policy/policies that are implemented through the national policy or where national policies are aimed directly at meeting the objectives of Union policies. Contracting Party shall select a policy/policies from a list provided in the electronic version of the tabular format, or select other and specify the name of the Energy Community policy. Contracting Parties shall select Directive (EU) 2016/2284 if the PaM has been reported under that Directive.

(h) Contracting Parties shall select from the following categories: planned; adopted; implemented; expired. Expired policies and measures shall be reported in the template only if they have an effect, or if they are expected to continue to have an effect on greenhouse gas emissions.

(i) Contracting Parties shall select from the following options and enter the name/s of entities responsible for implementing the policy or measure (more than one entity may be selected): national government; regional entities; local government; companies/businesses/industrial associations; research institutions; others not listed.

(j) Contracting Parties shall provide any indicator used (including the unit) and values for such indicators that they use to monitor and evaluate progress of policies and measures. Those values can be either ex-post or ex-ante values and Contracting Parties shall specify the year or years for which the value applies. Values for multiple indicators and years may be reported. Performance indicators identified by Contracting Parties shall be relevant, accepted, credible, easy and robust.

Notes:

(a) **Contracting Parties** shall report on all the policies and measures or groups of policies and measures for which such assessment is available. Notation: t signifies the first future year ending with 0 or 5 immediately following the reporting year.

(b) **Contracting Parties** may report ex-post assessments for more than one year, where available reporting shall focus on years ending with 0 or 5.

(c) Enhanced removals or decreased emissions of greenhouse gases shall be expressed as a positive number. Decreased removals or increased emissions shall be expressed as a negative number.

(d) In this field, the total of the EU ETS and ESR sectors shall be entered if the split between EU ETS and ESR is not available.

(e) Ex-post evaluations include all evaluations based on results from parts of, or the whole implementation period.
### Table 3: Available projected and realised costs and benefits of individual or groups of policies and measures on mitigation of climate change (a)

| Realized costs and benefits | Description of non-GHG mitigation benefits.
|----------------------------|---------------------------------|
|                            | Documentation / Source of cost estimation (provide a weblink of the report where the figure is referenced from).
|                            | Description of cost estimates (basis for cost estimate, what type of costs are included in the estimate, methodology) (c).
|                            | Price year
|                            | Absolute net cost per year in EUR
|                            | Net costs in EUR per tonne CO₂-equivalent reduced/ sequestered
|                            | Absolute benefit (b) per year in EUR
|                            | Benefits (b) in EUR per tonne CO₂-equivalent reduced/ sequestered
|                            | Absolute gross costs per year in EUR
|                            | Gross costs in EUR per tonne CO₂-equivalent reduced/sequestered
|                            | Year(s) for which cost has been calculated

| Projected costs and benefits | Description of non-GHG mitigation benefits.
|------------------------------|---------------------------------|
|                              | Documentation / Source of cost estimation (provide a weblink of the report where the figure is referenced from).
|                              | Description of cost estimates (basis for cost estimate, what type of costs are included in the estimate, methodology) (c).
|                              | Price year
|                              | Absolute net cost per year in EUR
|                              | Net costs in EUR per tonne CO₂-equivalent reduced/ sequestered
|                              | Absolute benefit (b) per year in EUR
|                              | Benefits (b) in EUR per tonne CO₂-equivalent reduced/ sequestered
|                              | Absolute gross costs per year in EUR
|                              | Gross costs in EUR per tonne CO₂-equivalent reduced/sequestered
|                              | Year(s) for which cost has been calculated

**Notes:**

(a) **Contracting Parties** shall report on all the policies and measures or groups of policies and measures for which such assessment is available.

(b) A benefit shall be indicated in the template as a negative cost.

(c) The description shall include the type of costs and benefits that have been taken into consideration, the stakeholders considered in the assessment of costs and benefits, the baseline against which costs and benefits are compared, and the methodology.

Navigation
CO₂ emissions from biomass
CO₂ captured
Indirect CO₂ (if available) (10)

Notation: t signifies the first future year ending with 0 or 5 immediately following the reporting year

Notes:

(1) Consistency with the data reported under Article 8 of this Regulation is encouraged.

(2) Use of notation keys: as regards the terms of use defined in the 2006 IPCC Guidelines for National Greenhouse Gas Inventories (chapter 8: reporting guidance and Tables), the notation keys of IE (included elsewhere), NO (not occurring), C (confidential) and NA (not applicable) may be used, as appropriate when projections do not yield data on a specific reporting level (see 2006 IPCC Guidelines).

The use of the notation key NE (Not Estimated) shall be restricted to the situation where a disproportionate amount of effort would be required to collect data for a category or a gas from a specific category that would be insignificant in terms of the overall level and trend in national emissions. In these circumstances a Contracting Party shall list all categories and gases from categories excluded on these grounds, together with a justification for exclusion in terms of the likely level of emissions or removals and identify the category as “not estimated” using the notation key “NE” in the reporting Tables.

(3) Unspecified mix of HFCs and PFCs is to be reported only if emissions are projected, for which it is not possible to report them under HFCs or under PFCs.

(6) It shall be reported to which inventory submission (year, version) the base year was calibrated.

(7) Values for t-5 shall only be provided when t-5 is after the projection base year.

(8) ODS – ozone depleting substances.

(9) For the purposes of reporting, the signs for removal shall always be negative (-) and the signs for emissions shall be positive (+). If the information requested in Table 1b is provided in full, this section does not need to be reported.

(10) Projected indirect CO₂ emissions reported in this Table are part of the projected total greenhouse gas emissions (excluding and including LULUCF) and shall be reported as such if available and projected separately from the other reported emissions.

</tr>
</tbody>
</table>

**Notes:**

(1) Please add a row per country-specific parameter used in the projections at the end of the Table. Note that this includes the term ‘variables’ because some of the parameters listed can be variables for certain projection tools used, depending on the models used.

(2) Only those parameters / variables need to be reported that are part of the projections, either input or output.

(3) Use of notation keys: the notation keys of IE (included elsewhere), NO (not occurring), C (confidential), NA (not applicable), and NE (Not estimated/Not used) may be used, as appropriate. The use of the notation key NE (Not estimated) is for cases where the suggested parameter is neither used as a driver nor reported along with the Member States Projections. Notation: t signifies the first future year ending with 0 or 5 immediately following the reporting year.

(4) May include harvested wood products from managed forest land and afforested land.

(5) Please specify the types of harvested wood products in the rows below (under ‘Add row for each other relevant parameter’).

(6) To be filled with Yes/No.

(7) Please specify additional different values for parameters used in different sector models.

(8) Any update of this base year for expressing monetary values shall be part of the recommendations by the Commission on harmonised values for key supra-nationally determined parameters under Article 38(3) of this Regulation.
Table 7: Key parameters that were varied in the sensitivity analysis

(Submit for each sensitivity scenario calculated). Only those parameters are to be filled in that were varied in a specific scenario.

PART II

ACQUIS COMMUNAUTAIRE

RENEWABLE ENERGY
DIRECTIVE (EU) 2018/2001 of 11 December 2018 on the promotion of the use of energy from renewable sources

The adaptations made by Ministerial Council Decision 2021/14/MC-EnC are highlighted in bold and blue.

Whereas it should be ensured, as early as possible, that Guarantees of origins issued by Contracting Parties of the Energy Community are recognised by Member States as referred to Article 19(11) of the Directive (EU) 2018/2001, either through the Energy Community Treaty or a separate agreement.¹

Article 1
Subject matter

This Directive establishes a common framework for the promotion of energy from renewable sources. It sets a target for the overall share of energy from renewable sources in the Energy Community gross final consumption of energy in 2030, in line with Regulation (EU) 2018/1999, in particular Article 2, point (11). It also lays down rules on financial support for electricity from renewable sources, on self-consumption of such electricity, on the use of energy from renewable sources in the heating and cooling sector and in the transport sector, on regional cooperation between Contracting Parties, between Contracting Parties and Member States, and between Contracting Parties and third countries, on guarantees of origin, on administrative procedures and on information and training. It also establishes sustainability and greenhouse gas emissions saving criteria for biofuels, bioliquids and biomass fuels.

Article 2
Definitions

For the purposes of this Directive, the relevant definitions in Directive 2009/72/EC, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, apply.

The following definitions also apply:

(1bis) '(overall) Energy Community 2030 target' means the value calculated on the basis of the targets for the Contracting Parties as regards the minimum share of renewable energy consumed in 2030, in the terms to be adopted by the Ministerial Council on the basis of the study(ies) carried out to this effect;²

(1) ‘energy from renewable sources’ or ‘renewable energy’ means energy from renewable non-fossil sources, namely wind, solar (solar thermal and solar photovoltaic) and geothermal energy, ambient energy, tide,

¹ The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
² The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
wave and other ocean energy, hydropower, biomass, landfill gas, sewage treatment plant gas, and biogas;

(2) ‘ambient energy’ means naturally occurring thermal energy and energy accumulated in the environment with constrained boundaries, which can be stored in the ambient air, excluding in exhaust air, or in surface or sewage water;

(3) ‘geothermal energy’ means energy stored in the form of heat beneath the surface of solid earth;

(4) ‘gross final consumption of energy’ means the energy commodities delivered for energy purposes to industry, transport, households, services including public services, agriculture, forestry and fisheries, the consumption of electricity and heat by the energy branch for electricity, heat and transport fuel production, and losses of electricity and heat in distribution and transmission;

(5) ‘support scheme’ means any instrument, scheme or mechanism applied by a Contracting Party, or a group of Contracting Parties or Member States, that promotes the use of energy from renewable sources by reducing the cost of that energy, increasing the price at which it can be sold, or increasing, by means of a renewable energy obligation or otherwise, the volume of such energy purchased, including but not restricted to, investment aid, tax exemptions or reductions, tax refunds, renewable energy obligation support schemes including those using green certificates, and direct price support schemes including feed-in tariffs and sliding or fixed premium payments;

(6) ‘renewable energy obligation’ means a support scheme requiring energy producers to include a given share of energy from renewable sources in their production, requiring energy suppliers to include a given share of energy from renewable sources in their supply, or requiring energy consumers to include a given share of energy from renewable sources in their consumption, including schemes under which such requirements may be fulfilled by using green certificates;

(7) <...> 3

(8) ‘SME’ means a micro, small or medium-sized enterprise as defined in Article 2 of the Annex to Commission Recommendation 2003/361/EC;

(9) ‘waste heat and cold’ means unavoidable heat or cold generated as by-product in industrial or power generation installations, or in the tertiary sector, which would be dissipated unused in air or water without access to a district heating or cooling system, where a cogeneration process has been used or will be used or where cogeneration is not feasible;

(10) ‘repowering’ means renewing power plants that produce renewable energy, including the full or partial replacement of installations or operation systems and equipment for the purposes of replacing capacity or increasing the efficiency or capacity of the installation;

(12) ‘guarantee of origin’ means an electronic document which has the sole function of providing evidence to a final customer that a given share or quantity of energy was produced from renewable sources;

(13) ‘residual energy mix’ means the total annual energy mix for a Contracting Party, excluding the share covered by cancelled guarantees of origin;

(14) ‘renewables self-consumer’ means a final customer operating within its premises located within confined boundaries or, where permitted by a Contracting Party, within other premises, who generates

3 Not applicable according to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
renewable electricity for its own consumption, and who may store or sell self-generated renewable electricity, provided that, for a non-household renewables self-consumer, those activities do not constitute its primary commercial or professional activity;

(15) ‘jointly acting renewables self-consumers’ means a group of at least two jointly acting renewables self-consumers in accordance with point (14) who are located in the same building or multi-apartment block;

(16) ‘renewable energy community’ means a legal entity:
(a) which, in accordance with the applicable national law, is based on open and voluntary participation, is autonomous, and is effectively controlled by shareholders or members that are located in the proximity of the renewable energy projects that are owned and developed by that legal entity;
(b) the shareholders or members of which are natural persons, SMEs or local authorities, including municipalities;
(c) the primary purpose of which is to provide environmental, economic or social community benefits for its shareholders or members or for the local areas where it operates, rather than financial profits;

(17) ‘renewables power purchase agreement’ means a contract under which a natural or legal person agrees to purchase renewable electricity directly from an electricity producer;

(18) ‘peer-to-peer trading’ of renewable energy means the sale of renewable energy between market participants by means of a contract with pre-determined conditions governing the automated execution and settlement of the transaction, either directly between market participants or indirectly through a certified third-party market participant, such as an aggregator. The right to conduct peer-to-peer trading shall be without prejudice to the rights and obligations of the parties involved as final customers, producers, suppliers or aggregators;

(19) ‘district heating’ or ‘district cooling’ means the distribution of thermal energy in the form of steam, hot water or chilled liquids, from central or decentralised sources of production through a network to multiple buildings or sites, for the use of space or process heating or cooling;

(20) ‘efficient district heating and cooling’ means efficient district heating and cooling as defined in point (41) of Article 2 of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decision 2015/08/MC-EnC;

(22) ‘energy performance certificate’ means energy performance certificate as defined in point (12) of Article 2 of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2009/05/MC-EnC;

(23) ‘waste’ means; waste as defined in point (1) of Article 3 of Directive 2008/98/EC, excluding substances that have been intentionally modified or contaminated in order to meet this definition;

(24) ‘biomass’ means the biodegradable fraction of products, waste and residues from biological origin from agriculture, including vegetal and animal substances, from forestry and related industries, including fisheries and aquaculture, as well as the biodegradable fraction of waste, including industrial and municipal waste of biological origin;
(25) ‘agricultural biomass’ means biomass produced from agriculture;
(26) ‘forest biomass’ means biomass produced from forestry;
(27) ‘biomass fuels’ means gaseous and solid fuels produced from biomass;
(28) ‘biogas’ means gaseous fuels produced from biomass;
(29) ‘biowaste’ means biowaste as defined in point (4) of Article 3 of Directive 2008/98/EC;
(30) ‘sourcing area’ means the geographically defined area from which the forest biomass feedstock is sourced, from which reliable and independent information is available and where conditions are sufficiently homogeneous to evaluate the risk of the sustainability and legality characteristics of the forest biomass;
(31) ‘forest regeneration’ means the re-establishment of a forest stand by natural or artificial means following the removal of the previous stand by felling or as a result of natural causes, including fire or storm;
(32) ‘bioliquids’ means liquid fuel for energy purposes other than for transport, including electricity and heating and cooling, produced from biomass;
(33) ‘biofuels’ means liquid fuel for transport produced from biomass;
(34) ‘advanced biofuels’ means biofuels that are produced from the feedstock listed in Part A of Annex IX;
(35) ‘recycled carbon fuels’ means liquid and gaseous fuels that are produced from liquid or solid waste streams of non-renewable origin which are not suitable for material recovery in accordance with Article 4 of Directive 2008/98/EC, or from waste processing gas and exhaust gas of non-renewable origin which are produced as an unavoidable and unintentional consequence of the production process in industrial installations;
(36) ‘renewable liquid and gaseous transport fuels of non-biological origin’ means liquid or gaseous fuels which are used in the transport sector other than biofuels or biogas, the energy content of which is derived from renewable sources other than biomass;
(37) ‘low indirect land-use change-risk biofuels, bioliquids and biomass fuels’ means biofuels, bioliquids and biomass fuels, the feedstock of which was produced within schemes which avoid displacement effects of food and feed-crop based biofuels, bioliquids and biomass fuels through improved agricultural practices as well as through the cultivation of crops on areas which were previously not used for cultivation of crops, and which were produced in accordance with the sustainability criteria for biofuels, bioliquids and biomass fuels laid down in Article 29;
(38) ‘fuel supplier’ means an entity supplying fuel to the market that is responsible for passing fuel through an excise duty point or, in the case of electricity or where no excise is due or where duly justified, any other relevant entity designated by a Contracting Party;
(39) ‘starch-rich crops’ means crops comprising mainly cereals, regardless of whether the grains alone or the whole plant, such as in the case of green maize, are used; tubers and root crops, such as potatoes, Jerusalem artichokes, sweet potatoes, cassava and yams; and corm crops, such as taro and cocoyam;
(40) ‘food and feed crops’ means starch-rich crops, sugar crops or oil crops produced on agricultural land as a main crop excluding residues, waste or ligno-cellulosic material and intermediate crops, such as catch crops and cover crops, provided that the use of such intermediate crops does not trigger demand for additional land;
(41) ‘ligno-cellulosic material’ means material composed of lignin, cellulose and hemicellulose, such as biomass sourced from forests, woody energy crops and forest-based industries’ residues and wastes;
(42) ‘non-food cellulosic material’ means feedstock mainly composed of cellulose and hemicellulose, and having a lower lignin content than ligno-cellulosic material, including food and feed crop residues, such as straw, stover, husks and shells; grassy energy crops with a low starch content, such as ryegrass, switchgrass, miscanthus, giant cane; cover crops before and after main crops; ley crops; industrial residues, including from food and feed crops after vegetal oils, sugars, starches and protein have been extracted; and material from biowaste, where ley and cover crops are understood to be temporary, short-term sown pastures comprising grass-legume mixture with a low starch content to obtain fodder for livestock and improve soil fertility for obtaining higher yields of arable main crops;

(43) ‘residue’ means a substance that is not the end product(s) that a production process directly seeks to produce; it is not a primary aim of the production process and the process has not been deliberately modified to produce it;

(44) ‘agricultural, aquaculture, fisheries and forestry residues’ means residues that are directly generated by agriculture, aquaculture, fisheries and forestry and that do not include residues from related industries or processing;

(45) ‘actual value’ means the greenhouse gas emissions savings for some or all of the steps of a specific biofuel, bioliquid or biomass fuel production process, calculated in accordance with the methodology laid down in Part C of Annex V or Part B of Annex VI;

(46) ‘typical value’ means an estimate of the greenhouse gas emissions and greenhouse gas emissions savings for a particular biofuel, bioliquid or biomass fuel production pathway, which is representative of the Energy Community consumption;

(47) ‘default value’ means a value derived from a typical value by the application of pre-determined factors and that may, in circumstances specified in this Directive, be used in place of an actual value.

**Article 3**

**Overall Energy Community target for 2030**

1. **Contracting Parties** shall ensure that the share of energy from renewable sources in the **Contracting Parties’** gross final consumption of energy in 2030 **corresponds to the target set by the Ministerial Council for 2030 on the basis of the study(ies) carried out to this effect.**

2. **Contracting Parties** shall set national contributions **not lower than the 2030 share included in the relevant Decision of the Ministerial Council to be taken on on the basis of the study(ies) carried out to this effect,** to meet the overall **Energy Community** target set in paragraph 1 of this Article as part of their integrated national energy and climate plans in accordance with Articles 3 to 5 and 9 to 14 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

If, on the basis of the assessment of the draft integrated national energy and climate plans submitted pursuant to Article 9 of Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, the **Secretariat** concludes that the national contributions of the **Contracting Parties** are insufficient for the achievement of the overall **Energy Community** target, it shall follow the procedure laid down in Articles 9 and 31 of that Regulation, as adapted and adopted by

---

4 Changes in the text of this Article correspond to Article 4 of Ministerial Council Decision 2021/14/MC-EnC.
Ministerial Council Decision 2021/14/MC-EnC.

3. Contracting Parties shall ensure that their national policies, including the obligations deriving from Articles 25 to 28 of this Directive, and their support schemes, are designed with due regard to the waste hierarchy as set out in Article 4 of Directive 2008/98/EC to aim to avoid undue distorting effects on the raw material markets. Contracting Parties shall grant no support for renewable energy produced from the incineration of waste if the separate collection obligations laid down in that Directive have not been complied with.

4. From 1 January 2022, the share of energy from renewable sources in each Contracting Party’s gross final consumption of energy shall not be lower than the baseline share shown in the third column of the table in Part A of Annex I to this Directive. Contracting Parties shall take the necessary measures to ensure compliance with that baseline share. If a Contracting Party does not maintain its baseline share as measured over any one-year period, the first and second subparagraphs of Article 32(4) of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC shall apply.

5. The European Union shall endeavour to support the high ambition of Contracting Parties through an enabling framework comprising the enhanced use of available funds, including additional funds to facilitate a just transition of carbon intensive regions towards increased shares of renewable energy, in particular financial instruments, especially for the following purposes:

(a) reducing the cost of capital for renewable energy projects;
(b) developing projects and programmes for integrating renewable sources into the energy system, for increasing flexibility of the energy system, for maintaining grid stability and for managing grid congestions;
(c) developing transmission and distribution grid infrastructure, intelligent networks, storage facilities and interconnections, with the objective of arriving at a 15% electricity interconnection target by 2030, in order to increase the technically feasible and economically affordable level of renewable energy in the electricity system;
(d) enhancing regional cooperation between Contracting Parties, Member States and Contracting Parties, Contracting Parties and third countries, through joint projects, joint support schemes and the opening of support schemes for renewable electricity to producers located in other Contracting Parties or Member States.

6. The Contracting Parties may use the Union Renewable Development Platform established by delegated regulation in order to support Contracting Parties that use cooperation mechanisms to contribute to the overall Energy Community’ target set in paragraph 1.

Article 4
Support schemes for energy from renewable sources

1. In order to reach or exceed the Contracting Parties target set in Article 3(1), and each Contracting Party’s contribution to that target set at a national level for the deployment of renewable energy, Contracting Parties may apply support schemes.

2. Support schemes for electricity from renewable sources shall provide incentives for the integration of electricity from renewable sources in the electricity market in a market-based and market-responsive way,
while avoiding unnecessary distortions of electricity markets as well as taking into account possible system integration costs and grid stability.

3. Support schemes for electricity from renewable sources shall be designed so as to maximise the integration of electricity from renewable sources in the electricity market and to ensure that renewable energy producers are responding to market price signals and maximise their market revenues.

To that end, with regard to direct price support schemes, support shall be granted in the form of a market premium, which could be, *inter alia*, sliding or fixed.

**Contracting Parties** may exempt small-scale installations and demonstration projects from this paragraph, without prejudice to the applicable *Energy Community* law on the internal market for electricity.

4. **Contracting Parties** shall ensure that support for electricity from renewable sources is granted in an open, transparent, competitive, non-discriminatory and cost-effective manner.

**Contracting Parties** may exempt small-scale installations and demonstration projects from tendering procedures.

**Contracting Parties** may also consider establishing mechanisms to ensure the regional diversification in the deployment of renewable electricity, in particular to ensure cost-efficient system integration.

5. **Contracting Parties** may limit tendering procedures to specific technologies where opening support schemes to all producers of electricity from renewable sources would lead to a suboptimal result, in view of:

(a) the long-term potential of a particular technology;

(b) the need to achieve diversification;

(c) grid integration costs;

(d) network constraints and grid stability;

(e) for biomass, the need to avoid distortions of raw materials markets.

6. Where support for electricity from renewable sources is granted by means of a tendering procedure, **Contracting Parties** shall, in order to ensure a high project realisation rate:

(a) establish and publish non-discriminatory and transparent criteria to qualify for the tendering procedure and set clear dates and rules for delivery of the project;

(b) publish information about previous tendering procedures, including project realisation rates.

7. In order to increase the generation of energy from renewable sources in the outermost regions and small islands, **Contracting Parties** may adapt financial support schemes for projects located in those regions in order to take into account the production costs associated with their specific conditions of isolation and external dependence.

8. By 31 December 2022 and every three years thereafter, the **Secretariat** shall report to the **Ministerial Council** on the performance of support for electricity from renewable sources granted by means of tendering procedures in the **Contracting Parties**, analysing in particular the ability of tendering procedures to:

(a) achieve cost-reduction;

(b) achieve technological improvement;

(c) achieve high realisation rates;

(d) provide non-discriminatory participation of small actors and, where applicable, local authorities;
(e) limit environmental impact;
(f) ensure local acceptability;
(g) ensure security of supply and grid integration.

9. This Article shall apply without prejudice to Article 18 of Energy Community Treaty.

Article 5

Opening of support schemes for electricity from renewable sources

1. Contracting Parties shall have the right, in accordance with Articles 7 to 13 of this Directive, to decide to which extent they support electricity from renewable sources which is produced in another Contracting Party or Member State. However, Contracting Parties may open participation in support schemes for electricity from renewable sources to producers located in other Contracting Parties or Member States, subject to the conditions laid down in this Article.

When opening participation in support schemes for electricity from renewable sources, Contracting Parties may provide that support for an indicative share of the newly-supported capacity, or of the budget allocated thereto, in each year is open to producers located in other Contracting Parties or Member States.

Such indicative shares may, in each year, amount to at least 5% from 2023 to 2026 and at least 10% from 2027 to 2030, or, where lower, to the level of interconnectivity of the Contracting Party concerned in any given year.

In order to acquire further implementation experience, Contracting Parties may organise one or more pilot schemes where support is open to producers located in other Contracting Parties or Member States.

2. Contracting Parties may require proof of physical import of electricity from renewable sources. To that end, Contracting Parties may limit participation in their support schemes to producers located in Contracting Parties or Member States with which there is a direct connection via interconnectors.

However, Contracting Parties shall not change or otherwise affect cross-zonal schedules and capacity allocation due to producers participating in cross-border support schemes. Cross-border electricity transfers shall be determined only by the outcome of capacity allocation pursuant to Energy Community law on the internal market in electricity.

3. If a Contracting Party decides to open participation in support schemes to producers located in other Contracting Parties or Member States, the relevant Contracting Parties or Member States shall agree on the principles of such participation. Such agreements shall cover at least the principles of allocation of renewable electricity that is the subject of cross-border support.

4. The Secretariat shall, upon the request of the relevant Contracting Party, assist them throughout the negotiation process with the setting up of cooperation arrangements by providing information and analysis, including quantitative and qualitative data on the direct and indirect costs and benefits of cooperation, as well as with guidance and technical expertise. The Secretariat may encourage or facilitate the exchange of best practices and may develop templates for cooperation agreements in order to facilitate the negotiation process. The Secretariat shall assess, by 2025, the costs and benefits of the deployment of electricity from renewable sources in the Energy Community pursuant to this Article.
5. By 2024, the Secretariat shall carry out an evaluation of the implementation of this Article. That evaluation shall assess the need to introduce an obligation on Contracting Parties partially to open participation in their support schemes for electricity from renewable sources to producers located in other Contracting Parties or Member States with a view to a 5% opening by 2025 and a 10% opening by 2030.

6. The Energy Community Secretariat shall coordinate with the European Commission in performing its tasks under paragraphs 4 and 5 of this Article.5

**Article 6**

**Stability of financial support**

1. Without prejudice to adaptations necessary to comply with Article 18 of Energy Community Treaty Contracting Parties shall ensure that the level of, and the conditions attached to, the support granted to renewable energy projects are not revised in a way that negatively affects the rights conferred thereunder and undermines the economic viability of projects that already benefit from support.

2. Contracting Parties may adjust the level of support in accordance with objective criteria, provided that such criteria are established in the original design of the support scheme.

3. Contracting Parties shall publish a long-term schedule anticipating the expected allocation of support, covering, as a reference, at least the following five years, or, in the case of budgetary planning constraints, the following three years, including the indicative timing, the frequency of tendering procedures where appropriate, the expected capacity and budget or maximum unitary support expected to be allocated, and the expected eligible technologies, if applicable. That schedule shall be updated on an annual basis or, where necessary, to reflect recent market developments or expected allocation of support.

4. Contracting Parties shall, at least every five years, assess the effectiveness of their support schemes for electricity from renewable sources and their major distributive effects on different consumer groups, and on investments. That assessment shall take into account the effect of possible changes to the support schemes. The indicative long-term planning governing the decisions of the support and design of new support shall take into account the results of that assessment. Contracting Parties shall include the assessment in the relevant updates of their integrated national energy and climate plans and progress reports in accordance with Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

**Article 7**

**Calculation of the share of energy from renewable sources**

1. The gross final consumption of energy from renewable sources in each Contracting Party shall be calculated as the sum of:

   (a) gross final consumption of electricity from renewable sources;
   
   (b) gross final consumption of energy from renewable sources in the heating and cooling sector; and
   
   (c) final consumption of energy from renewable sources in the transport sector.

---

5 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
With regard to point (a), (b), or (c) of the first subparagraph, gas, electricity and hydrogen from renewable sources shall be considered only once for the purposes of calculating the share of gross final consumption of energy from renewable sources.

Subject to the second subparagraph of Article 29(1), biofuels, bioliquids and biomass fuels that do not fulfil the sustainability and greenhouse gas emissions saving criteria laid down in Article 29(2) to (7) and (10) shall not be taken into account.

2. For the purposes of point (a) of the first subparagraph of paragraph 1, gross final consumption of electricity from renewable sources shall be calculated as the quantity of electricity produced in a Contracting Party from renewable sources, including the production of electricity from renewables self-consumers and renewable energy communities and excluding the production of electricity in pumped storage units from water that has previously been pumped uphill.

In multi-fuel plants using renewable and non-renewable sources, only the part of electricity produced from renewable sources shall be taken into account. For the purposes of that calculation, the contribution of each energy source shall be calculated on the basis of its energy content.

The electricity generated by hydropower and wind power shall be accounted for in accordance with the normalisation rules set out in Annex II.

3. For the purposes of point (b) of the first subparagraph of paragraph 1, gross final consumption of energy from renewable sources in the heating and cooling sector shall be calculated as the quantity of district heating and cooling produced in a Contracting Party from renewable sources, plus the consumption of other energy from renewable sources in industry, households, services, agriculture, forestry and fisheries, for heating, cooling and processing purposes.

In multi-fuel plants using renewable and non-renewable sources, only the part of heating and cooling produced from renewable sources shall be taken into account. For the purposes of that calculation, the contribution of each energy source shall be calculated on the basis of its energy content.

Ambient and geothermal energy used for heating and cooling by means of heat pumps and district cooling systems shall be taken into account for the purposes of point (b) of the first subparagraph of paragraph 1, provided that the final energy output significantly exceeds the primary energy input required to drive the heat pumps. The quantity of heat or cold to be considered to be energy from renewable sources for the purposes of this Directive shall be calculated in accordance with the methodology set out in Annex VII and shall take into account energy use in all end-use sectors.

Thermal energy generated by passive energy systems, under which lower energy consumption is achieved passively through building design or from heat generated by energy from non-renewable sources, shall not be taken into account for the purposes of point (b) of the first subparagraph of paragraph 1.

The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 7(3) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis.

4. For the purposes of point (c) of the first subparagraph of paragraph 1, the following requirements shall apply:

---

6 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
(a) Final consumption of energy from renewable sources in the transport sector shall be calculated as the sum of all biofuels, biomass fuels and renewable liquid and gaseous transport fuels of non-biological origin consumed in the transport sector. However, renewable liquid and gaseous transport fuels of non-biological origin that are produced from renewable electricity shall be considered to be part of the calculation pursuant to point (a) of the first subparagraph of paragraph 1 only when calculating the quantity of electricity produced in a Contracting Party from renewable sources.

(b) For the calculation of final consumption of energy in the transport sector, the values regarding the energy content of transport fuels, as set out in Annex III, shall be used. For the determination of the energy content of transport fuels not included in Annex III, Contracting Parties shall use the relevant European Standards Organisation (ESO) standards in order to determine the calorific values of fuels. Where no ESO standard has been adopted for that purpose, Contracting Parties shall use the relevant International Organization for Standardisation (ISO) standards.

5. The share of energy from renewable sources shall be calculated as the gross final consumption of energy from renewable sources divided by the gross final consumption of energy from all energy sources, expressed as a percentage.

For the purposes of the first subparagraph of this paragraph, the sum referred to in the first subparagraph of paragraph 1 of this Article shall be adjusted in accordance with Articles 8, 10, 12 and 13.

6. The methodology and definitions used in the calculation of the share of energy from renewable sources shall be those provided for in Regulation (EC) No 1099/2008, as adapted and adopted by Ministerial Council Decision 2015/02/MC-EnC. Contracting Parties shall ensure coherence of the statistical information used in calculating those sectoral and overall shares and of the statistical information reported to the Secretariat pursuant to that Regulation.

**Article 8**

Renewable development platform and statistical transfers between Contracting Parties

1. A Contracting Party may agree with another Contracting Party on the statistical transfer of a specified amount of energy from renewable sources from one Contracting Party to another Contracting Party. The transferred quantity shall be:

(a) deducted from the amount of energy from renewable sources that is taken into account in calculating the renewable energy share of the Contracting Party making the transfer for the purposes of this Directive; and

(b) added to the amount of energy from renewable sources that is taken into account in calculating the renewable energy share of the Contracting Party accepting the transfer for the purposes of this Directive.

2. In order to facilitate the achievement of the Energy Community target set in Article 3(1) of this Directive of each Contracting Party’s contribution to that target in accordance with Article 3(2) of this Directive, and to facilitate statistical transfers in accordance with paragraph 1 of this Article, the Contracting Parties shall join the Union renewable development platform (‘URDP’). Contracting Parties may, on a voluntary basis, submit to the Energy Community Secretariat annual data on their national contributions to the

---

7 Not applicable according to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
Energy Community target or any benchmark set for monitoring progress in Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, including the amount by which they expect to fall short of or exceed their contribution, and an indication of the price at which they would accept to transfer any excess production of energy from renewable sources from or to another Contracting Party. The Energy Community Secretariat shall forward such data to the URDP.

The price of those transfers shall be set on a case-by-case basis based on the URDP demand-and-supply matching mechanism.

3. The URDP shall match the demand for and supply of the amounts of energy from renewable sources that are taken into account in the calculation of the renewable energy share of a Contracting Party based on prices or other criteria specified by the Contracting Party accepting the transfer.

<...>

The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 8(3) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis. 8

4. The arrangements referred to in paragraphs 1 and 2 may have a duration of one or more calendar years. Such arrangements shall be notified to the Secretariat or finalised on the URDP not later than 12 months after the end of each year in which they have effect. The information sent to the Secretariat shall include the quantity and price of the energy involved. For transfers finalised on the URDP, the parties involved and the information on the particular transfer shall be disclosed to the public.

5. Transfers shall become effective after all Contracting Parties involved in the transfer have notified the Secretariat or after all clearing conditions are met on the URDP, as applicable.

Article 9

Joint projects between Contracting Parties or Contracting Parties and Member States

1. One or more Contracting Parties may cooperate with one or more Contracting Parties or Member States on all types of joint projects with regard to the production of electricity, heating or cooling from renewable sources. Such cooperation may involve private operators.

2. Contracting Parties shall notify the Secretariat of the proportion or amount of electricity, heating or cooling from renewable sources produced by any joint project in their territory that became operational after 25 June 2009, or by the increased capacity of an installation that was refurbished after that date, which is to be regarded as counting towards the renewable energy share of another Contracting Party or Member State for the purposes of this Directive.

3. The notification referred to in paragraph 2 shall:

(a) describe the proposed installation or identify the refurbished installation;

(b) specify the proportion or amount of electricity or heating or cooling produced from the installation which is to be regarded as counting towards the renewable energy share of the other Contracting Party or Member State;

8 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
(c) identify the **Contracting Party** or Member State in whose favour the notification is being made; and
(d) specify the period, in whole calendar years, during which the electricity or heating or cooling produced by the installation from renewable sources is to be regarded as counting towards the renewable energy share of the other **Contracting Party** or Member State.

4. The duration of a joint project as referred to in this Article may extend beyond 2030.

5. A notification made under this Article shall not be varied or withdrawn without the joint agreement of the **Contracting Party** making the notification and the **Contracting Party** or Member State identified in accordance with point (c) of paragraph 3.

6. The **Secretariat** shall, upon the request of the **Contracting Parties** concerned, facilitate the establishment of joint projects involving **Contracting Parties**, in particular via dedicated technical assistance and project development assistance.

---

**Article 10**

**Effects of joint projects between Contracting Parties, or Contracting Parties and Member States**

1. Within three months of the end of each year falling within the period referred to in point (d) of Article 9(3), the **Contracting Party** that made the notification under Article 9 shall issue a letter of notification stating:

(a) the total amount of electricity or heating or cooling produced from renewable sources during that year by the installation which was the subject of the notification under Article 9; and

(b) the amount of electricity or heating or cooling produced from renewable sources during that year by that installation which is to count towards the renewable energy share of another **Contracting Party** or Member State in accordance with the terms of the notification.

2. The notifying **Contracting Party** shall submit the letter of notification to the **Contracting Party** or Member State in whose favour the notification was made and to the Secretariat.

3. For the purposes of this Directive, the amount of electricity or heating or cooling from renewable sources notified in accordance with point (b) of paragraph 1 shall be:

(a) deducted from the amount of electricity or heating or cooling from renewable sources that is taken into account in calculating the renewable energy share of the **Contracting Party** issuing the letter of notification pursuant to paragraph 1; and

(b) added to the amount of electricity or heating or cooling from renewable sources that is taken into account in calculating the renewable energy share of the **Contracting Party** or Member State receiving the letter of notification pursuant to paragraph 2.

---

**Article 11**

**Joint projects between Contracting Parties and third countries**

1. One or more **Contracting Parties** may cooperate with one or more third countries on all types of joint projects with regard to the production of electricity from renewable sources. Such cooperation may involve
private operators and shall take place in full respect of international law.

2. Electricity from renewable sources produced in a third country shall be taken into account for the purposes of calculating the renewable energy shares of the Contracting Parties only where the following conditions are met:

(a) the electricity is consumed in the Contracting Party, which is deemed to be met where:
   (i) an equivalent amount of electricity to the electricity accounted for has been firmly nominated to the allocated interconnection capacity by all responsible transmission system operators in the country of origin, the country of destination and, if relevant, each third country of transit;
   (ii) an equivalent amount of electricity to the electricity accounted for has been firmly registered in the schedule of balance by the responsible transmission system operator on the Energy Community side of an interconnector; and
   (iii) the nominated capacity and the production of electricity from renewable sources by the installation referred to in point (b) refer to the same period of time;

(b) the electricity is produced by an installation that became operational after 25 June 2009 or by the increased capacity of an installation that was refurbished after that date, under a joint project as referred to in paragraph 1;

(c) the amount of electricity produced and exported has not received support from a support scheme of a third country other than investment aid granted to the installation; and

(d) the electricity has been produced in accordance with international law, in a third country that is a signatory to the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms, or other international conventions or treaties on human rights.

3. For the purposes of paragraph 4, Contracting Parties may apply to the Secretariat for account to be taken of electricity from renewable sources produced and consumed in a third country, in the context of the construction of an interconnector with a very long lead-time between a Contracting Party and a third country where the following conditions are met:

(a) construction of the interconnector started by 31 December 2026;

(b) it is not possible for the interconnector to become operational by 31 December 2030;

(c) it is possible for the interconnector to become operational by 31 December 2032;

(d) after it becomes operational, the interconnector will be used for the export to the Energy Community, in accordance with paragraph 2, of electricity from renewable sources;

(e) the application relates to a joint project that fulfils the criteria set out in points (b) and (c) of paragraph 2 and that will use the interconnector after it becomes operational, and to a quantity of electricity that is no greater than the quantity that will be exported to the Energy Community after the interconnector becomes operational. 4. The proportion or amount of electricity produced by any installation in the territory of a third country, which is to be regarded as counting towards the renewable energy share of one or more Contracting Parties for the purposes of this Directive, shall be notified to the Secretariat. When more than one Contracting Party is concerned, the distribution between Contracting Parties of that proportion or amount shall be notified to the Secretariat. The proportion or amount shall not exceed the proportion or amount actually exported to, and consumed in, the Contracting Party, shall correspond to the amount referred to in point (a)(i) and (ii) of paragraph 2 and shall meet the conditions set out in point
(a) of that paragraph. The notification shall be made by each **Contracting Party** towards whose overall national target the proportion or amount of electricity is to count.

5. The notification referred to in paragraph 4 shall:

(a) describe the proposed installation or identify the refurbished installation;

(b) specify the proportion or amount of electricity produced from the installation which is to be regarded as counting towards the renewable energy share of a **Contracting Party** as well as, subject to confidentiality requirements, the corresponding financial arrangements;

(c) specify the period, in whole calendar years, during which the electricity is to be regarded as counting towards the renewable energy share of the **Contracting Party**; and

(d) include a written acknowledgement of points (b) and (c) by the third country in whose territory the installation is to become operational and an indication of the proportion or amount of electricity produced by the installation which will be used domestically by that third country.

6. The duration of a joint project as referred to in this Article may extend beyond 2030.

7. A notification made under this Article shall be varied or withdrawn only where there is a joint agreement between the **Contracting Party** making the notification and the third country that has acknowledged the joint project in accordance with point (d) of paragraph 5.

8. <…>  

---

**Article 12**

**Effects of joint projects between Contracting Parties and third countries**

1. Within 12 months of the end of each year falling within the period specified under point (c) of Article 11(5), the notifying **Contracting Party** shall issue a letter of notification stating:

(a) the total amount of electricity produced from renewable sources during that year by the installation which was the subject of the notification under Article 11;

(b) the amount of electricity produced from renewable sources during that year by that installation which is to count towards its renewable energy share in accordance with the terms of the notification under Article 11; and

(c) evidence of compliance with the conditions laid down in Article 11(2).

2. The **Contracting Party** referred to in paragraph 1 shall submit the letter of notification to the **Secretariat** and to the third country that has acknowledged the project in accordance with point (d) of Article 11(5).

3. For the purposes of calculating the renewable energy shares under this Directive, the amount of electricity from renewable sources notified in accordance with point (b) of paragraph 1 shall be added to the amount of energy from renewable sources that is taken into account in calculating the renewable energy shares of the **Contracting Party** issuing the letter of notification.

---

9 Not applicable according to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
Article 13
Joint support schemes

1. Without prejudice to the obligations of Contracting Parties under Article 5, one or more Contracting Parties may decide, on a voluntary basis, to join or partly coordinate their national support schemes with one or more Contracting Parties or Member States. In such cases, a certain amount of energy from renewable sources produced in the territory of one participating Contracting Party may count towards the renewable energy share of another participating Contracting Party or Member State, provided that the parties concerned:

(a) make a statistical transfer of specified amounts of energy from renewable sources from one Contracting Party to another Contracting Party or Member State in accordance with Article 8; or

(b) set up a distribution rule agreed by participating Contracting Parties and Member States that allocates amounts of energy from renewable sources between the participating parties.

A distribution rule as referred to in point (b) of the first subparagraph shall be notified to the Secretariat not later than three months after the end of the first year in which it takes effect.

2. Within three months of the end of each year, each Contracting Party that has made a notification under the second subparagraph of paragraph 1 shall issue a letter of notification stating the total amount of electricity or heating or cooling from renewable sources produced during the year which is to be the subject of the distribution rule.

3. For the purposes of calculating the renewable energy shares under this Directive, the amount of electricity or heating or cooling from renewable sources notified in accordance with paragraph 2 shall be reallocated between the parties concerned in accordance with the notified distribution rule.

4. The Energy Community Secretariat shall disseminate guidelines and best practices, and, upon the request of the Contracting Parties concerned, facilitate the establishment of joint support schemes involving Contracting Parties.

Article 14
Capacity increases

For the purposes of Article 9(2) and point (b) of Article 11(2), units of energy from renewable sources imputable to an increase in the capacity of an installation shall be treated as if they were produced by a separate installation becoming operational at the moment at which the increase of capacity occurred.

Article 15
Administrative procedures, regulations and codes

1. Contracting Parties shall ensure that any national rules concerning the authorisation, certification and licensing procedures that are applied to plants and associated transmission and distribution networks for the production of electricity, heating or cooling from renewable sources, to the process of transformation
of biomass into biofuels, bioliquids, biomass fuels or other energy products, and to renewable liquid and
gaseous transport fuels of non-biological origin are proportionate and necessary and contribute to the
implementation of the energy efficiency first principle.

**Contracting Parties** shall, in particular, take the appropriate steps to ensure that:

(a) administrative procedures are streamlined and expedited at the appropriate administrative level and
predictable timeframes are established for the procedures referred to in the first subparagraph;

(b) rules concerning authorisation, certification and licensing are objective, transparent and proportion-
ate, do not discriminate between applicants and take fully into account the particularities of individual
renewable energy technologies;

(c) administrative charges paid by consumers, planners, architects, builders and equipment and system
installers and suppliers are transparent and cost-related; and

(d) simplified and less burdensome authorisation procedures, including a simple-notification procedure,
are established for decentralised devices, and for producing and storing energy from renewable sources.

2. **Contracting Parties** shall clearly define any technical specifications which are to be met by renewable
energy equipment and systems in order to benefit from support schemes. Where European standards ex-
ist, including eco-labels, energy labels and other technical reference systems established by the European
standardisation bodies, such technical specifications shall be expressed in terms of those standards. Such
technical specifications shall not prescribe where the equipment and systems are to be certified and shall
not impede the proper functioning of the internal market.

3. **Contracting Parties** shall ensure that their competent authorities at national, regional and local level
include provisions for the integration and deployment of renewable energy, including for renewables
self-consumption and renewable energy communities, and the use of unavoidable waste heat and cold
when planning, including early spatial planning, designing, building and renovating urban infrastructure,
industrial, commercial or residential areas and energy infrastructure, including electricity, district heating
and cooling, natural gas and alternative fuel networks. **Contracting Parties** shall, in particular, encourage
local and regional administrative bodies to include heating and cooling from renewable sources in the
planning of city infrastructure where appropriate, and to consult the network operators to reflect the impact
of energy efficiency and demand response programs as well as specific provisions on renewables self-con-
sumption and renewable energy communities, on the infrastructure development plans of the operators.

4. **Contracting Parties** shall introduce appropriate measures in their building regulations and codes in
order to increase the share of all kinds of energy from renewable sources in the building sector.

In establishing such measures or in their support schemes, **Contracting Parties** may take into account,
where applicable, national measures relating to substantial increases in renewables self-consumption, in
local energy storage and in energy efficiency, relating to cogeneration and relating to passive, low-energy
or zero-energy buildings.

**Contracting Parties** shall, in their building regulations and codes or by other means with equivalent
effect, require the use of minimum levels of energy from renewable sources in new buildings and in ex-
isting buildings that are subject to major renovation in so far as technically, functionally and economically
feasible, and reflecting the results of the cost-optimal calculation carried out pursuant to Article 5(2) of
and in so far as this does not negatively affect indoor air quality. **Contracting Parties** shall permit those
minimum levels to be fulfilled, \emph{inter alia}, through efficient district heating and cooling using a significant share of renewable energy and waste heat and cold.

The requirements laid down in the first subparagraph shall apply to the armed forces only to the extent that its application does not cause any conflict with the nature and primary aim of the activities of the armed forces and with the exception of material used exclusively for military purposes.

5. **Contracting Parties** shall ensure that new public buildings, and existing public buildings that are subject to major renovation, at national, regional and local level, fulfil an exemplary role in the context of this Directive from 1 January 2012. **Contracting Parties** may, \emph{inter alia}, allow that obligation to be fulfilled by complying with nearly zero-energy building provisions as required in Directive 2010/31/EU as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC or by providing for the roofs of public or mixed private-public buildings to be used by third parties for installations that produce energy from renewable sources.

6. With respect to their building regulations and codes, **Contracting Parties** shall promote the use of renewable heating and cooling systems and equipment that achieve a significant reduction of energy consumption. To that end, **Contracting Parties** shall use energy or eco-labels or other appropriate certificates or standards developed at national or Energy Community level, where these exist, and ensure the provision of adequate information and advice on renewable, highly energy efficient alternatives as well as eventual financial instruments and incentives available in the case of replacement, with a view to promoting an increased replacement rate of old heating systems and an increased switch to solutions based on renewable energy in accordance with Directive 2010/31/EU as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC.

7. **Contracting Parties** shall carry out an assessment of their potential of energy from renewable sources and of the use of waste heat and cold in the heating and cooling sector. That assessment shall, where appropriate, include spatial analysis of areas suitable for low-ecological-risk deployment and the potential for small-scale household projects and shall be included in the second comprehensive assessment required pursuant to Article 14(1) of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decision 2015/08/MC-EnC, for the first time by 31 December 2022 and in the subsequent updates of the comprehensive assessments.

8. **Contracting Parties** shall assess the regulatory and administrative barriers to long-term renewables power purchase agreements, and shall remove unjustified barriers to, and facilitate the uptake of, such agreements. **Contracting Parties** shall ensure that those agreements are not subject to disproportionate or discriminatory procedures or charges. **Contracting Parties** shall describe policies and measures facilitating the uptake of renewables power purchase agreements in their integrated national energy and climate plans and progress reports pursuant to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.
Article 16

*Organisation and duration of the permit-granting process*

1. **Contracting Parties** shall set up or designate one or more contact points. Those contact points shall, upon request by the applicant, guide through and facilitate the entire administrative permit application and granting process. The applicant shall not be required to contact more than one contact point for the entire process. The permit-granting process shall cover the relevant administrative permits to build, repower and operate plants for the production of energy from renewable sources and assets necessary for their connection to the grid. The permit-granting process shall comprise all procedures from the acknowledgment of the receipt of the application to the transmission of the outcome of the procedure referred to in paragraph 2.

2. The contact point shall guide the applicant through the administrative permit application process in a transparent manner up to the delivery of one or several decisions by the responsible authorities at the end of the process, provide the applicant with all necessary information and involve, where appropriate, other administrative authorities. Applicants shall be allowed to submit relevant documents also in digital form.

3. The contact point shall make available a manual of procedures for developers of renewable energy production projects and shall provide that information also online, addressing distinctly also small-scale projects and renewables self-consumers projects. The online information shall indicate the contact point relevant to the applicant’s application. If a Contracting Party has more than one contact point, the online information shall indicate the contact point relevant to the applicant’s application.

4. Without prejudice to paragraph 7, the permit-granting process referred to in paragraph 1 shall not exceed two years for power plants, including all relevant procedures of competent authorities. Where duly justified on the grounds of extraordinary circumstances, that two-year period may be extended by up to one year.

5. Without prejudice to paragraph 7, the permit-granting process shall not exceed one year for installations with an electrical capacity of less than 150 kW. Where duly justified on the grounds of extraordinary circumstances, that one-year period may be extended by up to one year.

**Contracting Parties** shall ensure that applicants have easy access to simple procedures for the settlement of disputes concerning the permit-granting process and the issuance of permits to build and operate renewable energy plants, including, where applicable, alternative dispute resolution mechanisms.

6. **Contracting Parties** shall facilitate the repowering of existing renewable energy plants by ensuring a simplified and swift permit-granting process. The length of that process shall not exceed one year. Where duly justified on the grounds of extraordinary circumstances, such as on grounds of overriding safety reasons where the repowering project impacts substantially on the grid or the original capacity, size or performance of the installation, that one-year period may be extended by up to one year.

7. The deadlines established in this Article shall apply without prejudice to obligations under applicable **Energy Community** environmental law, to judicial appeals, remedies and other proceedings before a court or tribunal, and to alternative dispute resolution mechanisms, including complaints procedures, non-judicial appeals and remedies, and may be extended for the duration of such procedures.

8. **Contracting Parties** may establish a simple-notification procedure for grid connections for repowering projects as referred to in Article 17(1). Where **Contracting Parties** do so, repowering shall be permitted following notification to the relevant authority where no significant negative environmental or social impact is expected. That authority shall decide within six months of receipt of a notification whether this is sufficient.
Where the relevant authority decides that a notification is sufficient, it shall automatically grant the permit. Where that authority decides that the notification is not sufficient, it shall be necessary to apply for a new permit and the time-limits referred to in paragraph 6 shall apply.

Article 17
Simple-notification procedure for grid connections

1. **Contracting Parties** shall establish a simple-notification procedure for grid connections whereby installations or aggregated production units of renewables self-consumers and demonstration projects, with an electrical capacity of 10,8 kW or less, or equivalent for connections other than three-phase connections, are to be connected to the grid following a notification to the distribution system operator.

The distribution system operator may, within a limited period following the notification, reject the requested grid connection or propose an alternative grid connection point on justified grounds of safety concerns or technical incompatibility of the system components. In the case of a positive decision by the distribution system operator, or in the absence of a decision by the distribution system operator within one month following the notification, the installation or aggregated production unit may be connected.

2. **Contracting Parties** may allow a simple-notification procedure for installations or aggregated production units with an electrical capacity of above 10,8 kW and up to 50 kW, provided that grid stability, grid reliability and grid safety are maintained.

Article 18
Information and training

1. **Contracting Parties** shall ensure that information on support measures is made available to all relevant actors, such as consumers including low-income, vulnerable consumers, renewables self-consumers, renewable energy communities, builders, installers, architects, suppliers of heating, cooling and electricity equipment and systems, and suppliers of vehicles compatible with the use of renewable energy and of intelligent transport systems.

2. **Contracting Parties** shall ensure that information on the net benefits, cost and energy efficiency of equipment and systems for the use of heating, cooling and electricity from renewable sources is made available either by the supplier of the equipment or system or by the competent authorities.

3. **Contracting Parties** shall ensure that certification schemes or equivalent qualification schemes are available for installers of small-scale biomass boilers and stoves, solar photovoltaic and solar thermal systems, shallow geothermal systems and heat pumps. Those schemes may take into account existing schemes and structures as appropriate, and shall be based on the criteria laid down in Annex IV. Each **Contracting Party** shall recognise the certification awarded by other **Contracting Parties** in accordance with those criteria.

4. **Contracting Parties** shall make information on certification schemes or equivalent qualification schemes as referred to in paragraph 3 available to the public. **Contracting Parties** may also make the list of installers who are qualified or certified in accordance with paragraph 3 available to the public.

5. **Contracting Parties** shall ensure that guidance is made available to all relevant actors, in particular to
planners and architects so that they are able properly to consider the optimal combination of energy from renewable sources, of high-efficiency technologies, and of district heating and cooling when planning, designing, building and renovating industrial, commercial or residential areas.

6. Contracting Parties, where appropriate with the participation of local and regional authorities, shall develop suitable information, awareness-raising, guidance or training programmes in order to inform citizens of how to exercise their rights as active customers, and of the benefits and practicalities, including technical and financial aspects, of developing and using energy from renewable sources, including by renewables self-consumption or in the framework of renewable energy communities.

Article 19
Guarantees of origin for energy from renewable sources

1. For the purposes of demonstrating to final customers the share or quantity of energy from renewable sources in an energy supplier’s energy mix and in the energy supplied to consumers under contracts marketed with reference to the consumption of energy from renewable sources, Contracting Parties shall ensure that the origin of energy from renewable sources can be guaranteed as such within the meaning of this Directive, in accordance with objective, transparent and non-discriminatory criteria.

2. To that end, Contracting Parties shall ensure that a guarantee of origin is issued in response to a request from a producer of energy from renewable sources, unless Contracting Parties decide, for the purposes of accounting for the market value of the guarantee of origin, not to issue such a guarantee of origin to a producer that receives financial support from a support scheme. Contracting Parties may arrange for guarantees of origin to be issued for energy from non-renewable sources. Issuance of guarantees of origin may be made subject to a minimum capacity limit. A guarantee of origin shall be of the standard size of 1 MWh. No more than one guarantee of origin shall be issued in respect of each unit of energy produced. Contracting Parties shall ensure that the same unit of energy from renewable sources is taken into account only once.

Contracting Parties shall ensure that when a producer receives financial support from a support scheme, the market value of the guarantee of origin for the same production is taken into account appropriately in the relevant support scheme.

It shall be presumed that the market value of the guarantee of origin has been taken into account appropriately in any of the following cases:

(a) where the financial support is granted by way of a tendering procedure or a tradable green certificate system;
(b) where the market value of the guarantees of origin is administratively taken into account in the level of financial support; or
(c) where the guarantees of origin are not issued directly to the producer but to a supplier or consumer who buys the energy from renewable sources either in a competitive setting or in a long-term renewables power purchase agreement.

In order to take into account the market value of the guarantee of origin, Contracting Parties may, inter alia, decide to issue a guarantee of origin to the producer and immediately cancel it.
The guarantee of origin shall have no function in terms of a Contracting Party’s compliance with Article 3. Transfers of guarantees of origin, separately or together with the physical transfer of energy, shall have no effect on the decision of Contracting Parties to use statistical transfers, joint projects or joint support schemes for compliance with Article 3 or on the calculation of the gross final consumption of energy from renewable sources in accordance with Article 7.

3. For the purposes of paragraph 1, guarantees of origin shall be valid for 12 months after the production of the relevant energy unit. Contracting Parties shall ensure that all guarantees of origin that have not been cancelled expire at the latest 18 months after the production of the energy unit. Contracting Parties shall include expired guarantees of origin in the calculation of their residual energy mix.

4. For the purposes of disclosure referred to in paragraphs 8 and 13, Contracting Parties shall ensure that energy companies cancel guarantees of origin at the latest six months after the end of the validity of the guarantee of origin.

5. Contracting Parties or designated competent bodies shall supervise the issuance, transfer and cancellation of guarantees of origin. The designated competent bodies shall not have overlapping geographical responsibilities, and shall be independent of production, trade and supply activities.

6. Contracting Parties or the designated competent bodies shall put in place appropriate mechanisms to ensure that guarantees of origin are issued, transferred and cancelled electronically and are accurate, reliable and fraud-resistant. Contracting Parties and designated competent bodies shall ensure that the requirements they impose comply with the standard CEN - EN 16325.

7. A guarantee of origin shall specify at least:
   (a) the energy source from which the energy was produced and the start and end dates of production;
   (b) whether it relates to:
      (i) electricity;
      (ii) gas, including hydrogen; or
      (iii) heating or cooling;
   (c) the identity, location, type and capacity of the installation where the energy was produced;
   (d) whether the installation has benefited from investment support and whether the unit of energy has benefited in any other way from a national support scheme, and the type of support scheme;
   (e) the date on which the installation became operational; and
   (f) the date and country of issue and a unique identification number. Simplified information may be specified on guarantees of origin from installations of less than 50 kW.

8. Where an electricity supplier is required to demonstrate the share or quantity of energy from renewable sources in its energy mix for the purposes of point (a) of Article 18 and Annex I to Directive 2019/944/EC, as adapted and adopted by Ministerial Council Decision 2021/13/MC-EnC, it shall do so by using guarantees of origin except:
   (a) as regards the share of its energy mix corresponding to non-tracked commercial offers, if any, for which the supplier may use the residual mix; or
   (b) where a Contracting Party decides not to issue guarantees of origin to a producer that receives financial support from a support scheme.
Where Contracting Parties have arranged to have guarantees of origin for other types of energy, suppliers shall use for disclosure the same type of guarantees of origin as the energy supplied. Likewise, guarantees of origin created pursuant to Article 14(10) of Directive 2012/27/EU, as adapted and adopted by Ministerial Council Decision 2015/08/MC-EnC, may be used to substantiate any requirement to demonstrate the quantity of electricity produced from high-efficiency cogeneration. For the purposes of paragraph 2 of this Article, where electricity is generated from high-efficiency cogeneration using renewable sources, only one guarantee of origin specifying both characteristics may be issued.

9. Contracting Parties shall recognise guarantees of origin issued by other Contracting Parties in accordance with this Directive exclusively as evidence of the elements referred to in paragraph 1 and points (a) to (f) of the first subparagraph of paragraph 7. A Contracting Party may refuse to recognise a guarantee of origin only where it has well-founded doubts about its accuracy, reliability or veracity. The Contracting Party shall notify the Secretariat of such a refusal and its justification.

10. If the Energy Community Secretariat finds that a refusal to recognise a guarantee of origin is unfounded, the Energy Community Secretariat may issue an opinion inviting the Contracting Party in question to recognise it. The Contracting Party in question shall take utmost account of the opinion and provide reasons for any deviation in writing. 10

11. Contracting Parties shall not recognise guarantees of origins issued by a third country except where the Union or the Energy Community has concluded an agreement with that third country on mutual recognition of guarantees of origin issued in the Contracting Parties and compatible guarantees of origin systems established in that third country, and only where there is direct import or export of energy.

13. The Secretariat shall adopt a report assessing options to establish an Energy Community-wide green label with a view to promoting the use of renewable energy coming from new installations. Suppliers shall use the information contained in guarantees of origin to demonstrate compliance with the requirements of such a label.

10 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
Article 20
Access to and operation of the grids

1. Where relevant, Contracting Parties shall assess the need to extend existing gas network infrastructure to facilitate the integration of gas from renewable sources.

2. Where relevant, Contracting Parties shall require transmission system operators and distribution system operators in their territory to publish technical rules in accordance with Article 8 of Directive 2009/73/EC as adapted and adopted by Ministerial Council Decision Decision 2011/02/MC-EnC, in particular regarding network connection rules that include gas quality, gas odoration and gas pressure requirements. Contracting Parties shall also require transmission and distribution system operators to publish the connection tariffs to connect gas from renewable sources based on objective, transparent and non-discriminatory criteria.

3. Subject to their assessment included in the integrated national energy and climate plans in accordance with Annex I to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC on the necessity to build new infrastructure for district heating and cooling from renewable sources in order to achieve the Energy Community target set in Article 3(1) of this Directive, Contracting Parties shall, where relevant, take the necessary steps with a view to developing a district heating and cooling infrastructure to accommodate the development of heating and cooling from large biomass, solar energy, ambient energy and geothermal energy facilities and from waste heat and cold.

Article 21
Renewables self-consumers

1. Contracting Parties shall ensure that consumers are entitled to become renewables self-consumers, subject to this Article.

2. Contracting Parties shall ensure that renewables self-consumers, individually or through aggregators, are entitled:

(a) to generate renewable energy, including for their own consumption, store and sell their excess production of renewable electricity, including through renewables power purchase agreements, electricity suppliers and peer-to-peer trading arrangements, without being subject:

(i) in relation to the electricity that they consume from or feed into the grid, to discriminatory or disproportionate procedures and charges, and to network charges that are not cost-reflective;

(ii) in relation to their self-generated electricity from renewable sources remaining within their premises, to discriminatory or disproportionate procedures, and to any charges or fees;

(b) to install and operate electricity storage systems combined with installations generating renewable electricity for self-consumption without liability for any double charge, including network charges, for stored electricity remaining within their premises;

(c) to maintain their rights and obligations as final consumers;

(d) to receive remuneration, including, where applicable, through support schemes, for the self-generated renewable electricity that they feed into the grid, which reflects the market value of that electricity and...
which may take into account its long-term value to the grid, the environment and society.

3. **Contracting Parties** may apply non-discriminatory and proportionate charges and fees to renewables self-consumers, in relation to their self-generated renewable electricity remaining within their premises in one or more of the following cases:

   (a) if the self-generated renewable electricity is effectively supported via support schemes, only to the extent that the economic viability of the project and the incentive effect of such support are not undermined;

   (b) from 1 December 2026, if the overall share of self-consumption installations exceeds 8% of the total installed electricity capacity of a **Contracting Party**, and if it is demonstrated, by means of a cost-benefit analysis performed by the national regulatory authority of that **Contracting Party**, which is conducted by way of an open, transparent and participatory process, that the provision laid down in point (a)(ii) of paragraph 2 either results in a significant disproportionate burden on the long-term financial sustainability of the electric system, or creates an incentive exceeding what is objectively needed to achieve cost-effective deployment of renewable energy, and that such burden or incentive cannot be minimised by taking other reasonable actions; or

   (c) if the self-generated renewable electricity is produced in installations with a total installed electrical capacity of more than 30 kW.

4. **Contracting Parties** shall ensure that renewables self-consumers located in the same building, including multi-apartment blocks, are entitled to engage jointly in activities referred to in paragraph 2 and that they are permitted to arrange sharing of renewable energy that is produced on their site or sites between themselves, without prejudice to the network charges and other relevant charges, fees, levies and taxes applicable to each renewables self-consumer. **Contracting Parties** may differentiate between individual renewables self-consumers and jointly acting renewables self-consumers. Any such differentiation shall be proportionate and duly justified.

5. The renewables self-consumer’s installation may be owned by a third party or managed by a third party for installation, operation, including metering and maintenance, provided that the third party remains subject to the renewables self-consumer’s instructions. The third party itself shall not be considered to be a renewables self-consumer.

6. **Contracting Parties** shall put in place an enabling framework to promote and facilitate the development of renewables self-consumption based on an assessment of the existing unjustified barriers to, and of the potential of, renewables self-consumption in their territories and energy networks. That enabling framework shall, inter alia:

   (a) address accessibility of renewables self-consumption to all final customers, including those in low-income or vulnerable households;

   (b) address unjustified barriers to the financing of projects in the market and measures to facilitate access to finance;

   (c) address other unjustified regulatory barriers to renewables self-consumption, including for tenants;

   (d) address incentives to building owners to create opportunities for renewables self-consumption, including for tenants;

   (e) grant renewables self-consumers, for self-generated renewable electricity that they feed into the grid, non-discriminatory access to relevant existing support schemes as well as to all electricity market segments;

   (f) ensure that renewables self-consumers contribute in an adequate and balanced way to the overall cost
sharing of the system when electricity is fed into the grid.

**Contracting Parties** shall include a summary of the policies and measures under the enabling framework and an assessment of their implementation respectively in their integrated national energy and climate plans and progress reports pursuant to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

7. This Article shall apply without prejudice to Articles 18 and 19 of the Energy Community Treaty.

### Article 22

**Renewable energy communities**

1. **Contracting Parties** shall ensure that final customers, in particular household customers, are entitled to participate in a renewable energy community while maintaining their rights or obligations as final customers, and without being subject to unjustified or discriminatory conditions or procedures that would prevent their participation in a renewable energy community, provided that for private undertakings, their participation does not constitute their primary commercial or professional activity.

2. **Contracting Parties** shall ensure that renewable energy communities are entitled to:
   
   (a) produce, consume, store and sell renewable energy, including through renewables power purchase agreements;
   
   (b) share, within the renewable energy community, renewable energy that is produced by the production units owned by that renewable energy community, subject to the other requirements laid down in this Article and to maintaining the rights and obligations of the renewable energy community members as customers;
   
   (c) access all suitable energy markets both directly or through aggregation in a non-discriminatory manner.

3. **Contracting Parties** shall carry out an assessment of the existing barriers and potential of development of renewable energy communities in their territories.

4. **Contracting Parties** shall provide an enabling framework to promote and facilitate the development of renewable energy communities. That framework shall ensure, *inter alia*, that:
   
   (a) unjustified regulatory and administrative barriers to renewable energy communities are removed;
   
   (b) renewable energy communities that supply energy or provide aggregation or other commercial energy services are subject to the provisions relevant for such activities;
   
   (c) the relevant distribution system operator cooperates with renewable energy communities to facilitate energy transfers within renewable energy communities;
   
   (d) renewable energy communities are subject to fair, proportionate and transparent procedures, including registration and licensing procedures, and cost-reflective network charges, as well as relevant charges, levies and taxes, ensuring that they contribute, in an adequate, fair and balanced way, to the overall cost sharing of the system in line with a transparent cost-benefit analysis of distributed energy sources developed by the national competent authorities;
   
   (e) renewable energy communities are not subject to discriminatory treatment with regard to their activities, rights and obligations as final customers, producers, suppliers, distribution system operators, or as other
market participants;
(f) the participation in the renewable energy communities is accessible to all consumers, including those in low-income or vulnerable households;
(g) tools to facilitate access to finance and information are available;
(h) regulatory and capacity-building support is provided to public authorities in enabling and setting up renewable energy communities, and in helping authorities to participate directly;
(i) rules to secure the equal and non-discriminatory treatment of consumers that participate in the renewable energy community are in place.

5. The main elements of the enabling framework referred to in paragraph 4, and of its implementation, shall be part of the updates of the Contracting Parties’ integrated national energy and climate plans and progress reports pursuant to Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

6. Contracting Parties may provide for renewable energy communities to be open to cross-border participation.

7. Without prejudice to Article 18 of the Energy Community Treaty, Contracting Parties shall take into account specificities of renewable energy communities when designing support schemes in order to allow them to compete for support on an equal footing with other market participants.

**Article 23**

**Mainstreaming renewable energy in heating and cooling**

1. In order to promote the use of renewable energy in the heating and cooling sector, each Contracting Party shall endeavour to increase the share of renewable energy in that sector by an indicative 1.3 percentage points as an annual average calculated for the periods 2021 to 2025 and 2026 to 2030, starting from the share of renewable energy in the heating and cooling sector in 2020, expressed in terms of national share of final energy consumption and calculated in accordance with the methodology set out in Article 7, without prejudice to paragraph 2 of this Article. That increase shall be limited to an indicative 1.1 percentage points for Contracting Parties where waste heat and cold is not used. Contracting Parties shall, where appropriate, prioritise the best available technologies.

2. For the purposes of paragraph 1, when calculating its share of renewable energy in the heating and cooling sector and its average annual increase in accordance with that paragraph, each Contracting Party:
   (a) may count waste heat and cold, subject to a limit of 40% of the average annual increase;
   (b) where its share of renewable energy in the heating and cooling sector is above 60%, may count any such share as fulfilling the average annual increase; and
   (c) where its share of renewable energy in the heating and cooling sector is above 50% and up to 60%, may count any such share as fulfilling half of the average annual increase.

When deciding which measures to adopt for the purposes of deploying energy from renewable sources in the heating and cooling sector, Contracting Parties may take into account cost-effectiveness reflecting structural barriers arising from the high share of natural gas or cooling, or from a dispersed settlement structure with low population density.
Where those measures would result in a lower average annual increase than that referred to in paragraph 1 of this Article, **Contracting Parties** shall make it public, for instance by the means of their integrated national energy and climate progress reports pursuant to Article 20 of Regulation (EU) 2018/1999 as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, and provide the **Secretariat** with reasons, including of choice of measures as referred to the second subparagraph of this paragraph.

3. On the basis of objective and non-discriminatory criteria, **Contracting Parties** may establish and make public a list of measures and may designate and make public the implementing entities, such as fuel suppliers, public or professional bodies, which are to contribute to the average annual increase referred to in paragraph 1.

4. **Contracting Parties** may implement the average annual increase referred to in paragraph 1 by means, inter alia, of one or more of the following options:

(a) physical incorporation of renewable energy or waste heat and cold in the energy and energy fuel supplied for heating and cooling;

(b) direct mitigation measures such as the installation of highly efficient renewable heating and cooling systems in buildings, or the use of renewable energy or waste heat and cold in industrial heating and cooling processes;

(c) indirect mitigation measures covered by tradable certificates proving compliance with the obligation laid down in paragraph 1 through support to indirect mitigation measures, carried out by another economic operator such as an independent renewable technology installer or energy service company providing renewable installation services;

(d) other policy measures, with an equivalent effect, to reach the average annual increase referred to in paragraph 1, including fiscal measures or other financial incentives.

When adopting and implementing the measures referred to in the first subparagraph, **Contracting Parties** shall aim to ensure the accessibility of measures to all consumers, in particular those in low-income or vulnerable households, who would not otherwise possess sufficient up-front capital to benefit.

5. **Contracting Parties** may use the structures established under the national energy savings obligations set out in Article 7 of Directive 2012/27/EU as adapted and adopted by Ministerial Council Decision 2015/08/MC-EnC to implement and monitor the measures referred to in paragraph 3 of this Article.

6. Where entities are designated under paragraph 3, **Contracting Parties** shall ensure that the contribution by those designated entities is measurable and verifiable and that the designated entities report annually on:

(a) the total amount of energy supplied for heating and cooling;

(b) the total amount of renewable energy supplied for heating and cooling;

(c) the amount of waste heat and cold supplied for heating and cooling;

(d) the share of renewable energy and waste heat and cold in the total amount of energy supplied for heating and cooling; and

(e) the type of renewable energy source.
1. **Contracting Parties** shall ensure that information on the energy performance and the share of renewable energy in their district heating and cooling systems is provided to final consumers in an easily accessible manner, such as on the suppliers’ websites, on annual bills or upon request.

2. **Contracting Parties** shall lay down the necessary measures and conditions to allow customers of district heating or cooling systems which are not efficient district heating and cooling systems, or which are not such a system by 31 December 2025 on the basis of a plan approved by the competent authority, to disconnect by terminating or modifying their contract in order to produce heating or cooling from renewable sources themselves.

   Where the termination of a contract is linked to physical disconnection, such a termination may be made conditional on compensation for the costs directly incurred as a result of the physical disconnection and for the undepreciated portion of assets needed to provide heat and cold to that customer.

3. **Contracting Parties** may restrict the right to disconnect by terminating or modifying a contract in accordance with paragraph 2 to customers who can demonstrate that the planned alternative supply solution for heating or cooling results in a significantly better energy performance. The energy-performance assessment of the alternative supply solution may be based on the energy performance certificate.

4. **Contracting Parties** shall lay down the necessary measures to ensure that district heating and cooling systems contribute to the increase referred to in Article 23(1) of this Directive by implementing at least one of the two following options:

   (a) Endeavour to increase the share of energy from renewable sources and from waste heat and cold in district heating and cooling by at least one percentage point as an annual average calculated for the period 2021 to 2025 and for the period 2026 to 2030, starting from the share of energy from renewable sources and from waste heat and cold in district heating and cooling in 2020, expressed in terms of share of final energy consumption in district heating and cooling, by implementing measures that can be expected to trigger that average annual increase in years with normal climatic conditions.

   **Contracting Parties** with a share of energy from renewable sources and from waste heat and cold in district heating and cooling above 60% may count any such share as fulfilling the average annual increase referred to in the first subparagraph of this point.

   (b) Ensure that operators of district heating or cooling systems are obliged to connect suppliers of energy from renewable sources and from waste heat and cold or are obliged to offer to connect and purchase heat or cold from renewable sources and from waste heat and cold from third-party suppliers based on non-discriminatory criteria set by the competent authority of the **Contracting Party** concerned, where they need to do one or more of the following:

   (i) meet demand from new customers;

   (ii) replace existing heat or cold generation capacity;
(iii) expand existing heat or cold generation capacity.

5. Where a Contracting Party exercises the option referred to in point (b) of paragraph 4, an operator of a district heating or cooling system may refuse to connect and to purchase heat or cold from a third-party supplier where:

(a) the system lacks the necessary capacity due to other supplies of waste heat and cold, of heat or cold from renewable sources or of heat or cold produced by high-efficiency cogeneration;

(b) the heat or cold from the third-party supplier does not meet the technical parameters necessary to connect and ensure the reliable and safe operation of the district heating and cooling system; or

(c) the operator can demonstrate that providing access would lead to an excessive heat or cold cost increase for final customers compared to the cost of using the main local heat or cold supply with which the renewable source or waste heat and cold would compete.

Contracting Parties shall ensure that, when an operator of a district heating or cooling system refuses to connect a supplier of heating or cooling pursuant to the first subparagraph, information on the reasons for the refusal, as well as the conditions to be met and measures to be taken in the system in order to enable the connection, is provided by that operator to the competent authority in accordance with paragraph 9.

6. Where a Contracting Party exercises the option referred to in point (b) of paragraph 4, it may exempt operators of the following district heating and cooling systems from the application of that point:

(a) efficient district heating and cooling;

(b) efficient district heating and cooling that exploits high-efficiency cogeneration;

(c) district heating and cooling that, on the basis of a plan approved by the competent authority, is efficient district heating and cooling by 31 December 2025;

(d) district heating and cooling with a total rated thermal input below 20 MW.

7. The right to disconnect by terminating or modifying a contract in accordance with paragraph 2 may be exercised by individual customers, by joint undertakings formed by customers or by parties acting on behalf of customers. For multi-apartment blocks, such disconnection may be exercised only at a whole building level in accordance with the applicable housing law.

8. Contracting Parties shall require electricity distribution system operators to assess at least every four years, in cooperation with the operators of district heating or cooling systems in their respective area, the potential for district heating or cooling systems to provide balancing and other system services, including demand response and storing of excess electricity from renewable sources, and whether the use of the identified potential would be more resource- and cost-efficient than alternative solutions.

9. Contracting Parties shall ensure that the rights of consumers and the rules for operating district heating and cooling systems in accordance with this Article are clearly defined and enforced by the competent authority.

10. A Contracting Party shall not be required to apply paragraphs 2 to 9 of this Article where:

(a) its share of district heating and cooling is less than or equal to 2% of the overall consumption of energy in heating and cooling on 24 December 2021;

(b) its share of district heating and cooling is increased above 2% by developing new efficient district heating and cooling based on its integrated national energy and climate plan pursuant to Annex I to Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC or
the assessment referred to in Article 15(7) of this Directive; or
(c) its share of systems referred to in paragraph 6 of this Article constitutes over 90% of total sales of its district heating and cooling.

**Article 25**

Mainstreaming renewable energy in the transport sector

1. In order to mainstream the use of renewable energy in the transport sector, each Contracting Party shall set an obligation on fuel suppliers to ensure that the share of renewable energy within the final consumption of energy in the transport sector is at least 14% by 2030 (minimum share) in accordance with an indicative trajectory set by the Contracting Party and calculated in accordance with the methodology set out in this Article and in Articles 26 and 27. <…>\(^{11}\)

Contracting Parties may exempt, or distinguish between, different fuel suppliers and different energy carriers when setting the obligation on the fuel suppliers, ensuring that the varying degrees of maturity and the cost of different technologies are taken into account.

For the calculation of the minimum share referred to in the first subparagraph, Contracting Parties:
(a) shall take into account renewable liquid and gaseous transport fuels of non-biological origin also when they are used as intermediate products for the production of conventional fuels; and
(b) may take into account recycled carbon fuels.

Within the minimum share referred to in the first subparagraph, the contribution of advanced biofuels and biogas produced from the feedstock listed in Part A of Annex IX as a share of final consumption of energy in the transport sector shall be at least 0,2% in 2022, at least 1% in 2025 and at least 3,5% in 2030.

Contracting Parties may exempt fuel suppliers supplying fuel in the form of electricity or renewable liquid and gaseous transport fuels of non-biological origin from the requirement to comply with the minimum share of advanced biofuels and biogas produced from the feedstock listed in Part A of Annex IX with respect to those fuels.

2. The greenhouse gas emissions savings from the use of renewable liquid and gaseous transport fuels of non-biological origin shall be at least 70% from 1 January 2024. <…>\(^{12}\)

The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 25(2) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis. \(^{12}\)

---

11 Not applicable according to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
12 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
Article 26

Specific rules for biofuels, bioliquids and biomass fuels produced from food and feed crops

1. For the calculation of a Contracting Party’s gross final consumption of energy from renewable sources referred to in Article 7 and the minimum share referred to in the first subparagraph of Article 25(1), the share of biofuels and bioliquids, as well as of biomass fuels consumed in transport, where produced from food and feed crops, shall be no more than one percentage point higher than the share of such fuels in the final consumption of energy in the road and rail transport sectors in 2022 in that Contracting Party, with a maximum of 7% of final consumption of energy in the road and rail transport sectors in that Contracting Party.

Where that share is below 1% in a Contracting Party, it may be increased to a maximum of 2% of the final consumption of energy in the road and rail transport sectors.

Contracting Parties may set a lower limit and may distinguish, for the purposes of Article 29(1), between different biofuels, bioliquids and biomass fuels produced from food and feed crops, taking into account best available evidence on indirect land-use change impact. Contracting Parties may, for example, set a lower limit for the share of biofuels, bioliquids and biomass fuels produced from oil crops.

Where the share of biofuels and bioliquids, as well as of biomass fuels consumed in transport, produced from food and feed crops in a Contracting Party is limited to a share lower than 7% or a Contracting Party decides to limit the share further, that Contracting Party may reduce the minimum share referred to in the first subparagraph of Article 25(1) accordingly, by a maximum of 7 percentage points.

2. For the calculation of a Contracting Party’s gross final consumption of energy from renewable sources referred to in Article 7 and the minimum share referred to in the first subparagraph of Article 25(1), the share of high indirect land-use change-risk biofuels, bioliquids or biomass fuels produced from food and feed crops for which a significant expansion of the production area into land with high-carbon stock is observed shall not exceed the level of consumption of such fuels in that Contracting Party in 2019, unless they are certified to be low indirect land-use change-risk biofuels, bioliquids or biomass fuels pursuant to this paragraph.

From 31 December 2026 until 31 December 2030 at the latest, that limit shall gradually decrease to 0%.

The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 26(2) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis”. 13

---

13 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
Article 27

Calculation rules with regard to the minimum shares of renewable energy in the transport sector

1. For the calculation of the minimum shares referred to in the first and fourth subparagraphs of Article 25(1), the following provisions shall apply:

(a) for the calculation of the denominator, that is the energy content of road- and rail- transport fuels supplied for consumption or use on the market, petrol, diesel, natural gas, biofuels, biogas, renewable liquid and gaseous transport fuels of non-biological origin, recycled carbon fuels and electricity supplied to the road and rail transport sectors, shall be taken into account;

(b) for the calculation of the numerator, that is the amount of energy from renewable sources consumed in the transport sector for the purposes of the first subparagraph of Article 25(1), the energy content of all types of energy from renewable sources supplied to all transport sectors, including renewable electricity supplied to the road and rail transport sectors, shall be taken into account. Contracting Parties may also take into account recycled carbon fuels.

For the calculation of the numerator, the share of biofuels and biogas produced from the feedstock listed in Part B of Annex IX shall be limited to 1,7% of the energy content of transport fuels supplied for consumption or use on the market. Contracting Parties may, where justified, modify that limit, taking into account the availability of feedstock. Any such modification shall be subject to approval by the Secretariat;

(c) for the calculation of both numerator and denominator, the values regarding the energy content of transport fuels set out in Annex III shall be used. For the determination of the energy content of transport fuels not included in Annex III, the Contracting Parties shall use the relevant ESO standards for the determination of the calorific values of fuels. Where no ESO standard has been adopted for that purpose, the relevant ISO standards shall be used.

The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 27(1) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis. 14

2. For the purposes of demonstrating compliance with the minimum shares referred to in Article 25(1):

(a) the share of biofuels and biogas for transport produced from the feedstock listed in Annex IX may be considered to be twice its energy content;

(b) the share of renewable electricity shall be considered to be four times its energy content when supplied to road vehicles and may be considered to be 1,5 times its energy content when supplied to rail transport;

(c) with the exception of fuels produced from food and feed crops, the share of fuels supplied in the aviation and maritime sectors shall be considered to be 1,2 times their energy content.

3. For the calculation of the share of renewable electricity in the electricity supplied to road and rail vehicles for the purposes of paragraph 1 of this Article, Contracting Parties shall refer to the two-year period before the year in which the electricity is supplied in their territory.

14 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
By way of derogation from the first subparagraph of this paragraph, to determine the share of electricity for the purposes of paragraph 1 of this Article, in the case of electricity obtained from a direct connection to an installation generating renewable electricity and supplied to road vehicles, that electricity shall be fully counted as renewable.

In order to ensure that the expected increase in demand for electricity in the transport sector beyond the current baseline is met with additional renewable energy generation capacity, the Contracting Parties shall use framework on additionality in the transport sector developed by the European Commission, and the Secretariat shall develop different options with a view to determining the baseline of Contracting Parties and measuring additionality.

For the purposes of this paragraph, where electricity is used for the production of renewable liquid and gaseous transport fuels of non-biological origin, either directly or for the production of intermediate products, the average share of electricity from renewable sources in the country of production, as measured two years before the year in question, shall be used to determine the share of renewable energy.

However, electricity obtained from direct connection to an installation generating renewable electricity may be fully counted as renewable electricity where it is used for the production of renewable liquid and gaseous transport fuels of non-biological origin, provided that the installation:

(a) comes into operation after, or at the same time as, the installation producing the renewable liquid and gaseous transport fuels of non-biological origin; and

(b) is not connected to the grid or is connected to the grid but evidence can be provided that the electricity concerned has been supplied without taking electricity from the grid.

Electricity that has been taken from the grid may be counted as fully renewable provided that it is produced exclusively from renewable sources and the renewable properties and other appropriate criteria have been demonstrated, ensuring that the renewable properties of that electricity are claimed only once and only in one end-use sector.

<...>

The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 27(3) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis. 15
Article 28
Other provisions on renewable energy in the transport sector

1. With a view to minimising the risk of single consignments being claimed more than once in the Energy Community, Contracting Parties and the Secretariat shall strengthen cooperation among national systems and between national systems and voluntary schemes and verifiers established pursuant to Article 30, including, where appropriate, the exchange of data. Where the competent authority of one Contracting Party suspects or detects a fraud, it shall, where appropriate, inform the other Contracting Parties.

2. The Secretariat shall ensure that an Energy Community database is put in place to enable the tracing of liquid and gaseous transport fuels that are eligible for being counted towards the numerator referred to in point (b) of Article 27(1) or that are taken into account for the purposes referred to in points (a), (b), and (c) of the first subparagraph of Article 29(1). Contracting Parties shall require the relevant economic operators to enter into that database information on the transactions made and the sustainability characteristics of those fuels, including their life-cycle greenhouse gas emissions, starting from their point of production to the fuel supplier that places the fuel on the market. A Contracting Party may set up a national database that is linked to the Energy Community database ensuring that information entered is instantly transferred between the databases.

Fuel suppliers shall enter the information necessary to verify compliance with the requirements laid down in the first and fourth subparagraphs of Article 25(1) into the relevant database.

3. By 31 December 2024, Contracting Parties shall take measures to ensure the availability of fuels from renewable sources for transport including with regard to publicly accessible high-power recharging points and other refuelling infrastructure as provided for in their national policy frameworks.

4. Contracting Parties shall have access to the Energy Community database referred to in paragraph 2 of this Article. They shall take measures to ensure that economic operators enter accurate information into the relevant database.

5. The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 28(5) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis.¹⁶

6. The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 28(6) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis.¹⁷

7. By 31 December 2025, in the context of the biennial assessment of progress made pursuant to Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, the Secretariat shall assess whether the obligation relating to advanced biofuels and biogas produced from feedstock listed in Part A of Annex IX laid down in the fourth subparagraph of Article 25(1) effectively stimulates innovation and ensures greenhouse gas emissions savings in the transport sector. The Secretariat shall analyse in that

¹⁶ The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
¹⁷ The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
assess whether the application of this Article effectively avoids double accounting of renewable energy.

Article 29  
Sustainability and greenhouse gas emissions saving criteria for biofuels, bioliquids and biomass fuels

1. Energy from biofuels, bioliquids and biomass fuels shall be taken into account for the purposes referred to in points (a), (b) and (c) of this subparagraph only if they fulfil the sustainability and the greenhouse gas emissions saving criteria laid down in paragraphs 2 to 7 and 10:

(a) contributing towards the Energy Community target set in Article 3(1) and the renewable energy shares of Contracting Parties;

(b) measuring compliance with renewable energy obligations, including the obligation laid down in Article 25;

(c) eligibility for financial support for the consumption of biofuels, bioliquids and biomass fuels.

However, biofuels, bioliquids and biomass fuels produced from waste and residues, other than agricultural, aquaculture, fisheries and forestry residues, are required to fulfil only the greenhouse gas emissions saving criteria laid down in paragraph 10 in order to be taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph. This subparagraph shall also apply to waste and residues that are first processed into a product before being further processed into biofuels, bioliquids and biomass fuels.

Electricity, heating and cooling produced from municipal solid waste shall not be subject to the greenhouse gas emissions saving criteria laid down in paragraph 10.

Biomass fuels shall fulfil the sustainability and greenhouse gas emissions saving criteria laid down in paragraphs 2 to 7 and 10 if used in installations producing electricity, heating and cooling or fuels with a total rated thermal input equal to or exceeding 20 MW in the case of solid biomass fuels, and with a total rated thermal input equal to or exceeding 2 MW in the case of gaseous biomass fuels. Contracting Parties may apply the sustainability and greenhouse gas emissions saving criteria to installations with lower total rated thermal input.

The sustainability and the greenhouse gas emissions saving criteria laid down in paragraphs 2 to 7 and 10 shall apply irrespective of the geographical origin of the biomass.

2. Biofuels, bioliquids and biomass fuels produced from waste and residues derived not from forestry but from agricultural land shall be taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 only where operators or national authorities have monitoring or management plans in place in order to address the impacts on soil quality and soil carbon. Information about how those impacts are monitored and managed shall be reported pursuant to Article 30(3).

3. Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land with a high biodiversity value, namely land that had one of the following statuses in or after January 2008, whether or not the land continues to have that status:

---

18 Not applicable according to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
(a) primary forest and other wooded land, namely forest and other wooded land of native species, where there is no clearly visible indication of human activity and the ecological processes are not significantly disturbed;

(b) highly biodiverse forest and other wooded land which is species-rich and not degraded, or has been identified as being highly biodiverse by the relevant competent authority, unless evidence is provided that the production of that raw material did not interfere with those nature protection purposes;

(c) areas designated:
   
   (i) by law or by the relevant competent authority for nature protection purposes; or
   
   (ii) for the protection of rare, threatened or endangered ecosystems or species recognised by international agreements or included in lists drawn up by intergovernmental organisations or the International Union for the Conservation of Nature, subject to their recognition in accordance with the first subparagraph of Article 30(4), unless evidence is provided that the production of that raw material did not interfere with those nature protection purposes;

(d) highly biodiverse grassland spanning more than one hectare that is:
   
   (i) natural, namely grassland that would remain grassland in the absence of human intervention and that maintains the natural species composition and ecological characteristics and processes; or
   
   (ii) non-natural, namely grassland that would cease to be grassland in the absence of human intervention and that is species-rich and not degraded and has been identified as being highly biodiverse by the relevant competent authority, unless evidence is provided that the harvesting of the raw material is necessary to preserve its status as highly biodiverse grassland.

<....> The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 29(3) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis. 19

4. Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land with high-carbon stock, namely land that had one of the following statuses in January 2008 and no longer has that status:

(a) wetlands, namely land that is covered with or saturated by water permanently or for a significant part of the year;

(b) continuously forested areas, namely land spanning more than one hectare with trees higher than five metres and a canopy cover of more than 30%, or trees able to reach those thresholds in situ;

(c) land spanning more than one hectare with trees higher than five metres and a canopy cover of between 10% and 30%, or trees able to reach those thresholds in situ, unless evidence is provided that the carbon stock of the area before and after conversion is such that, when the methodology laid down in Part C of Annex V is applied, the conditions laid down in paragraph 10 of this Article would be fulfilled.

This paragraph shall not apply if, at the time the raw material was obtained, the land had the same status as it had in January 2008.

19 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
5. Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land that was peatland in January 2008, unless evidence is provided that the cultivation and harvesting of that raw material does not involve drainage of previously undrained soil.

6. Biofuels, bioliquids and biomass fuels produced from forest biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall meet the following criteria to minimise the risk of using forest biomass derived from unsustainable production:

(a) the country in which forest biomass was harvested has national or sub-national laws applicable in the area of harvest as well as monitoring and enforcement systems in place ensuring:

(i) the legality of harvesting operations;
(ii) forest regeneration of harvested areas;
(iii) that areas designated by international or national law or by the relevant competent authority for nature protection purposes, including in wetlands and peatlands, are protected;
(iv) that harvesting is carried out considering maintenance of soil quality and biodiversity with the aim of minimising negative impacts; and
(v) that harvesting maintains or improves the long-term production capacity of the forest;

(b) when evidence referred to in point (a) of this paragraph is not available, the biofuels, bioliquids and biomass fuels produced from forest biomass shall be taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 if management systems are in place at forest sourcing area level ensuring:

(i) the legality of harvesting operations;
(ii) forest regeneration of harvested areas;
(iii) that areas designated by international or national law or by the relevant competent authority for nature protection purposes, including in wetlands and peatlands, are protected unless evidence is provided that the harvesting of that raw material does not interfere with those nature protection purposes;
(iv) that harvesting is carried out considering the maintenance of soil quality and biodiversity with the aim of minimising negative impacts; and
(v) that harvesting maintains or improves the long-term production capacity of the forest.

7. Biofuels, bioliquids and biomass fuels produced from forest biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall meet the following land-use, land-use change and forestry (LULUCF) criteria:

(a) the country or regional economic integration organisation of origin of the forest biomass:

(i) is a Party to the Paris Agreement;
(ii) has submitted a nationally determined contribution (NDC) to the United Nations Framework Convention on Climate Change (UNFCCC), covering emissions and removals from agriculture, forestry and land use which ensures that changes in carbon stock associated with biomass harvest are accounted towards the country’s commitment to reduce or limit greenhouse gas emissions as specified in the NDC; or
(iii) has national or sub-national laws in place, in accordance with Article 5 of the Paris Agreement, applicable in the area of harvest, to conserve and enhance carbon stocks and sinks, and providing
evidence that reported LULUCF-sector emissions do not exceed removals;

(b) where evidence referred to in point (a) of this paragraph is not available, the biofuels, bioliquids and biomass fuels produced from forest biomass shall be taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 if management systems are in place at forest sourcing area level to ensure that carbon stocks and sinks levels in the forest are maintained, or strengthened over the long term.

8. <…> The Energy Community Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 29(8) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis.  

9. <…>21

10. The greenhouse gas emission savings from the use of biofuels, bioliquids and biomass fuels taken into account for the purposes referred to in paragraph 1 shall be:

(a) at least 50% for biofuels, biogas consumed in the transport sector, and bioliquids produced in installations in operation on or before 5 October 2015;

(b) at least 60% for biofuels, biogas consumed in the transport sector, and bioliquids produced in installations starting operation from 6 October 2015 until 31 December 2020;

(c) at least 65% for biofuels, biogas consumed in the transport sector, and bioliquids produced in installations starting operation from 1 January 2023;

(d) at least 70% for electricity, heating and cooling production from biomass fuels used in installations starting operation from 1 January 2023 until 31 December 2027, and 80% for installations starting operation from 1 January 2028.  

An installation shall be considered to be in operation once the physical production of biofuels, biogas consumed in the transport sector and bioliquids, and the physical production of heating and cooling and electricity from biomass fuels has started.

The greenhouse gas emission savings from the use of biofuels, biogas consumed in the transport sector, bioliquids and biomass fuels used in installations producing heating, cooling and electricity shall be calculated in accordance with Article 31(1).

11. Electricity from biomass fuels shall be taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 only if it meets one or more of the following requirements:

(a) it is produced in installations with a total rated thermal input below 50 MW;

(b) for installations with a total rated thermal input from 50 to 100 MW, it is produced applying high-efficiency cogeneration technology, or, for electricity-only installations, meeting an energy efficiency level associated with the best available techniques (BAT-AEELs) as defined in Commission Implementing Decision (EU) 2017/1442;

(c) for installations with a total rated thermal input above 100 MW, it is produced applying high-efficiency cogeneration technology, or, for electricity-only installations, achieving an net-electrical efficiency of at least 36%;

20 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
21 Not applicable according to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
22 Changes in dates of this Article correspond to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
(d) it is produced applying Biomass CO₂ Capture and Storage.

For the purposes of points (a), (b) and (c) of the first subparagraph of paragraph 1 of this Article, electricity-only-installations shall be taken into account only if they do not use fossil fuels as a main fuel and only if there is no cost-effective potential for the application of high-efficiency cogeneration technology according to the assessment in accordance with Article 14 of Directive 2012/27/EU.

For the purposes of points (a) and (b) of the first subparagraph of paragraph 1 of this Article, this paragraph shall apply only to installations starting operation or converted to the use of biomass fuels after 25 December 2024. For the purposes of point (c) of the first subparagraph of paragraph 1 of this Article, this paragraph shall be without prejudice to support granted under support schemes in accordance with Article 4 approved by 25 December 2024.

Contracting Parties may apply higher energy efficiency requirements than those referred in the first subparagraph to installations with lower rated thermal input.

The first subparagraph shall not apply to electricity from installations which are the object of a specific notification by a Contracting Party to the Secretariat based on the duly substantiated existence of risks for the security of supply of electricity. Upon assessment of the notification, the Energy Community Secretariat shall issue an opinion taking into account the elements included therein. The Contracting Party in question shall take utmost account of the opinion and provide reasons for any deviation in writing. 23

12. For the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 of this Article, and without prejudice to Articles 25 and 26, Contracting Parties shall not refuse to take into account, on other sustainability grounds, biofuels and bioliquids obtained in compliance with this Article. This paragraph shall be without prejudice to public support granted under support schemes approved before 24 December 2018.

13. <…>24

14. For the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1, Contracting Parties may establish additional sustainability criteria for biomass fuels.

By 31 December 2029, the Energy Community Secretariat shall assess the impact of such additional criteria on the internal market.

**Article 30**

Verification of compliance with the sustainability and greenhouse gas emissions saving criteria

1. Where biofuels, bioliquids and biomass fuels, or other fuels that are eligible for counting towards the numerator referred to in point (b) of Article 27(1), are to be taken into account for the purposes referred to in Articles 23 and 25 and in points (a), (b) and (c) of the first subparagraph of Article 29(1), Contracting Parties shall require economic operators to show that the sustainability and greenhouse gas emissions saving criteria laid down in Article 29(2) to (7) and (10) have been fulfilled. For those purposes, they shall require economic operators to use a mass balance system which:

---

23 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
24 Not applicable according to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
(a) allows consignments of raw material or fuels with differing sustainability and greenhouse gas emissions saving characteristics to be mixed for instance in a container, processing or logistical facility, transmission and distribution infrastructure or site;
(b) allows consignments of raw material with differing energy content to be mixed for the purposes of further processing, provided that the size of consignments is adjusted according to their energy content;
(c) requires information about the sustainability and greenhouse gas emissions saving characteristics and sizes of the consignments referred to in point (a) to remain assigned to the mixture; and
(d) provides for the sum of all consignments withdrawn from the mixture to be described as having the same sustainability characteristics, in the same quantities, as the sum of all consignments added to the mixture and requires that this balance be achieved over an appropriate period of time.

The mass balance system shall ensure that each consignment is counted only once in point (a), (b) or (c) of the first subparagraph of Article 7(1) for the purposes of calculating the gross final consumption of energy from renewable sources and shall include information on whether support has been provided for the production of that consignment, and if so, on the type of support scheme.

2. Where a consignment is processed, information on the sustainability and greenhouse gas emissions saving characteristics of the consignment shall be adjusted and assigned to the output in accordance with the following rules:
(a) when the processing of a consignment of raw material yields only one output that is intended for the production of biofuels, bioliquids or biomass fuels, renewable liquid and gaseous transport fuels of non-biological origin, or recycled carbon fuels, the size of the consignment and the related quantities of sustainability and greenhouse gas emissions saving characteristics shall be adjusted applying a conversion factor representing the ratio between the mass of the output that is intended for such production and the mass of the raw material entering the process;
(b) when the processing of a consignment of raw material yields more than one output that is intended for the production of biofuels, bioliquids or biomass fuels, renewable liquid and gaseous transport fuels of non-biological origin, or recycled carbon fuels, for each output a separate conversion factor shall be applied and a separate mass balance shall be used.

3. Contracting Parties shall take measures to ensure that economic operators submit reliable information regarding the compliance with the greenhouse gas emissions savings thresholds set in, and adopted pursuant to, Article 25(2), and with the sustainability and greenhouse gas emissions saving criteria laid down in Article 29(2) to (7) and (10), and that economic operators make available to the relevant Contracting Party, upon request, the data that were used to develop the information. Contracting Parties shall require economic operators to arrange for an adequate standard of independent auditing of the information submitted, and to provide evidence that this has been done. In order to comply with point (a) of Article 29(6) and point (a) of Article 29(7), the first or second party auditing may be used up to the first gathering point of the forest biomass. The auditing shall verify that the systems used by economic operators are accurate, reliable and protected against fraud, including verification ensuring that materials are not intentionally modified or discarded so that the consignment or part thereof could become a waste or residue. It shall evaluate the frequency and methodology of sampling and the robustness of the data.

The obligations laid down in this paragraph shall apply regardless of whether the biofuels, bioliquids, biomass fuels, renewable liquid and gaseous transport fuels of non-biological origin, or recycled carbon fuels are produced within the Energy Community or are imported. Information about the geographic
origin and feedstock type of biofuels, bioliquids and biomass fuels per fuel supplier shall be made available
to consumers on the websites of operators, suppliers or the relevant competent authorities and shall be
updated on an annual basis.

**Contracting Parties** shall submit to the Secretariat, in aggregated form, the information referred to
in the first subparagraph of this paragraph. The **Secretariat** shall publish that information on the e-re-
porting platform referred to in Article 28 of Regulation (EU) 2018/1999 as adapted and adopted by
Ministerial Council Decision 2021/14/MC-EnC in summary form preserving the confidentiality of
commercially sensitive information.

4. The **Secretariat** may recognize that voluntary national schemes setting standards for the production
of biofuels, bioliquids or biomass fuels, or other fuels that are eligible for counting towards the numerator
referred to in point (b) of Article 27(1), provide accurate data on greenhouse gas emission savings for
the purposes of Article 25(2) and Article 29(10), demonstrate compliance with Article 27(3) and Article
28(2) and (4), or demonstrate that consignments of biofuels, bioliquids or biomass fuels comply with the
sustainability criteria laid down in Article 29(2) to (7). When demonstrating that the criteria laid down in
Article 29(6) and (7) are met, the operators may provide the required evidence directly at sourcing area
level. The **Secretariat** may recognise areas for the protection of rare, threatened or endangered ecosys-
tems or species recognised by international agreements or included in lists drawn up by intergovernmental
organisations or the International Union for the Conservation of Nature for the purposes of point (c)(ii) of
the first subparagraph of Article 29(3).

The **Secretariat** may recognise that those schemes contain accurate information on measures taken for
soil, water and air protection, for the restoration of degraded land, for the avoidance of excessive water
consumption in areas where water is scarce, and for certification of biofuels, bioliquids and biomass fuels
with low indirect land-use change-risk.

5. **<…>** The **Secretariat** shall require that each voluntary scheme on which an opinion has been issued
under paragraph 4 submit annually by 30 April a report to the **Secretariat** covering each of the points set
out in Annex IX to Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council
Decision 2021/14/MC-EnC. The report shall cover the preceding calendar year. The requirement to
submit a report shall apply only to voluntary schemes that have operated for at least 12 months.

The **Secretariat** shall make the reports drawn up by the voluntary schemes available, in an aggregated form
or in full if appropriate, on the e-reporting platform referred to in Article 28 of Regulation (EU) 2018/1999,
as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

6. **Contracting Parties** may set up national schemes where compliance with the sustainability and green-
house gas emissions saving criteria laid down in Article 29(2) to (7) and (10) and with the greenhouse gas
emissions savings thresholds for renewable liquid and gaseous transport fuels of non-biological origin and
recycled carbon fuels set in, and adopted pursuant to, Article 25(2) and in accordance with Article 28(5) is
verified throughout the entire chain of custody involving competent national authorities.

A **Contracting Party** may notify such a national scheme to the **Secretariat**. The **Secretariat** may
issue an opinion, whether such a notified national scheme complies with the conditions laid down in
this Directive. **The Contracting Party in question shall take utmost account of the opinion and provide reasons for any deviation in writing.** 25

Where the opinion is positive, schemes established in accordance with this Article shall not refuse mutual

---

25 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
recognition with that Contracting Party’s scheme, as regards verification of compliance with the sustainability and greenhouse gas emissions saving criteria laid down in Article 29(2) to (7) and (10) and the greenhouse gas emissions savings thresholds set in, and adopted pursuant to, Article 25(2).

7. The Secretariat shall issue opinions under paragraph 4 of this Article only if the scheme in question meets adequate standards of reliability, transparency and independent auditing and provides adequate assurances that no materials have been intentionally modified or discarded so that the consignment or part thereof would fall under Annex IX. In the case of schemes to measure greenhouse gas emissions savings, such schemes shall also comply with the methodological requirements set out in Annex V or VI. Lists of areas of high biodiversity value as referred to in point (c)(ii) of the first subparagraph of Article 29(3) shall meet adequate standards of objectivity and coherence with internationally recognised standards and provide for appropriate appeal procedures.

The voluntary schemes referred to in paragraph 4 shall, at least annually, publish a list of their certification bodies used for independent auditing, indicating for each certification body by which entity or national public authority it was recognised and which entity or national public authority is monitoring it.

8. The Energy Community Secretariat shall inform the Permanent High Level Group about any implementing acts adopted in accordance with Article 30(8) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing acts into the Energy Community acquis.

9. Where an economic operator provides evidence or data obtained in accordance with a scheme that has been the subject of an opinion pursuant to paragraph 4 or 6 of this Article, to the extent covered by that opinion, a Contracting Party shall not require the supplier to provide further evidence of compliance with the sustainability and greenhouse gas emissions saving criteria laid down in Article 29(2) to (7) and (10).

Competent authorities of the Contracting Parties shall supervise the operation of certification bodies that are conducting independent auditing under a voluntary scheme. Certification bodies shall submit, upon the request of competent authorities, all relevant information necessary to supervise the operation, including the exact date, time and location of audits. Where Contracting Parties find issues of non-conformity, they shall inform the voluntary scheme without delay.

10. At the request of a Contracting Party, which may be based on the request of an economic operator, the Secretariat shall, on the basis of all available evidence, examine whether the sustainability and greenhouse gas emissions saving criteria laid down in Article 29(2) to (7) and (10) in relation to a source of biofuels, bioliquids and biomass fuels, and the greenhouse gas emissions savings thresholds set in, and adopted pursuant to, Article 25(2), have been met.

Within six months of receipt of such a request and in accordance with the examination procedure referred to in Article 34(3), the Secretariat shall, decide whether the Contracting Party concerned may either: (a) take into account biofuels, bioliquids, biomass fuels and other fuels that are eligible for counting towards the numerator referred to in point (b) of Article 27(1) from that source for the purposes referred to in points (a), (b) and (c) of the first subparagraph of Article 29(1); or (b) by way of derogation from paragraph 9 of this Article, require suppliers of the source of biofuels, bioliquids, biomass fuels and other fuels that are eligible for counting towards the numerator referred to in point (b) of Article 27(1) to provide further evidence of compliance with those sustainability and greenhouse gas emissions saving criteria laid down in Article 29(2) to (7) and (10) and the greenhouse gas emissions savings thresholds set in, and adopted pursuant to, Article 25(2).

26 The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC.
gas emissions saving criteria and those greenhouse gas emissions savings thresholds.

**Article 31**

**Calculation of the greenhouse gas impact of biofuels, bioliquids and biomass fuels**

1. For the purposes of Article 29(10), the greenhouse gas emissions saving from the use of biofuel, bioliquids and biomass fuels shall be calculated in one of the following ways:

   (a) where a default value for greenhouse gas emissions saving for the production pathway is laid down in Part A or B of Annex V for biofuels and bioliquids and in Part A of Annex VI for biomass fuels where the \( e_i \) value for those biofuels or bioliquids calculated in accordance with point 7 of Part C of Annex V and for those biomass fuels calculated in accordance with point 7 of Part B of Annex VI is equal to or less than zero, by using that default value;

   (b) by using an actual value calculated in accordance with the methodology laid down in Part C of Annex V for biofuels and bioliquids and in Part B of Annex VI for biomass fuels;

   (c) by using a value calculated as the sum of the factors of the formulas referred to in point 1 of Part C of Annex V, where disaggregated default values in Part D or E of Annex V may be used for some factors, and actual values, calculated in accordance with the methodology laid down in Part C of Annex V, are used for all other factors;

   (d) by using a value calculated as the sum of the factors of the formulas referred to in point 1 of Part B of Annex VI, where disaggregated default values in Part C of Annex VI may be used for some factors, and actual values, calculated in accordance with the methodology laid down in Part B of Annex VI, are used for all other factors.

2. **Contracting Parties** may submit to the **Secretariat** reports including information on the typical greenhouse gas emissions from the cultivation of agricultural raw materials of the areas on their territory classified as level 2 in the nomenclature of territorial units for statistics (NUTS) or as a more disaggregated NUTS level in accordance with Regulation (EC) No 1059/2003 of the European Parliament and of the Council. Those reports shall be accompanied by a description of the method and data sources used to calculate the level of emissions. That method shall take into account soil characteristics, climate and expected raw material yields.

3. <…>27

4. <…> The **Energy Community Secretariat** shall inform the **Permanent High Level Group** about any implementing acts adopted in accordance with Article 31(4) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing acts into the Energy Community acquis. 28

5. **The Energy Community Secretariat** shall inform the **Permanent High Level Group** about any implementing acts adopted in accordance with Article 31(5) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant

implementing acts into the Energy Community acquis. 29

6. The Energy Community Secretariat shall inform the Permanent High Level Group about any implementing acts adopted in accordance with Article 31(6) of Directive (EU) 2018/2001 within one week of their adoption. The Permanent High Level Group is empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant implementing acts into the Energy Community acquis.30

Article 32
Implementing acts

Article 33
Monitoring by the Secretariat

The Secretariat shall monitor the origin of biofuels, bioliquids and biomass fuels consumed in the Energy Community and the impact of their production, including the impact as a result of displacement, on land use in the Energy Community and in the main third countries of supply. Such monitoring shall be based on Contracting Parties’ integrated national energy and climate plans and corresponding progress reports pursuant to Articles 3, 17 and 20 of Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, and those of relevant third countries, intergovernmental organisations, scientific studies and any other relevant pieces of information. The Secretariat shall also monitor the commodity price changes associated with the use of biomass for energy and any associated positive and negative effects on food security.

In 2032, the Secretariat shall publish a report reviewing the application of this Directive.

(new) Article 34

Until adoption by the Ministerial Council of the Energy Community 2030 targets, including the renewable energy target and/or targets for energy and climate of each Contracting Party, as appropriate, this Directive shall be applied on the basis of Contracting Parties’ National Domestic Contributions or targets or any other more ambitious targets or contributions that they have undertaken under any national or international legal and/or policy text.

\(^{(1)}\) In order to be able to achieve the national objectives set out in this Annex, it is underlined that the State aid guidelines for environmental protection recognise the continued need for national mechanisms of support for the promotion of energy from renewable sources.
ANNEX II

NORMALISATION RULE FOR ACCOUNTING FOR ELECTRICITY GENERATED FROM HYDROPOWER AND WIND POWER

The following rule shall be applied for the purposes of accounting for electricity generated from hydropower in a given Contracting Party:

\[(Q_{N\text{norm}})(C_i \frac{(i)}{(N 14)}(Q_i C_i)) 15\]

where:

- \(N\) = reference year;
- \(Q_{N\text{norm}}\) = normalised electricity generated by all hydropower plants of the Contracting Party in year \(N\), for accounting purposes;
- \(Q_i\) = the quantity of electricity actually generated in year \(i\) by all hydropower plants of the Contracting Party measured in GWh, excluding production from pumped storage units using water that has previously been pumped uphill;
- \(C_i\) = the total installed capacity, net of pumped storage, of all hydropower plants of the Contracting Party at the end of year \(i\), measured in MW.

The following rule shall be applied for the purposes of accounting for electricity generated from onshore wind power in a given Contracting Party:

\[(Q_{N\text{norm}})||(C_i \frac{(i)}{(Nn)}Q_i\frac{(j)}{(Nn)}(C_j C_j 12))\]

where:

- \(N\) = reference year;
- \(Q_{N\text{norm}}\) = normalised electricity generated by all onshore wind power plants of the Contracting Party in year \(N\), for accounting purposes;
- \(Q_i\) = the quantity of electricity actually generated in year \(i\) by all onshore wind power plants of the Contracting Party measured in GWh;
- \(C_j\) = the total installed capacity of all the onshore wind power plants of the Contracting Party at the end of year \(j\), measured in MW;
- \(n\) = 4 or the number of years preceding year \(N\) for which capacity and production data are available for the Contracting Party in question, whichever is lower.

The following rule shall be applied for the purposes of accounting for electricity generated from offshore wind power in a given Contracting Party:

\[(Q_{N\text{norm}})||(C_i \frac{(i)}{(Nn)}Q_i\frac{(j)}{(Nn)}(C_j C_j 2))\]

where:

- \(N\) = reference year;
- \(Q_{N\text{norm}}\) = normalised electricity generated by all offshore wind power plants of the Contracting Party in year \(N\), for accounting purposes;
- \(Q_i\) = the quantity of electricity actually generated in year \(i\) by all offshore wind power plants of the Contracting Party measured in GWh.
tracting Party measured in GWh;

\[ C_j = \text{the total installed capacity of all the offshore wind power plants of the Contracting Party at the end of year } j, \text{ measured in MW}; \]

\( n = 4 \) or the number of years preceding year N for which capacity and production data are available for the Contracting Party in question, whichever is lower.

CERTIFICATION OF INSTALLERS

The certification schemes or equivalent qualification schemes referred to in Article 18(3) shall be based on the following criteria:

1. The certification or qualification process shall be transparent and clearly defined by the Contracting Parties or by the administrative body that they appoint.

2. Installers of biomass, heat pump, shallow geothermal and solar photovoltaic and solar thermal energy shall be certified by an accredited training programme or training provider.

3. The accreditation of the training programme or provider shall be effected by Contracting Parties or by the administrative body that they appoint. The accrediting body shall ensure that the training programme offered by the training provider has continuity and regional or national coverage. The training provider shall have adequate technical facilities to provide practical training, including some laboratory equipment or corresponding facilities to provide practical training. The training provider shall also offer in addition to the basic training, shorter refresher courses on topical issues, including on new technologies, to enable life-long learning in installations. The training provider may be the manufacturer of the equipment or system, institutes or associations.

4. The training leading to certification or qualification of an installer shall include theoretical and practical parts. At the end of the training, the installer must have the skills required to install the relevant equipment and systems to meet the performance and reliability needs of the customer, incorporate quality craftsmanship, and comply with all applicable codes and standards, including energy and eco-labelling.

5. The training course shall end with an examination leading to a certificate or qualification. The examination shall include a practical assessment of successfully installing biomass boilers or stoves, heat pumps, shallow geothermal installations, solar photovoltaic or solar thermal installations.

6. The certification schemes or equivalent qualification schemes referred to in Article 18(3) shall take due account of the following guidelines:

   (a) Accredited training programmes should be offered to installers with work experience, who have undergone, or are undergoing, the following types of training:

   (i) in the case of biomass boiler and stove installers: training as a plumber, pipe fitter, heating engineer or technician of sanitary and heating or cooling equipment as a prerequisite;

   (ii) in the case of heat pump installers: training as a plumber or refrigeration engineer and have basic electrical and plumbing skills (cutting pipe, soldering pipe joints, gluing pipe joints, lagging, sealing fittings, testing for leaks and installation of heating or cooling systems) as a prerequisite;

   (iii) in the case of a solar photovoltaic or solar thermal installer: training as a plumber or electrician and have plumbing, electrical and roofing skills, including knowledge of soldering pipe joints, gluing pipe joints, sealing fittings, testing for plumbing leaks, ability to connect wiring, familiar with basic roof materials, flashing and sealing methods as a prerequisite; or

   (iv) a vocational training scheme to provide an installer with adequate skills corresponding to a three years education in the skills referred to in point (a), (b) or (c), including both classroom and workplace learning.
(b) The theoretical part of the biomass stove and boiler installer training should give an overview of the market situation of biomass and cover ecological aspects, biomass fuels, logistics, fire protection, related subsidies, combustion techniques, firing systems, optimal hydraulic solutions, cost and profitability comparison as well as the design, installation and maintenance of biomass boilers and stoves. The training should also provide good knowledge of any European standards for technology and biomass fuels, such as pellets, and biomass related national and Energy Community law.

(c) The theoretical part of the heat pump installer training should give an overview of the market situation for heat pumps and cover geothermal resources and ground source temperatures of different regions, soil and rock identification for thermal conductivity, regulations on using geothermal resources, feasibility of using heat pumps in buildings and determining the most suitable heat pump system, and knowledge about their technical requirements, safety, air filtering, connection with the heat source and system layout. The training should also provide good knowledge of any European standards for heat pumps, and of relevant national and Energy Community law. The installer should demonstrate the following key competences:

(i) a basic understanding of the physical and operation principles of a heat pump, including characteristics of the heat pump circle: context between low temperatures of the heat sink, high temperatures of the heat source, and the efficiency of the system, determination of the coefficient of performance and seasonal performance factor (SPF);

(ii) an understanding of the components and their function within a heat pump circle, including the compressor, expansion valve, evaporator, condenser, fixtures and fittings, lubricating oil, refrigerant, superheating and sub-cooling and cooling possibilities with heat pumps; and

(iii) the ability to choose and size the components in typical installation situations, including determining the typical values of the heat load of different buildings and for hot water production based on energy consumption, determining the capacity of the heat pump on the heat load for hot water production, on the storage mass of the building and on interruptible current supply; determine the buffer tank component and its volume and integration of a second heating system.

(d) The theoretical part of the solar photovoltaic and solar thermal installer training should give an overview of the market situation of solar products and cost and profitability comparisons, and cover ecological aspects, components, characteristics and dimensioning of solar systems, selection of accurate systems and dimensioning of components, determination of the heat demand, fire protection, related subsidies, as well as the design, installation and maintenance of solar photovoltaic and solar thermal installations. The training should also provide good knowledge of any European standards for technology, and certification such as Solar Keymark, and related national and Energy Community law. The installer should demonstrate the following key competences:

(i) the ability to work safely using the required tools and equipment and implementing safety codes and standards and to identify plumbing, electrical and other hazards associated with solar installations;

(ii) the ability to identify systems and their components specific to active and passive systems, including the mechanical design, and to determine the components’ location and system layout and configuration;

(iii) the ability to determine the required installation area, orientation and tilt for the solar photovoltaic and solar water heater, taking account of shading, solar access, structural integrity, the appropriateness of the installation for the building or the climate and to identify different installation methods suitable for roof types and the balance of system equipment required for the installation; and
(iv) for solar photovoltaic systems in particular, the ability to adapt the electrical design, including determining design currents, selecting appropriate conductor types and ratings for each electrical circuit, determining appropriate size, ratings and locations for all associated equipment and subsystems and selecting an appropriate interconnection point.

(e) The installer certification should be time restricted, so that a refresher seminar or event would be necessary for continued certification.

C. METHODOLOGY

1. Greenhouse gas emissions from the production and use of transport fuels, biofuels and bioliquids shall be calculated as follows:

(a) greenhouse gas emissions from the production and use of biofuels shall be calculated as:

\[ E = e_{ec} + e_i + e_p + e_{td} + e_u - e_{sca} - e_{css} - e_{crr} \]

where

- \( E \) = total emissions from the use of the fuel;
- \( e_{ec} \) = emissions from the extraction or cultivation of raw materials;
el = annualised emissions from carbon stock changes caused by land-use change;
ep = emissions from processing;
etd = emissions from transport and distribution;
eu = emissions from the fuel in use;
esca = emission savings from soil carbon accumulation via improved agricultural management;
eccs = emission savings from CO₂ capture and geological storage; and
eccr = emission savings from CO₂ capture and replacement. Emissions from the manufacture of machinery
and equipment shall not be taken into account.

(b) Greenhouse gas emissions from the production and use of bioliquids shall be calculated as for biofuels
(E), but with the extension necessary for including the energy conversion to electricity and/or heat and
cooling produced, as follows:

(i) For energy installations delivering only heat:

\[
EC_{h,el} = \frac{E}{\eta_h}
\]

(ii) For energy installations delivering only electricity:

\[
EC_{el} = \frac{E}{\eta_{el}}
\]

where

EC_{h,el} = Total greenhouse gas emissions from the final energy commodity.
E = Total greenhouse gas emissions of the bioliquid before end-conversion.
\(\eta_{el}\) = The electrical efficiency, defined as the annual electricity produced divided by the annual bioliquid
input based on its energy content.
\(\eta_h\) = The heat efficiency, defined as the annual useful heat output divided by the annual bioliquid input
based on its energy content.

(iii) For the electricity or mechanical energy coming from energy installations delivering useful heat
together with electricity and/or mechanical energy:

\[
EC_{el} = \frac{E}{\eta_{el}} \left( \frac{C_{el} \cdot \eta_{el}}{C_{el} \cdot \eta_{el} + C_h \cdot \eta_h} \right)
\]

(iv) For the useful heat coming from energy installations delivering heat together with electricity and/
or mechanical energy:
where:

\[ EC_{h,el} = \text{Total greenhouse gas emissions from the final energy commodity.} \]
\[ E = \text{Total greenhouse gas emissions of the bioliquid before end-conversion.} \]
\[ \eta_{el} = \text{The electrical efficiency, defined as the annual electricity produced divided by the annual fuel input based on its energy content.} \]
\[ \eta_h = \text{The heat efficiency, defined as the annual useful heat output divided by the annual fuel input based on its energy content.} \]
\[ C_{el} = \text{Fraction of exergy in the electricity, and/or mechanical energy, set to 100\% (C_{el} = 1).} \]
\[ C_h = \text{Carnot efficiency (fraction of exergy in the useful heat). The Carnot efficiency, } C_n, \text{ for useful heat at different temperatures is defined as:} \]

\[ C_h = \frac{T_h - T_0}{T_h} \]

where

\[ T_h = \text{Temperature, measured in absolute temperature (kelvin) of the useful heat at point of delivery.} \]
\[ T_0 = \text{Temperature of surroundings, set at 273,15 kelvin (equal to 0 °C) If the excess heat is exported for heating of buildings, at a temperature below 150 °C (423,15 kelvin), } C_h \text{ can alternatively be defined as follows:} \]
\[ C_h = \text{Carnot efficiency in heat at 150 °C (423,15 kelvin), which is: 0,3546} \]

For the purposes of that calculation, the following definitions apply:

(a) ‘cogeneration’ means the simultaneous generation in one process of thermal energy and electricity and/or mechanical energy;
(b) ‘useful heat’ means heat generated to satisfy an economical justifiable demand for heat, for heating and cooling purposes;
(c) ‘economically justifiable demand’ means the demand that does not exceed the needs for heat or cooling and which would otherwise be satisfied at market conditions.

2. Greenhouse gas emissions from biofuels and bioliquids shall be expressed as follows:

(a) greenhouse gas emissions from biofuels, E, shall be expressed in terms of grams of CO₂ equivalent per MJ of fuel, g CO₂eq/MJ.
(b) greenhouse gas emissions from bioliquids, EC, in terms of grams of CO₂ equivalent per MJ of final energy commodity (heat or electricity), g CO₂eq/MJ. When heating and cooling are co-generated with electricity, emissions shall be allocated between heat and electricity (as under 1(b)), irrespective if the heat is used for actual heating purposes or for cooling (f).

Where the greenhouse gas emissions from the extraction or cultivation of raw materials e_{ex} are expressed in unit g CO₂eq/dry-ton of feedstock, the conversion to grams of CO₂ equivalent per MJ of fuel, g CO₂eq/MJ, shall be calculated as follows (f):
Emissions per dry-ton feedstock shall be calculated as follows:

\[
e_{\text{ec, feedstock}} = \frac{e_{\text{ec, feedstock}} \left[ \frac{\text{gCO}_2\text{eq}}{\text{MJ feedstock}} \right]}{LHV} \times \text{Fuel feedstock factor} \times \text{Allocation factor fuel,}
\]

where

\[
\text{Allocation factor fuel,} = \left( \frac{\text{Energy in fuel}}{\text{Energy fuel} + \text{Energy in co-products}} \right)
\]

\[
\text{Fuel feedstock factor,} = \left[ \frac{\text{Ratio of MJ feedstock required to make 1 MJ fuel}}{1} \right]
\]

Emissions per dry-ton feedstock shall be calculated as follows:

\[
e_{\text{ec, feedstock}} \left[ \frac{\text{gCO}_2\text{eq}}{\text{t dry}} \right] = \frac{e_{\text{ec, feedstock}} \left[ \frac{\text{gCO}_2\text{eq}}{\text{t moist}} \right]}{(1 - \text{moisture content})}
\]

3. Greenhouse gas emissions savings from biofuels and bioliquids shall be calculated as follows:

(a) greenhouse gas emissions savings from biofuels:

\[
\text{SAVING} = \frac{E_t - E_b}{E_t}
\]

where

- \( E_t \) = total emissions from the biofuel; and
- \( E_b \) = total emissions from the fossil fuel comparator for transport

(b) greenhouse gas emissions savings from heat and cooling, and electricity being generated from bioliquids:

\[
\text{SAVING} = \frac{E_{\text{c}(h\&c,el)} - E_{\text{c}(b\&c,el)}}{E_{\text{c}(h\&c,el)}}
\]

where

- \( E_{\text{c}(h\&c,el)} \) = total emissions from the heat or electricity; and
- \( E_{\text{c}(b\&c,el)} \) = total emissions from the fossil fuel comparator for useful heat or electricity.

4. The greenhouse gases taken into account for the purposes of point 1 shall be \( \text{CO}_2 \), \( \text{N}_2\text{O} \), and \( \text{CH}_4 \). For the purposes of calculating \( \text{CO}_2 \) equivalence, those gases shall be valued as follows:

- \( \text{CO}_2 : 1 \)
- \( \text{N}_2\text{O} : 298 \)
- \( \text{CH}_4 : 25 \)

5. Emissions from the extraction or cultivation of raw materials, \( e_{ec} \), shall include emissions from the extraction or cultivation process itself; from the collection, drying and storage of raw materials; from waste and leakages; and from the production of chemicals or products used in extraction or cultivation. Capture of \( \text{CO}_2 \) in the cultivation of raw materials shall be excluded. Estimates of emissions from agriculture biomass cultivation may be derived from the use of regional averages for cultivation emissions included in the reports referred to in Article 31(4) or the information on the disaggregated default values for cultivation emissions included in this Annex, as an alternative to using actual values. In the absence of relevant information in those reports it is allowed to calculate averages based on local farming practises based for instance on data of a group of farms, as an alternative to using actual values.
6. For the purposes of the calculation referred to in point 1(a), greenhouse gas emissions savings from improved agriculture management, \( e_s \), such as shifting to reduced or zero-tillage, improved crop/rotation, the use of cover crops, including crop residue management, and the use of organic soil improver (e. g. compost, manure fermentation digestate), shall be taken into account only if solid and verifiable evidence is provided that the soil carbon has increased or that it is reasonable to expect to have increased over the period in which the raw materials concerned were cultivated while taking into account the emissions where such practices lead to increased fertiliser and herbicide use (\(^4\)).

7. Annualised emissions from carbon stock changes caused by land-use change, \( e_l \), shall be calculated by dividing total emissions equally over 20 years. For the calculation of those emissions, the following rule shall be applied:

\[
e_l = (CS_r - CS_A) \times 3,664 \times 1/20 \times 1/P - e_p \tag{5}
\]

where

\( e_l \) = annualised greenhouse gas emissions from carbon stock change due to land-use change (measured as mass (grams) of CO\(_2\)-equivalent per unit of biofuel or bioliquid energy (megajoules)). ‘Cropland’ (\(^6\)) and ‘perennial cropland’ (\(^7\)) shall be regarded as one land use;

\( CS_r \) = the carbon stock per unit area associated with the reference land-use (measured as mass (tonnes) of carbon per unit area, including both soil and vegetation). The reference land-use shall be the land-use in January 2008 or 20 years before the raw material was obtained, whichever was the later;

\( CS_A \) = the carbon stock per unit area associated with the actual land-use (measured as mass (tonnes) of carbon per unit area, including both soil and vegetation). In cases where the carbon stock accumulates over more than one year, the value attributed to \( CS_A \) shall be the estimated stock per unit area after 20 years or when the crop reaches maturity, whichever the earlier;

\( P \) = the productivity of the crop (measured as biofuel or bioliquid energy per unit area per year) and

\( e_p \) = bonus of 29 g CO\(_2\)eq/MJ biofuel or bioliquid if biomass is obtained from restored degraded land under the conditions laid down in point 8.

8. The bonus of 29 g CO\(_2\)eq/MJ shall be attributed if evidence is provided that the land:

(a) was not in use for agriculture or any other activity in January 2008; and

(b) is severely degraded land, including such land that was formerly in agricultural use.

The bonus of 29 g CO\(_2\)eq/MJ shall apply for a period of up to 20 years from the date of conversion of the land to agricultural use, provided that a steady increase in carbon stocks as well as a sizable reduction in erosion phenomena for land falling under (b) are ensured.

9. ‘Severely degraded land’ means land that, for a significant period of time, has either been significantly salinated or presented significantly low organic matter content and has been severely eroded.

10. <...>\(^{35}\)

11. Emissions from processing, \( e_p \), shall include emissions from the processing itself; from waste and leakages; and from the production of chemicals or products used in processing including the CO\(_2\) emissions corresponding to the carbon contents of fossil inputs, whether or not actually combusted in the process.

In accounting for the consumption of electricity not produced within the fuel production plant, the greenhouse gas emissions intensity of the production and distribution of that electricity shall be assumed to

\(^{35}\) The text displayed here corresponds to Article 4 of Ministerial Council Decision 2021/14/MC-EnC
be equal to the average emission intensity of the production and distribution of electricity in a defined region. By way of derogation from this rule, producers may use an average value for an individual electricity production plant for electricity produced by that plant, if that plant is not connected to the electricity grid.

Emissions from processing shall include emissions from drying of interim products and materials where relevant.

12. Emissions from transport and distribution, \( e_{td} \), shall include emissions from the transport of raw and semi-finished materials and from the storage and distribution of finished materials. Emissions from transport and distribution to be taken into account under point 5 shall not be covered by this point.

13. Emissions of the fuel in use, \( e_{fu} \), shall be taken to be zero for biofuels and bioliquids. Emissions of non-CO\(_2\) greenhouse gases (N\(_2\)O and CH\(_4\)) of the fuel in use shall be included in the \( e_{fu} \) factor for bioliquids.

14. Emission savings from CO\(_2\) capture and geological storage, \( e_{ccs} \), that have not already been accounted for in \( e_{fu} \), shall be limited to emissions avoided through the capture and storage of emitted CO\(_2\) directly related to the extraction, transport, processing and distribution of fuel if stored in compliance with Directive 2009/31/EC of the European Parliament and of the Council (8).

15. Emission savings from CO\(_2\) capture and replacement, \( e_{cr} \), shall be related directly to the production of biofuel or bioliquid they are attributed to, and shall be limited to emissions avoided through the capture of CO\(_2\) of which the carbon originates from biomass and which is used to replace fossil-derived CO\(_2\) in production of commercial products and services.

16. Where a cogeneration unit – providing heat and/or electricity to a fuel production process for which emissions are being calculated – produces excess electricity and/or excess useful heat, the greenhouse gas emissions shall be divided between the electricity and the useful heat according to the temperature of the heat (which reflects the usefulness (utility) of the heat). The useful part of the heat is found by multiplying its energy content with the Carnot efficiency, \( C_h \), calculated as follows:

\[
C_h = \frac{T_h - T_0}{T_h}
\]

where

\( T_h = \) Temperature, measured in absolute temperature (kelvin) of the useful heat at point of delivery.

\( T_0 = \) Temperature of surroundings, set at 273.15 kelvin (equal to 0 °C) If the excess heat is exported for heating of buildings, at a temperature below 150 °C (423.15 kelvin), \( C_h \) can alternatively be defined as follows:

\( C_h = \) Carnot efficiency in heat at 150 °C (423.15 kelvin), which is: 0.3546 For the purposes of that calculation, the actual efficiencies shall be used, defined as the annual mechanical energy, electricity and heat produced respectively divided by the annual energy input.

For the purposes of that calculation, the following definitions apply:

(a) ‘cogeneration’ shall mean the simultaneous generation in one process of thermal energy and electrical and/or mechanical energy;

(b) ‘useful heat’ shall mean heat generated to satisfy an economical justifiable demand for heat, for heating or cooling purposes;

(c) ‘economically justifiable demand’ shall mean the demand that does not exceed the needs for heat or cooling and which would otherwise be satisfied at market conditions.
17. Where a fuel production process produces, in combination, the fuel for which emissions are being calculated and one or more other products (co-products), greenhouse gas emissions shall be divided between the fuel or its intermediate product and the co-products in proportion to their energy content (determined by lower heating value in the case of co-products other than electricity and heat). The greenhouse gas intensity of excess useful heat or excess electricity is the same as the greenhouse gas intensity of heat or electricity delivered to the fuel production process and is determined from calculating the greenhouse intensity of all inputs and emissions, including the feedstock and CH₄ and N₂O emissions, to and from the cogeneration unit, boiler or other apparatus delivering heat or electricity to the fuel production process. In the case of cogeneration of electricity and heat, the calculation is performed following point 16.

18. For the purposes of the calculation referred to in point 17, the emissions to be divided shall be $e_{ec} + e_{el} + e_{ecs} + \text{those fractions of } e_{pr}, e_{stp}, e_{ccr}, \text{ and } e_{ccr} \text{ that take place up to and including the process step at which a co-product is produced.}$ If any allocation to co-products has taken place at an earlier process step in the life-cycle, the fraction of those emissions assigned in the last such process step to the intermediate fuel product shall be used for those purposes instead of the total of those emissions.

In the case of biofuels and bioliquids, all co-products shall be taken into account for the purposes of that calculation. No emissions shall be allocated to wastes and residues. Co-products that have a negative energy content shall be considered to have an energy content of zero for the purposes of the calculation.

Wastes and residues, including tree tops and branches, straw, husks, cobs and nut shells, and residues from processing, including crude glycerine (glycerine that is not refined) and bagasse, shall be considered to have zero life-cycle greenhouse gas emissions up to the process of collection of those materials irrespectively of whether they are processed to interim products before being transformed into the final product.

In the case of fuels produced in refineries, other than the combination of processing plants with boilers or cogeneration units providing heat and/or electricity to the processing plant, the unit of analysis for the purposes of the calculation referred to in point 17 shall be the refinery.

19. For biofuels, for the purposes of the calculation referred to in point 3, the fossil fuel comparator $E_{F(t)}$ shall be 94 $\text{g CO}_2\text{eq/MJ.}$

For bioliquids used for the production of electricity, for the purposes of the calculation referred to in point 3, the fossil fuel comparator $E_{F(e)}$ shall be 183 $\text{g CO}_2\text{eq/MJ.}$

For bioliquids used for the production of useful heat, as well as for the production of heating and/or cooling, for the purposes of the calculation referred to in point 3, the fossil fuel comparator $E_{F(h&c)}$ shall be 80 $\text{g CO}_2\text{eq/MJ.}$

(2) Heat or waste heat is used to generate cooling (chilled air or water) through absorption chillers. Therefore, it is appropriate to calculate only the emissions associated to the heat produced per MJ of heat, irrespectively if the end-use of the heat is actual heating or cooling via absorption chillers.

(3) The formula for calculating greenhouse gas emissions from the extraction or cultivation of raw materials eec describes cases where feedstock is converted into biofuels in one step. For more complex supply chains, adjustments are needed for calculating greenhouse gas emissions from the extraction or cultivation of raw materials eec for intermediate products.

(4) Measurements of soil carbon can constitute such evidence, e.g. by a first measurement in advance of the cultivation and subsequent ones at regular intervals several years apart. In such a case, before the second measurement is available, increase in soil carbon would be estimated on the basis of representative experiments or soil models. From the second measurement onwards, the measurements would constitute the basis for determining the existence of an increase in soil carbon and its magnitude.

(5) The quotient obtained by dividing the molecular weight of CO₂ (44,010 g/mol) by the molecular weight of carbon (12,011 g/mol) is equal to 3,664.

(6) Cropland as defined by IPCC.

(7) Perennial crops are defined as multi-annual crops, the stem of which is usually not annually harvested such as short rotation coppice and oil palm.

D. DISAGGREGATED DEFAULT VALUES FOR BIOFUELS AND BIOLIQUIDS

Disaggregated default values for cultivation: ‘$e_{ec}$’ as defined in Part C of this Annex, including soil $N_2O$ emissions.

</table>

(*) Default values for processes using CHP are valid only if all the process heat is supplied by CHP.

(**) Note: applies only to biofuels produced from animal by-products classified as category 1 and 2 material in accordance with Regulation (EC) No 1069/2009, for which emissions related to hygenisation as part of the rendering are not considered.

E. ESTIMATED DISAGGREGATED DEFAULT VALUES FOR FUTURE BIOFUELS AND BIOLIQUIDS THAT WERE NOT ON THE MARKET OR WERE ONLY ON THE MARKET IN NEGLIGIBLE QUANTITIES IN 2016

Disaggregated default values for cultivation: ‘eₜₐ’ as defined in Part C of this Annex, including N₂O emissions (including chipping of waste or farmed wood)
Disaggregated default values for soil N₂O emissions (included in disaggregated default values for cultivation emissions in the “e₇₅” table)

Disaggregated default values for transport and distribution of final fuel only. These are already included in the table of ‘transport and distribution emissions \( e_{\text{t-d}} \)’ as defined in Part C of this Annex, but the following values are useful if an economic operator wishes to declare actual transport emissions for feedstock transport only.

</table>

(1) The values for biogas production from manure include negative emissions for emissions saved from raw manure management. The value of esca considered is equal to – 45 g CO2eq/MJ manure used in anaerobic digestion.

(2) Open storage of digestate accounts for additional emissions of CH4 and N2O. The magnitude of those emissions changes with ambient conditions, substrate types and the digestion efficiency.

(3) Close storage means that the digestate resulting from the digestion process is stored in a gas-tight tank and that the additional biogas released during storage is considered to be recovered for production of additional electricity or biomethane. No greenhouse gas emissions are included in that process.

(4) Maize whole plant means maize harvested as fodder and ensiled for preservation.

(*) Case 1 refers to pathways in which electricity and heat required in the process are supplied by the CHP engine itself. Case 2 refers to pathways in which the electricity required in the process is taken from the grid and the process heat is supplied by the CHP engine itself. In some Member States, operators are not allowed to claim the gross production for subsidies and case 1 is the more likely configuration. Case 3 refers to pathways in which the electricity required in the process is taken from the grid and the process heat is supplied by a biogas boiler. This case applies to some installations in which the CHP engine is not on-site and biogas is sold (but not upgraded to biomethane).

\(\ast\) The greenhouse gas emissions savings for biomethane only refer to compressed biomethane relative to the fossil fuel comparator for transport of 94 g CO2eq/MJ.
### B. METHODOLOGY

1. Greenhouse gas emissions from the production and use of biomass fuels, shall be calculated as follows:

(a) Greenhouse gas emissions from the production and use of biomass fuels before conversion into electricity, heating and cooling, shall be calculated as:

\[
E = e_{ec} + e_i + e_p + e_{td} + e_u - e_{sca} - e_{ccs} - e_{crr}
\]

Where

- \( E \) = total emissions from the production of the fuel before energy conversion;
- \( e_{ec} \) = emissions from the extraction or cultivation of raw materials;
- \( e_i \) = annualised emissions from carbon stock changes caused by land-use change;
- \( e_p \) = emissions from processing;
- \( e_{td} \) = emissions from transport and distribution;
- \( e_u \) = emissions from the fuel in use;
- \( e_{sca} \) = emission savings from soil carbon accumulation via improved agricultural management;
- \( e_{ccs} \) = emission savings from CO₂ capture and geological storage; and
- \( e_{crr} \) = emission savings from CO₂ capture and replacement. Emissions from the manufacture of machinery and equipment shall not be taken into account.

(b) In the case of co-digestion of different substrates in a biogas plant for the production of biogas or biomethane, the typical and default values of greenhouse gas emissions shall be calculated as:

\[
E = \sum_{1}^{n} E_n
\]

where

- \( E \) = greenhouse gas emissions per MJ biogas or biomethane produced from co-digestion of the defined mixture of substrates
- \( S_n \) = Share of feedstock \( n \) in energy content
- \( E_n \) = Emission in g CO₂/MJ for pathway \( n \) as provided in Part D of this Annex (*)

</tr>
</tbody>
</table>

(*) The greenhouse gas emissions savings for biomethane only refer to compressed biomethane relative to the fossil fuel comparator for transport of 94 g CO₂eq/MJ.
\[
S_n = \frac{P_n \cdot W_n}{\sum_1^n \cdot W_n}
\]

where

- \( P_n \) = energy yield [MJ] per kilogram of wet input of feedstock n (**)
- \( W_n \) = weighting factor of substrate n defined as:

\[
W_n = \frac{I_n \cdot (1 - AM_n)}{\sum_1^n I_n \cdot (1 - SM_n)}
\]

where:

- \( I_n \) = Annual input to digester of substrate n [tonne of fresh matter]
- \( AM_n \) = Average annual moisture of substrate n [kg water/kg fresh matter]
- \( SM_n \) = Standard moisture for substrate n (**).

(*) For animal manure used as substrate, a bonus of 45 g CO₂eq/MJ manure (– 54 kg CO₂eq/t fresh matter) is added for improved agricultural and manure management.

(**) The following values of \( P_n \) shall be used for calculating typical and default values:

- \( P(\text{Maize}) \): 4.16 [MJ\text{biogas/kg wet maize @ 65\% moisture}]
- \( P(\text{Manure}) \): 0.50 [MJ\text{biogas/kg wet manure @ 90\% moisture}]
- \( P(\text{Biowaste}) \): 3.41 [MJ\text{biogas/kg wet biowaste @ 76\% moisture}]

(***) The following values of the standard moisture for substrate \( SM_n \) shall be used:

- \( SM(\text{Maize}) \): 0.65 [kg water/kg fresh matter]
- \( SM(\text{Manure}) \): 0.90 [kg water/kg fresh matter]
- \( SM(\text{Biowaste}) \): 0.76 [kg water/kg fresh matter]

(c) In the case of co-digestion of n substrates in a biogas plant for the production of electricity or biomethane, actual greenhouse gas emissions of biogas and biomethane are calculated as follows:

\[
E = \sum_{1}^{n} S_n \cdot (e_{ec,n} + e_{td,feedstock,n} + e_{l,n} - e_{sca,n}) + e_{p} + e_{td,product} + e_u - e_{ccs} - e_{ccr}
\]

where

- \( E \) = total emissions from the production of the biogas or biomethane before energy conversion;
- \( S_n \) = Share of feedstock n, in fraction of input to the digester;
- \( e_{ec,n} \) = emissions from the extraction or cultivation of feedstock n;
- \( e_{td,feedstock,n} \) = emissions from transport of feedstock n to the digester;
- \( e_{l,n} \) = annualised emissions from carbon stock changes caused by land-use change, for feedstock n;
- \( e_{sca} \) = emission savings from improved agricultural management of feedstock n (*);
- \( e_p \) = emissions from processing;
etd,product = emissions from transport and distribution of biogas and/or biomethane;
eu = emissions from the fuel in use, that is greenhouse gases emitted during combustion;
e_{scs} = emission savings from CO₂ capture and geological storage; and
e_{src} = emission savings from CO₂ capture and replacement.

(*) For e_{scs} a bonus of 45 g CO₂eq/MJ manure shall be attributed for improved agricultural and manure management in the case animal manure is used as a substrate for the production of biogas and biomethane.

(d) Greenhouse gas emissions from the use of biomass fuels in producing electricity, heating and cooling, including the energy conversion to electricity and/or heat or cooling produced, shall be calculated as follows:

(i) For energy installations delivering only heat:

\[
EC_h = \frac{E}{\eta_h}
\]

(ii) For energy installations delivering only electricity:

\[
EC_{el} = \frac{E}{\eta_{el}}
\]

where

\(EC_{n,el}\) = Total greenhouse gas emissions from the final energy commodity.

\(E\) = Total greenhouse gas emissions of the fuel before end-conversion.

\(\eta_{el}\) = The electrical efficiency, defined as the annual electricity produced divided by the annual fuel input, based on its energy content.

\(\eta_h\) = The heat efficiency, defined as the annual useful heat output divided by the annual fuel input, based on its energy content.

(iii) For the electricity or mechanical energy coming from energy installations delivering useful heat together with electricity and/or mechanical energy:

\[
EC_{el} = \frac{E}{\eta_{el}} \left( \frac{C_{el} \cdot \eta_{el} + C_h \cdot \eta_h}{C_{el} \cdot \eta_{el} + C_h \cdot \eta_h} \right)
\]

(iv) For the useful heat coming from energy installations delivering heat together with electricity and/or mechanical energy:

\[
EC_h = \frac{E}{\eta_h} \left( \frac{C_h \cdot \eta_h}{C_{el} \cdot \eta_{el} + C_h \cdot \eta_h} \right)
\]

where:

\(EC_{n,el}\) = Total greenhouse gas emissions from the final energy commodity.

\(E\) = Total greenhouse gas emissions of the fuel before end-conversion.

\(\eta_{el}\) = The electrical efficiency, defined as the annual electricity produced divided by the annual energy
input, based on its energy content.

\[ \eta_h = \frac{\text{annual useful heat output}}{\text{annual energy input, based on its energy content}} \]

\[ C_e = \text{Fraction of exergy in the electricity, and/or mechanical energy, set to 100\% (} C_e = 1) \]

\[ C_h = \text{Carnot efficiency (fraction of exergy in the useful heat)} \]

The Carnot efficiency, \( C_h \), for useful heat at different temperatures is defined as:

\[ C_h = \frac{T_h - T_0}{T_h} \]

where:

\[ T_h = \text{Temperature, measured in absolute temperature (kelvin) of the useful heat at point of delivery.} \]

\[ T_0 = \text{Temperature of surroundings, set at 273.15 kelvin (equal to 0 °C). If the excess heat is exported for heating of buildings, at a temperature below 150 °C (423.15 kelvin),} C_h \text{ can alternatively be defined as follows:} \]

\[ C_h = \text{Carnot efficiency in heat at 150 °C (423.15 kelvin), which is: 0.3546 For the purposes of that calculation, the following definitions apply:} \]

(i) ‘cogeneration’ shall mean the simultaneous generation in one process of thermal energy and electricity and/or mechanical energy;

(ii) ‘useful heat’ shall mean heat generated to satisfy an economical justifiable demand for heat, for heating or cooling purposes;

(iii) ‘economically justifiable demand’ shall mean the demand that does not exceed the needs for heat or cooling and which would otherwise be satisfied at market conditions.

2. Greenhouse gas emissions from biomass fuels shall be expressed as follows:

(a) greenhouse gas emissions from biomass fuels, \( E \), shall be expressed in terms of grams of CO\(_2\) equivalent per MJ of biomass fuel, g CO\(_2\)eq/MJ;

(b) greenhouse gas emissions from heating or electricity, produced from biomass fuels, \( E_C \), shall be expressed in terms of grams of CO\(_2\) equivalent per MJ of final energy commodity (heat or electricity), g CO\(_2\)eq/MJ.

When heating and cooling are co-generated with electricity, emissions shall be allocated between heat and electricity (as under point 1(d)), irrespective if the heat is used for actual heating purposes or for cooling. (1)

Where the greenhouse gas emissions from the extraction or cultivation of raw materials \( e_{ec} \) are expressed in unit g CO\(_2\)eq/dry-ton of feedstock, the conversion to grams of CO\(_2\) equivalent per MJ of fuel, g CO\(_2\)eq/MJ, shall be calculated as follows (2):

\[ e_{ec,\text{fuel}} \left[ \frac{\text{gCO}_2\text{eq}}{\text{MJfuel}} \right]_{ec} = e_{ec,\text{feedstock}} \left[ \frac{\text{gCO}_2\text{eq}}{\text{tdry feedstock}} \right] \cdot \frac{\text{Fuel feedstock factor}}{\text{LHV}} \cdot \text{Allocation factor fuel}_{ec} \]
Where

\[
\text{Allocation factor fuel}_a = \frac{\text{Energy in fuel}}{\text{Energy fuel} + \text{Energy in co-products}}
\]

\[
\text{Fuel feedstock factor}_a = \frac{\text{Ratio of MJ feedstock required to make 1 MJ fuel}}{}
\]

Emissions per dry-ton feedstock shall be calculated as follows:

\[
e_{\text{feedstock}} = \frac{\text{gCO}_2\text{eq}}{t_{\text{dry}}} = \frac{\text{e}_{\text{feedstock}}}{(1 - \text{moisture content})}
\]

3. Greenhouse gas emissions savings from biomass fuels shall be calculated as follows:

(a) greenhouse gas emissions savings from biomass fuels used as transport fuels:

\[
\text{SAVING} = \frac{(E_{t(t)} - E_{b})}{E_{t(t)}}
\]

where

- \(E_b\) = total emissions from biomass fuels used as transport fuels; and
- \(E_{t(t)}\) = total emissions from the fossil fuel comparator for transport

(b) greenhouse gas emissions savings from heat and cooling, and electricity being generated from biomass fuels:

\[
\text{SAVING} = \frac{(EC_{B(h&c,el)} - EC_{F(h&c,el)})}{EC_{F(h&c,el)}}
\]

where

- \(EC_{B(h&c,el)}\) = total emissions from the heat or electricity,
- \(EC_{F(h&c,el)}\) = total emissions from the fossil fuel comparator for useful heat or electricity.

4. The greenhouse gases taken into account for the purposes of point 1 shall be \(\text{CO}_2\), \(\text{N}_2\text{O}\) and \(\text{CH}_4\). For the purposes of calculating \(\text{CO}_2\) equivalence, those gases shall be valued as follows:

- \(\text{CO}_2\): 1
- \(\text{N}_2\text{O}\): 298
- \(\text{CH}_4\): 25

5. Emissions from the extraction, harvesting or cultivation of raw materials, \(e_{\text{ec}}\), shall include emissions from the extraction, harvesting or cultivation process itself; from the collection, drying and storage of raw materials; from waste and leakages; and from the production of chemicals or products used in extraction or cultivation. Capture of \(\text{CO}_2\) in the cultivation of raw materials shall be excluded. Estimates of emissions from agriculture biomass cultivation may be derived from the regional averages for cultivation emissions included in the reports referred to in Article 31(4) of this Directive or the information on the disaggregated default values for cultivation emissions included in this Annex, as an alternative to using actual values. In the absence of relevant information in those reports it is allowed to calculate averages based on local farming practises based for instance on data of a group of farms, as an alternative to using actual values. Estimates of emissions from cultivation and harvesting of forestry biomass may be derived from the use of averages for cultivation and harvesting emissions calculated for geographical areas at national level, as
an alternative to using actual values.

6. For the purposes of the calculation referred to in point 1(a), emission savings from improved agriculture management, $e_{esc}$, such as shifting to reduced or zero-tillage, improved crop/rotation, the use of cover crops, including crop residue management, and the use of organic soil improver (e.g., compost, manure fermentation digestate), shall be taken into account only if solid and verifiable evidence is provided that the soil carbon has increased or that it is reasonable to expect to have increased over the period in which the raw materials concerned were cultivated while taking into account the emissions where such practices lead to increased fertiliser and herbicide use (*i*).

7. Annualised emissions from carbon stock changes caused by land-use change, $e_{l}$, shall be calculated by dividing total emissions equally over 20 years. For the calculation of those emissions the following rule shall be applied:

$$e_{l} = \frac{(CS_{R} - CS_{A}) \times 3,664 \times 1/20 \times 1/P - e_{B}}{2}$$

where

- $e_{l}$ = annualised greenhouse gas emissions from carbon stock change due to land-use change (measured as mass of CO$_2$-equivalent per unit biomass fuel energy).
- ‘Cropland’ (*i*) and ‘perennial cropland’ (*i*) shall be regarded as one land use;
- $CS_{R}$ = the carbon stock per unit area associated with the reference land use (measured as mass (tonnes) of carbon per unit area, including both soil and vegetation). The reference land use shall be the land use in January 2008 or 20 years before the raw material was obtained, whichever was the later;
- $CS_{A}$ = the carbon stock per unit area associated with the actual land use (measured as mass (tonnes) of carbon per unit area, including both soil and vegetation). In cases where the carbon stock accumulates over more than one year, the value attributed to $CS_{A}$ shall be the estimated stock per unit area after 20 years or when the crop reaches maturity, whichever the earlier;
- $P$ = the productivity of the crop (measured as biomass fuel energy per unit area per year); and
- $e_{B}$ = bonus of 29 g CO$_2$eq/MJ biomass fuel if biomass is obtained from restored degraded land under the conditions laid down in point 8.

8. The bonus of 29 g CO$_2$eq/MJ shall be attributed if evidence is provided that the land:
- (a) was not in use for agriculture in January 2008 or any other activity; and
- (b) is severely degraded land, including such land that was formerly in agricultural use.

The bonus of 29 g CO$_2$eq/MJ shall apply for a period of up to 20 years from the date of conversion of the land to agricultural use, provided that a steady increase in carbon stocks as well as a sizable reduction in erosion phenomena for land falling under (b) are ensured.

9. ‘Severely degraded land’ means land that, for a significant period of time, has either been significantly salinated or presented significantly low organic matter content and has been severely eroded.

11. Emissions from processing, $e_{p}$, shall include emissions from the processing itself; from waste and leakages; and from the production of chemicals or products used in processing, including the CO$_2$ emissions...
corresponding to the carbon contents of fossil inputs, whether or not actually combusted in the process.

In accounting for the consumption of electricity not produced within the solid or gaseous biomass fuel production plant, the greenhouse gas emissions intensity of the production and distribution of that electricity shall be assumed to be equal to the average emission intensity of the production and distribution of electricity in a defined region. By way of derogation from this rule, producers may use an average value for an individual electricity production plant for electricity produced by that plant, if that plant is not connected to the electricity grid.

Emissions from processing shall include emissions from drying of interim products and materials where relevant.

12. Emissions from transport and distribution, $e_{tt}$, shall include emissions from the transport of raw and semi-finished materials and from the storage and distribution of finished materials. Emissions from transport and distribution to be taken into account under point 5 shall not be covered by this point.

13. Emissions of CO₂ from fuel in use, $e_{u}$, shall be taken to be zero for biomass fuels. Emissions of non-CO₂ greenhouse gases (CH₄ and N₂O) from the fuel in use shall be included in the $e_{u}$ factor.

14. Emission savings from CO₂ capture and geological storage, $e_{ccs}$, that have not already been accounted for in $e_{u}$ shall be limited to emissions avoided through the capture and storage of emitted CO₂ directly related to the extraction, transport, processing and distribution of biomass fuel if stored in compliance with Directive 2009/31/EC.

15. Emission savings from CO₂ capture and replacement, $e_{ccr}$, shall be related directly to the production of biomass fuel they are attributed to, and shall be limited to emissions avoided through the capture of CO₂ of which the carbon originates from biomass and which is used to replace fossil-derived CO₂ in production of commercial products and services.

16. Where a cogeneration unit – providing heat and/or electricity to a biomass fuel production process for which emissions are being calculated – produces excess electricity and/or excess useful heat, the greenhouse gas emissions shall be divided between the electricity and the useful heat according to the temperature of the heat (which reflects the usefulness (utility) of the heat). The useful part of the heat is found by multiplying its energy content with the Carnot efficiency, $C_r$, calculated as follows:

$$C_r = \frac{T_h - T_0}{T_h}$$

where

$T_h$ = Temperature, measured in absolute temperature (kelvin) of the useful heat at point of delivery.

$T_0$ = Temperature of surroundings, set at 273,15 kelvin (equal to 0 °C).

If the excess heat is exported for heating of buildings, at a temperature below 150 °C (423,15 kelvin), $C_r$ can alternatively be defined as follows:

$C_r = \text{Carnot efficiency in heat at 150 °C (423,15 kelvin), which is: } 0,3546$

For the purposes of that calculation, the actual efficiencies shall be used, defined as the annual mechanical energy, electricity and heat produced respectively divided by the annual energy input.

For the purposes of that calculation, the following definitions apply:
(a) ‘cogeneration’ shall mean the simultaneous generation in one process of thermal energy and electrical and/or mechanical energy;

(b) ‘useful heat’ shall mean heat generated to satisfy an economical justifiable demand for heat, for heating or cooling purposes;

(c) ‘economically justifiable demand’ shall mean the demand that does not exceed the needs for heat or cooling and which would otherwise be satisfied at market conditions.

17. Where a biomass fuel production process produces, in combination, the fuel for which emissions are being calculated and one or more other products (‘co-products’), greenhouse gas emissions shall be divided between the fuel or its intermediate product and the co-products in proportion to their energy content (determined by lower heating value in the case of co-products other than electricity and heat). The greenhouse gas intensity of excess useful heat or excess electricity is the same as the greenhouse gas intensity of heat or electricity delivered to the biomass fuel production process and is determined from calculating the greenhouse gas intensity of all inputs and emissions, including the feedstock and CH₄ and N₂O emissions, to and from the cogeneration unit, boiler or other apparatus delivering heat or electricity to the biomass fuel production process. In the case of cogeneration of electricity and heat, the calculation is performed following point 16.

18. For the purposes of the calculations referred to in point 17, the emissions to be divided shall be \( e_{\text{cc}} + e_{\text{c}} + e_{\text{sc}} + \) those fractions of \( e_{\text{f}}, e_{\text{tr}}, e_{\text{cs}} \) and \( e_{\text{cr}} \) that take place up to and including the process step at which a co-product is produced. If any allocation to co-products has taken place at an earlier process step in the life-cycle, the fraction of those emissions assigned in the last such process step to the intermediate fuel product shall be used for those purposes instead of the total of those emissions.

In the case of biogas and biomethane, all co-products that do not fall under the scope of point 7 shall be taken into account for the purposes of that calculation. No emissions shall be allocated to wastes and residues. Co-products that have a negative energy content shall be considered to have an energy content of zero for the purposes of the calculation.

Wastes and residues, including tree tops and branches, straw, husks, cobs and nut shells, and residues from processing, including crude glycerine (glycerine that is not refined) and bagasse, shall be considered to have zero life-cycle greenhouse gas emissions up to the process of collection of those materials irrespectively of whether they are processed to interim products before being transformed into the final product.

In the case of biomass fuels produced in refineries, other than the combination of processing plants with boilers or cogeneration units providing heat and/or electricity to the processing plant, the unit of analysis for the purposes of the calculation referred to in point 17 shall be the refinery.

19. For biomass fuels used for the production of electricity, for the purposes of the calculation referred to in point 3, the fossil fuel comparator \( ECF_{(el)} \) shall be 183 g CO₂eq/MJ electricity or 212 g CO₂eq/MJ electricity for the outermost regions.

For biomass fuels used for the production of useful heat, as well as for the production of heating and/or cooling, for the purposes of the calculation referred to in point 3, the fossil fuel comparator \( ECF_{(h)} \) shall be 80 g CO₂eq/MJ heat.

For biomass fuels used for the production of useful heat, in which a direct physical substitution of coal can be demonstrated, for the purposes of the calculation referred to in point 3, the fossil fuel comparator \( ECF_{(h)} \) shall be 124 g CO₂eq/MJ heat.
For biomass fuels used as transport fuels, for the purposes of the calculation referred to in point 3, the fossil fuel comparator $E_{F(t)}$ shall be 94 g CO$_2$eq/MJ.

1. Heat or waste heat is used to generate cooling (chilled air or water) through absorption chillers. Therefore, it is appropriate to calculate only the emissions associated to the heat produced, per MJ of heat, irrespectively if the end-use of the heat is actual heating or cooling via absorption chillers.

2. The formula for calculating greenhouse gas emissions from the extraction or cultivation of raw materials eec describes cases where feedstock is converted into biofuels in one step. For more complex supply chains, adjustments are needed for calculating greenhouse gas emissions from the extraction or cultivation of raw materials eec for intermediate products.

3. Measurements of soil carbon can constitute such evidence, e.g. by a first measurement in advance of the cultivation and subsequent ones at regular intervals several years apart. In such a case, before the second measurement is available, increase in soil carbon would be estimated on the basis of representative experiments or soil models. From the second measurement onwards, the measurements would constitute the basis for determining the existence of an increase in soil carbon and its magnitude.

4. The quotient obtained by dividing the molecular weight of CO2 (44,010 g/mol) by the molecular weight of carbon (12,011 g/mol) is equal to 3.664

5. Cropland as defined by IPCC.

6. Perennial crops are defined as multi-annual crops, the stem of which is usually not annually harvested such as short rotation coppice and oil palm.

### C. Disaggregated Default Values for Biomass Fuels

(1) The values for biogas production from manure include negative emissions for emissions saved from raw manure management. The value of esca considered is equal to – 45 g CO2eq/MJ manure used in anaerobic digestion.

(2) Maize whole plant means maize harvested as fodder and ensiled for preservation.

(3) Transport of agricultural raw materials to the transformation plant is, according to the methodology provided in the Commission’s report of 25 February 2010 on sustainability requirements for the use of solid and gaseous biomass sources in electricity, heating and cooling, included in the ‘cultivation’ value. The value for transport of maize silage accounts for 0,4 g CO2eq/MJ biogas.

### Comments

Case 1 refers to processes in which a Natural Gas boiler is used to provide the process heat to the pellet mill. Process electricity is purchased from the grid.

Case 2a refers to processes in which a boiler fuelled with wood chips is used to provide the process heat to the pellet mill. Process electricity is purchased from the grid.

Case 3a refers to processes in which a CHP, fuelled with wood chips, is used to provide heat and electricity to the pellet mill.

(1) Open storage of digestate accounts for additional emissions of methane which change with the weather, the substrate and the digestion efficiency. In these calculations the amounts are taken to be equal to 0.05 MJ CH₄/MJ biogas for manure, 0.035 MJ CH₄/MJ biogas for maize and 0.01 MJ CH₄/MJ biogas for biowaste.

(2) Close storage means that the digestate resulting from the digestion process is stored in a gas tight tank and the additional biogas released during storage is considered to be recovered for production of additional electricity or biomethane.

1) This category includes the following categories of technologies for biogas upgrade to biomethane: Pressure Swing Adsorption (PSA), Pressure Water Scrubbing (PWS), Membranes, Cryogenic, and Organic Physical Scrubbing (OPS). It includes an emission of 0.03 MJ CH4/MJ biomethane for the emission of methane in the off-gases.

2) This category includes the following categories of technologies for biogas upgrade to biomethane: Pressure Water Scrubbing (PWS) when water is recycled, Pressure Swing Adsorption (PSA), Chemical Scrubbing, Organic Physical Scrubbing (OPS), Membranes and Cryogenic upgrading. No methane emissions are considered for this category (the methane in the off-gas is combusted, if any).
Typical and default values – biogas for electricity – mixtures of manure and maize: greenhouse gas emissions with shares given on a fresh mass basis

Comments

Case 1 refers to pathways in which electricity and heat required in the process are supplied by the CHP engine itself.

Case 2 refers to pathways in which the electricity required in the process is taken from the grid and the process heat is supplied by the CHP engine itself. In some Contracting Parties, operators are not allowed to claim the gross production for subsidies and case 1 is the more likely configuration.

Case 3 refers to pathways in which the electricity required in the process is taken from the grid and the process heat is supplied by a biogas boiler. This case applies to some installations in which the CHP engine is not on-site and biogas is sold (but not upgraded to biomethane).

Where biomethane is used as Compressed Biomethane as a transport fuel, a value of 3.3 g CO₂eq/MJ biomethane needs to be added to the typical values and a value of 4.6 g CO₂eq/MJ biomethane to the default values.
ANNEX VII

ACCOUNTING OF ENERGY FROM HEAT PUMPS

The amount of aerothermal, geothermal or hydrothermal energy captured by heat pumps to be considered to be energy from renewable sources for the purposes of this Directive, E\(_{\text{RES}}\), shall be calculated in accordance with the following formula:

\[ E_{\text{RES}} = Q_{\text{usable}} \times (1 - 1/\text{SPF}) \]

where

\( Q_{\text{usable}} \) = the estimated total usable heat delivered by heat pumps fulfilling the criteria referred to in Article 7(4), implemented as follows: Only heat pumps for which SPF > 1,15 * 1/\( \eta \) shall be taken into account,

\( \text{SPF} \) = the estimated average seasonal performance factor for those heat pumps,

\( \eta \) = the ratio between total gross production of electricity and the primary energy consumption for the production of electricity and shall be calculated as an EU average based on Eurostat data.
ANNEX VIII

PART A. PROVISIONAL ESTIMATED INDIRECT LAND-USE CHANGE EMISSIONS FROM BIOFUEL, BIOLIQUID AND BIOMASS FUEL FEEDSTOCK (g CO₂eq/MJ) (*)

<table>
<thead>
<tr>
<th>Feedstock group</th>
<th>Mean (‡)</th>
<th>Interpercentile range derived from the sensitivity analysis (§)</th>

</tr>
<tr>
<td>Oil crops</td>
<td>55</td>
<td>33 to 66</td>
</tr>
</tbody>
</table>

PART B. BIOFUELS, BIOLIQUIDS AND BIOMASS FUELS FOR WHICH THE ESTIMATED INDIRECT LAND-USE CHANGE EMISSIONS ARE CONSIDERED TO BE ZERO

Biofuels, bioliquids and biomass fuels produced from the following feedstock categories will be considered to have estimated indirect land-use change emissions of zero:

(1) Feedstocks which are not listed under part A of this Annex.

(2) Feedstocks, the production of which has led to direct land-use change, namely, a change from one of the following IPCC land cover categories: forest land, grassland, wetlands, settlements, or other land, to cropland or perennial cropland (4). In such a case a direct land-use change emission value (eₜ) should have been calculated in accordance with point 7 of part C of Annex V.

(*) The mean values reported here represent a weighted average of the individually modelled feedstock values. The magnitude of the values in the Annex is sensitive to the range of assumptions (such as treatment of co-products, yield developments, carbon stocks and displacement of other commodities) used in the economic models developed for their estimation. Although it is therefore not possible to fully characterise the uncertainty range associated with such estimates, a sensitivity analysis conducted on the results based on a random variation of key parameters, a so-called Monte Carlo analysis, was conducted.

(‡) The mean values included here represent a weighted average of the individually modelled feedstock values.

(§) The range included here reflects 90% of the results using the fifth and ninety-fifth percentile values resulting from the analysis. The fifth percentile suggests a value below which 5% of the observations were found (namely, 5% of total data used showed results below 8, 4, and 33 g CO₂eq/MJ). The ninety-fifth percentile suggests a value below which 95% of the observations were found (namely, 5% of total data used showed results above 16, 17, and 66 g CO₂eq/MJ).

(4) Perennial crops are defined as multi-annual crops, the stem of which is usually not annually harvested such as short rotation coppice and oil palm.
ANNEX IX

PART A. Feedstocks for the production of biogas for transport and advanced biofuels, the contribution of which towards the minimum shares referred to in the first and fourth subparagraphs of Article 25(1) may be considered to be twice their energy content:

(a) Algae if cultivated on land in ponds or photobioreactors;

(b) Biomass fraction of mixed municipal waste, but not separated household waste subject to recycling targets under point (a) of Article 11(2) of Directive 2008/98/EC;

(c) Biowaste as defined in point (4) of Article 3 of Directive 2008/98/EC from private households subject to separate collection as defined in point (11) of Article 3 of that Directive;

(d) Biomass fraction of industrial waste not fit for use in the food or feed chain, including material from retail and wholesale and the agro-food and fish and aquaculture industry, and excluding feedstocks listed in part B of this Annex;

(e) Straw;

(f) Animal manure and sewage sludge;

(g) Palm oil mill effluent and empty palm fruit bunches;

(h) Tall oil pitch;

(i) Crude glycerine;

(j) Bagasse;

(k) Grape marcs and wine lees;

(l) Nut shells;

(m) Husks;

(n) Cobs cleaned of kernels of corn;

(o) Biomass fraction of wastes and residues from forestry and forest-based industries, namely, bark, branches, pre-commercial thinnings, leaves, needles, tree tops, saw dust, cutter shavings, black liquor, brown liquor, fibre sludge, lignin and tall oil;

(p) Other non-food cellulosic material;

(q) Other ligno-cellulosic material except saw logs and veneer logs.

PART B. Feedstocks for the production of biofuels and biogas for transport, the contribution of which towards the minimum share established in the first subparagraph of Article 25(1) shall be limited and may be considered to be twice their energy content:

(a) Used cooking oil;

(b) Animal fats classified as categories 1 and 2 in accordance with Regulation (EC) No 1069/2009.

ACQUIS COMMUNAUTAIRE

ENERGY EFFICIENCY
DIRECTIVE 2012/27/EU of 25 October 2012 on energy efficiency

CHAPTER I

SUBJECT MATTER, SCOPE, DEFINITIONS AND ENERGY EFFICIENCY TARGETS

Article 1
Subject matter and scope

1. This Directive establishes a common framework of measures to promote energy efficiency within the Energy Community, in order to ensure that the Energy Community 2020 headline target for energy efficiency and the Energy Community 2030 headline target for energy efficiency, as defined in Articles 2(1bis) and 2(1tris) are met.

The Directive lays down rules designed to remove barriers in the energy market and overcome market failures that impede efficiency in the supply and use of energy, and provides for the establishment of indicative national energy efficiency targets and contributions for 2020 and 2030.

This Directive contributes to the implementation of the “energy efficiency first principle”.

2. The requirements laid down in this Directive are minimum requirements and shall not prevent any Contracting Party from maintaining or introducing more stringent measures. Such measures shall be compatible with Energy Community law. Where national legislation provides for more stringent measures, the Contracting Party shall notify such legislation to the Energy Community Secretariat.

Article 2
Definitions

For the purposes of this Directive, the following definitions shall apply:

(1) ‘energy’ means all forms of energy products, combustible fuels, heat, renewable energy, electricity, or any other form of energy, as defined in Article 2(d) of Regulation (EC) No 1099/2008 of the European Parliament and of the Council of 22 October 2008 on energy statistics, as adapted and adopted by Ministerial Council Decision 2012/02/MC-EnC;

1 The text displayed here corresponds to Article 5(1) of Ministerial Council Decision 2021/14/MC-EnC.
(1bis) ‘the Energy Community 2020 headline target for energy efficiency’ means the target for reduction of primary and/or final energy consumption of the Contracting Parties by 2020, in the terms to be adopted by the Ministerial Council, as appropriate, on the basis of the study(ies) carried out to this effect.

(1tris) ‘the Energy Community 2030 headline target for energy efficiency’ means a target for reduction of primary and/or final energy consumption of the Contracting Parties by 2030, in the terms to be adopted by the Ministerial Council, as appropriate, on the basis of the study(ies) carried out to this effect.

(1cis) ‘Energy Community’s energy consumption’ means the energy consumption of the Contracting Parties.

(2) ‘primary energy consumption’ means gross inland consumption, excluding non-energy uses;

(3) ‘final energy consumption’ means all energy supplied to industry, transport, households, services and agriculture. It excludes deliveries to the energy transformation sector and the energy industries themselves;

(4) ‘energy efficiency’ means the ratio of output of performance, service, goods or energy, to input of energy;

(5) ‘energy savings’ means an amount of saved energy determined by measuring and/or estimating consumption before and after implementation of an energy efficiency improvement measure, whilst ensuring normalisation for external conditions that affect energy consumption;

(6) ‘energy efficiency improvement’ means an increase in energy efficiency as a result of technological, behavioural and/or economic changes;

(7) ‘energy service’ means the physical benefit, utility or good derived from a combination of energy with energy-efficient technology or with action, which may include the operations, maintenance and control necessary to deliver the service, which is delivered on the basis of a contract and in normal circumstances has proven to result in verifiable and measurable or estimable energy efficiency improvement or primary energy savings;

(9) ‘central government’ means all administrative departments whose competence extends over the whole territory of a Contracting Party;

(10) ‘total useful floor area’ means the floor area of a building or part of a building, where energy is used to condition the indoor climate;

(11) ‘energy management system’ means a set of interrelated or interacting elements of a plan which sets an energy efficiency objective and a strategy to achieve that objective;

(12) ‘European standard’ means a standard adopted by the European Committee for Standardisation, the European Committee for Electrotechnical Standardisation or the European Telecommunications Standards Institute and made available for public use;

(13) ‘international standard’ means a standard adopted by the International Standardisation Organisation and made available to the public;

(14) ‘obligated party’ means an energy distributor or retail energy sales company that is bound by the national energy efficiency obligation schemes referred to in Article 7;

(15) ‘entrusted party’ means a legal entity with delegated power from a government or other public body
to develop, manage or operate a financing scheme on behalf of the government or other public body;

(16) ‘participating party’ means an enterprise or public body that has committed itself to reaching certain objectives under a voluntary agreement, or is covered by a national regulatory policy instrument;

(17) ‘implementing public authority’ means a body governed by public law which is responsible for the carrying out or monitoring of energy or carbon taxation, financial schemes and instruments, fiscal incentives, standards and norms, energy labelling schemes, training or education;

(18) ‘policy measure’ means a regulatory, financial, fiscal, voluntary or information provision instrument formally established and implemented in a Contracting Party to create a supportive framework, requirement or incentive for market actors to provide and purchase energy services and to undertake other energy efficiency improvement measures;

(19) ‘individual action’ means an action that leads to verifiable, and measurable or estimable, energy efficiency improvements and is undertaken as a result of a policy measure;

(20) ‘energy distributor’ means a natural or legal person, including a distribution system operator, responsible for transporting energy with a view to its delivery to final customers or to distribution stations that sell energy to final customers;

(22) ‘retail energy sales company’ means a natural or legal person who sells energy to final customers;

(23) ‘final customer’ means a natural or legal person who purchases energy for own end use;

(24) ‘energy service provider’ means a natural or legal person who delivers energy services or other energy efficiency improvement measures in a final customer’s facility or premises;

(25) ‘energy audit’ means a systematic procedure with the purpose of obtaining adequate knowledge of the existing energy consumption profile of a building or group of buildings, an industrial or commercial operation or installation or a private or public service, identifying and quantifying cost-effective energy savings opportunities, and reporting the findings;

(26) ‘small and medium-sized enterprises’ or ‘SMEs’ means enterprises as defined in Title I of the Annex to Commission Recommendation 2003/361/EC of 6 May 2003 concerning the definition of micro, small and medium-sized enterprises; the category of micro, small and medium-sized enterprises is made up of enterprises which employ fewer than 250 persons and which have an annual turnover not exceeding EUR 50 million, and/or an annual balance sheet total not exceeding EUR 43 million;

(27) ‘energy performance contracting’ means a contractual arrangement between the beneficiary and the provider of an energy efficiency improvement measure, verified and monitored during the whole term of the contract, where investments (work, supply or service) in that measure are paid for in relation to a contractually agreed level of energy efficiency improvement or other agreed energy performance criterion, such as financial savings;

(28) ‘smart metering system’ or ‘intelligent metering system’ means an electronic system that can measure energy consumption, providing more information than a conventional meter, and can transmit and receive data using a form of electronic communication;

(30) ‘cogeneration’ means the simultaneous generation in one process of thermal energy and electrical or mechanical energy;

(31) ‘economically justifiable demand’ means demand that does not exceed the needs for heating or cooling and which would otherwise be satisfied at market conditions by energy generation processes other than cogeneration;

(32) ‘useful heat’ means heat produced in a cogeneration process to satisfy economically justifiable demand for heating or cooling;

(33) ‘electricity from cogeneration’ means electricity generated in a process linked to the production of useful heat and calculated in accordance with the methodology laid down in Annex I;

(34) ‘high-efficiency cogeneration’ means cogeneration meeting the criteria laid down in Annex II;

(35) ‘overall efficiency’ means the annual sum of electricity and mechanical energy production and useful heat output divided by the fuel input used for heat produced in a cogeneration process and gross electricity and mechanical energy production;

(36) ‘power-to-heat ratio’ means the ratio of electricity from cogeneration to useful heat when operating in full cogeneration mode using operational data of the specific unit;

(37) ‘cogeneration unit’ means a unit that is able to operate in cogeneration mode;

(38) ‘small-scale cogeneration unit’ means a cogeneration unit with installed capacity below 1 MWₑ;

(39) ‘micro-cogeneration unit’ means a cogeneration unit with a maximum capacity below 50 kWₑ;

(40) ‘plot ratio’ means the ratio of the building floor area to the land area in a given territory;

(41) ‘efficient district heating and cooling’ means a district heating or cooling system using at least 50 % renewable energy, 50 % waste heat, 75 % cogenerated heat or 50 % of a combination of such energy and heat;

(42) ‘efficient heating and cooling’ means a heating and cooling option that, compared to a baseline scenario reflecting a business-as-usual situation, measurably reduces the input of primary energy needed to supply one unit of delivered energy within a relevant system boundary in a cost-effective way, as assessed in the cost-benefit analysis referred to in this Directive, taking into account the energy required for extraction, conversion, transport and distribution;

(43) ‘efficient individual heating and cooling’ means an individual heating and cooling supply option that, compared to efficient district heating and cooling, measurably reduces the input of non-renewable primary energy needed to supply one unit of delivered energy within a relevant system boundary or requires the same input of non-renewable primary energy but at a lower cost, taking into account the energy required for extraction, conversion, transport and distribution;

(44) ‘substantial refurbishment’ means a refurbishment whose cost exceeds 50 % of the investment cost for a new comparable unit;

(45) ‘aggregator’ means a demand service provider that combines multiple short-duration consumer loads for sale or auction in organised energy markets.
Article 3

Energy efficiency targets

1. Each Contracting Party shall set an indicative national energy efficiency target for 2020, based on either primary or final energy consumption, primary or final energy savings, or energy intensity. Contracting Parties shall notify those targets to the Energy Community Secretariat in accordance with Article 24(1) and Annex XIV Part 1. When doing so, they shall also express those targets in terms of an absolute level of primary energy consumption and final energy consumption in 2020 and shall explain how, and on the basis of which data, this has been calculated.

When setting those targets, Contracting Parties shall take into account:

(a) the Energy Community’s energy consumption in 2020;
(b) the measures provided for in this Directive;
(c) the measures adopted to reach the national energy saving targets adopted pursuant to Article 4(1) of Directive 2006/32/EC, as adapted and adopted by Ministerial Council Decision 2009/05/MC-EnC; and
(d) other measures to promote energy efficiency within Contracting Parties, and at the Energy Community level.

When setting those targets, Contracting Parties may also take into account national circumstances affecting primary energy consumption, such as:

(a) remaining cost-effective energy-saving potential;
(b) GDP evolution and forecast;
(c) changes of energy imports and exports;
(d) development of all sources of renewable energies, nuclear energy, carbon capture and storage; and
(e) early action.

2. By 30 June 2018, the Energy Community Secretariat shall assess progress achieved and whether the Energy Community is likely to achieve the Energy Community’s energy consumption in 2020 as per decision of the Ministerial Council on the basis of the study(ies) carried out to this effect.

3. In carrying out the review referred to in paragraph 2, the Energy Community Secretariat shall:

(a) sum the national indicative energy efficiency targets reported by Contracting Parties;
(b) assess whether the sum of those targets can be considered a reliable guide to whether the Energy Community as a whole is on track, taking into account the evaluation of the first annual report in accordance with Article 24(1), and the evaluation of the National Energy Efficiency Action Plans in accordance with Article 24(2);
(c) take into account complementary analysis arising from:

(i) an assessment of progress in energy consumption, and in energy consumption in relation to economic activity, at Energy Community level, including progress in the efficiency of energy supply in Contracting Parties that have based their national indicative targets on final energy consumption or final energy savings, including progress due to these Contracting Parties’ compliance with Chapter III of this Directive;

2 The text displayed here corresponds to Article 5(2) of Ministerial Council Decision 2021/14/MC-EnC
(ii) results from modelling exercises in relation to future trends in energy consumption at Energy Community level;

(d) compare the results under points (a) to (c) with the Energy Community’s energy consumption of no more than 187 Mtoe of primary energy and/or no more than 133 Mtoe of final energy in 2020.

4. By 31 October 2022, the Secretariat shall assess whether the Energy Community has achieved its 2020 headline targets on energy efficiency.

5. Each Contracting Party shall set indicative national energy efficiency contributions towards the Energy Community 2030 headline target for energy efficiency set in Article 1(1) of this Directive in accordance with Articles 4 and 6 of Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC. When setting those contributions, Contracting Parties shall take into account the Energy Community’s energy consumption in 2030 in primary energy and/or final energy as decided by the Ministerial Council on the basis of the relevant study(ies) to this effect. Those contributions shall not be higher than the national benchmarks included in Annex XX to this Directive following decision by the Ministerial Council on the basis of the relevant study(ies) to this effect. The Contracting Parties shall notify those contributions to the Energy Community Secretariat as part of their integrated national energy and climate plans as referred to in, and in accordance with, Articles 3 and 7 to 12 of Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

6. <…>³

³ Not applicable according to Article 5(2) of Ministerial Council Decision 2021/14/MC-EnC
CHAPTER II

EFFICIENCY IN ENERGY USE

Article 4
Building renovation

Article 5
Exemplary role of public bodies’ buildings

1. Without prejudice to Article 7 of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC, each Contracting Party shall ensure that, as from 1 December 2017, 1 %, and from 1 January 2024 on, 3 % of the total floor area of heated and/or cooled buildings owned and occupied by its central government is renovated each year to meet at least the minimum energy performance requirements that it has set in application of Article 4 of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC. The 1 % rate shall be calculated on the total floor area of buildings with a total useful floor area over 500 m² owned and occupied by the central government of the Contracting Party concerned that, on 1 January of each year, do not meet the national minimum energy performance requirements set in application of Article 4 of Directive 2010/31/EU, as adapted and adopted by the Ministerial Council Decision 2010/02/MC-EnC. That threshold shall be lowered to 250 m² as of 1 January 2019.

From 1 January 2024 on, the rate of 3 % shall be calculated on the total floor area of buildings with a total useful floor area over 250 m² owned and occupied by the central government of the Contracting Party concerned that, on 1 January of each year, do not meet the national minimum energy performance requirements set in application of Article 4 of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC.

Where a Contracting Party requires that the obligation to renovate each year 1 % of the total floor area extends to floor area owned and occupied by administrative departments at a level below central government, the 1 %, and respectively 3 % rate shall be calculated on the total floor area of buildings with a total useful floor area over 500 m² and, as of 1 January 2019, respectively as of 1 January 2024, over 250 m² owned and occupied by central government and by these administrative departments of the Contracting Party concerned that, on 1 January of each year, do not meet the national minimum energy performance requirements set in application of Article 4 of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC.

When implementing measures for the comprehensive renovation of central government buildings in accordance with the first subparagraph, Contracting Parties may choose to consider the building as a whole, including the building envelope, equipment, operation and maintenance.

4 Not applicable according to Article 6(53) of Ministerial Council Decision 2021/14/MC-EnC
5 The text displayed here corresponds to Article 5(16) of Ministerial Council Decision 2021/14/MC-EnC
Contracting Parties shall require that central government buildings with the poorest energy performance be a priority for energy efficiency measures, where cost-effective and technically feasible.

2. **Contracting Parties** may decide not to set or apply the requirements referred to in paragraph 1 to the following categories of buildings:
   (a) buildings officially protected as part of a designated environment, or because of their special architectural or historical merit, in so far as compliance with certain minimum energy performance requirements would unacceptably alter their character or appearance;
   (b) buildings owned by the armed forces or central government and serving national defence purposes, apart from single living quarters or office buildings for the armed forces and other staff employed by national defence authorities;
   (c) buildings used as places of worship and for religious activities.

3. If a **Contracting Party** renovates more than 1 % from 1 December 2017, and respectively 3 % as of 1 January 2024, of the total floor area of central government buildings in a given year, it may count the excess towards the annual renovation rate of any of the three previous or following years.

4. **Contracting Parties** may count towards the annual renovation rate of central government buildings new buildings occupied and owned as replacements for specific central government buildings demolished in any of the two previous years, or buildings that have been sold, demolished or taken out of use in any of the two previous years due to more intensive use of other buildings.

5. For the purposes of paragraph 1, by 1 January 2017, **Contracting Parties** shall establish and make publicly available an inventory of heated and/or cooled central government buildings with a total useful floor area over 500 m² and, as of 1 January 2019, over 250 m², excluding buildings exempted on the basis of paragraph 2. The inventory shall contain the following data:
   (a) the floor area in m²; and
   (b) the energy performance of each building or relevant energy data.

6. Without prejudice to Article 7 of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC, **Contracting Parties** may opt for an alternative approach to paragraphs 1 to 5 of this Article, whereby they take other cost-effective measures, including deep renovations and measures for behavioural change of occupants, to achieve, by 2020, respectively by 2030, an amount of energy savings in eligible buildings owned and occupied by their central government that is at least equivalent to that required in paragraph 1, reported on an annual basis.

For the purpose of the alternative approach, **Contracting Parties** may estimate the energy savings that paragraphs 1 to 4 would generate by using appropriate standard values for the energy consumption of reference central government buildings before and after renovation and according to estimates of the surface of their stock. The categories of reference central government buildings shall be representative of the stock of such buildings.

**Contracting Parties** opting for the alternative approach shall notify to the **Energy Community Secretariat**, by 1 January 2017, respectively 1 January 2024 the alternative measures that they plan to adopt, showing how they would achieve an equivalent improvement in the energy performance of the buildings within the central government estate.

7. **Contracting Parties** shall encourage public bodies, including at regional and local level, and social housing bodies governed by public law, with due regard for their respective competences and adminis-
trative set-up, to:

(a) adopt an energy efficiency plan, freestanding or as part of a broader climate or environmental plan, containing specific energy saving and efficiency objectives and actions, with a view to following the exemplary role of central government buildings laid down in paragraphs 1, 5 and 6;

(b) put in place an energy management system, including energy audits, as part of the implementation of their plan;

(c) use, where appropriate, energy service companies, and energy performance contracting to finance renovations and implement plans to maintain or improve energy efficiency in the long term.

**Article 6**

**Purchasing by public bodies**

1. **Contracting Parties** shall ensure that central governments purchase only products, services and buildings with high energy-efficiency performance, insofar as that is consistent with cost-effectiveness, economical feasibility, wider sustainability, technical suitability, as well as sufficient competition, as referred to in Annex III.

The obligation set out in the first subparagraph shall apply to contracts for the purchase of products, services and buildings by public bodies in so far as such contracts have a value equal to or greater than the thresholds laid in each Contracting Party’s national legislation. Each Contracting Party shall submit its national thresholds to the Energy Community Secretariat, by 15 October 2017.6

2. The obligation referred to in paragraph 1 shall apply to the contracts of the armed forces only to the extent that its application does not cause any conflict with the nature and primary aim of the activities of the armed forces.

3. **Contracting Parties** shall encourage public bodies, including at regional and local levels, with due regard to their respective competences and administrative set-up, to follow the exemplary role of their central governments to purchase only products, services and buildings with high energy-efficiency performance. **Contracting Parties** shall encourage public bodies, when tendering service contracts with significant energy content, to assess the possibility of concluding long-term energy performance contracts that provide long-term energy savings.

4. Without prejudice to paragraph 1, when purchasing a product package covered as a whole by a delegated act adopted under Directive 2010/30/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC, **Contracting Parties** may require that the aggregate energy efficiency shall take priority over the energy efficiency of individual products within that package, by purchasing the product package that complies with the criterion of belonging to the highest energy efficiency class.

---

6 The text displayed here corresponds to Article 3(10) of Ministerial Council Decision 2015/08/MC-EnC
Article 7

Energy savings obligation[

1. Contracting Parties shall achieve cumulative end-use energy savings at least equivalent to:
   (a) new savings each year from 1 January 2014 to 31 December 2020 of 0.7 % of annual energy sales to final customers by volume, averaged over the most recent three-year period prior to 1 January 2016. Sales of energy, by volume, used in transport may be excluded, in whole or in part, from that calculation;
   (b) new savings each year from 1 January 2024 to 31 December 2030 of 0.8 % of annual final energy consumption, averaged over the most recent three-year period prior to 1 January 2022. Contracting Parties may request that this rate for energy savings is evaluated annually for a possible revision by the Energy Community Ministerial Council based on the economic analysis provided by the ongoing studies carried out to this effect.

   Contracting Parties may count energy savings that stem from policy measures, whether introduced by 31 December 2020 or after that date, provided that those measures result in new individual actions that are carried out after 31 December 2020.

   Contracting Parties shall continue to achieve new annual savings in accordance with point (b) of the first subparagraph for ten-year periods after 2030.

   Contracting Parties shall decide how to phase the calculated quantity of new savings over each period referred to in points (a) and (b) of the first subparagraph, provided that the required total cumulative end-use energy savings have been achieved by the end of each obligation period.

2. Provided that Contracting Parties achieve at least their cumulative end-use energy savings obligation referred to in point (b) of the first subparagraph of paragraph 1, they may calculate the required amount of energy savings by one or more of the following means:
   (a) applying an annual savings rate on energy sales to final customers or on final energy consumption, averaged over the most recent three-year period prior to 1 January 2022;
   (b) excluding, in whole or in part, energy used in transport from the calculation baseline;
   (c) making use of any of the options set out in paragraph 4.

3. Where Contracting Parties make use of the possibilities provided for in point (a), (b) or (c) of paragraph 2, they shall establish:
   (a) their own annual savings rate that will be applied in the calculation of their cumulative end-use energy savings, which shall ensure that the final amount of their net energy savings is no lower than those required under point (b) of the first subparagraph of paragraph 1; and
   (b) Energy savings which can be measured and verified, granted after 2024, resulting from implementation of new policy measures and individual actions after 31 December 2020 and which have effects in 2024 and beyond, can be included in the advised cumulative energy savings for the period referred to in point (6) of the first paragraph for the Contracting Parties.
   (c) their own calculation baseline, which may exclude, in whole or in part, energy used in

7 The text displayed here corresponds to Article 5(3) of Ministerial Council Decision 2021/14/MC-EnC
transport.

4. Subject to paragraph 5, each Contracting Party may:

(a) carry out the calculation required under point (a) of the first subparagraph of paragraph 1 using values of 0.5 % in 2017 and 2018; 0.7 % in 2019 and 2020;

(b) exclude from the calculation all or part of the sales of energy used, by volume, with respect to the obligation period referred to in point (a) of the first subparagraph of paragraph 1, or final energy consumed, with respect to the obligation period referred to in point (b) of that subparagraph, by industrial activities listed in Annex I to Directive 2003/87/EC;

(c) count towards the amount of required energy savings, energy savings achieved in the energy transformation, distribution and transmission sectors, including efficient district heating and cooling infrastructure, as a result of implementing the requirements set out in Article 14(4), point (b) of Article 14(5), and Article 15(1) to (6) and (9). Contracting Parties shall inform the Energy Community Secretariat about their intended policy measures under this point for the period from 1 January 2024 to 31 December 2030 as part of their integrated national energy and climate plans. The impact of those measures shall be calculated in accordance with Annex V and included in those plans;

(d) count towards the amount of required energy savings, energy savings resulting from individual actions newly implemented since 31 December 2008 that continue to have an impact in 2020 with respect to the obligation period referred to in point (a) of the first subparagraph of paragraph 1 and beyond 2020 with respect to the period referred to in point (b) of the first subparagraph of paragraph 1, and which can be measured and verified;

(e) count towards the amount of required energy savings, energy savings that stem from policy measures, provided that it can be demonstrated that those measures result in individual actions carried out from 1 January 2018 to 31 December 2020 for the first obligation period referred to in point (a) of the first subparagraph of paragraph 1, and beyond 2020 with respect to the period referred to in point (b) of the first subparagraph of paragraph 1, and which can be measured and verified;

(f) count towards the amount of required energy savings, energy savings that stem from policy measures, provided that it can be demonstrated that those measures result in individual actions carried out from 1 January 2018 to 31 December 2020 which deliver savings after 31 December 2020;

(g) exclude from the calculation of the amount of required energy savings, 30 % of the verifiable amount of energy generated on or in buildings for own use as a result of policy measures promoting new installation of renewable energy technologies;

(h) count towards the amount of required energy savings, energy savings that exceed the energy savings required for the obligation period from 1 January 2018 to 31 December 2020, respectively from 2021 to 2030 provided that those savings result from individual actions carried out under policy measures referred to in Articles 7a and 7b, notified by Contracting Parties in their National Energy Efficiency Action Plans and reported in their progress reports in accordance with Article 24.

5. Contracting Parties shall apply and calculate the effect of the options chosen under para-
graph 4 for the periods referred to in points (a) and (b) of the first subparagraph of paragraph 1 separately:

(a) for the calculation of the amount of energy savings required for the obligation period referred to in point (a) of the first subparagraph of paragraph 1, Contracting Parties may make use of points (a) to (d) of paragraph 4. All the options chosen under paragraph 4 taken together shall amount to no more than 25% of the amount of energy savings referred to in point (a) of the first subparagraph of paragraph 1;

(b) for the calculation of the amount of energy savings required for the obligation period referred to in point (b) of the first subparagraph of paragraph 1, Contracting Parties may make use of points (b) to (g) of paragraph 4, provided individual actions referred to in point (d) of paragraph 4 continue to have a verifiable and measurable impact after 31 December 2020. All the options chosen under paragraph 4 taken together shall not lead to a reduction of more than 35% of the amount of energy savings calculated in accordance with paragraphs 2 and 3.

Regardless of whether Contracting Parties exclude, in whole or in part, energy used in transport from their calculation baseline or make use of any of the options listed in paragraph 4, they shall ensure that the calculated net amount of new savings to be achieved in final energy consumption during the obligation period from 1 January 2024 to 31 December 2030 is not lower than the amount resulting from applying the annual savings rate referred to in point (b) of the first subparagraph of paragraph 1.

6. Contracting Parties shall describe in their integrated national energy and climate plans in accordance with Annex III to Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC, the calculation of the amount of energy savings to be achieved over the period from 1 January 2024 to 31 December 2030 referred to in point (b) of the first subparagraph of paragraph 1 of this Article and shall, if relevant, explain how the annual savings rate and the calculation baseline were established, and how and to what extent the options referred to in paragraph 4 of this Article were applied.

7. Energy savings achieved after 31 December 2020 shall not count towards the amount of required energy savings for the period from 1 January 2014 to 31 December 2020.

8. <…>8.

9. Contracting Parties shall ensure that savings resulting from policy measures referred to in Articles 7a and 7b and Article 20(6) are calculated in accordance with Annex V.

10. Contracting Parties shall achieve the amount of energy savings required under paragraph 1 of this Article either by establishing an energy efficiency obligation scheme referred to in Article 7a or by adopting alternative policy measures referred to in Article 7b. Contracting Parties may combine an energy efficiency obligation scheme with alternative policy measures.

11. In designing policy measures to fulfil their obligations to achieve energy savings, Contracting Parties shall take into account the need to alleviate energy poverty in accordance with criteria established by them, taking into consideration their available practices in the field, by requiring, to the extent appropriate, a share of energy efficiency measures under their national energy efficiency obligation schemes, alternative policy measures, or programmes or measures financed under an Energy Efficiency National Fund, to be implemented as a pri-

8 Not applicable according to Article 5(3) of Ministerial Council Decision 2021/14/MC-EnC
priority among vulnerable households, including those affected by energy poverty and, where appropriate, in social housing.

12. Contracting Parties shall include information about the outcome of measures to alleviate energy poverty in the context of this Directive in the integrated national energy and climate progress reports in accordance with Regulation (EU) 2018/1999, as adapted and adopted by Ministerial Council Decision 2021/14/MC-EnC.

13. Contracting Parties shall demonstrate that where there is an overlap in the impact of policy measures or individual actions, there is no double counting of energy savings.

**Article 7a**

**Energy efficiency obligation schemes**

1. Where Contracting Parties decide to fulfil their obligations to achieve the amount of savings required under Article 7(1) by way of an energy efficiency obligation scheme, they shall ensure that obligated parties as referred to in paragraph 2 of this Article operating in each Contracting Party’s territory achieve, without prejudice to Article 7(4) and (5), their cumulative end-use energy savings requirement as set out in Article 7(1).

Where applicable, Contracting Parties may decide that obligated parties fulfil those savings, in whole or in part, as a contribution to the Energy Efficiency National Fund in accordance with Article 20(6).

2. Contracting Parties shall designate, on the basis of objective and non-discriminatory criteria, obligated parties among energy distributors, retail energy sales companies and transport fuel distributors or transport fuel retailers operating in their territory. The amount of energy savings needed to fulfil the obligation shall be achieved by the obligated parties among final customers, designated by the Contracting Party, independently of the calculation made pursuant to Article 7(1) or, if Contracting Parties so decide, through certified savings stemming from other parties as described in point (a) of paragraph 6 of this Article.

3. Where retail energy sales companies are designated as obligated parties under paragraph 2, Contracting Parties shall ensure that, in fulfilling their obligation, retail energy sales companies do not create any barriers that impede consumers from switching from one supplier to another.

4. Contracting Parties shall express the amount of energy savings required of each obligated party in terms of either final or primary energy consumption. The method chosen to express the amount of energy savings required shall also be used to calculate the savings claimed by obligated parties. The conversion factors set out in Annex IV shall apply.

5. Contracting Parties shall put in place measurement, control and verification systems under which documented verification is carried out on at least a statistically significant proportion and representative sample of the energy efficiency improvement measures put in place by the obligated parties. The measurement, control and verification shall be carried out independently of the obligated parties.

6. Within the energy efficiency obligation scheme, Contracting Parties may do one or both

---

9 The text displayed here corresponds to Article 5(4) of Ministerial Council Decision 2021/14/MC-EnC
of the following:

(a) permit obligated parties to count towards their obligation certified energy savings achieved by energy service providers or other third parties, including when obligated parties promote measures through other State-approved bodies or through public authorities that may involve formal partnerships and may be in combination with other sources of finance. Where Contracting Parties so permit, they shall ensure that the certification of energy savings follows an approval process that is put in place in the Contracting Parties, that is clear, transparent, and open to all market participants, and that aims to minimise the costs of certification;

(b) allow obligated parties to count savings obtained in a given year as if they had instead been obtained in any of the four previous or three following years as long as this is not beyond the end of the obligation periods set out in Article 7(1).

Contracting Parties shall assess and, if appropriate, take measures to minimise the impact of the direct and indirect costs of energy efficiency obligation schemes on the competitiveness of energy-intensive industries exposed to international competition.

7. Contracting Parties shall, on an annual basis, publish the energy savings achieved by each obligated party, or each sub-category of obligated party, and in total under the scheme.

*Article 7b*

**Alternative policy measures**

1. Where Contracting Parties decide to fulfil their obligations to achieve the savings required under Article 7(1) by way of alternative policy measures, they shall ensure, without prejudice to Article 7(4) and (5), that the energy savings required under Article 7(1) are achieved among final customers.

2. For all measures other than those relating to taxation, Contracting Parties shall put in place measurement, control and verification systems under which documented verification is carried out on at least a statistically significant proportion and representative sample of the energy efficiency improvement measures put in place by the participating or entrusted parties. The measurement, control and verification shall be carried out independently of the participating or entrusted parties;

---

10 The text displayed here corresponds to Article 5(4) of Ministerial Council Decision 2021/14/MC-EnC
Article 8
Energy audits and energy management systems

1. **Contracting Parties** shall promote the availability to all final customers of high quality energy audits which are cost-effective and:
   (a) carried out in an independent manner by qualified and/or accredited experts according to qualification criteria; or
   (b) implemented and supervised by independent authorities under national legislation.

   The energy audits referred to in the first subparagraph may be carried out by in-house experts or energy auditors provided that the **Contracting Party** concerned has put in place a scheme to assure and check their quality, including, if appropriate, an annual random selection of at least a statistically significant percentage of all the energy audits they carry out.

   For the purpose of guaranteeing the high quality of the energy audits and energy management systems, **Contracting Parties** shall establish transparent and non-discriminatory minimum criteria for energy audits based on Annex VI.

   Energy audits shall not include clauses preventing the findings of the audit from being transferred to any qualified/accredited energy service provider, on condition that the customer does not object.

2. **Contracting Parties** shall develop programmes to encourage SMEs to undergo energy audits and the subsequent implementation of the recommendations from these audits.

   On the basis of transparent and non-discriminatory criteria and without prejudice to Union State aid law, **Contracting Parties** may set up support schemes for SMEs, including if they have concluded voluntary agreements, to cover costs of an energy audit and of the implementation of highly cost-effective recommendations from the energy audits, if the proposed measures are implemented.

   **Contracting Parties** shall bring to the attention of SMEs, including through their respective representative intermediary organisations, concrete examples of how energy management systems could help their businesses. The Commission and the **Energy Community Secretariat** shall assist **Contracting Parties** by supporting the exchange of best practices in this domain.

3. **Contracting Parties** shall also develop programmes to raise awareness among households about the benefits of such audits through appropriate advice services.

4. **Contracting Parties** shall ensure that enterprises that are not SMEs are subject to an energy audit carried out in an independent and cost-effective manner by qualified and/or accredited experts or implemented and supervised by independent authorities under national legislation by 5 November 2018 and at least every four years from the date of the previous energy audit.

5. Energy audits shall be considered as fulfilling the requirements of paragraph 4 when they are carried out in an independent manner, on the basis of minimum criteria based on Annex VI, and implemented under voluntary agreements concluded between organisations of stakeholders and an appointed body and supervised by the **Contracting Party** concerned, or other bodies to which the competent authorities have delegated that task.

---

11 Exchange of best practices by the Commission and the **Energy Community** Secretariat is supported by the Ministerial Council and incorporated in conclusions of the meeting held on 16 October 2015.
have delegated the responsibility concerned, or by the Commission.

Access of market participants offering energy services shall be based on transparent and non-discriminatory criteria.

6. Enterprises that are not SMEs and that are implementing an energy or environmental management system - certified by an independent body according to the relevant European or International Standards - shall be exempted from the requirements of paragraph 4, provided that Contracting Parties ensure that the management system concerned includes an energy audit on the basis of the minimum criteria based on Annex VI.

7. Energy audits may stand alone or be part of a broader environmental audit. Contracting Parties may require that an assessment of the technical and economic feasibility of connection to an existing or planned district heating or cooling network shall be part of the energy audit.

Without prejudice to Union State aid law, Contracting Parties may implement incentive and support schemes for the implementation of recommendations from energy audits and similar measures.

Article 9
Metering for gas and electricity

1. Contracting Parties shall ensure that, in so far as it is technically possible, financially reasonable and proportionate in relation to the potential energy savings, for electricity and natural gas final customers are provided with competitively priced individual meters that accurately reflect their actual energy consumption and that provide information on the actual time of use.

Such a competitively priced individual meter shall always be provided when:

(a) an existing meter is replaced, unless this is technically impossible or not cost-effective in relation to the estimated potential savings in the long term;

(b) a new connection is made in a new building or a building undergoes major renovations, as set out in Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC.

2. Where, and to the extent that, Contracting Parties implement intelligent metering systems and roll out smart meters for natural gas and/or electricity in accordance with Directives 2009/72/EC and 2009/73/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC:

(a) they shall ensure that the metering systems provide to final customers information on actual time of use and that the objectives of energy efficiency and benefits for final customers are fully taken into account when establishing the minimum functionalities of the meters and the obligations imposed on market participants;

(b) they shall ensure the security of the smart meters and data communication, and the privacy of final customers, in compliance with relevant Union data protection and privacy legislation;

(c) in the case of electricity and at the request of the final customer, they shall require meter operators to ensure that the meter or meters can account for electricity put into the grid from the final customer’s premises;

(d) they shall ensure that if final customers request it, metering data on their electricity input and off-take is

12 The text displayed here corresponds to Article 5(5) of Ministerial Council Decision 2021/14/MC-EnC.
made available to them or to a third party acting on behalf of the final customer in an easily understandable format that they can use to compare deals on a like-for-like basis;

(e) they shall require that appropriate advice and information be given to customers at the time of installation of smart meters, in particular about their full potential with regard to meter reading management and the monitoring of energy consumption.

<...>13

‘Article 9a

Metering for heating, cooling and domestic hot water14

1. Contracting Parties shall ensure that, for district heating, district cooling and domestic hot water, final customers are provided with competitively priced meters that accurately reflect their actual energy consumption.

2. Where heating, cooling or domestic hot water is supplied to a building from a central source that services multiple buildings or from a district heating or district cooling system, a meter shall be installed at the heat exchanger or point of delivery.

‘Article 9b15

Sub-metering and cost allocation for heating, cooling and domestic hot water

1. In multi-apartment and multi-purpose buildings with a central heating or central cooling source or supplied from a district heating or district cooling system, individual meters shall be installed to measure the consumption of heating, cooling or domestic hot water for each building unit, where technically feasible and cost effective in terms of being proportionate in relation to the potential energy savings.

Where the use of individual meters is not technically feasible or where it is not cost-efficient to measure heat consumption in each building unit, individual heat cost allocators shall be used to measure heat consumption at each radiator unless it is shown by the Contracting Party in question that the installation of such heat cost allocators would not be cost-efficient. In those cases, alternative cost-efficient methods of heat consumption measurement may be considered. The general criteria, methodologies and/or procedures to determine technical non-feasibility and non-cost effectiveness shall be clearly set out and published by each Contracting Party.

2. In new multi-apartment buildings and in residential parts of new multi-purpose buildings that are equipped with a central heating source for domestic hot water or are supplied from district heating systems, individual meters shall, notwithstanding the first subparagraph of paragraph 1, be provided for domestic hot water.

3. Where multi-apartment or multi-purpose buildings are supplied from district heating or

---

13 Not applicable according to Article 5(5) of Ministerial Council Decision 2021/14/MC-EnC
14 The text here corresponds to Article 5(6) of Ministerial Council Decision 2021/14/MC-EnC
15 The text displayed here corresponds to Article 5(6) of Ministerial Council Decision 2021/14/MC-EnC
district cooling, or where own common heating or cooling systems for such buildings are
prevalent, Contracting Parties shall ensure they have in place transparent, publicly available
national rules on the allocation of the cost of heating, cooling and domestic hot water con-
sumption in such buildings to ensure transparency and accuracy of accounting for individual
consumption. Where appropriate, such rules shall include guidelines on the manner in which
to allocate cost for energy that is used as follows:
(a) domestic hot water;
(b) heat radiated from the building installation and for the purpose of heating the common
areas, where staircases and corridors are equipped with radiators;
(c) for the purpose of heating or cooling apartments.

Article 9c
Remote reading requirement

For the purposes of Articles 9a and 9b, meters and heat cost allocators installed after 30
October 2023 shall be remotely readable devices. The conditions of technical feasibility and
cost effectiveness set out in Article 9b(1) shall continue to apply.
Meters and heat cost allocators which are not remotely readable but which have already
been installed shall be rendered remotely readable or replaced with remotely readable de-
vices by 1 January 2030, save where the Contracting Party in question shows that this is not
cost-efficient.’

Article 10
Billing information for gas and electricity

1. Where final customers do not have smart meters as referred to in Directive (EU) 2019/944/
EC and 2009/73/EC, as adapted and adopted by Ministerial Council Decisions 2021/13/MC-EnC
and 2011/02/MC-EnC, respectively, Contracting Parties shall ensure, by 30 November 2017,
that billing information is reliable, accurate and based on actual consumption, in accordance
with point 1.1 of Annex VII, for electricity and gas, where that is technically possible and
economically justified;
This obligation may be fulfilled by a system of regular self-reading by the final customers whereby they com-
municate readings from their meter to the energy supplier. Only when the final customer has not provided
a meter reading for a given billing interval shall billing be based on estimated consumption or a flat rate.
2. Meters installed in accordance with Directives 2009/72/EC and 2009/73/EC as incorporated and
adapted by Ministerial Council Decision 2011/02/MC-EnC, shall enable accurate billing information
based on actual consumption. Contracting Parties shall ensure that final customers have the possibility
of easy access to complementary information on historical consumption allowing detailed self-checks.

16 The text displayed here corresponds to Article 5(6) of Ministerial Council Decision 2021/14/MC-EnC
17 The text displayed here corresponds to Article 5(7) of Ministerial Council Decision 2021/14/MC-EnC
Complementary information on historical consumption shall include:

(a) cumulative data for at least the three previous years or the period since the start of the supply contract if this is shorter. The data shall correspond to the intervals for which frequent billing information has been produced; and

(b) detailed data according to the time of use for any day, week, month and year. These data shall be made available to the final customer via the internet or the meter interface for the period of at least the previous 24 months or the period since the start of the supply contract if this is shorter.

3. Independently of whether smart meters have been installed or not, **Contracting Parties**:

(a) shall require that, to the extent that information on the energy billing and historical consumption of final customers is available, it be made available, at the request of the final customer, to an energy service provider designated by the final customer;

(b) shall ensure that final customers are offered the option of electronic billing information and bills and that they receive, on request, a clear and understandable explanation of how their bill was derived, especially where bills are not based on actual consumption;

(c) shall ensure that appropriate information is made available with the bill to provide final customers with a comprehensive account of current energy costs, in accordance with Annex VII;

(d) may lay down that, at the request of the final customer, the information contained in these bills shall not be considered to constitute a request for payment. In such cases, **Contracting Parties** shall ensure that suppliers of energy sources offer flexible arrangements for actual payments;

(e) shall require that information and estimates for energy costs are provided to consumers on demand in a timely manner and in an easily understandable format enabling consumers to compare deals on a like-for-like basis.

---

**Article 10a**

Billing and consumption information for heating, cooling and domestic hot water

1. Where meters or heat cost allocators are installed, **Contracting Parties** shall ensure that billing and consumption information is reliable, accurate and based on actual consumption or heat cost allocator readings, in accordance with points 1 and 2 of Annex VII a for all final users, namely for natural or legal persons purchasing heating, cooling or domestic hot water for their own end-use, or natural or legal persons occupying an individual building or a unit in a multi-apartment or multi-purpose building supplied with heating, cooling or domestic hot water from a central source who has no direct or individual contract with the energy supplier.

This obligation may, where a **Contracting Party** so provides, save in the case of sub-metered consumption based on heat cost allocators under Article 9b, be fulfilled by a system of regular self-reading by the final customer or final user whereby they communicate readings from their meter. Only where the final customer or final user has not provided a meter reading for a given billing interval shall billing be based on estimated consumption or a flat rate.

2. **Contracting Parties** shall:

---

18 The text displayed here corresponds to Article 5(8) of Ministerial Council Decision 2021/14/MC-EnC
(a) require that, if information on the energy billing and historical consumption or heat cost allocator readings of final users is available, it be made available upon request by the final user, to an energy service provider designated by the final user;
(b) ensure that final customers are offered the option of electronic billing information and bills;
(c) ensure that clear and comprehensible information is provided with the bill to all final users in accordance with point 3 of Annex VIIa; and
(d) promote cybersecurity and ensure the privacy and data protection of final users in accordance with applicable Union law.

Contracting Parties may provide that, at the request of the final customer, the provision of billing information shall not be considered to constitute a request for payment. In such cases, Contracting Parties shall ensure that flexible arrangements for actual payment are offered.

3. Contracting Parties shall decide who is to be responsible for providing the information referred to in paragraphs 1 and 2 to final users without a direct or individual contract with an energy supplier.

**Article 11**

Cost of access to metering and billing information for electricity and gas

Contracting Parties shall ensure that final customers receive all their bills and billing information for energy consumption free of charge and that final customers have access to their consumption data in an appropriate way and free of charge.

**Article 11a**

Cost of access to metering and billing and consumption information for heating, cooling and domestic hot water

1. Contracting Parties shall ensure that final users receive all their bills and billing information for energy consumption free of charge and that final users have access to their consumption data in an appropriate way and free of charge.

2. Notwithstanding paragraph 1 of this Article, the distribution of costs of billing information for the individual consumption of heating, cooling and domestic hot water in multi-apartment and multi-purpose buildings pursuant to Article 9b shall be carried out on a non-profit basis. Costs resulting from the assignment of that task to a third party, such as a service provider or the local energy supplier, covering the measuring, allocation and accounting for actual individual consumption in such buildings, may be passed onto the final users to the extent that such costs are reasonable.

3. In order to ensure reasonable costs for sub-metering services as referred to in paragraph 2, Contracting Parties may stimulate competition in that service sector by taking appropriate measures.

---

19 The text displayed here corresponds to Article 5(9) of Ministerial Council Decision 2021/14/MC-EnC
20 The text displayed here corresponds to Article 5(10) of Ministerial Council Decision 2021/14/MC-EnC
measures, such as recommending or otherwise promoting the use of tendering and/or the use of interoperable devices and systems facilitating switching between service providers’.

**Article 12**  
Consumer information and empowering programme

1. **Contracting Parties** shall take appropriate measures to promote and facilitate an efficient use of energy by small energy customers, including domestic customers. These measures may be part of a national strategy.

2. For the purposes of paragraph 1, these measures shall include one or more of the elements listed under point (a) or (b):

   (a) a range of instruments and policies to promote behavioural change which may include:
   
   (i) fiscal incentives;
   
   (ii) access to finance, grants or subsidies;
   
   (iii) information provision;
   
   (iv) exemplary projects;
   
   (v) workplace activities;

   (b) ways and means to engage consumers and consumer organisations during the possible roll-out of smart meters through communication of:

   (i) cost-effective and easy-to-achieve changes in energy use;
   
   (ii) information on energy efficiency measures.

**Article 13**  
Penalties

**Contracting Parties** shall lay down the rules on penalties applicable in case of non-compliance with the national provisions adopted pursuant to Articles 7 to 11 and Article 18(3) and shall take the necessary measures to ensure that they are implemented. The penalties provided for shall be effective, proportionate and dissuasive. **Contracting Parties** shall notify those provisions to the Commission and the **Energy Community Secretariat** by **15 October 2017** and shall notify it without delay of any subsequent amendment affecting them.
CHAPTER III

EFFICIENCY IN ENERGY SUPPLY

Article 14

Promotion of efficiency in heating and cooling

1. **By 30 November 2018, Contracting Parties** shall carry out and notify to the **Energy Community Secretariat** a comprehensive assessment of the potential for the application of high-efficiency cogeneration and efficient district heating and cooling, containing the information set out in Annex VIII. If they have already carried out an equivalent assessment, they shall notify it to the **Energy Community Secretariat**.

2. At the request of the Commission, the assessment shall be updated and notified to the Commission every five years. The Commission shall make any such request at least one year before the due date.

3. For the purpose of the assessment referred to in paragraph 1, **Contracting Parties** shall carry out a cost-benefit analysis covering their territory based on climate conditions, economic feasibility and technical suitability in accordance with Part 1 of Annex IX. The cost-benefit analysis shall be capable of facilitating the identification of the most resource-and cost-efficient solutions to meeting heating and cooling needs. That cost-benefit analysis may be part of an environmental assessment under Directive 2001/42/EC of the European Parliament and of the Council of 27 June 2001 on the assessment of the effects of certain plans and programmes on the environment.

4. Where the assessment referred to in paragraph 1 and the analysis referred to in paragraph 3 identify a potential for the application of high-efficiency cogeneration and/or efficient district heating and cooling whose benefits exceed the costs, **Contracting Parties** shall take adequate measures for efficient district heating and cooling infrastructure to be developed and/or to accommodate the development of high-efficiency cogeneration and the use of heating and cooling from waste heat and renewable energy sources in accordance with paragraphs 1, 5, and 7.

Where the assessment referred to in paragraph 1 and the analysis referred to in paragraph 3 do not identify a potential whose benefits exceed the costs, including the administrative costs of carrying out the cost-benefit analysis referred to in paragraph 5, the **Contracting Party** concerned may exempt installations from the requirements laid down in that paragraph.

5. **Contracting Parties** shall ensure that a cost-benefit analysis in accordance with Part 2 of Annex IX is carried out when, after **15 October 2017**:

(a) a new thermal electricity generation installation with a total thermal input exceeding 20 MW is planned, in order to assess the cost and benefits of providing for the operation of the installation as a high-efficiency cogeneration installation;

---

21 Not applicable in accordance with Article 3(11) of Decision 2015/08/MC-EnC.
(b) an existing thermal electricity generation installation with a total thermal input exceeding 20 MW is substantially refurbished, in order to assess the cost and benefits of converting it to high-efficiency cogeneration;

(c) an industrial installation with a total thermal input exceeding 20 MW generating waste heat at a useful temperature level is planned or substantially refurbished, in order to assess the cost and benefits of utilising the waste heat to satisfy economically justified demand, including through cogeneration, and of the connection of that installation to a district heating and cooling network;

(d) a new district heating and cooling network is planned or in an existing district heating or cooling network a new energy production installation with a total thermal input exceeding 20 MW is planned or an existing such installation is to be substantially refurbished, in order to assess the cost and benefits of utilising the waste heat from nearby industrial installations.

The fitting of equipment to capture carbon dioxide produced by a combustion installation with a view to its being geologically stored as provided for in Directive 2009/31/EC shall not be considered as refurbishment for the purpose of points (b), (c) and (d) of this paragraph.

Contracting Parties may require the cost-benefit analysis referred to in points (c) and (d) to be carried out in cooperation with the companies responsible for the operation of the district heating and cooling networks.

6. Contracting Parties may exempt from paragraph 5:

(a) those peak load and back-up electricity generating installations which are planned to operate under 1500 operating hours per year as a rolling average over a period of five years, based on a verification procedure established by the Contracting Parties ensuring that this exemption criterion is met;

(b) nuclear power installations;

(c) installations that need to be located close to a geological storage site approved under Directive 2009/31/EC.

Contracting Parties may also lay down thresholds, expressed in terms of the amount of available useful waste heat, the demand for heat or the distances between industrial installations and district heating networks, for exempting individual installations from the provisions of points (c) and (d) of paragraph 5.

Contracting Parties shall notify exemptions adopted under this paragraph to the Energy Community Secretariat by 15 October 2017 and any subsequent changes to them thereafter.

7. Contracting Parties shall adopt authorisation criteria as referred to in Article 7 of Directive 2009/72/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC, or equivalent permit criteria, to:

(a) take into account the outcome of the comprehensive assessment referred to in paragraph 1;

(b) ensure that the requirements of paragraph 5 are fulfilled; and

(c) take into account the outcome of cost-benefit analysis referred to in paragraph 5.

8. Contracting Parties may exempt individual installations from being required, by the authorisation and permit criteria referred to in paragraph 7, to implement options whose benefits exceed their costs, if there are imperative reasons of law, ownership or finance for so doing. In these cases the Contracting Party concerned shall submit a reasoned notification of its decision to the Energy Community Secretariat within three months of the date of taking it.
9. Paragraphs 5, 6, 7 and 8 of this Article shall apply to installations covered by Directive 2010/75/EU, as adapted and adopted by Ministerial Council Decision 2013/06/MC-EnC, without prejudice to the requirements of that Directive.

10. On the basis of the harmonised efficiency reference values referred to in point (f) of Annex II, Contracting Parties shall ensure that the origin of electricity produced from high-efficiency cogeneration can be guaranteed according to objective, transparent and non-discriminatory criteria laid down by each Contracting Party. They shall ensure that this guarantee of origin complies with the requirements and contains at least the information specified in Annex X. Contracting Parties shall mutually recognise their guarantees of origin, exclusively as proof of the information referred to in this paragraph. Any refusal to recognise a guarantee of origin as such proof, in particular for reasons relating to the prevention of fraud, must be based on objective, transparent and non-discriminatory criteria. Contracting Parties shall notify the Energy Community Secretariat of such refusal and its justification. In the event of refusal to recognise a guarantee of origin, the Commission may adopt a decision to compel the refusing party to recognise it, in particular with regard to objective, transparent and non-discriminatory criteria on which such recognition is based.

11. Contracting Parties shall ensure that any available support for cogeneration is subject to the electricity produced originating from high-efficiency cogeneration and the waste heat being effectively used to achieve primary energy savings. Public support to cogeneration and district heating generation and networks shall be subject to State aid rules, where applicable.

Article 15
Energy transformation, transmission and distribution

1. Contracting Parties shall ensure that national energy regulatory authorities pay due regard to energy efficiency in carrying out the regulatory tasks specified in Directives 2009/72/EC and 2009/73/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC, regarding their decisions on the operation of the gas and electricity infrastructure.

Contracting Parties shall in particular ensure that national energy regulatory authorities, through the development of network tariffs and regulations, within the framework of Directive 2009/72/EC, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC, and taking into account the costs and benefits of each measure, provide incentives for grid operators to make available system services to network users permitting them to implement energy efficiency improvement measures in the context of the continuing deployment of smart grids.

Such systems services may be determined by the system operator and shall not adversely impact the security of the system.

For electricity, Contracting Parties shall ensure that network regulation and network tariffs fulfil the criteria in Annex XI, taking into account guidelines and codes developed pursuant to Regulation (EC) No 714/2009, as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC.
2. **Contracting Parties** shall ensure, by 15 October 2018, that:

(a) concrete measures and investments are identified for the introduction of cost-effective energy efficiency improvements in the network infrastructure, with a timetable for their introduction, following the common methodology prepared by the European Commission in order to encourage network operators to reduce losses, implement a cost – efficient and energy – efficient infrastructure investment programme and properly account for the energy efficiency and flexibility of the grid.

(b) concrete measures and investments are identified for the introduction of cost-effective energy efficiency improvements in the network infrastructure, with a timetable for their introduction.

3. **Contracting Parties** may permit components of schemes and tariff structures with a social aim for net-bound energy transmission and distribution, provided that any disruptive effects on the transmission and distribution system are kept to the minimum necessary and are not disproportionate to the social aim.

4. **Contracting Parties** shall ensure the removal of those incentives in transmission and distribution tariffs that are detrimental to the overall efficiency (including energy efficiency) of the generation, transmission, distribution and supply of electricity or those that might hamper participation of demand response, in balancing markets and ancillary services procurement. **Contracting Parties** shall ensure that network operators are incentivised to improve efficiency in infrastructure design and operation, and, within the framework of Directive 2009/72/EC, *as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC*, that tariffs allow suppliers to improve consumer participation in system efficiency, including demand response, depending on national circumstances.

5. Without prejudice to Article 16(2) of Directive 2009/28/EC and taking into account Article 15 of Directive 2009/72/EC, *as adapted and adopted by Ministerial Council Decision 2011/02/MC-EnC*, and the need to ensure continuity in heat supply, **Contracting Parties** shall ensure that, subject to requirements relating to the maintenance of the reliability and safety of the grid, based on transparent and non-discriminatory criteria set by the competent national authorities, transmission system operators and distribution system operators when they are in charge of dispatching the generating installations in their territory:

(a) guarantee the transmission and distribution of electricity from high-efficiency cogeneration;

(b) provide priority or guaranteed access to the grid of electricity from high-efficiency cogeneration;

(c) when dispatching electricity generating installations, provide priority dispatch of electricity from high-efficiency cogeneration in so far as the secure operation of the national electricity system permits.

**Contracting Parties** shall ensure that rules relating to the ranking of the different access and dispatch priorities granted in their electricity systems are clearly explained in detail and published. When providing priority access or dispatch for high-efficiency cogeneration, **Contracting Parties** may set rankings as between, and within different types of, renewable energy and high-efficiency cogeneration and shall in any case ensure that priority access or dispatch for energy from variable renewable energy sources is not hampered.

In addition to the obligations laid down by the first subparagraph, transmission system operators and distribution system operators shall comply with the requirements set out in Annex XII.

**Contracting Parties** may particularly facilitate the connection to the grid system of electricity produced from high-efficiency cogeneration from small-scale and micro-cogeneration units. **Contracting Parties** shall, where appropriate, take steps to encourage network operators to adopt a simple notification ‘install...
and inform’ process for the installation of micro-cogeneration units to simplify and shorten authorisation procedures for individual citizens and installers.

6. Subject to the requirements relating to the maintenance of the reliability and safety of the grid, Contracting Parties shall take the appropriate steps to ensure that, where this is technically and economically feasible with the mode of operation of the high-efficiency cogeneration installation, high-efficiency cogeneration operators can offer balancing services and other operational services at the level of transmission system operators or distribution system operators. Transmission system operators and distribution system operators shall ensure that such services are part of a services bidding process which is transparent, non-discriminatory and open to scrutiny.

Where appropriate, Contracting Parties may require transmission system operators and distribution system operators to encourage high-efficiency cogeneration to be sited close to areas of demand by reducing the connection and use-of-system charges.

7. Contracting Parties may allow producers of electricity from high-efficiency cogeneration wishing to be connected to the grid to issue a call for tender for the connection work.

8. Contracting Parties shall ensure that national energy regulatory authorities encourage demand side resources, such as demand response, to participate alongside supply in wholesale and retail markets.

Subject to technical constraints inherent in managing networks, Contracting Parties shall ensure that transmission system operators and distribution system operators, in meeting requirements for balancing and ancillary services, treat demand response providers, including aggregators, in a non-discriminatory manner, on the basis of their technical capabilities.

Subject to technical constraints inherent in managing networks, Contracting Parties shall promote access to and participation of demand response in balancing, reserve and other system services markets, inter alia by requiring national energy regulatory authorities or, where their national regulatory systems so require, transmission system operators and distribution system operators in close cooperation with demand service providers and consumers, to define technical modalities for participation in these markets on the basis of the technical requirements of these markets and the capabilities of demand response. Such specifications shall include the participation of aggregators.

Contracting Parties may encourage operators of installations referred to in the first subparagraph to improve their annual average net operational rates.
CHAPTER IV

HORIZONTAL PROVISIONS

Article 16

Availability of qualification, accreditation and certification schemes

1. Where a Contracting Party considers that the national level of technical competence, objectivity and reliability is insufficient, it shall ensure that, by 31 December 2017, certification and/or accreditation schemes and/or equivalent qualification schemes, including, where necessary, suitable training programmes, become or are available for providers of energy services, energy audits, energy managers and installers of energy-related building elements as defined in Article 2(9) of Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC.

2. Contracting Parties shall ensure that the schemes referred to in paragraph 1 provide transparency to consumers, are reliable and contribute to national energy efficiency objectives.

3. Contracting Parties shall make publicly available the certification and/or accreditation schemes or equivalent qualification schemes referred to in paragraph 1 and shall cooperate among themselves and with the Commission and the Energy Community Secretariat on comparisons between, and recognition of, the schemes.

Contracting Parties shall take appropriate measures to make consumers aware of the availability of qualification and/or certification schemes in accordance with Article 18(1).

Article 17

Information and training

1. Contracting Parties shall ensure that information on available energy efficiency mechanisms and financial and legal frameworks is transparent and widely disseminated to all relevant market actors, such as consumers, builders, architects, engineers, environmental and energy auditors, and installers of building elements as defined in Directive 2010/31/EU, as adapted and adopted by Ministerial Council Decision 2010/02/MC-EnC.

Contracting Parties shall encourage the provision of information to banks and other financial institutions on possibilities of participating, including through the creation of public/private partnerships, in the financing of energy efficiency improvement measures.

2. Contracting Parties shall establish appropriate conditions for market operators to provide adequate and targeted information and advice to energy consumers on energy efficiency.

3. The Commission shall review the impact of its measures to support the development of platforms, involving, inter alia, the European social dialogue bodies in fostering training programmes for energy efficiency, and shall bring forward further measures if appropriate. The Commission shall encourage European social partners in their discussions on energy efficiency.
4. **Contracting Parties** shall, with the participation of stakeholders, including local and regional authorities, promote suitable information, awareness-raising and training initiatives to inform citizens of the benefits and practicalities of taking energy efficiency improvement measures.

5. The Commission shall encourage the exchange and wide dissemination of information on best energy efficiency practices in **Contracting Parties**.

---

**Article 18**

**Energy services**

1. **Contracting Parties** shall promote the energy services market and access for SMEs to this market by:
   (a) disseminating clear and easily accessible information on:
      (i) available energy service contracts and clauses that should be included in such contracts to guarantee energy savings and final customers’ rights;
      (ii) financial instruments, incentives, grants and loans to support energy efficiency service projects;
   (b) encouraging the development of quality labels, inter alia, by trade associations;
   (c) making publicly available and regularly updating a list of available energy service providers who are qualified and/or certified and their qualifications and/or certifications in accordance with Article 16, or providing an interface where energy service providers can provide information;
   (d) supporting the public sector in taking up energy service offers, in particular for building refurbishment, by:
      (i) providing model contracts for energy performance contracting which include at least the items listed in Annex XIII;
      (ii) providing information on best practices for energy performance contracting, including, if available, cost-benefit analysis using a life-cycle approach;
   (e) providing a qualitative review in the framework of the National Energy Efficiency Action Plan regarding the current and future development of the energy services market.

2. **Contracting Parties** shall support the proper functioning of the energy services market, where appropriate, by:
   (a) identifying and publicising point(s) of contact where final customers can obtain the information referred to in paragraph 1;
   (b) taking, if necessary, measures to remove the regulatory and non-regulatory barriers that impede the uptake of energy performance contracting and other energy efficiency service models for the identification and/or implementation of energy saving measures;
   (c) considering putting in place or assigning the role of an independent mechanism, such as an ombudsman, to ensure the efficient handling of complaints and out-of-court settlement of disputes arising from energy service contracts;
   (d) enabling independent market intermediaries to play a role in stimulating market development on the demand and supply sides.

3. **Contracting Parties** shall ensure that energy distributors, distribution system operators and retail
energy sales companies refrain from any activities that may impede the demand for and delivery of energy services or other energy efficiency improvement measures, or hinder the development of markets for such services or measures, including foreclosing the market for competitors or abusing dominant positions.

**Article 19**

**Other measures to promote energy efficiency**

1. **Contracting Parties** shall evaluate and if necessary take appropriate measures to remove regulatory and non-regulatory barriers to energy efficiency, without prejudice to the basic principles of the property and tenancy law of the **Contracting Parties**, in particular as regards:

   (a) the split of incentives between the owner and the tenant of a building or among owners, with a view to ensuring that these parties are not deterred from making efficiency-improving investments that they would otherwise have made by the fact that they will not individually obtain the full benefits or by the absence of rules for dividing the costs and benefits between them, including national rules and measures regulating decision-making processes in multi-owner properties;

   (b) legal and regulatory provisions, and administrative practices, regarding public purchasing and annual budgeting and accounting, with a view to ensuring that individual public bodies are not deterred from making investments in improving energy efficiency and minimising expected life-cycle costs and from using energy performance contracting and other third-party financing mechanisms on a long-term contractual basis.

Such measures to remove barriers may include providing incentives, repealing or amending legal or regulatory provisions, or adopting guidelines and interpretative communications, or simplifying administrative procedures. The measures may be combined with the provision of education, training and specific information and technical assistance on energy efficiency.

2. The evaluation of barriers and measures referred to in paragraph 1 shall be notified to the Commission and the Energy Community Secretariat in the first National Energy Efficiency Action Plan referred to in Article 24(2). The Commission and the Energy Community Secretariat shall encourage the sharing of national best practices in this regard.

**Article 20**

**Energy Efficiency National Fund, Financing and Technical Support**

1. Without prejudice to Articles 107 and 108 of the Treaty on the Functioning of the European Union, **Contracting Parties** shall facilitate the establishment of financing facilities, or use of existing ones, for energy efficiency improvement measures to maximise the benefits of multiple streams of financing.

2. The Commission shall, where appropriate, directly or via the European financial institutions, assist **Contracting Parties** in setting up financing facilities and technical support schemes with the aim of increasing energy efficiency in different sectors.

---

23 The text displayed here corresponds to Article 5(12) of Ministerial Council Decision 2021/14/MC-EnC.

24 The 19th Ministerial Council tasked the Secretariat to assist Contracting Parties in finding the best suited solutions to implement the Directive, paying due respect to Contracting Parties’ specific circumstances and the degree of implementation in the area of energy efficiency so far. The Secretariat is to propose how to best to support the implementation of the Directive, linking it to the appropriate financing.
3. The Commission and the Energy Community Secretariat shall facilitate the exchange of best practice between the competent national or regional authorities or bodies, e.g. through annual meetings of the regulatory bodies, public databases with information on the implementation of measures by Contracting Parties, and country comparison.

(a) In order to mobilise private financing for energy efficiency measures and energy renovation, in accordance with Directive 2010/31/EU, the Secretariat shall conduct a dialogue with both public and private financial institutions in order to map out possible actions it can take.

(b) The actions referred to in paragraph 3a shall include the following:

(i) mobilising capital investment into energy efficiency by considering the wider impacts of energy savings for financial risk management;

(ii) ensuring better energy and finance performance data by:

(iii) examining further how energy efficiency investments improve underlying asset values;

(iv) supporting studies to assess the monetisation of the non-energy benefits of energy efficiency investments.

(c) For the purpose of mobilising private financing of energy efficiency measures and energy renovation, Contracting Parties shall, when implementing this Directive:

(i) consider ways to make better use of energy audits under Article 8 to influence decision-making;

(ii) make optimal use of the possibilities and tools proposed in the smart finance for smart buildings initiative.

(d) By 1 January 2023, the Energy Community Secretariat shall provide guidance for Contracting Parties on how to unlock private investment.

4. Contracting Parties may set up an Energy Efficiency National Fund. The purpose of this fund shall be to support national energy efficiency initiatives.

5. Contracting Parties may allow for the obligations set out in Article 5(1) to be fulfilled by annual contributions to the Energy Efficiency National Fund of an amount equal to the investments required to achieve those obligations.

6. Contracting Parties may provide that obligated parties can fulfil their obligations set out in Article 7(1) by contributing annually to the Energy Efficiency National Fund an amount equal to the investments required to achieve those obligations.

7. Contracting Parties may use their revenues from annual emission allocations under Decision No 406/2009/EC for the development of innovative financing mechanisms to give practical effect to the objective in Article 5 of improving the energy performance of buildings.

25 The Ministerial Council’s support for exchange of best practices by the Commission and the Energy Community Secretariat was written down in its conclusions at the meeting held on 16 October 2015.
Article 21
Conversion factors

For the purpose of comparison of energy savings and conversion to a comparable unit, the conversion factors set out in Annex IV shall apply unless the use of other conversion factors can be justified.

CHAPTER V
FINAL PROVISIONS

Article 22
Delegated acts

The Secretariat shall inform the Permanent High Level Group about any delegated acts adopted in accordance with Article 22 of Directive (EU) 2019/2002 within one week upon their adoption. The Permanent High Level Group shall be empowered pursuant to Article 53(d) of the Energy Community Treaty to take measures to incorporate the relevant delegated acts into the Energy Community acquis.

Article 23
Exercise of the delegation

Exercise of the delegation

Article 24
Review and monitoring of implementation

1. The Commission shall review the continued need for the possibility of exemptions set out in Article 14(6) for the first time in the assessment of the first National Energy Efficiency Action Plan and every three years thereafter. Where the review shows that any of the criteria for these exemptions can no longer be justified taking into account the availability of heat load and the real operating conditions of the exempted installations, the Commission shall propose appropriate measures.

2. Contracting Parties shall submit to the Energy Community Secretariat before 30 April each year statistics on national electricity and heat production from high and low efficiency cogeneration, in accordance with the methodology shown in Annex I, in relation to total heat and electricity production. They shall also submit annual statistics on cogeneration heat and electricity capacities and fuels for cogeneration, and on district heating and cooling production and capacities, in relation to total heat and electricity production and capacities. Contracting Parties shall submit statistics on primary energy savings achieved

26 The text displayed here corresponds to Article 6 of Ministerial Council Decision 2021/14/MC-EnC
27 Not applicable according to Article 3(27) of Ministerial Council Decision 2015/09/MC-EnC
by application of cogeneration in accordance with the methodology shown in Annex II.

3. By 30 June 2018 the Energy Community Secretariat shall submit the assessment referred to in Article 3(2) to the Ministerial Council of the Energy Community, accompanied, if necessary, by proposals for further measures.

4. The Energy Community Secretariat shall review the effectiveness of the implementation of Article 6 by 5 November 2018 and shall submit a report to the Ministerial Council of the Energy Community. That report shall be accompanied, if appropriate, by proposals for further measures.

5. By 30 May 2019, the Energy Community Secretariat shall submit a report to the Ministerial Council of the Energy Community on the implementation of Article 7. That report shall be accompanied, if appropriate, by a legislative proposal for one or more of the following purposes:

(a) to change the final date laid down in Article 7(1);
(b) to review the requirements laid down in Article 7(1), (2) and (3);
(c) to establish additional common requirements, in particular as regards the matters referred to in Article 7(7).

6. By 30 September 2020, the Commission shall assess the progress made by Contracting Parties in removing the regulatory and non-regulatory barriers referred to in Article 19(1). This assessment shall be followed, if appropriate, by proposals for further measures.

7. By 30 June 2018 the Energy Community Secretariat shall submit the assessment referred to in Article 3(2) to the Ministerial Council of the Energy Community, accompanied, if necessary, by proposals for further measures.

8. The Energy Community Secretariat shall review the effectiveness of the implementation of Article 6 by 5 November 2018 and shall submit a report to the Ministerial Council of the Energy Community. That report shall be accompanied, if appropriate, by proposals for further measures.

9. By 30 May 2019, the Energy Community Secretariat shall submit a report to the Ministerial Council of the Energy Community on the implementation of Article 7. That report shall be accompanied, if appropriate, by a legislative proposal for one or more of the following purposes:

(a) to change the final date laid down in Article 7(1);
(b) to review the requirements laid down in Article 7(1), (2) and (3);
(c) to establish additional common requirements, in particular as regards the matters referred to in Article 7(7).

10. By 30 September 2020, the Commission shall assess the progress made by Contracting Parties in removing the regulatory and non-regulatory barriers referred to in Article 19(1). This assessment shall be followed, if appropriate, by proposals for further measures.

11. The Commission shall make the reports referred to in paragraphs 1 and 2 publicly available.

28 The text displayed here corresponds to Article 3(31) to 3(33) of Ministerial Council Decision 2015/08/MC-EnC
Article 25

Online platform

The Commission shall establish an online platform in order to foster the practical implementation of this Directive at national, regional and local levels. That platform shall support the exchange of experiences on practices, benchmarking, networking activities, as well as innovative practices.

Article 26

Committee procedure

<…>²⁹

Article 27

Amendments and repeals³⁰

1. Article 1 of the Ministerial Council Decision 2009/05/MC-EnC is repealed from 15 October 2017. By way of exception, Article 4(1) to (4) of Directive 2006/32/EC as incorporated and adapted by Ministerial Council Decision 2009/05/MC-EnC thereof and Annexes I, III and IV thereto, shall continue to apply, without prejudice to the obligations of the Contracting Parties relating to the time-limit for its transposition into national law. Article 4(1) to (4) of, and Annexes I, III and IV of Directive 2006/32/EC as incorporated and adapted by Ministerial Council Decision 2009/05/MC-EnC, shall cease to apply with effect from 1 January 2020. References to Directive 2006/32/EC shall be construed as references to this Directive and shall be read in accordance with the correlation table set out in Annex XV.

2. Article 9(1) and (2) of Directive 2010/30/EU, as incorporated and adapted by Ministerial Council Decision 2010/01/MC-EnC shall cease to apply from 15 October 2017.

Article 28

Transposition

1. Contracting Parties shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 31 December 2022.

However, each Contracting Party shall bring into force the laws, regulations and administrative provisions necessary to comply with Articles 9 to 11a, and Annexes VII and VIIa of this Directive by 30 June 2023.³¹

2. Notwithstanding the first paragraph, Article 1(1) and 3(5) shall not be implemented until the Ministerial Council of the Energy Community will adopt the 2030 headline targets on

²⁹ Not applicable according to Article 3(35) of Ministerial Council Decision 2015/08/MC-EnC.
³⁰ The text displayed here corresponds to Article 3(36) of Ministerial Council Decision 2015/08/MC-EnC.
³¹ The text displayed here corresponds to Article 2(1) of Ministerial Council Decision 2021/14/MC-EnC.
energy efficiency for the Energy Community and Annex XX with the national benchmarks.\(^{32}\)

Notwithstanding the first subparagraph, **Contracting Parties** shall bring into force the laws, regulations and administrative provisions necessary to comply with the first subparagraph of Article 4(1), Article 4(5), Article 4(6), the last subparagraph of Article 8(9), Article 13(6), Article 18(2), Article 23(1) and Article 23(2) and point (4) of Annex V by the dates specified therein.

They shall forthwith communicate to the **Energy Community Secretariat**\(^{33}\) the text of those provisions. When **Contracting Parties** adopt those provisions, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. **Contracting Parties** shall determine how such reference is to be made.

**3. Contracting Parties shall communicate to the Secretariat on the text of the main provisions of national law which they adopt in the field covered by this Directive.**\(^{34}\)

**Article 29**

**Transitional provisions**\(^{35}\)

Until adoption by the Ministerial Council of the Energy Community 2030 targets, including the energy efficiency headline target, and/or the targets for energy and climate of each Contracting Party, as appropriate, this Directive shall be applied on the basis of Contracting Parties’ National Domestic Contributions or targets or any other more ambitious contributions or targets that they have undertaken under any national or international legal and/or policy text.

**Article 29 (bis)**

**Entry into force**

This Directive shall enter into force on the date of its adoption by the Ministerial Council.
ANNEX I

GENERAL PRINCIPLES FOR THE CALCULATION OF ELECTRICITY FROM COGENERATION

Part I

General principles

Values used for calculation of electricity from cogeneration shall be determined on the basis of the expected or actual operation of the unit under normal conditions of use. For micro-cogeneration units the calculation may be based on certified values.

(a) Electricity production from cogeneration shall be considered equal to total annual electricity production of the unit measured at the outlet of the main generators;

(i) in cogeneration units of types (b), (d), (e), (f), (g) and (h) referred to in Part II with an annual overall efficiency set by Contracting Parties at a level of at least 75 %, and

(ii) in cogeneration units of types (a) and (c) referred to in Part II with an annual overall efficiency set by Contracting Parties at a level of at least 80 %.

(b) In cogeneration units with an annual overall efficiency below the value referred to in point (i) of point (a) (cogeneration units of types (b), (d), (e), (f), (g), and (h) referred to in Part II) or with an annual overall efficiency below the value referred to in point (ii) of point (a) (cogeneration units of types (a) and (c) referred to in Part II) cogeneration is calculated according to the following formula:

$$E_{\text{CHP}} = C \times H_{\text{CHP}}$$

where:

- $E_{\text{CHP}}$ is the amount of electricity from cogeneration;
- $C$ is the power-to-heat ratio;
- $H_{\text{CHP}}$ is the amount of useful heat from cogeneration (calculated for this purpose as total heat production minus any heat produced in separate boilers or by live steam extraction from the steam generator before the turbine).

The calculation of electricity from cogeneration must be based on the actual power-to-heat ratio. If the actual power-to-heat ratio of a cogeneration unit is not known, the following default values may be used, in particular for statistical purposes, for units of types (a), (b), (c), (d) and (e) referred to in Part II provided that the calculated cogeneration electricity is less or equal to total electricity production of the unit:
If Contracting Parties introduce default values for power-to-heat ratios for units of types (f), (g), (h), (i), (j) and (k) referred to in Part II, such default values shall be published and shall be notified to the Energy Community Secretariat.

(c) If a share of the energy content of the fuel input to the cogeneration process is recovered in chemicals and recycled this share can be subtracted from the fuel input before calculating the overall efficiency used in points (a) and (b).

(d) Contracting Parties may determine the power-to-heat ratio as the ratio of electricity to useful heat when operating in cogeneration mode at a lower capacity using operational data of the specific unit.

(e) Contracting Parties may use other reporting periods than one year for the purpose of the calculations according to points (a) and (b).

### Part II

**Cogeneration technologies covered by this Directive**

(a) Combined cycle gas turbine with heat recovery

(b) Steam back pressure turbine

(c) Steam condensing extraction turbine

(d) Gas turbine with heat recovery

(e) Internal combustion engine

(f) Microturbines

(g) Stirling engines

(h) Fuel cells

(i) Steam engines

(j) Organic Rankine cycles

(k) Any other type of technology or combination thereof falling under the definition laid down in Article 2(30).

ANNEX II

METHODOLOGY FOR DETERMINING THE EFFICIENCY OF THE COGENERATION PROCESS

Values used for calculation of efficiency of cogeneration and primary energy savings shall be determined on the basis of the expected or actual operation of the unit under normal conditions of use.

(a) High-efficiency cogeneration

For the purpose of this Directive high-efficiency cogeneration shall fulfil the following criteria:

— cogeneration production from cogeneration units shall provide primary energy savings calculated according to point (b) of at least 10 % compared with the references for separate production of heat and electricity,

— production from small-scale and micro-cogeneration units providing primary energy savings may qualify as high-efficiency cogeneration.

(b) Calculation of primary energy savings

The amount of primary energy savings provided by cogeneration production defined in accordance with Annex I shall be calculated on the basis of the following formula:

\[ PES = \left(1 - \frac{1}{\frac{\text{CHP H}_\text{η}}{\text{Ref H}_\text{η}} + \frac{\text{CHP E}_\text{η}}{\text{Ref E}_\text{η}}} \right) \times 100 \%

where:

PES is primary energy savings.

CHP H_\text{η} is the heat efficiency of the cogeneration production defined as annual useful heat output divided by the fuel input used to produce the sum of useful heat output and electricity from cogeneration.

Ref H_\text{η} is the efficiency reference value for separate heat production.

CHP E_\text{η} is the electrical efficiency of the cogeneration production defined as annual electricity from cogeneration divided by the fuel input used to produce the sum of useful heat output and electricity from cogeneration. Where a cogeneration unit generates mechanical energy, the annual electricity from cogeneration may be increased by an additional element representing the amount of electricity which is equivalent to that of mechanical energy. This additional element does not create a right to issue guarantees of origin in accordance with Article 14(10).

Ref E_\text{η} is the efficiency reference value for separate electricity production.

(c) Calculations of energy savings using alternative calculation

Contracting Parties may calculate primary energy savings from a production of heat and electricity and mechanical energy as indicated below without applying Annex I to exclude the non-cogenerated heat and electricity parts of the same process. Such a production can be regarded as high-efficiency cogeneration provided it fulfils the efficiency criteria in point (a) of this Annex and, for cogeneration units with an electrical capacity larger than 25 MW, the overall efficiency is above 70 %. However, specification of the quantity of electricity from cogeneration produced in such a production, for issuing a guarantee of origin and for statistical purposes, shall be determined in accordance with Annex I.
If primary energy savings for a process are calculated using alternative calculation as indicated above the primary energy savings shall be calculated using the formula in point (b) of this Annex replacing: ‘CHP Hη’ with ‘Hη’ and ‘CHP Eη’ with ‘Eη’, where:

Hη shall mean the heat efficiency of the process, defined as the annual heat output divided by the fuel input used to produce the sum of heat output and electricity output.

Eη shall mean the electricity efficiency of the process, defined as the annual electricity output divided by the fuel input used to produce the sum of heat output and electricity output. Where a cogeneration unit generates mechanical energy, the annual electricity from cogeneration may be increased by an additional element representing the amount of electricity which is equivalent to that of mechanical energy. This additional element will not create a right to issue guarantees of origin in accordance with Article 14(10).

(d) Contracting Parties may use other reporting periods than one year for the purpose of the calculations according to points (b) and (c) of this Annex.

(e) For micro-cogeneration units the calculation of primary energy savings may be based on certified data.

(f) Efficiency reference values for separate production of heat and electricity

The harmonised efficiency reference values shall consist of a matrix of values differentiated by relevant factors, including year of construction and types of fuel, and must be based on a well-documented analysis taking, inter alia, into account data from operational use under realistic conditions, fuel mix and climate conditions as well as applied cogeneration technologies.

The efficiency reference values for separate production of heat and electricity in accordance with the formula set out in point (b) shall establish the operating efficiency of the separate heat and electricity production that cogeneration is intended to substitute.

The efficiency reference values shall be calculated according to the following principles:

1. For cogeneration units the comparison with separate electricity production shall be based on the principle that the same fuel categories are compared.

2. Each cogeneration unit shall be compared with the best available and economically justifiable technology for separate production of heat and electricity on the market in the year of construction of the cogeneration unit.

3. The efficiency reference values for cogeneration units older than 10 years of age shall be fixed on the reference values of units of 10 years of age.

4. The efficiency reference values for separate electricity production and heat production shall reflect the climatic differences between Contracting Parties.
ANNEX III

ENERGY EFFICIENCY REQUIREMENTS FOR PURCHASING PRODUCTS, SERVICES AND BUILDINGS BY CENTRAL GOVERNMENT

Central governments that purchase products, services or buildings, insofar as this is consistent with cost-effectiveness, economical feasibility, wider sustainability, technical suitability, as well as sufficient competition, shall:

(a) where a product is covered by a delegated act adopted under Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC or by a related Commission implementing directive, purchase only the products that comply with the criterion of belonging to the highest energy efficiency class possible in the light of the need to ensure sufficient competition;

(b) <…>

(c) <…>

(d) <…>

(e) require in their tenders for service contracts that service providers use, for the purposes of providing the services in question, only products that comply with the requirements referred to in points (a) to (d), when providing the services in question. This requirement shall apply only to new products purchased by service providers partially or wholly for the purpose of providing the service in question;

(f) purchase, or make new rental agreements for, only buildings that comply at least with the minimum energy performance requirements referred to in Article 5(1) unless the purpose of the purchase is:

(i) to undertake deep renovation or demolition;

(ii) in the case of public bodies, to re-sell the building without using it for public body’s own purposes; or

(iii) to preserve it as a building officially protected as part of a designated environment, or because of its special architectural or historical merit.

Compliance with these requirements shall be verified by means of the energy performance certificates referred to in Article 11 of Directive 2010/31/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC.

**Source:** EUROSTAT

(¹) **Contracting Parties** may apply different conversion factors if these can be justified.

(²) 93 % methane.

(³) Applicable when energy savings are calculated in primary energy terms using a bottom-up approach based on final energy consumption. For savings in kWh electricity, Contracting Parties shall apply a coefficient established through a transparent methodology on the basis of national circumstances affecting primary energy consumption, in order to ensure a precise calculation of real savings. Those circumstances shall be substantiated, verifiable and based on objective and non-discriminatory criteria. For savings in kWh electricity, Contracting Parties shall take into account the energy mix included in their integrated national energy and climate plans to be notified to the Commission in accordance with Regulation (EU) 2018/1999. By 25 December 2022 and every four years thereafter, the Commission shall revise the default coefficient on the basis of observed data. That revision shall be carried out taking into account its effects on other Union law such as Directive 2009/125/EC and Regulation (EU) 2017/1369 of the European Parliament and of the Council of 4 July 2017 setting a framework for energy labelling and repealing Directive 2010/30/EU

(⁴) Applicable when energy savings are calculated in primary energy terms using a bottom-up approach based on final energy consumption. For savings in kWh electricity **Contracting Parties** may apply a default coefficient of 2,5. **Contracting Parties** may apply a different coefficient provided they can justify it.
ANNEX V

COMMON METHODS AND PRINCIPLES FOR CALCULATING THE IMPACT OF ENERGY EFFICIENCY OBLIGATION SCHEMES OR OTHER POLICY MEASURES UNDER ARTICLES 7, 7A AND 7B AND ARTICLE 20 (6) METHODS FOR CALCULATING ENERGY SAVINGS OTHER THAN THOSE ARISING FROM TAXATION MEASURES FOR THE PURPOSES OF ARTICLES 7, 7A AND 7B AND ARTICLE 20(6).

1. Methods for calculating energy savings other than those arising from taxation measures for the purposes of Articles 7, 7a and 7b and Article 20(6).

Obligated, participating or entrusted parties, or implementing public authorities, may use the following methods for calculating energy savings:

(a) deemed savings, by reference to the results of previous independently monitored energy improvements in similar installations. The generic approach is termed “ex ante”;

(b) metered savings, whereby the savings from the installation of a measure, or package of measures, are determined by recording the actual reduction in energy use, taking due account of factors such as additionality, occupancy, production levels and the weather which may affect consumption. The generic approach is termed “ex post”;

(c) scaled savings, whereby engineering estimates of savings are used. This approach may be used only where establishing robust measured data for a specific installation is difficult or disproportionately expensive, e.g. replacing a compressor or electric motor with a different kWh rating from that for which independent information about savings has been measured, or where those estimates are carried out on the basis of nationally established methodologies and benchmarks by qualified or accredited experts that are independent of the obligated, participating or entrusted parties involved;

(d) surveyed savings, where consumers’ response to advice, information campaigns, labelling or certification schemes or smart metering is determined. This approach may be used only for savings resulting from changes in consumer behaviour. It shall not be used for savings resulting from the installation of physical measures.

2. In determining the energy savings for an energy efficiency measure for the purposes of Articles 7, 7a and 7b and Article 20(6), the following principles apply:

The savings shall be shown to be additional to those that would have occurred in any event without the activity of the obligated, participating or entrusted parties, or implementing public authorities. To determine the savings that can be claimed as additional, Contracting Parties shall have regard to how energy use and demand would evolve in the absence of the policy measure in question by taking into account at least the following factors: energy consumption trends, changes in consumer behaviour, technological progress and changes caused by other measures implemented at Union and national level.

(a) Savings resulting from the implementation of mandatory Union law shall be considered to be savings that would have occurred in any event, and thus shall not be claimed as en-
ergy savings for the purpose of Article 7(1). By way of derogation from that requirement, savings related to the renovation of existing buildings may be claimed as energy savings for the purpose of Article 7(1), provided that the materiality criterion referred to in point 3(h) of this Annex is ensured. Savings resulting from the implementation of national minimum requirements established for new buildings prior to the transposition of Directive 2010/31/EU can be claimed as energy savings for the purpose of point (a) of Article 7(1), provided that the materiality criterion referred to in point 3(h) of this Annex is ensured and those savings have been notified by Contracting Parties in their National Energy Efficiency Action Plans in accordance with Article 24(2).

(b) Credit may be given only for savings exceeding the following levels:

(ii) Union requirements relating to the removal from the market of certain energy related products following the implementation of implementing measures under Directive 2009/125/EC.

(c) Policies with the purpose of encouraging higher levels of energy efficiency of products, equipment, transport systems, vehicles and fuels, buildings and building elements, processes or markets shall be permitted.

(d) Measures promoting the installation of small-scale renewable energy technologies on or in buildings may be eligible to be taken into account for the fulfilment of energy savings required under Article 7(1), provided that they result in verifiable, and measurable or estimable, energy savings. The calculation of energy savings shall comply with the requirements of this Annex.

(e) For policies that accelerate the uptake of more efficient products and vehicles, full credit may be claimed, provided that it is shown that such uptake takes place before expiry of the average expected lifetime of the product or vehicle, or before the product or vehicle would usually be replaced, and the savings are claimed only for the period until end of the average expected lifetime of the product or vehicle to be replaced.

(f) In promoting the uptake of energy efficiency measures, Contracting Parties shall, where relevant, ensure that quality standards for products, services and installation of measures are maintained or introduced where such standards do not exist.

(g) To account for climatic variations between regions, Contracting Parties may choose to adjust the savings to a standard value or to accord different energy savings in accordance with temperature variations between regions.

(h) The calculation of energy savings shall take into account the lifetime of the measures and the rate at which the savings decline over time. That calculation shall count the savings each individual action will achieve during the period from its date of implementation to 31 December 2020 or 31 December 2030 as appropriate. Alternatively, Contracting Parties may adopt another method that is estimated to achieve at least the same total quantity of savings. When using another method, Contracting Parties shall ensure that the total amount of energy savings calculated using that method does not exceed the amount of energy savings that would have been the result of their calculation when counting the savings each individual action
will achieve during the period from its date of implementation to 31 December 2020 or 31 December 2030 as appropriate. Contracting Parties shall describe in detail in their integrated national energy and climate plans under Regulation (EU) 2018/1999 the other method and the provisions made to ensure that the binding calculation requirement is met.

3. Contracting Parties shall ensure that the following requirements for policy measures taken pursuant to Article 7b and Article 20(6) are met:

(a) policy measures and individual actions produce verifiable end-use energy savings;
(b) the responsibility of each participating party, entrusted party or implementing public authority, as relevant, is clearly defined;
(c) the energy savings that are achieved or are to be achieved are determined in a transparent manner;
(d) the amount of energy savings required or to be achieved by the policy measure is expressed in either final or primary energy consumption, using the conversion factors set out in Annex IV;
(e) an annual report on the energy savings achieved by entrusted parties, participating parties and implementing public authorities be provided and made publicly available, as well as data on the annual trend of energy savings;
(f) monitoring of the results and taking appropriate measures if progress is not satisfactory;
(g) the energy savings from an individual action are not claimed by more than one party;
(h) the activities of the participating party, entrusted party or implementing public authority are shown to be material to the achievement of the energy savings claimed.

4. In determining the energy saving from taxation related policy measures introduced under Article 7b, the following principles shall apply:

(a) credit shall be given only for energy savings from taxation measures exceeding the minimum levels of taxation applicable to fuels as required in Council Directive 2003/96/EC (***) or 2006/112/EC (****);
(b) price elasticities for the calculation of the impact of the (energy) taxation measures shall represent the responsiveness of energy demand to price changes, and shall be estimated on the basis of recent and representative official data sources;
(c) the energy savings from accompanying taxation policy instruments, including fiscal incentives or payment to a fund, shall be accounted separately.

5. Notification of methodology

Contracting Parties shall in accordance with Regulation (EU) 2018/1999 notify to the Secretariat their proposed detailed methodology for the operation of the energy efficiency obligation schemes and alternative measures referred to in Articles 7a and 7b, and Article 20(6). Except in the case of taxation, such notification shall include details of:

(a) the level of the energy savings required under point (b) of the first subparagraph of Article 7(1) or savings expected to be achieved over the whole period from 1 January 2021 to 31 December 2030;
(b) the obligated, participating or entrusted parties, or implementing public authorities;
(c) target sectors;
(d) policy measures and individual actions, including the expected total amount of cumulative energy savings for each measure;
(e) the duration of the obligation period for the energy efficiency obligation scheme;
(f) the actions provided for by the policy measure;
(g) the calculation methodology, including how additionality and materiality have been determined and which methodologies and benchmarks are used for deemed and scaled savings;
(h) the lifetimes of measures, and how they are calculated or what they are based upon;
(i) the approach taken to address climatic variations within the Member State;
(j) the monitoring and verification systems for measures under Articles 7a and 7b and how their independence from the obligated, participating or entrusted parties is ensured;
(k) in the case of taxation:
   (i) the target sectors and segment of taxpayers;
   (ii) the implementing public authority;
   (iii) the savings expected to be achieved;
   (iv) the duration of the taxation measure; and

(*) Regulation (EC) No 443/2009 of 23 April 2009 setting emission performance standards for new passenger cars as part of the Community’s integrated approach to reduce CO₂ emissions from light-duty vehicles
(**) Regulation (EU) No 510/2011 of 11 May 2011 setting emission performance standards for new light commercial vehicles as part of the Union’s integrated approach to reduce CO₂ emissions from light-duty vehicles
ANNEX VI

MINIMUM CRITERIA FOR ENERGY AUDITS INCLUDING THOSE CARRIED OUT AS PART OF ENERGY MANAGEMENT SYSTEMS

The energy audits referred to in Article 8 shall be based on the following guidelines:

(a) be based on up-to-date, measured, traceable operational data on energy consumption and (for electricity) load profiles;

(b) comprise a detailed review of the energy consumption profile of buildings or groups of buildings, industrial operations or installations, including transportation;

(c) build, whenever possible, on life-cycle cost analysis (LCCA) instead of Simple Payback Periods (SPP) in order to take account of long-term savings, residual values of long-term investments and discount rates;

(d) be proportionate, and sufficiently representative to permit the drawing of a reliable picture of overall energy performance and the reliable identification of the most significant opportunities for improvement.

Energy audits shall allow detailed and validated calculations for the proposed measures so as to provide clear information on potential savings.

The data used in energy audits shall be storable for historical analysis and tracking performance.
ANNEX VII

MINIMUM REQUIREMENTS FOR BILLING AND BILLING INFORMATION BASED ON ACTUAL CONSUMPTION OF ELECTRICITY AND GAS

1. Minimum requirements for billing

1.1. Billing based on actual consumption

In order to enable final customers to regulate their own energy consumption, billing should take place on the basis of actual consumption at least once a year, and billing information should be made available at least quarterly, on request or where the consumers have opted to receive electronic billing or else twice yearly. Gas used only for cooking purposes may be exempted from this requirement.

1.2. Minimum information contained in the bill

Contracting Parties shall ensure that, where appropriate, the following information is made available to final customers in clear and understandable terms in or with their bills, contracts, transactions, and receipts at distribution stations:

(a) current actual prices and actual consumption of energy;

(b) comparisons of the final customer’s current energy consumption with consumption for the same period in the previous year, preferably in graphic form;

(c) contact information for final customers’ organisations, energy agencies or similar bodies, including website addresses, from which information may be obtained on available energy efficiency improvement measures, comparative end-user profiles and objective technical specifications for energy-using equipment.

In addition, wherever possible and useful, Contracting Parties shall ensure that comparisons with an average normalised or benchmarked final customer in the same user category are made available to final customers in clear and understandable terms, in, with or signposted to within, their bills, contracts, transactions, and receipts at distribution stations.

1.3. Advice on energy efficiency accompanying bills and other feedback to final customers

When sending contracts and contract changes, and in the bills customers receive or through websites addressing individual customers, energy distributors, distribution system operators and retail energy sales companies shall inform their customers in a clear and understandable manner of contact information for independent consumer advice centres, energy agencies or similar institutions, including their internet addresses, where they can obtain advice on available energy efficiency measures, benchmark profiles for their energy consumption and technical specifications of energy using appliances that can serve to reduce the consumption of these appliances.
ANNEX VIIa

MINIMUM REQUIREMENTS FOR BILLING AND CONSUMPTION INFORMATION
FOR HEATING, COOLING AND DOMESTIC HOT WATER

1. Billing based on actual consumption or heat cost allocator readings

In order to enable final users to regulate their own energy consumption, billing shall take place on the basis of actual consumption or heat cost allocator readings at least once per year.

2. Minimum frequency of billing or consumption information

From 30 October 2023 where remotely readable meters or heat cost allocators have been installed, billing or consumption information based on actual consumption or heat cost allocator readings shall be provided to final users at least quarterly upon request or where final customers have opted to receive electronic billing, or else twice a year.

From 1 January 2025, where remotely readable meters or heat cost allocators have been installed, billing or consumption information based on actual consumption or heat cost allocator readings shall be provided to final users at least monthly. It may also be made available via the internet and be updated as frequently as allowed by the measurement devices and systems used. Heating and cooling may be exempted from that requirement outside the heating/cooling seasons.

3. Minimum information contained in the bill

Contracting Parties shall ensure that the following information is made available to final users in clear and comprehensible terms in or with their bills where those are based on actual consumption or heat cost allocator readings:

(a) current actual prices and actual consumption of energy or total heat cost and heat cost allocator readings;

(b) information about the fuel mix used and the related annual greenhouse gas emissions, including for final users supplied by district heating or district cooling, and a description of the different taxes, levies and tariffs applied. Contracting Parties may limit the scope of the requirement to provide information about greenhouse gas emissions to include only supplies from district heating systems with a total rated thermal input exceeding 20 MW;

(c) comparisons of the final users current energy consumption with consumption for the same period in the previous year, in graphic form, climate corrected for heating and cooling;

(d) contact information for final customers’ organisations, energy agencies or similar bodies, including website addresses, from which information on available energy efficiency improvement measures, comparative end-user profiles and objective technical specifications for energy-using equipment may be obtained;

(e) information about related complaints procedures, ombudsman services or alternative dispute resolution mechanisms, as applicable in the Contracting Parties;

(f) comparisons with an average normalised or benchmarked final user in the same user category. In the case of electronic bills, such comparisons may instead be made available online.
and signposted to within the bills.

Bills that are not based on actual consumption or heat cost allocator readings shall contain a clear and comprehensible explanation of how the amount set out in the bill was calculated, and at least the information referred to in points (d) and (e).
ANNEX VIII

POTENTIAL FOR EFFICIENCY IN HEATING AND COoling

1. The comprehensive assessment of national heating and cooling potentials referred to in Article 14(1) shall include:

(a) a description of heating and cooling demand;

(b) a forecast of how this demand will change in the next 10 years, taking into account in particular the evolution of demand in buildings and the different sectors of industry;

(c) a map of the national territory, identifying, while preserving commercially sensitive information:

(i) heating and cooling demand points, including:
— municipalities and conurbations with a plot ratio of at least 0.3, and
— industrial zones with a total annual heating and cooling consumption of more than 20 GWh;

(ii) existing and planned district heating and cooling infrastructure;

(iii) potential heating and cooling supply points, including:
— electricity generation installations with a total annual electricity production of more than 20 GWh, and
— waste incineration plants,
— existing and planned cogeneration installations using technologies referred to in Part II of Annex I, and district heating installations;

(d) identification of the heating and cooling demand that could be satisfied by high-efficiency cogeneration, including residential micro-cogeneration, and by district heating and cooling;

(e) identification of the potential for additional high-efficiency cogeneration, including from the refurbishment of existing and the construction of new generation and industrial installations or other facilities generating waste heat;

(f) identification of energy efficiency potentials of district heating and cooling infrastructure;

(g) strategies, policies and measures that may be adopted up to 2020 and up to 2030 to realise the potential in point (e) in order to meet the demand in point (d), including, where appropriate, proposals to:

(i) increase the share of cogeneration in heating and cooling production and in electricity production;

(ii) develop efficient district heating and cooling infrastructure to accommodate the development of high-efficiency cogeneration and the use of heating and cooling from waste heat and renewable energy sources;

(iii) encourage new thermal electricity generation installations and industrial plants producing waste heat to be located in sites where a maximum amount of the available waste heat will be recovered to meet existing or forecasted heat and cooling demand;

(iv) encourage new residential zones or new industrial plants which consume heat in their production processes to be located where available waste heat, as identified in the comprehensive assessment, can contribute to meeting their heat and cooling demands. This could include proposals that support
the clustering of a number of individual installations in the same location with a view to ensuring an optimal matching between demand and supply for heat and cooling;

(v) encourage thermal electricity generating installations, industrial plants producing waste heat, waste incineration plants and other waste-to-energy plants to be connected to the local district heating or cooling network;

(vi) encourage residential zones and industrial plants which consume heat in their production processes to be connected to the local district heating or cooling network;

(h) the share of high-efficiency cogeneration and the potential established and progress achieved under Directive 2004/8/EC;

(i) an estimate of the primary energy to be saved;

(j) an estimate of public support measures to heating and cooling, if any, with the annual budget and identification of the potential aid element. This does not prejudge a separate notification of the public support schemes for a State aid assessment.

2. To the extent appropriate, the comprehensive assessment may be made up of an assembly of regional or local plans and strategies.
ANNEX IX

COST-BENEFIT ANALYSIS

Part 1

General principles of the cost-benefit analysis

The purpose of preparing cost-benefit analyses in relation to measures for promoting efficiency in heating and cooling as referred to in Article 14(3) is to provide a decision base for qualified prioritisation of limited resources at society level.

The cost-benefit analysis may either cover a project assessment or a group of projects for a broader local, regional or national assessment in order to establish the most cost-effective and beneficial heating or cooling option for a given geographical area for the purpose of heat planning.

Cost-benefit analyses for the purposes of Article 14(3) shall include an economic analysis covering socio-economic and environmental factors.

The cost-benefit analyses shall include the following steps and considerations:

(a) Establishing a system boundary and geographical boundary

The scope of the cost-benefit analyses in question determines the relevant energy system. The geographical boundary shall cover a suitable well-defined geographical area, e.g. a given region or metropolitan area, to avoid selecting sub-optimised solutions on a project by project basis.

(b) Integrated approach to demand and supply options

The cost-benefit analysis shall take into account all relevant supply resources available within the system and geographical boundary, using the data available, including waste heat from electricity generation and industrial installations and renewable energy, and the characteristics of, and trends in heat and cooling demand.

(c) Constructing a baseline

The purpose of the baseline is to serve as a reference point, to which the alternative scenarios are evaluated.

(d) Identifying alternative scenarios

All relevant alternatives to the baseline shall be considered. Scenarios that are not feasible due to technical reasons, financial reasons, national regulation or time constraints may be excluded at an early stage of the cost-benefit analysis if justified based on careful, explicit and well-documented considerations.

Only high-efficiency cogeneration, efficient district heating and cooling or efficient individual heating and cooling supply options should be taken into account in the cost-benefit analysis as alternative scenarios compared to the baseline.

(e) Method for the calculation of cost-benefit surplus

(i) The total long-term costs and benefits of heat or cooling supply options shall be assessed and compared.

(ii) The criterion for evaluation shall be the net present value (NPV) criterion.

(iii) The time horizon shall be chosen such that all relevant costs and benefits of the scenarios are included. For example, for a gas-fired power plant an appropriate time horizon could be 25 years, for
a district heating system, 30 years, or for heating equipment such as boilers 20 years.

(f) Calculation and forecast of prices and other assumptions for the economic analysis

(i) **Contracting Parties** shall provide assumptions, for the purpose of the cost-benefit analyses, on the prices of major input and output factors and the discount rate.

(ii) The discount rate used in the economic analysis for the calculation of net present value shall be chosen according to European or national guidelines (1).

(iii) **Contracting Parties** shall use national, European or international energy price development forecasts if appropriate in their national and/or regional/local context.

(iv) The prices used in the economic analysis shall reflect the true socio economic costs and benefits and should include external costs, such as environmental and health effects, to the extent possible, i.e. when a market price exists or when it is already included in European or national regulation.

(g) Economic analysis: Inventory of effects

The economic analyses shall take into account all relevant economic effects.

**Contracting Parties** may assess and take into account in decision making costs and energy savings from the increased flexibility in energy supply and from a more optimal operation of the electricity networks, including avoided costs and savings from reduced infrastructure investment, in the analysed scenarios.

The costs and benefits taken into account shall include at least the following:

(i) Benefits
   - Value of output to the consumer (heat and electricity)
   - External benefits such as environmental, greenhouse gas emissions and health and safety benefits, to the extent possible
   - Labor market effects, energy security and competitiveness, to the extent possible

(ii) Costs
   - Capital costs of plants and equipment
   - Capital costs of the associated energy networks
   - Variable and fixed operating costs
   - Energy costs
   - Environmental, and health and safety costs, to the extent possible
   - Labor market costs, energy security and competitiveness, to the extent possible.

(h) Sensitivity analysis:

A sensitivity analysis shall be included to assess the costs and benefits of a project or group of projects based on different energy prices, discount rates and other variable factors having a significant impact on the outcome of the calculations.

(1) The national discount rate chosen for the purpose of economic analysis should take into account data provided by the European Central Bank.
The **Contracting Parties** shall designate the competent authorities responsible for carrying out the cost-benefit analyses under Article 14. **Contracting Parties** may require competent local, regional and national authorities or operators of individual installations to carry out the economic and financial analysis. They shall provide the detailed methodologies and assumptions in accordance with this Annex and establish and make public the procedures for the economic analysis.

**Part 2**

**Principles for the purpose of Article 14(5) and (7)**

The cost-benefit analyses shall provide information for the purpose of the measures in Article 14(5) and (7):

If an electricity-only installation or an installation without heat recovery is planned, a comparison shall be made between the planned installations or the planned refurbishment and an equivalent installation producing the same amount of electricity or process heat, but recovering the waste heat and supplying heat through high-efficiency cogeneration and/or district heating and cooling networks.

Within a given geographical boundary the assessment shall take into account the planned installation and any appropriate existing or potential heat demand points that could be supplied from it, taking into account rational possibilities (for example, technical feasibility and distance).

The system boundary shall be set to include the planned installation and the heat loads, such as building(s) and industrial process. Within this system boundary the total cost of providing heat and power shall be determined for both cases and compared.

Heat loads shall include existing heat loads, such as an industrial installation or an existing district heating system, and also, in urban areas, the heat load and costs that would exist if a group of buildings or part of a city were provided with and/or connected into a new district heating network.

The cost-benefit analysis shall be based on a description of the planned installation and the comparison installation(s), covering electrical and thermal capacity, as applicable, fuel type, planned usage and the number of planned operating hours annually, location and electricity and thermal demand.

For the purpose of the comparison, the thermal energy demand and the types of heating and cooling used by the nearby heat demand points shall be taken into account. The comparison shall cover infrastructure related costs for the planned and comparison installation.

Cost-benefit analyses for the purposes of Article 14(5) shall include an economic analysis covering a financial analysis reflecting actual cash flow transactions from investing in and operating individual installations. Projects with positive cost-benefit outcome are those where the sum of discounted benefits in the economic and financial analysis exceeds the sum of discounted costs (cost-benefit surplus).

**Contracting Parties** shall set guiding principles for the methodology, assumptions and time horizon for the economic analysis.

**Contracting Parties** may require that the companies responsible for the operation of thermal electric generation installations, industrial companies, district heating and cooling networks, or other parties influenced by the defined system boundary and geographical boundary, contribute data for use in assessing the costs and benefits of an individual installation.
ANNEX X

GUARANTEE OF ORIGIN FOR ELECTRICITY PRODUCED FROM HIGH-EFFICIENCY COGENRATION

(a) Contracting Parties shall take measures to ensure that:

(i) the guarantee of origin of the electricity produced from high-efficiency cogeneration:

— enable producers to demonstrate that the electricity they sell is produced from high-efficiency cogeneration and is issued to this effect in response to a request from the producer,

— is accurate, reliable and fraud-resistant,

— is issued, transferred and cancelled electronically;

(ii) the same unit of energy from high-efficiency cogeneration is taken into account only once.

(b) The guarantee of origin referred to in Article 14(10) shall contain at least the following information:

(i) the identity, location, type and capacity (thermal and electrical) of the installation where the energy was produced;

(ii) the dates and places of production;

(iii) the lower calorific value of the fuel source from which the electricity was produced;

(iv) the quantity and the use of the heat generated together with the electricity;

(v) the quantity of electricity from high-efficiency cogeneration in accordance with Annex II that the guarantee represents;

(vi) the primary energy savings calculated in accordance with Annex II based on the harmonised efficiency reference values indicated in point (f) of Annex II;

(vii) the nominal electric and thermal efficiency of the plant;

(viii) whether and to what extent the installation has benefited from investment support;

(ix) whether and to what extent the unit of energy has benefited in any other way from a national support scheme, and the type of support scheme;

(x) the date on which the installation became operational; and

(xi) the date and country of issue and a unique identification number.

The guarantee of origin shall be of the standard size of 1 MWh. It shall relate to the net electricity output measured at the station boundary and exported to the grid.
ANNEX XI

ENERGY EFFICIENCY CRITERIA FOR ENERGY NETWORK REGULATION AND FOR ELECTRICITY NETWORK TARIFFS

1. Network tariffs shall be cost-reflective of cost-savings in networks achieved from demand-side and demand-response measures and distributed generation, including savings from lowering the cost of delivery or of network investment and a more optimal operation of the network.

2. Network regulation and tariffs shall not prevent network operators or energy retailers making available system services for demand response measures, demand management and distributed generation on organised electricity markets, in particular:
   (a) the shifting of the load from peak to off-peak times by final customers taking into account the availability of renewable energy, energy from cogeneration and distributed generation;
   (b) energy savings from demand response of distributed consumers by energy aggregators;
   (c) demand reduction from energy efficiency measures undertaken by energy service providers, including energy service companies;
   (d) the connection and dispatch of generation sources at lower voltage levels;
   (e) the connection of generation sources from closer location to the consumption; and
   (f) the storage of energy.

For the purposes of this provision the term ‘organised electricity markets’ shall include over-the-counter markets and electricity exchanges for trading energy, capacity, balancing and ancillary services in all time-frames, including forward, day-ahead and intra-day markets.

3. Network or retail tariffs may support dynamic pricing for demand response measures by final customers, such as:
   (a) time-of-use tariffs;
   (b) critical peak pricing;
   (c) real time pricing; and
   (d) peak time rebates.
ANNEX XII

ENERGY EFFICIENCY REQUIREMENTS FOR TRANSMISSION SYSTEM OPERATORS AND DISTRIBUTION SYSTEM OPERATORS

Transmission system operators and distribution system operators shall:

(a) set up and make public their standard rules relating to the bearing and sharing of costs of technical adaptations, such as grid connections, grid reinforcements and the introduction of new grids, improved operation of the grid and rules on the non-discriminatory implementation of the grid codes, which are necessary in order to integrate new producers feeding electricity produced from high-efficiency cogeneration into the interconnected grid;

(b) provide any new producer of electricity produced from high-efficiency cogeneration wishing to be connected to the system with the comprehensive and necessary information required, including:
   (i) a comprehensive and detailed estimate of the costs associated with the connection;
   (ii) a reasonable and precise timetable for receiving and processing the request for grid connection;
   (iii) a reasonable indicative timetable for any proposed grid connection. The overall process to become connected to the grid should be no longer than 24 months, bearing in mind what is reasonably practicable and non-discriminatory;

(c) provide standardised and simplified procedures for the connection of distributed high-efficiency cogeneration producers to facilitate their connection to the grid.

The standard rules referred to in point (a) shall be based on objective, transparent and non-discriminatory criteria taking particular account of all the costs and benefits associated with the connection of those producers to the grid. They may provide for different types of connection.
ANNEX XIII

MINIMUM ITEMS TO BE INCLUDED IN ENERGY PERFORMANCE CONTRACTS WITH THE PUBLIC SECTOR OR IN THE ASSOCIATED TENDER SPECIFICATIONS

— Clear and transparent list of the efficiency measures to be implemented or the efficiency results to be obtained.

— Guaranteed savings to be achieved by implementing the measures of the contract.

— Duration and milestones of the contract, terms and period of notice.

— Clear and transparent list of the obligations of each Contracting Party.

— Reference date(s) to establish achieved savings.

— Clear and transparent list of steps to be performed to implement a measure or package of measures and, where relevant, associated costs.

— Obligation to fully implement the measures in the contract and documentation of all changes made during the project.

— Regulations specifying the inclusion of equivalent requirements in any subcontracting with third parties.

— Clear and transparent display of financial implications of the project and distribution of the share of both parties in the monetary savings achieved (i.e. remuneration of the service provider).

— Clear and transparent provisions on measurement and verification of the guaranteed savings achieved, quality checks and guarantees.

— Provisions clarifying the procedure to deal with changing framework conditions that affect the content and the outcome of the contract (i.e. changing energy prices, use intensity of an installation).

— Detailed information on the obligations of each of the Contracting Party and of the penalties for their breach.

**ANNEX X**

**Guarantee of origin for electricity produced from high-efficiency cogeneration**

(a) Contracting Parties shall take measures to ensure that:

(i) the guarantee of origin of the electricity produced from high-efficiency cogeneration:

- enable producers to demonstrate that the electricity they sell is produced from high-efficiency cogeneration and is issued to this effect in response to a request from the producer,
- is accurate, reliable and fraud-resistant,
- is issued, transferred and cancelled electronically;

(ii) the same unit of energy from high-efficiency cogeneration is taken into account only once.

(b) The guarantee of origin referred to in Article 14(10) shall contain at least the following information:

(i) the identity, location, type and capacity (thermal and electrical) of the installation where the energy was produced;

(ii) the dates and places of production;

(iii) the lower calorific value of the fuel source from which the electricity was produced;

(iv) the quantity and the use of the heat generated together with the electricity;
(v) the quantity of electricity from high-efficiency cogeneration in accordance with Annex II that the
guarantee represents;
(vi) the primary energy savings calculated in accordance with Annex II based on the harmonised effi-
ciency reference values indicated in point (f) of Annex II;
(vii) the nominal electric and thermal efficiency of the plant;
(viii) whether and to what extent the installation has benefited from investment support;
(ix) whether and to what extent the unit of energy has benefited in any other way from a national
support scheme, and the type of support scheme;
(x) the date on which the installation became operational; and
(xi) the date and country of issue and a unique identification number.

The guarantee of origin shall be of the standard size of 1 MWh. It shall relate to the net electricity output
measured at the station boundary and exported to the grid.
ANNEX XI
Energy efficiency criteria for energy network regulation and for electricity network tariffs

1. Network tariffs shall be cost-reflective of cost-savings in networks achieved from demand-side and demandresponse measures and distributed generation, including savings from lowering the cost of delivery or of network investment and a more optimal operation of the network.

2. Network regulation and tariffs shall not prevent network operators or energy retailers making available system services for demand response measures, demand management and distributed generation on organised electricity markets, in particular:
   (a) the shifting of the load from peak to off-peak times by final customers taking into account the availability of renewable energy, energy from cogeneration and distributed generation;
   (b) energy savings from demand response of distributed consumers by energy aggregators;
   (c) demand reduction from energy efficiency measures undertaken by energy service providers, including energy service companies;
   (d) the connection and dispatch of generation sources at lower voltage levels;
   (e) the connection of generation sources from closer location to the consumption; and
   (f) the storage of energy. For the purposes of this provision the term ‘organised electricity markets’ shall include over-the-counter markets and electricity exchanges for trading energy, capacity, balancing and ancillary services in all timeframes, including forward, day-ahead and intra-day markets.

3. Network or retail tariffs may support dynamic pricing for demand response measures by final customers, such as:
   (a) time-of-use tariffs;
   (b) critical peak pricing;
   (c) real time pricing; and
   (d) peak time rebates.
ANNEX XII

Energy efficiency requirements for transmission system operators and distribution system operators

Transmission system operators and distribution system operators shall:

(a) set up and make public their standard rules relating to the bearing and sharing of costs of technical adaptations, such as grid connections and grid reinforcements, improved operation of the grid and rules on the non-discriminatory implementation of the grid codes, which are necessary in order to integrate new producers feeding electricity produced from high-efficiency cogeneration into the interconnected grid;

(b) provide any new producer of electricity produced from high-efficiency cogeneration wishing to be connected to the system with the comprehensive and necessary information required, including:

(i) a comprehensive and detailed estimate of the costs associated with the connection;

(ii) a reasonable and precise timetable for receiving and processing the request for grid connection;

(iii) a reasonable indicative timetable for any proposed grid connection. The overall process to become connected to the grid should be no longer than 24 months, bearing in mind what is reasonably practicable and non-discriminatory;

(c) provide standardised and simplified procedures for the connection of distributed high-efficiency cogeneration producers to facilitate their connection to the grid.

The standard rules referred to in point (a) shall be based on objective, transparent and non-discriminatory criteria taking particular account of all the costs and benefits associated with the connection of those producers to the grid. They may provide for different types of connection.
ANNEX XIII

Minimum items to be included in energy performance contracts with the public sector or in the associated tender specifications

- Clear and transparent list of the efficiency measures to be implemented or the efficiency results to be obtained.
- Guaranteed savings to be achieved by implementing the measures of the contract.
- Duration and milestones of the contract, terms and period of notice.
- Clear and transparent list of the obligations of each contracting party.
- Reference date(s) to establish achieved savings.
- Clear and transparent list of steps to be performed to implement a measure or package of measures and, where relevant, associated costs.
- Obligation to fully implement the measures in the contract and documentation of all changes made during the project.
- Regulations specifying the inclusion of equivalent requirements in any subcontracting with third parties.
- Clear and transparent display of financial implications of the project and distribution of the share of both parties in the monetary savings achieved (i.e. remuneration of the service provider).
- Clear and transparent provisions on measurement and verification of the guaranteed savings achieved, quality checks and guarantees.
- Provisions clarifying the procedure to deal with changing framework conditions that affect the content and the outcome of the contract (i.e. changing energy prices, use intensity of an installation).
- Detailed information on the obligations of each of the contracting party and of the penalties for their breach.
ANNEX XIV

General framework for reporting

PART 1
General framework for annual reports

The annual reports referred to in Article 24(1) provide a basis for the monitoring of the progress towards national 2020 targets. Contracting Parties shall ensure that the reports include the following minimum information:

(a) an estimate of following indicators in the year before last (year X\(^{37} (1) - 2)\):
   (i) primary energy consumption;
   (ii) total final energy consumption;
   (iii) final energy consumption by sector
      - industry
      - transport (split between passenger and freight transport, if available)
      - households
      - services;
   (iv) gross value added by sector
      - industry
      - services;
   (v) disposable income of households;
   (vi) gross domestic product (GDP);
   (vii) electricity generation from thermal power generation;
   (viii) electricity generation from combined heat and power;
   (ix) heat generation from thermal power generation;
   (x) heat generation from combined heat and power plants, including industrial waste heat;
   (xi) fuel input for thermal power generation;
   (xii) passenger kilometres (pkm), if available;
   (xiii) tonne kilometres (tkm), if available;
   (xiv) combined transport kilometres (pkm + tkm), in case (xii) and (xiii) are not available;
   (xv) population.

In sectors where energy consumption remains stable or is growing, Contracting Parties shall analyse the reasons for it and attach their appraisal to the estimates.

The second and subsequent reports shall also include points (b) to (e):

(b) updates on major legislative and non-legislative measures implemented in the previous year which contribute towards the overall national energy efficiency targets for 2020;

\(^{37} X = \text{current year}\)
(c) the total building floor area of the buildings with a total useful floor area over 500 m² and as of 1 January 2019 over 250 m² owned and occupied by the Contracting Parties central government that, on 1 January of the year in which the report is due, did not meet the energy performance requirements referred to in Article 5(1);

(d) the total building floor area of heated and/or cooled buildings owned and occupied by the Contracting Parties central government that was renovated in the previous year referred to in Article 5(1) or the amount of energy savings in eligible buildings owned and occupied by their central government as referred to in Article 5(6);

(e) energy savings achieved through the national energy efficiency obligation schemes referred to in Article 7(1) or the alternative measures adopted in application of Article 7(9).

The first report shall also include the national target referred to in Article 3(1).

In the annual reports referred to in Article 24(1) Contracting Parties may also include additional national targets. These may be related in particular to the statistical indicators enumerated in point (a) of this Part or combinations thereof, such as primary or final energy intensity or sectoral energy intensities.

PART 2
General framework for National Energy Efficiency Action Plans

National Energy Efficiency Action Plans referred to in Article 24(2) shall provide a framework for the development of national energy efficiency strategies.

The National Energy Efficiency Action Plans shall cover significant energy efficiency improvement measures and expected/achieved energy savings, including those in the supply, transmission and distribution of energy as well as energy end-use. Contracting Parties shall ensure that the National Energy Efficiency Action Plans include the following minimum information:

1. Targets and strategies
   - the indicative national energy efficiency target for 2020 as required by Article 3(1),
   - the national indicative energy savings target set in Article 4(1) of Directive 2006/32/EC, as incorporated and adapted by the Ministerial Council Decision 2009/05/MC-EnC,
   - other existing energy efficiency targets addressing the whole economy or specific sectors.

2. Measures and energy savings

The National Energy Efficiency Action Plans shall provide information on measures adopted or planned to be adopted in view of implementing the main elements of this Directive and on their related savings.

(a) Primary energy savings

The National Energy Efficiency Action Plans shall list significant measures and actions taken towards primary energy saving in all sectors of the economy. For every measure or package of measures/actions estimations of expected savings for 2020 and savings achieved by the time of the reporting shall be provided.

Where available, information on other impacts/benefits of the measures (greenhouse gas emissions reduction, improved air quality, job creation, etc.) and the budget for the implementation should be provided.

(b) Final energy savings

The first and second National Energy Efficiency Action Plans shall include the results with regard to the fulfilment of the final energy savings target set out in Article 4(1) and (2) of the Directive 2006/32/EC, as
incorporated and adapted by the Ministerial Council Decision 2009/05/MCEnc. If calculation/estimation of savings per measure is not available, sector level energy reduction shall be shown due to (the combination) of measures.

The first and second National Energy Efficiency Action Plans shall also include the measurement and/ or calculation methodology used for calculating the energy savings. If the ‘recommended methodology’38 is applied, the National Energy Efficiency Action Plan should provide references to this.

3. Specific information related to this Directive

3.1. Public bodies (Article 5)
National Energy Efficiency Action Plans shall include the list of public bodies having developed an energy efficiency plan in accordance with Article 5(7).

3.2. Energy efficiency obligations (Article 7)
National Energy Efficiency Action Plans shall include the national coefficients chosen in accordance with Annex IV. The first National Energy Efficiency Action Plan shall include a short description of the national scheme referred to in Article 7(1) or the alternative measures adopted in application of Article 7(9).

3.3. Energy audits and management systems (Article 8) National Energy Efficiency Action Plans shall include:
(a) the number of energy audits carried out in the previous period;
(b) the number of energy audits carried out in large enterprises in the previous period;
(c) the number of large companies in their territory, with an indication of the number of those to which Article 8(5) is applicable.

3.4. Promotion of efficient heating and cooling (Article 14)
National Energy Efficiency Action Plans shall include an assessment of the progress achieved in implementing the comprehensive assessment referred to in Article 14(1).

3.5. Energy transmission and distribution (Article 15)
The first National Energy Efficiency Action Plan and the subsequent reports due every 10 years thereafter shall include the assessment made, the measures and investments identified to utilise the energy efficiency potentials of gas and electricity infrastructure referred to in Article 15(2).

3.6. Contracting Parties shall report, as part of their National Energy Efficiency Action Plans, on the measures undertaken to enable and develop demand response as referred to in Article 15.

3.7. Availability of qualification, accreditation and certification schemes (Article 16)
National Energy Efficiency Action Plans shall include information on the available qualification, accreditation and certification schemes or equivalent qualification schemes for the providers of energy services, energy audits and energy efficiency improvement measures.

3.8. Energy Services (Article 18)
National Energy Efficiency Action Plans shall include an internet link to the website where the list or the interface of energy services providers referred to in point (c) of Article 18(1) can be accessible.

3.9. Other measures to promote energy efficiency (Article 19)
The first National Energy Efficiency Action Plan shall include a list of the measures referred to in Article 19(1).

DIRECTIVE 2010/31/EU of 19 May 2010 on the energy performance of buildings

The adaptations made by Ministerial Council Decision 2010/02/MC-EnC are highlighted in bold and blue.

Article 1

Subject matter

1. This Directive promotes the improvement of the energy performance of buildings within the Energy Community, taking into account outdoor climatic and local conditions, as well as indoor climate requirements and cost-effectiveness.

2. This Directive lays down requirements as regards:
   (a) the common general framework for a methodology for calculating the integrated energy performance of buildings and building units;
   (b) the application of minimum requirements to the energy performance of new buildings and new building units;
   (c) the application of minimum requirements to the energy performance of:
      (i) existing buildings, building units and building elements that are subject to major renovation;
      (ii) building elements that form part of the building envelope and that have a significant impact on the energy performance of the building envelope when they are retrofitted or replaced; and
      (iii) technical building systems whenever they are installed, replaced or upgraded;
   (d) national plans for increasing the number of nearly zero-energy buildings;
   (e) energy certification of buildings or building units;
   (f) regular inspection of heating and air-conditioning systems in buildings; and
   (g) independent control systems for energy performance certificates and inspection reports.

3. The requirements laid down in this Directive are minimum requirements and shall not prevent any Contracting Party from maintaining or introducing more stringent measures. Such measures shall be compatible with the Treaty on the Functioning of the European Union. They shall be notified to the Secretariat.
Article 2
Definitions

For the purpose of this Directive, the following definitions shall apply:

1. “building” means a roofed construction having walls, for which energy is used to condition the indoor climate;

2. “nearly zero-energy building” means a building that has a very high energy performance, as determined in accordance with Annex I. The nearly zero or very low amount of energy required should be covered to a very significant extent by energy from renewable sources, including energy from renewable sources produced on-site or nearby;

3. “technical building system” means technical equipment for the heating, cooling, ventilation, hot water, lighting or for a combination thereof, of a building or building unit;

4. “energy performance of a building” means the calculated or measured amount of energy needed to meet the energy demand associated with a typical use of the building, which includes, inter alia, energy used for heating, cooling, ventilation, hot water and lighting;

5. “primary energy” means energy from renewable and non-renewable sources which has not undergone any conversion or transformation process;

6. “energy from renewable sources” means energy from renewable non-fossil sources, namely wind, solar, aerothermal, geothermal, hydrothermal and ocean energy, hydropower, biomass, landfill gas, sewage treatment plant gas and biogases;

7. “building envelope” means the integrated elements of a building which separate its interior from the outdoor environment;

8. “building unit” means a section, floor or apartment within a building which is designed or altered to be used separately;

9. “building element” means a technical building system or an element of the building envelope;

10. “major renovation” means the renovation of a building where:
(a) the total cost of the renovation relating to the building envelope or the technical building systems is higher than 25% of the value of the building, excluding the value of the land upon which the building is situated; or
(b) more than 25% of the surface of the building envelope undergoes renovation; Contracting Parties may choose to apply option (a) or (b).

11. “European standard” means a standard adopted by the European Committee for Standardisation, the European Committee for Electrotechnical Standardisation or the European Telecommunications Standards Institute and made available for public use;

12. “energy performance certificate” means a certificate recognised by a Contracting Party or by a legal person designated by it, which indicates the energy performance of a building or building unit, calculated according to a methodology adopted in accordance with Article 3;

13. “cogeneration” means simultaneous generation in one process of thermal energy and electrical and/or mechanical energy;
14. “cost-optimal level” means the energy performance level which leads to the lowest cost during the estimated economic lifecycle, where:

(a) the lowest cost is determined taking into account energy-related investment costs, maintenance and operating costs (including energy costs and savings, the category of building concerned, earnings from energy produced), where applicable, and disposal costs, where applicable; and

(b) the estimated economic lifecycle is determined by each Contracting Party. It refers to the remaining estimated economic lifecycle of a building where energy performance requirements are set for the building as a whole, or to the estimated economic lifecycle of a building element where energy performance requirements are set for building elements.

The cost-optimal level shall lie within the range of performance levels where the cost benefit analysis calculated over the estimated economic lifecycle is positive;

15. “air-conditioning system” means a combination of the components required to provide a form of indoor air treatment, by which temperature is controlled or can be lowered;

16. “boiler” means the combined boiler body-burner unit, designed to transmit to fluids the heat released from burning;

17. “effective rated output” means the maximum calorific output, expressed in kW, specified and guaranteed by the manufacturer as being deliverable during continuous operation while complying with the useful efficiency indicated by the manufacturer;

18. “heat pump” means a machine, a device or installation that transfers heat from natural surroundings such as air, water or ground to buildings or industrial applications by reversing the natural flow of heat such that it flows from a lower to a higher temperature. For reversible heat pumps, it may also move heat from the building to the natural surroundings;

19. “district heating” or “district cooling” means the distribution of thermal energy in the form of steam, hot water or chilled liquids, from a central source of production through a network to multiple buildings or sites, for the use of space or process heating or cooling.

**Article 3**

Adoption of a methodology for calculating the energy performance of buildings

Contracting Parties shall apply a methodology for calculating the energy performance of buildings in accordance with the common general framework set out in Annex I.

This methodology shall be adopted at national or regional level.

**Article 4**

Setting of minimum energy performance requirements

1. Contracting Parties shall take the necessary measures to ensure that minimum energy performance requirements for buildings or building units are set with a view to achieving cost-optimal levels. The energy performance shall be calculated in accordance with the methodology referred to in Article 3. Cost-optimal
levels shall be calculated in accordance with the comparative methodology framework referred to in Article 5 once the framework is in place.

**Contracting Parties** shall take the necessary measures to ensure that minimum energy performance requirements are set for building elements that form part of the building envelope and that have a significant impact on the energy performance of the building envelope when they are replaced or retrofitted, with a view to achieving cost-optimal levels.

When setting requirements, **Contracting Parties** may differentiate between new and existing buildings and between different categories of buildings.

These requirements shall take account of general indoor climate conditions, in order to avoid possible negative effects such as inadequate ventilation, as well as local conditions and the designated function and the age of the building.

A **Contracting Party** shall not be required to set minimum energy performance requirements which are not cost-effective over the estimated economic lifecycle.

Minimum energy performance requirements shall be reviewed at regular intervals which shall not be longer than five years and, if necessary, shall be updated in order to reflect technical progress in the building sector.

2. **Contracting Parties** may decide not to set or apply the requirements referred to in paragraph 1 to the following categories of buildings:

(a) buildings officially protected as part of a designated environment or because of their special architectural or historical merit, in so far as compliance with certain minimum energy performance requirements would unacceptably alter their character or appearance;

(b) buildings used as places of worship and for religious activities;

(c) temporary buildings with a time of use of two years or less, industrial sites, workshops and non-residential agricultural buildings with low energy demand and non-residential agricultural buildings which are in use by a sector covered by a national sectoral agreement on energy performance;

(d) residential buildings which are used or intended to be used for either less than four months of the year or, alternatively, for a limited annual time of use and with an expected energy consumption of less than 25% of what would be the result of all-year use;

(e) stand-alone buildings with a total useful floor area of less than 50 m².

### Article 5

**Calculation of cost-optimal levels of minimum energy performance requirements**

1. The Commission shall establish by means of delegated acts in accordance with Articles 23, 24 and 25 by 30 June 2011 a comparative methodology framework for calculating cost-optimal levels of minimum energy performance requirements for buildings and building elements.

The comparative methodology framework shall be established in accordance with Annex III and shall differentiate between new and existing buildings and between different categories of buildings.

2. **Contracting Parties** shall calculate cost-optimal levels of minimum energy performance requirements using the comparative methodology framework established in accordance with paragraph 1 and relevant
parameters, such as climatic conditions and the practical accessibility of energy infrastructure, and compare the results of this calculation with the minimum energy performance requirements in force.

Contracting Parties shall report to the Secretariat all input data and assumptions used for those calculations and the results of those calculations. The report may be included in the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC. Contracting Parties shall submit those reports to the Secretariat at regular intervals, which shall not be longer than five years. The first report shall be submitted by 30 June 2013.

3. If the result of the comparison performed in accordance with paragraph 2 shows that the minimum energy performance requirements in force are significantly less energy efficient than cost-optimal levels of minimum energy performance requirements, the Contracting Party concerned shall justify this difference in writing to the Secretariat in the report referred to in paragraph 2, accompanied, to the extent that the gap cannot be justified, by a plan outlining appropriate steps to significantly reduce the gap by the next review of the energy performance requirements as referred to in Article 4(1).

4. The Secretariat shall publish a report on the progress of the Contracting Parties in reaching cost-optimal levels of minimum energy performance requirements.

Article 6

New buildings

1. Contracting Parties shall take the necessary measures to ensure that new buildings meet the minimum energy performance requirements set in accordance with Article 4.

For new buildings, Contracting Parties shall ensure that, before construction starts, the technical, environmental and economic feasibility of high-efficiency alternative systems such as those listed below, if available, is considered and taken into account:

(a) decentralised energy supply systems based on energy from renewable sources;
(b) cogeneration;
(c) district or block heating or cooling, particularly where it is based entirely or partially on energy from renewable sources;
(d) heat pumps.

2. Contracting Parties shall ensure that the analysis of alternative systems referred to in paragraph 1 is documented and available for verification purposes.

3. That analysis of alternative systems may be carried out for individual buildings or for groups of similar buildings or for common typologies of buildings in the same area. As far as collective heating and cooling systems are concerned, the analysis may be carried out for all buildings connected to the system in the same area.
**Article 7**

*Existing buildings*

**Contracting Parties** shall take the necessary measures to ensure that when buildings undergo major renovation, the energy performance of the building or the renovated part thereof is upgraded in order to meet minimum energy performance requirements set in accordance with Article 4 in so far as this is technically, functionally and economically feasible.

Those requirements shall be applied to the renovated building or building unit as a whole. Additionally or alternatively, requirements may be applied to the renovated building elements.

**Contracting Parties** shall in addition take the necessary measures to ensure that when a building element that forms part of the building envelope and has a significant impact on the energy performance of the building envelope, is retrofitted or replaced, the energy performance of the building element meets minimum energy performance requirements in so far as this is technically, functionally and economically feasible.

**Contracting Parties** shall determine these minimum energy performance requirements in accordance with Article 4.

**Contracting Parties** shall encourage, in relation to buildings undergoing major renovation, the consideration and taking into account of high-efficiency alternative systems, as referred to in Article 6(1), in so far as this is technically, functionally and economically feasible.

**Article 8**

*Technical building systems*

1. **Contracting Parties** shall, for the purpose of optimising the energy use of technical building systems, set system requirements in respect of the overall energy performance, the proper installation, and the appropriate dimensioning, adjustment and control of the technical building systems which are installed in existing buildings. **Contracting Parties** may also apply these system requirements to new buildings. System requirements shall be set for new, replacement and upgrading of technical building systems and shall be applied in so far as they are technically, economically and functionally feasible.

The system requirements shall cover at least the following:
(a) heating systems;
(b) hot water systems;
(c) air-conditioning systems;
(d) large ventilation systems;
or a combination of such systems.

2. **Contracting Parties** shall encourage the introduction of intelligent metering systems whenever a building is constructed or undergoes major renovation, whilst ensuring that this encouragement is in line with point 2 of Annex I to Directive 2009/72/EC of the European Parliament and of the Council of 13 July 2009 concerning common rules for the internal market in electricity. **Contracting Parties** may furthermore encourage, where appropriate, the installation of active control systems such as automation, control and monitoring systems that aim to save energy.
Article 9

Nearly zero-energy buildings

1. **Contracting Parties** shall ensure that:
   (a) by **30 June 2021**, all new buildings are nearly zero-energy buildings; and
   (b) after **30 June 2019**, new buildings occupied and owned by public authorities are nearly zero-energy buildings.

**Contracting Parties** shall draw up national plans for increasing the number of nearly zero-energy buildings. These national plans may include targets differentiated according to the category of building.

2. **Contracting Parties** shall furthermore, following the leading example of the public sector, develop policies and take measures such as the setting of targets in order to stimulate the transformation of buildings that are refurbished into nearly zero-energy buildings, and inform the **Secretariat** thereof in their national plans referred to in paragraph 1.

3. The national plans shall include, *inter alia*, the following elements:
   (a) the **Contracting Party**’s detailed application in practice of the definition of nearly zero-energy buildings, reflecting their national, regional or local conditions, and including a numerical indicator of primary energy use expressed in kWh/m² per year. Primary energy factors used for the determination of the primary energy use may be based on national or regional yearly average values and may take into account relevant European standards;
   (b) intermediate targets for improving the energy performance of new buildings, by 2015, with a view to preparing the implementation of paragraph 1;
   (c) information on the policies and financial or other measures adopted in the context of paragraphs 1 and 2 for the promotion of nearly zero-energy buildings, including details of national requirements and measures concerning the use of energy from renewable sources in new buildings and existing buildings undergoing major renovation in the context of Article 13(4) of Directive 2009/28/EC and Articles 6 and 7 of this Directive.

4. The **Secretariat** shall evaluate the national plans referred to in paragraph 1, notably the adequacy of the measures envisaged by the **Contracting Party** in relation to the objectives of this Directive. The **Secretariat**, taking due account of the principle of subsidiarity, may request further specific information regarding the requirements set out in paragraphs 1, 2 and 3. In that case, the **Contracting Party** concerned shall submit the requested information or propose amendments within nine months following the request from the Secretariat. **Following its evaluation, the Secretariat may propose a recommendation to the Ministerial Council.**

5. The **Secretariat** shall by **31 December 2013** and every three years thereafter publish a report on the progress of **Contracting Parties** in increasing the number of nearly zero-energy buildings. On the basis of that report the **Secretariat** shall develop an action plan and, if necessary, propose measures to increase the number of those buildings and encourage best practices as regards the cost-effective transformation of existing buildings into nearly zero-energy buildings.

6. **Contracting Parties** may decide not to apply the requirements set out in points (a) and (b) of paragraph 1 in specific and justifiable cases where the cost-benefit analysis over the economic lifecycle of the
building in question is negative. **Contracting Parties** shall inform the **Secretariat** of the principles of the relevant legislative regimes.

**Article 10**

**Financial incentives and market barriers**

1. In view of the importance of providing appropriate financing and other instruments to catalyse the energy performance of buildings and the transition to nearly zero-energy buildings, **Contracting Parties** shall take appropriate steps to consider the most relevant such instruments in the light of national circumstances.

2. **Contracting Parties** shall draw up, by **30 June 2013**, a list of existing and, if appropriate, proposed measures and instruments including those of a financial nature, other than those required by this Directive, which promote the objectives of this Directive. **Contracting Parties** shall update this list every three years. **Contracting Parties** shall communicate these lists to the **Secretariat**, which they may do by including them in the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC.

3. The **Secretariat** shall examine the effectiveness of the listed existing and proposed measures referred to in paragraph 2 as well as of relevant Union instruments, in supporting the implementation of this Directive. On the basis of that examination, and taking due account of the principle of subsidiarity, the **Secretariat** may provide advice < ... > as regards specific national schemes and coordination with Union and international financial institutions. The **Secretariat** may include its examination and possible advice or recommendations in its report on the National Energy Efficiency Plans referred to in Article 14(5) of Directive 2006/32/EC.

4. The **Secretariat** shall, where appropriate, assist upon request **Contracting Parties** in setting up national or regional financial support programmes with the aim of increasing energy efficiency in buildings, especially of existing buildings, by supporting the exchange of best practice between the responsible national or regional authorities or bodies.

5. In order to improve financing in support of the implementation of this Directive and taking due account of the principle of subsidiarity, the Commission shall, preferably by 2011, present an analysis on, in particular:
   (a) the effectiveness, the appropriateness of the level, and the actual amount used, of structural funds and framework programmes that were used for increasing energy efficiency in buildings, especially in housing;
   (b) the effectiveness of the use of funds from the EIB and other public finance institutions;
   (c) the coordination of Union and national funding and other forms of support that can act as a leverage for stimulating investments in energy efficiency and the adequacy of such funds for achieving Union objectives.

   On the basis of that analysis, and in accordance with the multiannual financial framework, the Commission may subsequently submit, if it considers this appropriate, proposals with respect to Union instruments to the European Parliament and the Council.

6. **Contracting Parties** shall take account of the cost-optimal levels of energy performance when providing incentives for the construction or major renovation of buildings.

7. The provisions of this Directive shall not prevent **Contracting Parties** from providing incentives for new buildings, renovations or building elements which go beyond the cost-optimal levels.
Article 11
Energy performance certificates

1. **Contracting Parties** shall lay down the necessary measures to establish a system of certification of the energy performance of buildings. The energy performance certificate shall include the energy performance of a building and reference values such as minimum energy performance requirements in order to make it possible for owners or tenants of the building or building unit to compare and assess its energy performance.

The energy performance certificate may include additional information such as the annual energy consumption for non-residential buildings and the percentage of energy from renewable sources in the total energy consumption.

2. The energy performance certificate shall include recommendations for the cost-optimal or cost-effective improvement of the energy performance of a building or building unit, unless there is no reasonable potential for such improvement compared to the energy performance requirements in force.

The recommendations included in the energy performance certificate shall cover:

(a) measures carried out in connection with a major renovation of the building envelope or technical building system(s); and

(b) measures for individual building elements independent of a major renovation of the building envelope or technical building system(s).

3. The recommendations included in the energy performance certificate shall be technically feasible for the specific building and may provide an estimate for the range of payback periods or cost-benefits over its economic lifecycle.

4. The energy performance certificate shall provide an indication as to where the owner or tenant can receive more detailed information, including as regards the cost-effectiveness of the recommendations made in the energy performance certificate. The evaluation of cost effectiveness shall be based on a set of standard conditions, such as the assessment of energy savings and underlying energy prices and a preliminary cost forecast. In addition, it shall contain information on the steps to be taken to implement the recommendations. Other information on related topics, such as energy audits or incentives of a financial or other nature and financing possibilities may also be provided to the owner or tenant.

5. Subject to national rules, **Contracting Parties** shall encourage public authorities to take into account the leading role which they should play in the field of energy performance of buildings, *inter alia*, by implementing the recommendations included in the energy performance certificate issued for buildings owned by them within its validity period.

6. Certification for building units may be based:

(a) on a common certification of the whole building; or

(b) on the assessment of another representative building unit with the same energy-relevant characteristics in the same building.

7. Certification for single-family houses may be based on the assessment of another representative building of similar design and size with a similar actual energy performance quality if such correspondence can be
guaranteed by the expert issuing the energy performance certificate.

8. The validity of the energy performance certificate shall not exceed 10 years.

9. The Commission shall, by 2011, in consultation with the relevant sectors, adopt a voluntary common European Union certification scheme for the energy performance of non-residential buildings. That measure shall be adopted in accordance with the advisory procedure referred to in Article 26(2). Contracting Parties are encouraged to recognise or use the scheme, or use part thereof by adapting it to national circumstances.

**Article 12**

**Issue of energy performance certificates**

1. Contracting Parties shall ensure that an energy performance certificate is issued for:
   (a) buildings or building units which are constructed, sold or rented out to a new tenant; and
   (b) buildings where a total useful floor area over 500 m² is occupied by a public authority and frequently visited by the public. On 30 September 2015, this threshold of 500 m² shall be lowered to 250 m².

The requirement to issue an energy performance certificate does not apply where a certificate, issued in accordance with either Directive 2002/91/EC or this Directive, for the building or building unit concerned is available and valid.

2. Contracting Parties shall require that, when buildings or building units are constructed, sold or rented out, the energy performance certificate or a copy thereof is shown to the prospective new tenant or buyer and handed over to the buyer or new tenant.

3. Where a building is sold or rented out in advance of construction, Contracting Parties may require the seller to provide an assessment of its future energy performance, as a derogation from paragraphs 1 and 2; in this case, the energy performance certificate shall be issued at the latest once the building has been constructed.

4. Contracting Parties shall require that when:
   - buildings having an energy performance certificate,
   - building units in a building having an energy performance certificate, and
   - building units having an energy performance certificate,
are offered for sale or for rent, the energy performance indicator of the energy performance certificate of the building or the building unit, as applicable, is stated in the advertisements in commercial media.

5. The provisions of this Article shall be implemented in accordance with applicable national rules on joint ownership or common property.

6. Contracting Parties may exclude the categories of buildings referred to in Article 4(2) from the application of paragraphs 1, 2, 4 and 5 of this Article.

7. The possible effects of energy performance certificates in terms of legal proceedings, if any, shall be decided in accordance with national rules.
Article 13
Display of energy performance certificates

1. Contracting Parties shall take measures to ensure that where a total useful floor area over 500 m² of a building for which an energy performance certificate has been issued in accordance with Article 12(1) is occupied by public authorities and frequently visited by the public, the energy performance certificate is displayed in a prominent place clearly visible to the public.

On 30 September 2015, this threshold of 500 m² shall be lowered to 250 m².

2. Contracting Parties shall require that where a total useful floor area over 500 m² of a building for which an energy performance certificate has been issued in accordance with Article 12(1) is frequently visited by the public, the energy performance certificate is displayed in a prominent place clearly visible to the public.

3. The provisions of this Article do not include an obligation to display the recommendations included in the energy performance certificate.

Article 14
Inspection of heating systems

1. Contracting Parties shall lay down the necessary measures to establish a regular inspection of the accessible parts of systems used for heating buildings, such as the heat generator, control system and circulation pump(s), with boilers of an effective rated output for space heating purposes of more than 20 kW. That inspection shall include an assessment of the boiler efficiency and the boiler sizing compared with the heating requirements of the building. The assessment of the boiler sizing does not have to be repeated as long as no changes were made to the heating system or as regards the heating requirements of the building in the meantime.

Contracting Parties may reduce the frequency of such inspections or lighten them as appropriate, where an electronic monitoring and control system is in place.

2. Contracting Parties may set different inspection frequencies depending on the type and effective rated output of the heating system whilst taking into account the costs of the inspection of the heating system and the estimated energy cost savings that may result from the inspection.

3. Heating systems with boilers of an effective rated output of more than 100 kW shall be inspected at least every two years. For gas boilers, this period may be extended to four years.

4. As an alternative to paragraphs 1, 2 and 3 Contracting Parties may opt to take measures to ensure the provision of advice to users concerning the replacement of boilers, other modifications to the heating system and alternative solutions to assess the efficiency and appropriate size of the boiler. The overall impact of this approach shall be equivalent to that arising from the provisions set out in paragraphs 1, 2 and 3.

Where Contracting Parties choose to apply the measures referred to in the first subparagraph, they shall submit to the Secretariat a report on the equivalence of those measures to measures referred to in paragraphs 1, 2 and 3 of this Article by 30 June 2013 at the latest. Contracting Parties shall submit these reports to the Secretariat every three years. The reports may be included in the Energy Efficiency
Article 15

Inspection of air-conditioning systems

1. Contracting Parties shall lay down the necessary measures to establish a regular inspection of the accessible parts of air-conditioning systems of an effective rated output of more than 12 kW. The inspection shall include an assessment of the air-conditioning efficiency and the sizing compared to the cooling requirements of the building. The assessment of the sizing does not have to be repeated as long as no changes were made to this air-conditioning system or as regards the cooling requirements of the building in the meantime.

Contracting Parties may reduce the frequency of such inspections or lighten them, as appropriate, where an electronic monitoring and control system is in place.

2. The Contracting Parties may set different inspection frequencies depending on the type and effective rated output of the air-conditioning system, whilst taking into account the costs of the inspection of the air-conditioning system and the estimated energy cost savings that may result from the inspection.

3. In laying down the measures referred to in paragraphs 1 and 2 of this Article, Contracting Parties shall, as far as is economically and technically feasible, ensure that inspections are carried out in accordance with the inspection of heating systems and other technical systems referred to in Article 14 of this Directive and the inspection of leakages referred to in Regulation (EC) No 842/2006 of the European Parliament and of the Council of 17 May 2006 on certain fluorinated greenhouse gases.

4. As an alternative to paragraphs 1, 2 and 3 Contracting Parties may opt to take measures to ensure the provision of advice to users on the replacement of air-conditioning systems or on other modifications to the air-conditioning system which may include inspections to assess the efficiency and appropriate size of the air-conditioning system. The overall impact of this approach shall be equivalent to that arising from the provisions set out in paragraphs 1, 2 and 3.

Where Contracting Parties apply the measures referred to in the first subparagraph, they shall, by 30 June 2013 at the latest, submit to the Secretariat a report on the equivalence of those measures to the measures referred to in paragraphs 1, 2 and 3 of this Article. Contracting Parties shall submit these reports to the Secretariat every three years. The reports may be included in the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC.

5. After receiving the national report from a Contracting Party about the application of the option as described in paragraph 4, the Secretariat may request further specific information regarding the requirements and equivalence of the measures set out in that paragraph. In this case, the Contracting Party concerned shall present the requested information or propose amendments within nine months.
Article 16
Reports on the inspection of heating and air-conditioning systems

1. An inspection report shall be issued after each inspection of a heating or air-conditioning system. The inspection report shall contain the result of the inspection performed in accordance with Article 14 or 15 and include recommendations for the cost-effective improvement of the energy performance of the inspected system.

The recommendations may be based on a comparison of the energy performance of the system inspected with that of the best available feasible system and a system of similar type for which all relevant components achieve the level of energy performance required by the applicable legislation.

2. The inspection report shall be handed over to the owner or tenant of the building.

Article 17
Independent experts

Contracting Parties shall ensure that the energy performance certification of buildings and the inspection of heating systems and air-conditioning systems are carried out in an independent manner by qualified and/or accredited experts, whether operating in a self-employed capacity or employed by public bodies or private enterprises.

Experts shall be accredited taking into account their competence.

Contracting Parties shall make available to the public information on training and accreditations. Contracting Parties shall ensure that either regularly updated lists of qualified and/or accredited experts or regularly updated lists of accredited companies which offer the services of such experts are made available to the public.

Article 18
Independent control system

1. Contracting Parties shall ensure that independent control systems for energy performance certificates and reports on the inspection of heating and air-conditioning systems are established in accordance with Annex II. Contracting Parties may establish separate systems for the control of energy performance certificates and for the control of reports on the inspection of heating and air-conditioning systems.

2. The Contracting Parties may delegate the responsibilities for implementing the independent control systems. Where the Contracting Parties decide to do so, they shall ensure that the independent control systems are implemented in compliance with Annex II.

3. Contracting Parties shall require the energy performance certificates and the inspection reports referred to in paragraph 1 to be made available to the competent authorities or bodies on request.
Article 19
Review

The Commission, assisted by the Committee established by Article 26, shall evaluate this Directive by 1 January 2017 at the latest, in the light of the experience gained and progress made during its application, and, if necessary, make proposals.

Article 20
Information

1. **Contracting Parties** shall take the necessary measures to inform the owners or tenants of buildings or building units of the different methods and practices that serve to enhance energy performance.

2. **Contracting Parties** shall in particular provide information to the owners or tenants of buildings on energy performance certificates and inspection reports, their purpose and objectives, on cost-effective ways to improve the energy performance of the building and, where appropriate, on financial instruments available to improve the energy performance of the building.

At the request of the **Contracting Parties**, the **Secretariat** shall assist **Contracting Parties** in staging information campaigns for the purposes of paragraph 1 and the first subparagraph of this paragraph, which may be dealt with in Union programmes.

3. **Contracting Parties** shall ensure that guidance and training are made available for those responsible for implementing this Directive. Such guidance and training shall address the importance of improving energy performance, and shall enable consideration of the optimal combination of improvements in energy efficiency, use of energy from renewable sources and use of district heating and cooling when planning, designing, building and renovating industrial or residential areas.

4. The Commission is invited to continuously improve its information services, in particular the website that has been set up as a European portal for energy efficiency in buildings directed towards citizens, professionals and authorities, in order to assist **Contracting Parties** in their information and awareness-raising efforts. Information displayed on this website might include links to relevant European Union and national, regional and local legislation, links to Europa websites that display the National Energy Efficiency Action Plans, links to available financial instruments, as well as best practice examples at national, regional and local level. In the context of the European Regional Development Fund, the Commission shall continue and further intensify its information services with the aim of facilitating the use of available funds by providing assistance and information to interested stakeholders, including national, regional and local authorities, on funding possibilities, taking into account the latest changes in the regulatory framework.

Article 21
Consultation

In order to facilitate the effective implementation of the Directive, **Contracting Parties** shall consult the stakeholders involved, including local and regional authorities, in accordance with the national legislation
applicable and as relevant. Such consultation is of particular importance for the application of Articles 9 and 20.

**Article 22**

**Adaptation of Annex I to technical progress**

The Commission shall adapt points 3 and 4 of Annex I to technical progress by means of delegated acts in accordance with Articles 23, 24 and 25.

**Article 23**

**Exercise of delegation**

1. The powers to adopt the delegated acts referred to in Article 22 shall be conferred on the Commission for a period of five years beginning on 8 July 2010. The Commission shall make a report in respect of the delegated powers not later than six months before the end of the five-year period. The delegation of powers shall be automatically extended for periods of an identical duration, unless the European Parliament or the Council revokes it in accordance with Article 24.

2. Without prejudice to the deadline referred to in Article 5(1), the powers to adopt the delegated acts referred to in Article 5 shall be conferred on the Commission until 30 June 2012.

3. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the **Ministerial Council, who shall put it on the agenda of its next meeting.**

4. The powers to adopt delegated acts are conferred on the Commission subject to the conditions laid down in Articles 24 and 25.

**Article 24**

**Revocation of the delegation**

The Ministerial Council may object to the application of a delegated act to the Contracting Parties of the Energy Community at the meeting following notification. If, at that meeting, the Ministerial Council has not objected to the delegated act, it shall become binding on the Contracting Parties, subject to possible adaptation. If the Ministerial Council objects to a delegated act, it shall not be applicable in the Energy Community. The Ministerial Council shall state the reasons for objecting to the delegated act.
**Article 25**

Objections to delegated acts

1. The European Parliament or the Council may object to a delegated act within a period of two months from the date of notification. At the initiative of the European Parliament or the Council that period shall be extended by two months.

2. If, on expiry of that period, neither the European Parliament nor the Council has objected to the delegated act it shall be published in the Official Journal of the European Union and shall enter into force on the date stated therein.

   The delegated act may be published in the Official Journal of the European Union and enter into force before the expiry of that period, if the European Parliament and the Council have both informed the Commission of their intention not to raise objections.

3. If the European Parliament or the Council objects to a delegated act, it shall not enter into force. The institution which objects shall state the reasons for objecting to the delegated act.

**Article 26**

Committee procedure

1. The Commission shall be assisted by a Committee.

2. Where reference is made to this paragraph, Articles 3 and 7 of Decision 1999/468/EC shall apply, having regard to the provisions of Article 8 thereof.

**Article 27**

Penalties

Contracting Parties shall lay down the rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive and shall take all measures necessary to ensure that they are implemented. The penalties provided for must be effective, proportionate and dissuasive. Contracting Parties shall communicate those provisions to the Secretariat by 31 March 2013 at the latest and shall notify it without delay of any subsequent amendment affecting them.

**Article 28**

Transposition

1. Contracting Parties shall adopt and publish, by 30 September 2012 at the latest, the laws, regulations and administrative provisions necessary to comply with Articles 2 to 18, and with Articles 20 and 27. They shall apply those provisions as far as Articles 2, 3, 9, 11, 12, 13, 17, 18, 20 and 27 are concerned.

1 In accordance with the Accession Protocol, the corresponding date for Georgia is 30 June 2019.
from **31 March 2013** at the latest.

They shall apply those provisions as far as Articles 4, 5, 6, 7, 8, 14, 15 and 16 are concerned, to buildings occupied by the public authorities from **31 March 2013** at the latest and to other buildings from **30 September 2013** at the latest.

They may defer the application of Article 12(1) and (2) to single building units that are rented out, until **31 March 2016**. This shall however not result in fewer certificates being issued than would have been the case under the application of the Directive 2002/91/EC in the **Contracting Party** concerned.

When **Contracting Parties** adopt measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. They shall also include a statement that references in existing laws, regulations and administrative provisions to Directive 2002/91/EC shall be construed as references to this Directive. **Contracting Parties** shall determine how such reference is to be made and how that statement is to be formulated.

2. **Contracting Parties** shall communicate to the **Secretariat** the text of the main provisions of national law which they adopt in the field covered by this Directive.

**Article 29**

**Repeal**

Directive 2002/91/EC, as amended by the Regulation indicated in Annex IV, Part A, is hereby repealed with effect from 1 February 2012, without prejudice to the obligations of the **Contracting Parties** relating to the time limit for transposition into national law and application of the Directive set out in Annex IV, Part B. References to Directive 2002/91/EC shall be construed as references to this Directive and shall be read in accordance with the correlation table in Annex V.

**Articles 30 and 31**

**Entry into force and Addressees**

This Decision [2010/02/MC-EnC] enters into force upon its adoption and is addressed to the **Contracting Parties**.

The Secretariat shall monitor and review the implementation of Directive 2010/31/EU in the **Contracting Parties** and shall submit a progress report to the Permanent High Level Group by **31 March 2013**.

---

2 The text displayed here corresponds to Article 3 of Decision 2010/02/MC-EnC.
3 The text displayed here corresponds to Article 1(4) of Decision 2010/02/MC-EnC.
ANNEX I

Common general framework for the calculation of energy performance of buildings (referred to in Article 3)

1. The energy performance of a building shall be determined on the basis of the calculated or actual annual energy that is consumed in order to meet the different needs associated with its typical use and shall reflect the heating energy needs and cooling energy needs (energy needed to avoid overheating) to maintain the envisaged temperature conditions of the building, and domestic hot water needs.

2. The energy performance of a building shall be expressed in a transparent manner and shall include an energy performance indicator and a numeric indicator of primary energy use, based on primary energy factors per energy carrier, which may be based on national or regional annual weighted averages or a specific value for on-site production.

The methodology for calculating the energy performance of buildings should take into account European standards and shall be consistent with relevant Union legislation, including Directive 2009/28/EC.

3. The methodology shall be laid down taking into consideration at least the following aspects:

   (a) the following actual thermal characteristics of the building including its internal partitions:

   (i) thermal capacity;
   (ii) insulation;
   (iii) passive heating;
   (iv) cooling elements; and
   (v) thermal bridges;

   (b) heating installation and hot water supply, including their insulation characteristics;

   (c) air-conditioning installations;

   (d) natural and mechanical ventilation which may include air-tightness;

   (e) built-in lighting installation (mainly in the non-residential sector);

   (f) the design, positioning and orientation of the building, including outdoor climate;

   (g) passive solar systems and solar protection;

   (h) indoor climatic conditions, including the designed indoor climate;

   (i) internal loads.

4. The positive influence of the following aspects shall, where relevant in the calculation, be taken into account:

   (a) local solar exposure conditions, active solar systems and other heating and electricity systems based on energy from renewable sources;

   (b) electricity produced by cogeneration;

   (c) district or block heating and cooling systems;

   (d) natural lighting.
5. For the purpose of the calculation buildings should be adequately classified into the following categories:

(a) single-family houses of different types;
(b) apartment blocks;
(c) offices;
(d) educational buildings;
(e) hospitals;
(f) hotels and restaurants;
(g) sports facilities;
(h) wholesale and retail trade services buildings;
(i) other types of energy-consuming buildings.
ANNEX II

Independent control systems for energy performance certificates and inspection reports

1. The competent authorities or bodies to which the competent authorities have delegated the responsibility for implementing the independent control system shall make a random selection of at least a statistically significant percentage of all the energy performance certificates issued annually and subject those certificates to verification.

   The verification shall be based on the options indicated below or on equivalent measures:

   (a) validity check of the input data of the building used to issue the energy performance certificate and the results stated in the certificate;

   (b) check of the input data and verification of the results of the energy performance certificate, including the recommendations made;

   (c) full check of the input data of the building used to issue the energy performance certificate, full verification of the results stated in the certificate, including the recommendations made, and on-site visit of the building, if possible, to check correspondence between specifications given in the energy performance certificate and the building certified.

2. The competent authorities or bodies to which the competent authorities have delegated the responsibility for implementing the independent control system shall make a random selection of at least a statistically significant percentage of all the inspection reports issued annually and subject those reports to verification.
ANNEX III

Comparative methodology framework to identify cost-optimal levels of energy performance requirements for buildings and building elements

The comparative methodology framework shall enable Contracting Parties to determine the energy performance of buildings and building elements and the economic aspects of measures relating to the energy performance, and to link them with a view to identifying the cost-optimal level.

The comparative methodology framework shall be accompanied by guidelines outlining how to apply this framework in the calculation of cost-optimal performance levels.

The comparative methodology framework shall allow for taking into account use patterns, outdoor climate conditions, investment costs, building category, maintenance and operating costs (including energy costs and savings), earnings from energy produced, where applicable, and disposal costs, where applicable. It should be based on relevant European standards relating to this Directive.

The Commission shall also provide:

- guidelines to accompany the comparative methodology framework; these guidelines will serve to enable the Contracting Parties to undertake the steps listed below,
- information on estimated long-term energy price developments.

For the application of the comparative methodology framework by Contracting Parties, general conditions, expressed by parameters, shall be laid down at Contracting Party level.

The comparative methodology framework shall require Contracting Parties to:

- define reference buildings that are characterised by and representative of their functionality and geographic location, including indoor and outdoor climate conditions. The reference buildings shall cover residential and non-residential buildings, both new and existing ones,
- define energy efficiency measures to be assessed for the reference buildings. These may be measures for individual buildings as a whole, for individual building elements, or for a combination of building elements,
- assess the final and primary energy need of the reference buildings and the reference buildings with the defined energy efficiency measures applied,
- calculate the costs (i.e. the net present value) of the energy efficiency measures (as referred to in the second indent) during the expected economic lifecycle applied to the reference buildings (as referred to in the first indent) by applying the comparative methodology framework principles.

By calculating the costs of the energy efficiency measures during the expected economic lifecycle, the cost-effectiveness of different levels of minimum energy performance requirements is assessed by the Contracting Parties. This will allow the determination of cost-optimal levels of energy performance requirements.
REGULATION (EU) 2017/1369 of 4 July 2017 setting a framework for energy labelling

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in **bold and blue**.

**Article 1**

**Subject-matter and scope**

1. This Regulation lays down a framework that applies to energy-related products (‘products’) placed on the market or put into service. It provides for the labelling of those products and the provision of standard product information regarding energy efficiency, the consumption of energy and of other resources by products during use and supplementary information concerning products, thereby enabling customers to choose more efficient products in order to reduce their energy consumption.

2. This Regulation does not apply to:

   (a) second-hand products, unless they are imported from a third country;

   (b) means of transport for persons or goods.

**Article 2**

**Definitions**

For the purposes of this Regulation the following definitions apply:

1. ‘energy-related product’ or ‘product’ means a good or system with an impact on energy consumption during use which is placed on the market or put into service, including parts with an impact on energy consumption during use which are placed on the market or put into service for customers and that are intended to be incorporated into products;

2. ‘product group’ means a group of products which have the same main functionality;

3. ‘system’ means a combination of several goods which when put together perform a specific function in an expected environment and of which the energy efficiency can then be determined as a single entity;

4. ‘model’ means a version of a product of which all units share the same technical characteristics relevant for the label and the product information sheet and the same model identifier;

5. ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific product model from other models with the same trade mark or the same supplier’s name;

6. ‘equivalent model’ means a model which has the same technical characteristics relevant for the label and the same product information sheet, but which is placed on the market or put into service by the
same supplier as another model with a different model identifier;
(7) ‘making available on the market’ means the supply of a product for distribution or use on the markets of the Contracting Parties in the course of a commercial activity, whether in return for payment or free of charge;
(8) ‘placing on the market’ means the first making available of a product on the markets of the Contracting Parties;
(9) ‘putting into service’ means the first use of a product for its intended purpose on the markets of the Contracting Parties;
(10) ‘manufacturer’ means a natural or legal person who manufactures a product or has a product designed or manufactured, and markets that product under its name or trademark;
(11) ‘authorised representative’ means a natural or legal person established in the Energy Community who has received a written mandate from the manufacturer to act on its behalf in relation to specified tasks;
(12) ‘importer’ means a natural or legal person established in the Energy Community who places a product from a third country on the markets of the Contracting Parties;
(13) ‘dealer’ means a retailer or other natural or legal person who offers for sale, hire, or hire purchase, or displays products to customers or installers in the course of a commercial activity, whether or not in return for payment;
(14) ‘supplier’ means a manufacturer established in the Energy Community, the authorised representative of a manufacturer who is not established in the Energy Community, or an importer, who places a product on the markets of the Contracting Parties;
(15) ‘distance selling’ means the offer for sale, hire or hire purchase by mail order, catalogue, internet, telemarketing or by any other method by which the potential customer cannot be expected to see the product displayed;
(16) ‘customer’ means a natural or legal person who buys, hires or receives a product for own use whether or not acting for purposes which are outside its trade, business, craft or profession;
(17) ‘energy efficiency’ means the ratio of output of performance, service, goods or energy to input of energy;
(18) ‘harmonised standard’ means standard as defined in point (c) of Article 2(1) of Regulation (EU) No 1025/2012 of the European Parliament and of the Council;
(19) ‘label’ means a graphic diagram, either in printed or electronic form, including a closed scale using only letters from A to G, each letter representing a class and each class corresponding to energy savings, in seven different colours from dark green to red, in order to inform customers about energy efficiency and energy consumption; it includes rescaled labels and labels with fewer classes and colours in accordance with Article 11(10) and (11);
(20) ‘rescaling’ means an exercise making the requirements for achieving the energy class on a label for a particular product group more stringent;
(21) ‘rescaled label’ means a label for a particular product group that has undergone rescaling and is distinguishable from labels before rescaling while preserving a visual and perceptible coherence of all labels;
(22) ‘product information sheet’ means a standard document containing information relating to a product, in printed or electronic form;
(23) ‘technical documentation’ means documentation sufficient to enable market surveillance authorities to assess the accuracy of the label and the product information sheet of a product, including test reports or similar technical evidence;

(24) ‘supplementary information’ means information, as specified in a delegated act, on the functional and environmental performance of a product;

(25) <...>¹

(26) ‘verification tolerance’ means the maximum admissible deviation of the measurement and calculation results of the verification tests performed by, or on behalf of, market surveillance authorities, compared to the values of the declared or published parameters, reflecting deviation arising from interlaboratory variation.

Article 3

General obligations of suppliers

1. The supplier shall ensure that products that are placed on the market are accompanied, for each individual unit, free of charge, with accurate printed labels and with product information sheets in accordance with this Regulation and the relevant delegated acts.

² Delegated acts may provide that the label is printed on the packaging of the product.

2. The supplier shall deliver printed label, including any rescaled labels, and product information sheets, to the dealer free of charge, promptly and in any event within five working days upon the dealer’s request.

3. The supplier shall ensure the accuracy of the labels and product information sheets that it provides and shall produce technical documentation sufficient to enable the accuracy to be assessed.

4. Once a unit of a model is in service, the supplier shall request explicit consent from the customer regarding any changes intended to be introduced to the unit by means of updates that would be detrimental to the parameters of the energy efficiency label for that unit, as set out in the relevant delegated act. The supplier shall inform the customer of the objective of the update and of the changes in the parameters, including any change in the label class. For a period proportionate to the average lifespan of the product, the supplier shall give the customer the option of refusing the update without avoidable loss of functionality.

5. The supplier shall not place on the market products that have been designed so that a model’s performance is automatically altered in test conditions with the objective of reaching a more favourable level for any of the parameters specified in the relevant delegated act or included in any of the documentation provided with the product.

6. After the final unit of a model has been placed on the market, the supplier shall keep the information concerning that model for a period of 15 years. Where appropriate in relation to the average life span of a product, a shorter retention period may be provided for by relevant delegated acts.

¹ Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC

² The second subparagraph of Article 3(1) is not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC
Article 4

[...]

Article 5

Obligations of dealers

1. The dealer shall:
   (a) display, in a visible manner, including for online distance selling, the label provided by the supplier or made available in accordance with paragraph 2 for units of a model covered by the relevant delegated act; and,
   (b) make available to customers the product information sheet, including, upon request, in physical form at the point of sale.

2. Where, notwithstanding Article 3(1), the dealer does not have a label, it shall request one from the supplier in accordance with Article 3(2).

3. Where, notwithstanding Article 3(1), the dealer does not have a product information sheet, it shall request one from the supplier in accordance with Article 3(2); or, if it chooses to do so, print or download one for electronic display from the product database, if those functions are available for the relevant product.

Article 6

Other obligations of suppliers and dealers

The supplier and the dealer shall:
   (a) make reference to the energy efficiency class of the product and the range of the efficiency classes available on the label in visual advertisements or technical promotional material for a specific model in accordance with the relevant delegated act;
   (b) cooperate with market surveillance authorities and take immediate action to remedy any case of non-compliance with the requirements set out in this Regulation and the relevant delegated acts, which falls under their responsibility, at their own initiative or when required to do so by market surveillance authorities;
   (c) for products covered by delegated acts, not provide or display other labels, marks, symbols or inscriptions which do not comply with the requirements of this Regulation and the relevant delegated acts, if doing so would be likely to mislead or confuse customers with respect to the consumption of energy or other resources during use;
   (d) for products not covered by delegated acts, not supply or display labels which mimic the labels provided for under this Regulation and the relevant delegated acts;
   (e) for non-energy related products, not supply or display labels which mimic the labels provided for in this Regulation or in delegated acts.

Point (d) in the first subparagraph shall not affect labels provided for in national law, unless those labels are provided for in delegated acts.

3 Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC
Article 7

Obligations of Contracting Parties

1. Contracting Parties shall not impede the placing on the market or putting into service, within their territories, of products which comply with this Regulation and the relevant delegated acts.

2. Where Contracting Parties provide incentives for a product specified in a delegated act, those incentives shall aim at the highest two significantly populated classes of energy efficiency, or at higher classes as laid down in that delegated act.

3. Contracting Parties shall ensure that the introduction of labels and rescaling of labels is accompanied by educational and promotional information campaigns on energy labelling, if appropriate in cooperation with suppliers and dealers. The Secretariat shall support cooperation and the exchange of best practices in relation to those campaigns, including through the recommendation of common key messages.

4. Contracting Parties shall lay down the rules on penalties and enforcement mechanisms applicable to infringements of this Regulation and the delegated acts, and shall take all measures necessary to ensure that they are implemented. The penalties provided for shall be effective, proportionate and dissuasive. Rules which fulfil the requirements of Article 15 of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, shall be considered to fulfil the requirements of this paragraph as regards penalties.

Contracting Parties shall, by 1 January 2020, notify the Secretariat of the rules referred to in the first subparagraph that have not previously been notified to the Secretariat, and shall notify the Secretariat, without delay, of any subsequent amendment affecting them.

Article 8

Market surveillance and control of products entering the markets of Contracting Parties

1. The Secretariat shall encourage and support cooperation and the exchange of information on market surveillance relating to the labelling of products between national authorities of the Contracting Parties that are responsible for market surveillance or in charge of the control of products entering the Contracting Parties’ markets, and between them and the Secretariat, inter alia.

Such exchanges of information shall also be conducted when test results indicate that the product complies with this Regulation and the relevant delegated act.

2. Contracting Parties’ general market surveillance programmes or sector specific programmes, where applicable, shall include actions to ensure the effective enforcement of this Regulation.

3. For the purposes of the preceding paragraphs, national market surveillance authorities and the Secretariat shall take into account guidelines for the enforcement of this Regulation, in particular as regards best practices for product testing and the sharing of information, developed under Article 8(4) of Regulation (EU) 2017/1369 in the European Union.

4. Market surveillance authorities shall have the right to recover from the supplier the costs of document inspection and physical product testing in case of non-compliance with this
Regulation or the relevant delegated acts.

Article 9
Procedure at national level for dealing with products presenting a risk

1. Where the market surveillance authorities of one Contracting Party have sufficient reason to believe that a product covered by this Regulation presents a risk to aspects of public interest protection covered by this Regulation, such as environmental and consumer protection aspects, they shall carry out an evaluation in relation to the product concerned covering all energy labelling requirements relevant to the risk and laid down in this Regulation or in the relevant delegated act. Suppliers and dealers shall cooperate as necessary with the market surveillance authorities for the purpose of that evaluation.

2. Where, in the course of the evaluation referred to in paragraph 1, the market surveillance authorities find that the product does not comply with the requirements laid down in this Regulation or in the relevant delegated act, they shall without delay require the supplier, or where appropriate, the dealer, to take all appropriate corrective action to bring the product into compliance with those requirements, where appropriate to withdraw the product from the market, or where appropriate, to recall it within a reasonable period, commensurate with the nature of the risk as they may prescribe.

3. Where the market surveillance authorities consider that a case of non-compliance as referred to in paragraph 2 is not restricted to their national territory, they shall inform the Secretariat and the other Contracting Parties of the results of the evaluation and of the action which they have required the supplier or dealer to take.

4. The supplier or, where appropriate, the dealer shall ensure that all appropriate corrective or restrictive action in accordance with paragraph 2 is taken in respect of all the products concerned that it has made available on the market throughout the Energy Community.

5. Where the supplier or, where appropriate, the dealer does not take adequate corrective action within the period referred to in paragraph 2, the market surveillance authorities shall take all appropriate provisional measures to prohibit or restrict the availability of the product on their national market, to withdraw the product from that market, or to recall it.

6. The market surveillance authorities shall inform the Secretariat and the other Contracting Parties without delay of the measures taken pursuant to paragraph 5. That information shall include all available details, in particular:
   (a) the data necessary for the identification of the non-compliant product;
   (b) the origin of the product;
   (c) the nature of the non-compliance alleged and the risk involved;
   (d) the nature and duration of the national measures taken and the arguments put forward by the supplier or, where appropriate, the dealer.

In particular, the market surveillance authorities shall indicate whether the non-compliance is due to either failure of the product to meet requirements relating to aspects of public interest protection laid

---

4 The second subparagraph of Article 9(2) is not applicable, in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC.
down in this Regulation or shortcomings in the harmonised standards referred to in Article 13 conferring a presumption of conformity.

7. **Contracting Parties** other than the **Contracting Party** initiating the procedure shall without delay inform the **Secretariat** and the other **Contracting Parties** of any measures adopted and of any additional information at their disposal relating to the non-compliance of the product concerned, and, in the event of disagreement with the notified national measure, of their objections.

8. Where, within 60 days of receipt of the information referred to in paragraph 6, no objection has been raised by either a **Contracting Party**, or the **Secretariat** in respect of a provisional measure taken by a **Contracting Party**, that measure shall be deemed to be justified.

9. **Contracting Parties** shall ensure that appropriate restrictive measures, such as withdrawal of the product from their market, are taken in respect of the product concerned, without delay.

### Article 10

**Energy Community safeguard procedure**

1. Where, on completion of the procedure set out in Article 9(4) and (5), objections are raised against a measure taken by a Contracting Party, or where the Secretariat considers a national measure to be contrary to Energy Community law, the Secretariat shall, without delay, consult the Contracting Party, and the supplier or, where appropriate, the dealer and shall evaluate the national measure.

On the basis of the results of that evaluation, the Secretariat shall decide whether the national measure is justified or not and may suggest an appropriate alternative measure. The Secretariat shall seek consent from the European Commission before taking such decision.

2. The **Secretariat** shall address its decision to all **Contracting Parties** and shall immediately communicate it to them and to the supplier or dealer concerned.

3. If the national measure is considered to be justified, all **Contracting Parties** shall take the measures necessary to ensure that the non-compliant product is withdrawn from their market, and shall inform the **Secretariat** and Commission accordingly. If the national measure is considered to be unjustified, the **Contracting Party** concerned shall withdraw the measure.

4. Where the national measure is considered to be justified and the non-compliance of the product is attributed to shortcomings in the harmonised standards referred to in Article 9(6) of this Regulation, the Secretariat shall inform the Commission thereof.

5. Corrective or restrictive measures pursuant to Article 9(2), (4), (5) or (9), or Article 10(3) shall be extended to all units of a non-compliant model and of its equivalent models, except those units for which the supplier demonstrates that they are compliant.
Article 11
Use of rescaled labels

13. Where, pursuant to Article 11(1) or (3) of Regulation (EU) 2017/1369 in the European Union, a label has been rescaled:

(a) the supplier shall, when placing a product on the market, provide both the existing and the rescaled labels and the product information sheets to the dealer for a period beginning four months before the date specified in the relevant delegated act for starting the display of the rescaled label.

By way of derogation from the first subparagraph of this point, if the existing and the rescaled label require different testing of the model, the supplier may choose not to supply the existing label with units of models placed on the market or put into service during the four-month period before the date specified in the relevant delegated act for starting the display of the rescaled label if no units belonging to the same model or equivalent models were placed on the market or put into service before the start of the four-month period. In that case, the dealer shall not offer those units for sale before that date. The supplier shall notify the dealer concerned of that consequence as soon as possible, including when it includes such units in its offers to dealers.

(b) the supplier shall, for products placed on the market or put into service before the four-month period, deliver the rescaled label on request from the dealer in accordance with Article 3(2) as from the start of that period. For such products, the dealer shall obtain a rescaled label in accordance with Article 5(2).

By way of derogation from the first subparagraph of this point:

(i) a dealer who is unable to obtain a rescaled label in accordance with the first subparagraph of this point for units already in its stock because the supplier has ceased its activities shall be permitted to sell those units exclusively with the non-rescaled label until nine months after the date specified in the relevant delegated act for starting the display of the rescaled label; or

(ii) if the non-rescaled and the rescaled label require different testing of the model, the supplier is exempt from the obligation to supply a rescaled label for units placed on the market or put into service before the four-month period, if no units belonging to the same model or equivalent models are placed on the market or put into service after the start of the four-month period. In that case, the dealer shall be permitted to sell those units exclusively with the non-rescaled label until nine months after the date specified in the relevant delegated act for starting the display of the rescaled label.

(c) the dealer shall replace the existing labels on products on display, both in shops and online, with the rescaled labels within 14 working days after the date specified in the relevant delegated act for starting the display of the rescaled label. The dealer shall not display the rescaled labels before that date.

By way of derogation from points (a), (b) and (c) of this paragraph, relevant delegated acts may provide for specific rules for energy labels printed on the packaging.

5 Article 11(1) to (12) is not applicable, in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC.
Article 12
Product database

Article 13
Harmonised standards

Where harmonised standards referred to in Article 13 of Regulation (EU) 2017/1369 in the European Union are applied during the conformity assessment of a product, the model shall be presumed to be in conformity with the relevant measurement and calculation requirements of the delegated act.

Article 14
Consultation Forum

Article 15
Working plan

Article 16
Relevant delegated acts

1. The European Commission may propose to the Ministerial Council the incorporation of relevant delegated acts supplementing Regulation (EU) 2017/1369 in the Energy Community.
2. The Ministerial Council shall decide upon the incorporation and adaptation of these relevant delegated acts at the meeting following the proposal. Upon adoption of a relevant Decision, relevant delegated acts shall be transposed and implemented by all Contracting Parties.

Article 17
Exercise of the delegation

6 Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC
7 Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC
8 Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC
9 Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC
**Article 18**
Committee procedure

<...>\(^{10}\)

**Article 19**
Evaluation and report

By 2 August 2025, the Secretariat shall assess the implementation of this Regulation and submit a report to the Ministerial Council.

**Article 20**
Repeal and transitional measures

2. References to the repealed Directive shall be construed as references to this Regulation and shall be read in accordance with the correlation table set out in Annex II.

3. For models, the units of which were placed on the market or put into service in accordance with Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, before 1 January 2020, the supplier shall, for a period ending five years after the final unit was manufactured, make an electronic version of the technical documentation available for inspection within 10 days of a request received from Contracting Parties or the Secretariat.

4. Delegated acts adopted pursuant to Article 10 of Directive 2010/30/EU and Directive 96/60/EC, as incorporated and adapted by the Ministerial Council, shall remain in force until they are repealed by a Decision adopted by the Ministerial Council taken under Article 16 of this Regulation.

Obligations under this Regulation shall apply in relation to product groups covered by delegated acts adopted pursuant to Article 10 of Directive 2010/30/EU and by Directive 96/60/EC, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC.

5. With regard to product groups already covered by relevant delegated acts adopted pursuant to Directive 2010/30/EU as incorporated and adapted by the Ministerial Council, or to Directive 96/60/EC as incorporated and adapted by the Ministerial Council, the energy efficiency classification established by Directive 2010/30/EU, as incorporated and adapted by the

\(^{10}\) Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC
Ministerial Council Decision 2010/02/MC-EnC, may continue to apply until the date on which the delegated acts introducing rescaled labels become applicable.

**Article 21**

Entry into force and application

This Regulation shall enter into force on the day of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.

Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.

DELEGATED REGULATION (EU) 2017/254 of 30 November 2016 on the use of tolerances in verification procedures

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in bold and blue.*

**Article 1**

Amendments to Delegated Regulation (EU) No 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Annex V to Delegated Regulation (EU) No 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC, is amended in accordance with Annex I to this Delegated Regulation.

**Article 2**

Annex X to Delegated Regulation (EU) 2015/1187 is amended in accordance with Annex XV to this Delegated Regulation.

Article 16
Entry into force and application

This Regulation shall enter into force on the date of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.

Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.
ANNEX I

Amendments to Annex V to Delegated Regulation (EU) No 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Annex V is replaced by the following:

‘ANNEX V

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Parties authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household dishwasher models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if, for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household dishwasher models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

**Contracting Parties’** authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX II

Amendments to Annex VII to Delegated Regulation (EU) No 1060/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Annex VII is replaced by the following:

ANNEX VII

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

   (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

   (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

   (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household refrigerating appliance models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household refrigerating appliance models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annexes VI and VIII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX III
Amendments to Annex V to Delegated Regulation (EU) No 1061/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Annex V is replaced by the following:

‘ANNEX V
Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation. When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household washing machine models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as
equivalent household washing machine models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

Contracting Parties’ authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in the a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX IV

Amendments to Annexes VII and VIII to Delegated Regulation (EU) No 1062/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

(1) Annex VII is amended as follows:

(a) In part 2, subparagraph (iv) of paragraph (a) is deleted.
(b) Part 3 is deleted.
(c) In part 4, the title is replaced by the following:

‘4. Measurements of peak luminance ratio referred to in Table 2 of Annex VIII’.

(2) Annex VIII is replaced by the following:

‘ANNEX VIII

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 2.

(3) If the result referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.
(4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 2.

(6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII. The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 2 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX V

Amendments to Annex VIII to Delegated Regulation (EU) No 626/2011, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Annex VIII is replaced by the following:

‘ANNEX VIII

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

   (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

   (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

   (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other
Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII. The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX VI

Amendments to Annex V to Delegated Regulation (EU) No 392/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex V is replaced by the following:

‘ANNEX V

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

   (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

   (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

   (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household tumble drier models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household tumble drier models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

**Contracting Parties’** authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX VII

Amendments to Annex V to Delegated Regulation (EU) No 874/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex V is replaced by the following:

’ANNEX V

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

1. VERIFICATION PROCEDURE FOR ELECTRICAL LAMPS AND LED MODULES MARKETED AS INDIVIDUAL PRODUCTS

(1) The Contracting Party authorities shall verify a sample batch of a minimum of 20 lamps of the same model from the same supplier, where possible obtained in equal proportions from four randomly selected sources.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when testing the units of model, the arithmetical mean of the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) is within the respective tolerance of 10%.

(3) If the results referred to in points 2(a), (b) or (c) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to point 3.
The Contracting Party authorities shall use measurement procedures that reflect generally recognised, current best practice and are reliable, accurate and reproducible, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerance of 10% and shall only use the procedure described in points 1 to 4 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

2. VERIFICATION PROCEDURE FOR LUMINAIRES INTENDED TO BE MARKETED OR MARKETED TO THE END-USER

The luminaire shall be considered to comply with the requirements laid down in this Regulation if it is accompanied by the required product information, if it is claimed to be compatible with all the lamp energy efficiency classes it is compatible with, and if, when applying state-of-the-art methods and criteria for assessing compatibility, it is found to be compatible with the lamp energy efficiency classes with which it is claimed to be compatible pursuant to points (2)(IV)(a) and (b) of part 2 of Annex I.
ANNEX VIII

Amendments to Annex VII to Delegated Regulation (EU) No 665/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex VII is replaced by the following:

ANNEX VII

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

   (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

   (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

   (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 4.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent vacuum cleaner models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent vacuum cleaner in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 4.
(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent vacuum cleaner models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VI. The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 4 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX IX

Amendments to Annex VIII to Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex VIII is replaced by the following:

‘ANNEX VIII

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 16.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 16.
(6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII. The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 16 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 2017/254

ANNEX X

Amendments to Annex IX to Delegated Regulation (EU) No 812/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex IX is replaced by the following:

‘ANNEX IX

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 9.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all other equivalent water heater models, hot water storage tanks models, solar device models or package of water heater and solar device models shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different equivalent models.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 9.

(6) If the result referred to in point 5 is not achieved, the model and all other equivalent water heater
models, hot water storage tanks models, solar device models or package of water heater and solar device models shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII and Annex VIII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 9 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX XI

Amendments to Annex VIII to Delegated Regulation (EU) No 65/2014, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex VIII is replaced by the following:

‘ANNEX VIII

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 6.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 6.
(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex II. The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 6 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX XII

Amendments to Annex IX to Delegated Regulation (EU) No 1254/2014

Annex IX is replaced by the following:

‘ANNEX IX

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all other equivalent models shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different equivalent models.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model and all other equivalent models shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-com-
pliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VIII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX XIII

Amendments to Annex X to Delegated Regulation (EU) 2015/1094

Annex X is replaced by the following:

‘ANNEX X

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 4.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all equivalent professional refrigerated storage cabinets that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 4.

(6) If the result referred to in point 5 is not achieved, the model and all equivalent professional refrigerated storage cabinets that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.
(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annexes VIII and IX.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 4 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX XIV

Amendments to Annex IX to Delegated Regulation (EU) 2015/1186

Annex IX is replaced by the following:

‘ANNEX IX

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

   (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

   (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

   (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 6. The unit shall be tested with a fuel with characteristics in the same range as the fuel that was used by the supplier to perform the measurements described in Annex VIII.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 6.
(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VIII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 6 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX XV

Amendments to Annex X to Delegated Regulation (EU) 2015/1187

Annex X is replaced by the following:

‘ANNEX X

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/ EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 5. The unit shall be tested with a fuel with characteristics in the same range as the fuel that was used by the supplier to perform measurements according to Annex VIII.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective verification tolerances given in Table 5.
(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VIII and IX.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 5 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

DELEGATED REGULATION (EU) 518/2014 of 5 March 2014 on labelling of energy-related products on the internet

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in bold and blue.

**Article 1**

**Amendments to Delegated Regulation (EU) No 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

Delegated Regulation (EU) No 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC, is amended as follows:

(1) Article 3 is amended as follows:

(a) the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household dishwasher model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household dishwasher models;’;

(b) the following point (g) is added:

‘(g) an electronic product fiche as set out in Annex II is made available to dealers for each household dishwasher model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household dishwasher models.’;

(2) in Article 4, point (b) is replaced by the following:

‘(b) household dishwashers offered for sale, hire or hirepurchase where the end-user cannot be expected to see the household dishwasher displayed, are marketed with the information provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;’;

(3) a new Annex VIII is added in accordance with Annex I to this Regulation.
Article 2
Amendments to Delegated Regulation (EU) No 1060/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Delegated Regulation (EU) No 1060/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC, is amended as follows:

(1) Article 3 is amended as follows:
   (a) the following point (f) is added:
      ‘(f) an electronic label in the format and containing the information set out in Annex II is made available to dealers for each household refrigerating appliance model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household refrigerating appliance models;’;
   (b) the following point (g) is added:
      ‘(g) an electronic product fiche as set out in Annex III is made available to dealers for each household refrigerating appliance model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household refrigerating appliance models.’;

(2) in Article 4, point (b) is replaced by the following:
   ‘(b) household refrigerating appliances offered for sale, hire or hire purchase where the end-user cannot be expected to see the product displayed, are marketed with the information to be provided by the suppliers in accordance with Annex V. Where the offer for is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex X shall apply instead;’;

(3) a new Annex X is added in accordance with Annex II to this Regulation.

Article 3
Amendments to Delegated Regulation (EU) No 1061/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Delegated Regulation (EU) No 1061/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC, is amended as follows:

(1) Article 3 is amended as follows:
   (a) the following point (f) is added:
      ‘(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household washing machine model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household washing machine models;’;
   (b) the following point (g) is added:
      ‘(g) an electronic product fiche as set out in Annex II is made available to dealers for each household washing machine model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household washing machine models;’;
hold washing machine model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household washing machine models.

(2) in Article 4, point (b) is replaced by the following:

‘(b) household washing machines offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed are marketed with the information to be provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;’;

(3) a new Annex VIII is added in accordance with Annex III to this Regulation.

Article 4

Amendments to Delegated Regulation (EU) No 1062/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Delegated Regulation (EU) No 1062/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in Annex V is made available to dealers for each television model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other television models;’;

(b) in paragraph 1, the following point (g) is added:

‘(g) an electronic product fiche as set out in Annex III is made available to dealers for each television model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other television models;’;

(2) in Article 4, point (b) is replaced by the following:

‘(b) televisions offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the television displayed, are marketed with the information to be provided by the suppliers in accordance with Annex VI. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1)(f) and 3(1)(g) the provisions in Annex IX shall apply instead;’;

(3) a new Annex IX is added in accordance with Annex IV to this Regulation.
Article 5

Amendments to Delegated Regulation (EU) No 626/2011, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Delegated Regulation (EU) No 626/2011, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (h) is added:

‘(h) an electronic label in the format and containing the information set out in Annex III is made available to dealers for each air conditioner model placed on the market from 1 January 2020 with a new model identifier, respecting energy efficiency classes set out in Annex II. It may also be made available to dealers for other air conditioner models;’;

(b) in paragraph 1, the following point (i) is added:

‘(i) an electronic product fiche as set out in Annex IV is made available to dealers for each air conditioner model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other air conditioner models.’;

(2) in Article 4, point (b) is replaced by the following:

‘(b) air conditioners offered for sale, hire or hire purchase where the end-user cannot be expected to see the product displayed, are marketed with the information provided by suppliers in accordance with Annexes IV and VI. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1) (h) and 3(1)

(i) the provisions of Annex IX shall apply instead;’;

(3) a new Annex IX is added in accordance with Annex V to this Regulation.

Article 6

Amendments to Delegated Regulation (EU) No 392/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Delegated Regulation (EU) No 392/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC, is amended as follows:

(1) Article 3 is amended as follows:

(a) the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household tumble drier model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household tumble drier models;’;

(b) the following point (g) is added:
‘(g) an electronic product fiche as set out in Annex II is made available to dealers for each household tumble drier model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household tumble drier models.’;

(2) in Article 4, point (b) is replaced by the following:

‘(b) household tumble driers offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, are marketed with the information provided by suppliers in accordance with Annex IV to this Regulation. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;’;

(3) a new Annex VIII is added in accordance with Annex VI to this Regulation.

Article 7

Amendments to Delegated Regulation (EU) No 874/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Delegated Regulation (EU) No 874/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in point 1 of Annex I is made available to dealers for each lamp model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other lamp models.’;

(b) in paragraph 2, the following point (e) is added:

‘(e) an electronic label in the format and containing information set out in point 2 of Annex I is made available to dealers for each luminaire model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other luminaire models.’;

(2) Article 4 is amended as follows:

(a) in paragraph 1, point (a) is replaced by the following:

‘(a) each model offered for sale, hire or hire-purchase where the final owner cannot be expected to see the product displayed is marketed with the information to be provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label has been made available in accordance with Article 3(1)(f) the provisions in Annex VIII shall apply instead;’;

(b) in paragraph 2, the following point (d) is added:

‘(d) each model offered for sale, hire or hire-purchase through the internet and for which an electronic label has been made available in accordance with Article 3(2)(e) is accompanied by the label in accordance with Annex VIII.’;

(3) a new Annex VIII is added in accordance with Annex VII to this Regulation.
**Article 8**

**Amendments to Delegated Regulation (EU) No 665/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

Delegated Regulation (EU) No 665/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC, is amended as follows:

1. Article 3 is amended as follows:
   
   (a) in paragraph 1, the following point (f) is added:
   
   ‘(f) an electronic label in the format and containing the information set out in Annex II is made available to dealers for each vacuum cleaner model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other vacuum cleaner models;’;
   
   (b) in paragraph 1, the following point (g) is added:
   
   ‘(g) an electronic product fiche as set out in Annex III is made available to dealers for each vacuum cleaner model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other vacuum cleaner models;’;

2. in Article 4, point (b) is replaced by the following:
   
   ‘(b) vacuum cleaners offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, are marketed with the information provided by suppliers in accordance with Annex V to this Regulation. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1)(f) and 3(1)(g) the provisions in Annex VIII shall apply instead;’;

3. a new Annex VIII is added in accordance with Annex VIII to this Regulation.

**Article 9**

**Amendments to Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC, is amended as follows:

1. Article 3 is amended as follows:
   
   (a) in paragraph 1, the following point (f) is added in the first subparagraph:
   
   ‘(f) an electronic label in the format and containing the information set out in point 1.1 of Annex III is made available to dealers for each space heater model conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;’;
   
   (b) in paragraph 1, the following point (g) is added in the first subparagraph: 
(g) an electronic product fiche as set out in point 1 of Annex IV is made available to dealers for each space heater model, whereby for heat pump space heaters models, the electronic product fiche is made available to dealers at least for the heat generator.

(c) in paragraph 1, the following subparagraph is added:

‘From 1 January 2020 an electronic label in the format and containing the information set out in point 1.2 of Annex III shall be made available to dealers for each space heater model conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II.’;

(d) in paragraph 2, the following point (f) is added in the first subparagraph:

‘(f) an electronic label in the format and containing the information set out in point 2.1 of Annex III is made available to dealers for each combination heater model conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;’;

(e) in paragraph 2, the following point (g) is added in the first subparagraph:

‘(g) an electronic product fiche as set out in point 2 of Annex IV is made available to dealers for each combination heater model, whereby for heat pump combination heaters models, the electronic product fiche is made available to dealers at least for the heat generator.’;

(f) in paragraph 2, the following subparagraph is added:

‘From 1 January 2020 an electronic label in the format and containing the information set out in point 2.2 of Annex III shall be made available to dealers for each combination heater model conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;’;

(g) in paragraph 3, the following point (c) is added:

‘(c) an electronic product fiche, as set out in point 3 of Annex IV, is made available to dealers for each temperature control model.’;

(h) in paragraph 4, the following point (c) is added:

‘(c) an electronic product fiche, as set out in point 4 of Annex IV, is made available to dealers for each solar device model.’;

(i) in paragraph 5, the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in point 3 of Annex III is made available to dealers for each model comprising a package of space heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;’;

(j) in paragraph 5, the following point (g) is added:

‘(g) an electronic product fiche as set out in point 5 of Annex IV is made available to dealers for each model comprising a package of space heater, temperature control and solar device.’;

(k) in paragraph 6, the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in point 4 of Annex III is made available to dealers for each model comprising a package of combination heater, temperature control and solar device conforming to the seasonal space heating energy efficiency
classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;’;

(1) in paragraph 6, the following point (g) is added:

‘(g) an electronic product fiche as set out in point 6 of Annex IV is made available to dealers for each model comprising a package of combination heater, temperature control and solar device.’;

(2) Article 4 is amended as follows:

(a) in paragraph 1, point (b) is replaced by the following:

‘(b) space heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the space heater displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;’;

(b) in paragraph 2, point (b) is replaced by the following:

‘(b) combination heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the combination heater displayed, are marketed with the information provided by the suppliers in accordance with point 2 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;’;

(c) in paragraph 3, point (b) is replaced by the following:

‘(b) packages of space heater, temperature control and solar device offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the package of space heater, temperature control and solar device displayed, are marketed with the information provided in accordance with point 3 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;’;

(d) in paragraph 4, point (b) is replaced by the following:

‘(b) packages of combination heater, temperature control and solar device offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the package of combination heater, temperature control and solar device displayed, are marketed with the information provided in accordance with point 4 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;’;

(3) Annex VI is amended in accordance with Annex IX to this Regulation;

(4) a new Annex IX is added in accordance with Annex IX to this Regulation.

**Article 10**

Amendments to Delegated Regulation (EU) No 812/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Delegated Regulation (EU) No 812/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (f) is added in the first subparagraph:

‘(f) an electronic label in the format and containing the information set out in point 1.1 of Annex
III is made available to dealers for each water heater model conforming to the water heating energy efficiency classes set out in point 1 of Annex II;”;

(b) in paragraph 1, the following point (g) is added in the first subparagraph:

‘(g) an electronic product fiche as set out in point 1 of Annex IV is made available to dealers for each water heater model, whereby for heat pump water heaters models, the electronic product fiche is made available to dealers at least for the heat generator.’;

(c) in paragraph 1, the following subparagraph is added:

‘From 1 January 2020 an electronic label in the format and containing the information set out in point 1.2 of Annex III shall be made available to dealers for each water heater model conforming to the water heating energy efficiency classes set out in point 1 of Annex II.’;

(d) in paragraph 2, the following point (f) is added in the first subparagraph:

‘(f) an electronic label in the format and containing the information set out in point 2.1 of Annex III is made available to dealers for each hot water storage tank model in accordance with the energy efficiency classes set out in point 2 of Annex II;’;

(e) in paragraph 2, the following point (g) is added in the first subparagraph:

‘(g) an electronic product fiche as set out in point 2 of Annex IV is made available to dealers for each hot water storage tank model.’;

(f) in paragraph 2, the following subparagraph is added:

‘From 1 January 2020 an electronic label in the format and containing the information set out in point 2.2 of Annex III shall be made available to dealers for each hot water storage tank model, in accordance with the energy efficiency classes set out in point 2 of Annex II.’;

(g) in paragraph 3, the following point (c) is added:

‘(c) an electronic product fiche, as set out in point 3 of Annex IV, is made available to dealers for each solar device model.’;

(h) in paragraph 4, the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in point 3 of Annex III is made available to dealers for each model comprising a package of water heater and solar device, in accordance with the water heating energy efficiency classes set out in point 1 of Annex II;’;

(i) in paragraph 4, the following point (g) is added:

‘(g) an electronic product fiche as set out in point 4 of Annex IV is made available to dealers for each model comprising a package of water heater and solar device.’;

(2) Article 4 is amended as follows:

(a) in paragraph 1, point (b) is replaced by the following:

‘(b) water heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the water heater displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;’;

(b) in paragraph 2, point (b) is replaced by the following:

‘(b) hot water storage tanks offered for sale, hire or hire-purchase, where the end user cannot be
expected to see the hot water storage tank displayed, are marketed with the information provided by the suppliers in accordance with point 2 of Annex VI; except where the offer is made through the internet in which case the provisions in Annex X shall apply;’;

(c) in paragraph 3, point (b) is replaced by the following:

‘(b) packages of water heater and solar device offered for sale, hire or hire purchase, where the end-user cannot be expected to see the package of water heater and solar device displayed, are marketed with the information provided in accordance with point 3 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;’;

(3) Annex VI is amended in accordance with Annex X to this Regulation;

(4) A new Annex X is added in accordance with Annex X to this Regulation.

Article 11
Entry into force and application

This Regulation shall enter into force on the date of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.

Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 518/2014

ANNEX I

Amendments to the Annexes to Delegated Regulation (EU) 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

The following Annex VIII is added:

‘ANNEX VIII

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

4

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.”
ANNEX II
Amendments to the Annexes to Delegated Regulation (EU) No 1060/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC- EnC

The following Annex X is added:

‘ANNEX X
Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
   (a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
   (b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
   (c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
   (d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 3 of Annex II. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:
   (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
   (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
   (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:
   (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
   (b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'
ANNEX III

Amendments to the Annexes to Delegated Regulation (EU) No 1061/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

The following Annex VIII is added:

‘ANNEX VIII

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

\[ \text{A}++ \quad \text{A}++ \]

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.”
ANNEX IV

Amendments to the Annexes to Delegated Regulation (EU) No 1062/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

The following Annex IX is added:

‘ANNEX IX

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(3). The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 5 of Annex V. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(1)(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'
ANNEX V

Amendments to the Annexes to Delegated Regulation (EU) No 392/2012,
as incorporated and adapted by the Ministerial Council Decision
2014/02/MC- EnC

The following Annex IX is added:

‘ANNEX IX

Information to be provided in the case of sale, hire or hire-purchase through
the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used
for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click,
mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate
computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be
presented in non-graphical form where display devices cannot render the graphic or as an aid to
accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(h) shall be shown
on the display mechanism in proximity to the price of the product in accordance with the timetable set
out in Article 3(4) to 3(6). The size shall be such that the label is clearly visible and legible and shall be
proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which
case the image used for accessing the label shall comply with the specifications laid down in point 3 of
this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or
tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent
to that of the price; and
(c) have one of the following two formats:

![A+++ A+++](image)

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity
to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(1)(i) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.”
ANNEX VI

Amendments to the Annexes to Delegated Regulation (EU) No 392/2012,
as incorporated and adapted by the Ministerial Council Decision
2014/02/MC- EnC

The following Annex VIII is added:

‘ANNEX VIII

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 4 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.’
ANNEX VII

Amendments to the Annexes to Delegated Regulation (EU) No 874/2012,
as incorporated and adapted by the Ministerial Council Decision
2014/02/MC- EnC

The following Annex VIII is added:

‘ANNEX VIII

Information to be provided in the case of sale, hire or hire-purchase through
the internet

(1) For the purpose of points 2 to 4 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used
for displaying internet content to users;
(b) “nested display” means visual interface where an image or data set is accessed by a mouse click,
mouse roll-over or tactile screen expansion of another image or data set;
(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate
computer or a smartphone;
(d) “alternative text” means text provided as an alternative to a graphic allowing information to be
presented in non-graphical form where display devices cannot render the graphic or as an aid to
accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) or Article 3(2)(e)
shall be shown on the display mechanism in proximity to the price of the product. The size shall be such
that the label is clearly visible and legible and shall be proportionate to the size specified in Annex I. The
label may be displayed using a nested display, in which case the image used for accessing the label shall
comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall
appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent
to that of the price; and
(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity
to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.’
ANNEX VIII

Amendments to the Annexes to Delegated Regulation (EU) No 665/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC- EnC

The following Annex VII is added:

‘ANNEX VII

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(2). The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 3 of Annex II. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(1)(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.”
ANNEX IX

Amendments to the Annexes to Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

(a) In Annex VI the title is replaced by the following:

‘Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet’

(b) The following Annex IX is added:

‘ANNEX IX

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;

(b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:
(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
ANNEX X

Amendments to the Annexes to Delegated Regulation (EU) No 812/2013,
as incorporated and adapted by the Ministerial Council Decision
2014/02/MC-EnC

(a) In Annex VI the title is replaced by the following:

‘Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet’

(b) The following Annex X is added:

‘ANNEX X

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;

(b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:
(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.’
DELEGATED REGULATION (EU) 2015/1094 of 5 May 2015 supplementing Directive 2010/30/EU with regard to the energy labelling of professional refrigerated storage cabinets

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in bold and blue.

Article 1
Subject matter and scope

1. This Regulation establishes requirements for the labelling of, and the provision of supplementary product information on, professional refrigerated storage cabinets.
2. This Regulation shall apply to electric mains-operated professional refrigerated storage cabinets, including those sold for the refrigeration of foodstuffs and animal feed.
3. This Regulation shall not apply to the following products:
   (a) professional refrigerated storage cabinets that are primarily powered by energy sources other than electricity;
   (b) professional refrigerated storage cabinets operating with a remote condensing unit;
   (c) open cabinets, where their openness is a fundamental requirement for their primary functionality;
   (d) cabinets specifically designed for food processing, where the mere presence of one compartment, with a net volume equivalent to less than 20% of the cabinet’s total net volume and specifically designed for food processing, is not sufficient for exemption;
   (e) cabinets specifically designed only for the purpose of thawing frozen foodstuffs in a controlled manner, where the mere presence of one compartment specifically designed for thawing frozen foodstuffs in a controlled manner is not sufficient for exemption;
   (f) saladettes;
   (g) serve-over counters and other similar forms of cabinet primarily intended for display and sale of foodstuffs in addition to refrigeration and storage;
   (h) cabinets that do not use a vapour compression refrigeration cycle;
   (i) custom-made professional refrigerated storage cabinets, made on a one-off basis according to individual customer specification and not equivalent to other professional refrigerated storage cabinets as described in definition 9 of Annex I;
   (j) refrigerator-freezers;
   (k) static-air cabinets;
   (l) built-in cabinets;
Article 2
Definitions

The following definitions shall apply for the purpose of this Regulation:

(a) ‘professional refrigerated storage cabinet’ means an insulated refrigerating appliance integrating one or more compartments accessible via one or more doors or drawers, capable of continuously maintaining the temperature of foodstuffs within prescribed limits at chilled or frozen operating temperature, using a vapour compression cycle, and intended for the storage of foodstuffs in non-household environments but not for the display to or access by customers;

(b) ‘foodstuffs’ means food, ingredients, beverages, including wine, and other items primarily intended for consumption which require refrigeration at specified temperatures;

(c) ‘built-in cabinet’ means a fixed insulated refrigerating appliance intended to be installed in a cabinet, in a prepared recess in a wall or similar location, and requiring furniture finishing;

(d) ‘roll-in cabinet’ means a professional refrigerated storage cabinet including one unique compartment that allows wheeled racks of product to be wheeled in;

(e) ‘pass-through cabinet’ means a professional refrigerated storage cabinet accessible from both sides;

(f) ‘static-air cabinet’ means a professional refrigerated storage cabinet without internal forced-air circulation, specifically designed to store temperature-sensitive foodstuffs or to avoid a drying effect on foodstuffs stored without a sealed enclosure, where a single static air compartment within the cabinet is not sufficient to designate the cabinet as a static air cabinet;

(g) ‘open cabinet’ means a professional refrigerated storage cabinet whose refrigerated enclosure can be reached from the outside without opening a door or a drawer, where the mere presence of one compartment which can be reached from the outside without opening a door or a drawer, with a net volume equivalent to less than 20% of the professional refrigerated storage cabinet’s total volume, is not sufficient to qualify it as such;

(h) ‘saladette’ means a professional refrigerated storage cabinet with one or more doors or drawer fronts in the vertical plane that has cut-outs in the top surface into which temporary storage bins can be inserted for easy-access storage of foodstuffs such as, but not limited to, pizza toppings or salad items;

(i) ‘combined cabinet’ means a professional refrigerated storage cabinet including two or more compartments with different temperatures for the refrigeration and storage of foodstuffs;

(j) ‘refrigerator-freezer’ means a type of combined cabinet including at least one compartment exclusively intended for chilled operating temperature and one compartment exclusively intended for frozen operating temperature;

(k) ‘chest freezer’ means a food freezer in which the compartment(s) is accessible from the top of the appliance or which has both top-opening type and upright type compartments but where the gross volume of the top-opening type compartment(s) exceeds 75% of the total gross volume of the appliance.
Article 3
Responsibilities of suppliers and timetable

1. From 1 January 2020, suppliers placing professional refrigerated storage cabinets on the market or putting them into service shall ensure that the following requirements are met:

(a) a printed label in the format and containing the information set out in Annex III shall be provided for each professional refrigerated storage cabinet;

(b) an electronic label in the format and containing the information set out in Annex III shall be made available to dealers for each professional refrigerated storage cabinet model;

(c) a product fiche, as set out in Annex IV, shall be made available;

(d) an electronic product fiche, as set out in Annex IV, shall be made available to dealers for each professional refrigerated storage cabinet model;

(e) technical documentation, as set out in Annex V, shall be provided on request to the authorities of the Contracting Parties;

(f) any advertisement relating to a specific professional refrigerated storage cabinet model and containing energy-related or price information shall include a reference to the energy efficiency class of that model;

(g) any technical promotional material concerning a specific professional refrigerated storage cabinet model and describing its specific technical parameters shall include a reference to the energy efficiency class of that model.

2. The labels in Annex III shall accompany professional refrigerated storage cabinets placed on the market according to the following timetable:

- <...>
- from 1 January 2020: label 2.

Article 4
Responsibilities of dealers

Dealers of professional refrigerated storage cabinets shall ensure that the following requirements are met:

(a) at the point of sale, each professional refrigerated storage cabinet shall bear the label provided by suppliers in accordance with Article 3(1) on the outside of the front or top of the appliance, so that it is clearly visible;

(b) professional refrigerated storage cabinets offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the product displayed, shall be marketed with the information provided by the suppliers in accordance with Annex VI, except where the offer is made on the internet, in which case:

(c) any advertisement relating to a specific professional refrigerated storage cabinet model and containing energy-related or price information shall include a reference to the energy efficiency class of that model;

(d) any technical promotional material concerning a specific professional refrigerated storage cabinet model and describing its specific technical parameters shall include a reference to the energy efficiency class of that model.

1 The first indent in Article 3(2) shall not be applicable in accordance with Article 3(4)(a) of Decision 2018/03/MC-EnC.
class of that model.

**Article 5**

**Measurement and calculation**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation procedures based on recognised state-of-the-art methods, as set out in Annex IX.

**Article 6**

**Verification procedure for market surveillance purposes**

Contracting Parties shall apply the procedure set out in Annex X when assessing the conformity of the declared energy efficiency class, annual energy consumption and volumes.

**Article 7**

**Review**

<...>²

**Article 8**

**Entry into force and application**

This Regulation shall enter into force on the day of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.

Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.

---

² Not applicable in accordance with Article 3(4)(a) of Decision 2018/03/MC-EnC
ANNEX I

Definitions applicable for Annexes II to X

For the purposes of Annexes II to X, the following definitions shall apply:

(1) ‘net volume’ means the volume containing foodstuffs within the load limit;

(2) ‘chilled operating temperature’ means that the temperature of foodstuffs stored in the cabinet is continuously maintained at a temperature between –1 °C and 5 °C;

(3) ‘frozen operating temperature’ means that the temperature of foodstuffs stored in the cabinet is continuously maintained at a temperature lower than –15 °C, which is understood as the highest temperature of the warmest package test;

(4) ‘multi-use cabinet’ means that a professional refrigerated storage cabinet or separate compartment of the same cabinet may be set at different temperatures for chilled or frozen foodstuffs;

(5) ‘vertical cabinet’ means a professional refrigerated storage cabinet of overall height equal to or higher than 1050 mm with one or more front doors or drawers accessing the same compartment;

(6) ‘counter cabinet’ means a professional refrigerated storage cabinet of overall height lower than 1050 mm with one or more front doors or drawers accessing the same compartment;

(7) ‘light-duty cabinet’, also known as ‘semi-professional cabinet’, means a professional refrigerated storage cabinet only capable of continuously maintaining chilled or frozen operating temperature in all its compartment(s) in ambient conditions corresponding to climate class 3, as detailed in Table 3 of Annex IX; if the cabinet is able to maintain temperature in ambient conditions corresponding to climate class 4, it shall not be considered a light-duty cabinet;

(8) ‘heavy-duty cabinet’ means a professional refrigerated storage cabinet capable of continuously maintaining chilled or frozen operating temperature in all its compartment(s) in ambient conditions corresponding to climate class 5, as detailed in Table 3 in Annex IX;

(9) ‘equivalent professional refrigerated storage cabinet’ means a professional refrigerated storage cabinet model placed on the market with the same net volume, same technical, efficiency and performance characteristics, and same compartment types and volumes as another professional refrigerated storage cabinet model placed on the market under a different commercial code number by the same manufacturer.
ANNEX II

Energy efficiency classes

The energy efficiency class of a professional refrigerated storage cabinet shall be determined on the basis of its energy efficiency index (EEI), as set out in Table 1.

Table 1

<table>
<thead>
<tr>
<th>Energy efficiency class</th>
<th>EEI</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+++</td>
<td>EEI &lt; 5</td>
</tr>
<tr>
<td>A++</td>
<td>5 ≤ EEI &lt; 10</td>
</tr>
<tr>
<td>A+</td>
<td>10 ≤ EEI &lt; 15</td>
</tr>
<tr>
<td>A</td>
<td>15 ≤ EEI &lt; 25</td>
</tr>
<tr>
<td>B</td>
<td>25 ≤ EEI &lt; 35</td>
</tr>
<tr>
<td>C</td>
<td>35 ≤ EEI &lt; 50</td>
</tr>
<tr>
<td>D</td>
<td>50 ≤ EEI &lt; 75</td>
</tr>
<tr>
<td>E</td>
<td>75 ≤ EEI &lt; 85</td>
</tr>
<tr>
<td>F</td>
<td>85 ≤ EEI &lt; 95</td>
</tr>
<tr>
<td>G</td>
<td>95 ≤ EEI &lt; 115</td>
</tr>
</tbody>
</table>

The EEI shall be calculated as detailed in Annex VIII.
ANNEX III
Labels

1. Label 1 – Professional refrigerated storage cabinets in energy efficiency classes A to G

The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the energy efficiency class, determined in accordance with Annex II; the head of the arrow containing the energy efficiency class shall be placed at the same height as that for the relevant energy efficiency class;
IV. the annual electricity consumption in kWh in terms of final energy consumption per year, calculated in accordance with Annex IX and rounded to the nearest integer;
V. the sum of the net volumes, expressed in litres, of all chilled compartments functioning at chilled operating temperature; where no compartments functioning at chilled operating temperature are present, the supplier shall declare ‘- L’ instead of a value;
VI. the sum of the net volumes, expressed in litres, of all compartments functioning at frozen operating temperature; where no compartments functioning at frozen operating temperature are present, the supplier shall declare ‘- L’ instead of a value;
VII. the climate class (3, 4 or 5), together with the associated dry bulb temperature (in °C) and the relative
humidity (in %), as referred to in Table 3, Annex IX.

The design of the label shall be in accordance with point 3. By way of derogation, where a model has been awarded an ‘EU ecolabel’, a copy of the ecolabel may be added.

2. Label 2 – Professional refrigerated storage cabinets in energy efficiency classes A+++ to G

The information listed in point 1 shall be included in this label.

The design of the label shall be in accordance with point 3. By way of derogation, where a model has been awarded an ‘EU eco-label’, a copy of the eco-label may be added.
3. The design of the label for professional refrigerated storage cabinets shall be as follows:

Where:
(a) The label shall be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(b) The background of the label shall be white.
(c) Colours shall be CMYK – cyan, magenta, yellow and black; for example, 00-70-X-00 indicates 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(d) The label shall meet the following specifications (numbers refer to the figure above):
1  EU label border stroke: 5 pt – colour: Cyan 100 % – round corners: 3,5 mm;
2  EU logo: colours: X-80-00-00 and 00-00-X-00;
3  Energy label: colour: X-00-00-00;
   Pictogram as depicted (EU logo + energy label): 92 mm wide × 17 mm high;
4  Sub-logos border: 1 pt – colour: Cyan 100 % – 92,5 mm long;
5  A-G scale
   Arrow: 7 mm high, gap 0,75 mm – colours:
      Highest class: X-00-X-00,
      Second class: 70-00-X-00,
      Third class: 30-00-X-00,
      Fourth class: 00-00-X-00,
      Fifth class: 00-30-X-00,
      Sixth class: 00-70-X-00,
      Last classes: 00-X-X-00.
   Text: Calibri bold 19 pt, capitals and white; ‘+’ symbols: Calibri bold 13 pt, superscript, white, aligned on a single row;
6  Energy efficiency class
   Arrow: 26 mm wide × 14 mm high, 100 % black;
   Text: Calibri bold 29 pt, capitals and white; ‘+’ symbols: Calibri bold 18 pt, superscript, white and aligned on a single row;
7  Energy
   Text: Calibri regular 11 pt, capitals, 100 % black;
8  Annual energy consumption
   Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm;
   Value: Calibri bold 32 pt, 100 % black;
   2nd line: Calibri regular 14 pt, 100 % black;
9  Sum of the net volumes of all compartments functioning at chilled operating temperature
   Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm;
   Value: Calibri bold 25 pt, 100 % black; Calibri regular 17 pt, 100 % black;
10 Climate class together with the associated dry bulb temperature and the relative humidity
   Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm;
   Value: Calibri bold 25 pt, 100 % black;
   2nd line: Calibri regular 14 pt, 100 % black;
11 Sum of the net volumes of all compartments functioning at frozen operating temperature
   Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm;
   Value: Calibri bold 25 pt, 100 % black; Calibri regular 17 pt, 100 % black;
Supplier’s name or trademark
Supplier’s model identifier
The supplier’s name or trademark and model identifier shall fit in a space of 90 × 15 mm
Number of Regulation

Text: Calibri bold 11 pt.
ANNEX IV

Product fiche

1. The information in the product fiche of the professional refrigerated storage cabinet shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trade mark;
(b) supplier’s model identifier;
(c) type of model in accordance with the definitions in Annex I;
(d) the energy efficiency class and energy efficiency index of the model, determined in accordance with Annex II;
(e) where the model has been awarded an ‘EU eco-label’ under Regulation (EC) No 66/2010, that information may be included;
(f) the energy consumption of the cabinet over 24 hours (E24h) and the annual energy consumption in kWh, calculated in accordance with Annex IX and rounded to the nearest integer;
(g) net volume of each compartment;
(h) climate class in accordance with Table 3 in Annex IX;
(i) for light-duty cabinets, the following sentence: ‘This appliance is intended for use in ambient temperatures up to 25 °C and therefore is not suitable for use in hot professional kitchens’;
(j) for heavy-duty cabinets, the following sentence: ‘This appliance is intended for use in ambient temperatures up to 40 °C’.

2. A single fiche may cover a number of professional refrigerated storage cabinet models supplied by the same supplier.

3. The information in the fiche may be given in the form of a copy of the label, either in colour or in black and white, in which case information listed in point 1 and not displayed on the label shall also be provided.
ANNEX V

Technical documentation

1. The technical documentation referred to in Article 3(1)(c) shall include:
   (a) the name and address of the supplier;
   (b) sufficient description of the professional refrigerated storage cabinet model for it to be unambiguously identified;
   (c) where appropriate, the references of the harmonised standards applied;
   (d) where appropriate, the other technical standards and specifications used;
   (e) the identification and signature of the person empowered to bind the supplier;
   (f) the results of the measurements and calculations for the technical parameters specified in Annex IX.

2. Where the information included in the technical documentation file for a professional refrigerated storage cabinet model has been obtained by a calculation based on an equivalent professional refrigerated storage cabinet model, the technical documentation shall include details of such calculations and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The technical information shall also include a list of all other equivalent professional refrigerated storage cabinet models where the information was obtained on the same basis.

3. The information contained in this technical documentation may be merged with the technical documentation provided in accordance with measures under Directive 2009/125/EC.
ANNEX VI
Information to be provided where end-users cannot be expected to see the product displayed, except on the internet

1. Where end-users cannot be expected to see the product displayed, except on the internet, the information shall be provided in the following order:
(a) the energy efficiency class of the model, in accordance with Annex II;
(b) the annual energy consumption in kWh per year, rounded to the nearest integer and calculated in accordance with Annex IX;
(c) the net volume of each compartment;
(d) the climate class in accordance with Annex IX.

2. Where other information contained in the product fiche is provided, it shall be in the form and order specified in Annex IV.

3. The size and font in which the information referred in this Annex is printed or shown shall be such that it is legible.
ANNEX VII

Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
   (a) ‘display mechanism’ means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
   (b) ‘nested display’ means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
   (c) ‘tactile screen’ means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
   (d) ‘alternative text’ means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3(1)(b) shall be shown on the display mechanism near the price of the product in accordance with the timelines indicated in Article 3(2). The size of the label shall be such that it is clearly visible and legible and shall be proportionate to the size specified in point 3 of Annex III. The label may be displayed using a nested display, in which case the image used for accessing it shall comply with the specifications in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:
   (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
   (b) indicate the energy efficiency class of the product in white in the same font size as that used for the price; and
   (c) be in one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:
   (a) the image referred to in point 3 of this Annex is shown on the display mechanism in proximity to the price of the product;
   (b) the image links to the label;
   (c) the label is displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
   (d) the label is displayed by pop up, new tab, new page or inset screen display;
   (e) for magnification of the label on tactile screens, the device conventions for tactile magnification apply;
   (f) display of the label is closed by means of a close option or other standard closing mechanism;
   (g) the alternative text for the graphic, to be displayed on failure to display the label, is the energy efficiency class of the product in the same font size as that used for the price.
5. The appropriate product fiche made available by suppliers in accordance with Article 3(1)(d) shall be shown on the display mechanism near the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing it shall clearly and legibly indicate ‘Product fiche’. If nested display is used, the fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
ANNEX VIII

Method for calculating the energy efficiency index for professional refrigerated storage cabinets

For the calculation of the energy efficiency index (EEI) of a professional refrigerated storage cabinet model, the annual energy consumption of the cabinet shall be compared to its standard annual energy consumption.

The EEI shall be calculated as:

\[ \text{EEI} = \left( \frac{\text{AEC}}{\text{SAEC}} \right) \times 100 \]

Where:

- \( \text{AEC} = \text{E}_{24h} \times \text{af} \times 365 \)
- \( \text{AEC} = \) annual energy consumption of the cabinet in kWh/year
- \( \text{E}_{24h} = \) energy consumption of the cabinet over 24 hours
- \( \text{af} = \) adjustment factor
- \( \text{SAEC} = \text{M} \times \text{Vn} + \text{N} \)
- \( \text{SAEC} = \) standard annual energy consumption of the cabinet in kWh/year
- \( \text{Vn} = \) net volume of the appliance, which is the sum of net volumes of all compartments of the cabinet, expressed in litres.
- \( \text{M} \) and \( \text{N} \) are given in the Table 2.

Table 2

ANNEX IX

Measurement and calculation

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published for that purpose in a dedicated section of the website of the Energy Community, or using other reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art methods. They shall meet the technical definitions, conditions, equations and parameters set out in this Annex.

2. For establishing the values of annual energy consumption and energy efficiency index for professional refrigerated storage cabinets, measurements shall be carried out under the following conditions:

- The temperature of test packages shall be between – 1 °C and 5 °C for chilled cabinets and lower than - 15 °C for frozen cabinets.

- The ambient conditions shall correspond to climate class 4 as detailed in Table 3, except for light-duty cabinets, which shall be tested in ambient conditions corresponding to climate class 3. Adjustment factors of 1,2 for light-duty cabinets at chilled operating temperature and 1,1 for light-duty cabinets at frozen operating temperature shall then be applied to the testing results obtained for light-duty cabinets.

- Professional refrigerated storage cabinets shall be tested:
  - at chilled operating temperature in the case of a combined cabinet containing at least one compartment exclusively intended for chilled operating temperature,
  - at chilled operating temperature in the case of a professional refrigerated storage cabinet which has solely one compartment exclusively intended for chilled operating temperature,
  - at frozen operating temperature in all other cases.

3. The ambient conditions of climate classes 3, 4 and 5 are shown in Table 3.

ANNEX X³

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

1. The Contracting Party authorities shall verify one single unit of the model.
2. The model shall be considered to comply with the applicable requirements if:
   a. the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MCEnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
   b. the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
   c. when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 4.
3. If the results referred to in points 2(a) or (b) are not achieved, the model and all equivalent professional refrigerated storage cabinets that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.
4. If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the technical documentation.
5. The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 4.
6. If the result referred to in point 5 is not achieved, the model and all equivalent professional refrigerated storage cabinets that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

³ Annex IX is amended in accordance with Article 13 and Annex XIII of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.
(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annexes VIII and IX.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 4 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

DELEGATED REGULATION (EU) 2015/1186 of 24 April 2015 supplementing Directive 2010/30/EU with regard to the energy labelling of local space heaters

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in bold and blue.

Article 1

Subject matter and scope

This Regulation establishes requirements for the energy labelling of, and the provision of supplementary product information on local space heaters with a nominal heat output of 50 kW or less.

This Regulation shall not apply to:
(a) electric local space heaters;
(b) local space heaters using a vapour compression cycle or sorption cycle for the generation of heat driven by electric compressors or fuel;
(c) solid fuel local space heaters that are specified for the combustion of non-woody biomass only;
(d) local space heaters specified for purposes other than indoor space heating to reach and maintain a certain thermal comfort of human beings by means of heat convection or heat radiation;
(e) local space heaters that are specified for outdoor use only;
(f) local space heaters of which the direct heat output is less than 6 % of the combined direct and indirect heat output at nominal heat output;
(g) solid fuel local space heaters that are not factory assembled, or are not provided as prefabricated components or parts by a single manufacturer which are to be assembled on site;
(h) luminous local space heaters and tube local space heaters;
(i) air heating products;
(j) sauna stoves.

Article 2

Definitions

In addition to the definitions set out in Article 2 of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, the following definitions shall apply for the purposes of this Regulation:

(1) ‘local space heater’ means a space heating device that emits heat by direct heat transfer or by direct
heat transfer in combination with heat transfer to a fluid, in order to reach and maintain a certain level of human thermal comfort within an enclosed space in which the product is situated, possibly combined with a heat output to other spaces and is equipped with one or more heat generators that convert electricity or gaseous, liquid or solid fuels directly into heat, through use of the Joule effect or combustion of fuels respectively;

(2) ‘solid fuel local space heater’ means an open fronted local space heater, closed fronted local space heater or cooker using solid fuels;

(3) ‘gaseous fuel local space heater’ means an open fronted local space heater or a closed fronted local space heater using gaseous fuel;

(4) ‘liquid fuel local space heater’ means an open fronted local space heater or a closed fronted local space heater using liquid fuel;

(5) ‘electric local space heater’ means a local space heater using the electric Joule effect to generate heat;

(6) ‘open fronted local space heater’ means a local space heater, using gaseous, liquid or solid fuels, of which the fire bed and combustion gases are not sealed from the space in which the product is fitted and which is sealed to a chimney or fireplace opening or requires a flue duct for the evacuation of products of combustion;

(7) ‘closed fronted local space heater’ means a local space heater, using gaseous, liquid or solid fuels, of which the fire bed and combustion gases can be sealed from the space in which the product is fitted and which is sealed to a chimney or fireplace opening or requires a flue duct for the evacuation of products of combustion;

(8) ‘cooker’ means a local space heater, using solid fuels, that integrates in one enclosure the function of a local space heater, and a hob, an oven or both to be used for preparation of food and which is sealed to a chimney or fireplace opening or requires a flue duct for the evacuation of products of combustion;

(9) ‘fuel fired local space heater’ means either an open fronted local space heater, closed fronted local space heater or cooker;

(10) ‘luminous local space heater’ means a local space heater, using gaseous or liquid fuel which is equipped with a burner; which is to be installed above head level, directed towards the place of use so that the heat emission of the burner, being predominantly infrared radiation, directly warms the subjects to be heated and which emits the products of combustion in the space where it is situated;

(11) ‘tube local space heater’ means a local space heater, using gaseous or liquid fuel, which is equipped with a burner; which is to be installed above head level, near the subjects to be heated, which heats the space primarily by infrared radiation from the tube or tubes heated by the internal passage of products of combustion and of which the products of combustion are to be evacuated through a flue duct;

(12) ‘flueless heater’ means a local space heater, using gaseous, liquid or solid fuel, emitting the products of combustion into the space where the product is situated, other than a luminous local space heater;

(13) ‘open to chimney heater’ means a local space heater, using gaseous, liquid or solid fuels intended to sit under a chimney or in a fireplace without sealing between the product and the chimney or fireplace opening, and allowing the products of combustion pass unrestricted from the fire bed to the chimney or flue;

(14) ‘air heating product’ means a product providing heat to an air-based heating system only that can be ducted and is designed to be used while fastened or secured in a specific location or wall mounted which distributes the air by means of an air moving device in order to reach and maintain a certain level
of human thermal comfort within an enclosed space in which the product is situated;

(15) ‘sauna stove’ means a local space heater, incorporated in, or declared to be used in, dry or wet sauna’s or similar environments;

(16) ‘solid fuel’ means a fuel which is solid at normal indoor room temperatures, including solid biomass and solid fossil fuel;

(17) ‘biomass’ means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;

(18) ‘woody biomass’ means biomass originating from trees, bushes and shrubs, including log wood, chipped wood, compressed wood in the form of pellets, compressed wood in the form of briquettes, and sawdust;

(19) ‘non-woody biomass’ means biomass other than woody biomass, including, inter alia, straw, miscanthus, reeds, kernels, grains, olive stones, olive cakes and nut shells;

(20) ‘preferred fuel’ means the single fuel which is to be preferably used for the local space heater according to the supplier’s instructions;

(21) ‘fossil solid fuel’ means solid fuel other than biomass, including anthracite and dry steam coal, hard coke, low temperature coke, bituminous coal, lignite, a blend of fossil fuels or a blend of biomass and fossil fuel; for the purposes of this Regulation it also includes peat;

(22) ‘other suitable fuel’ means a fuel, other than the preferred fuel, which can be used in the local space heater according to the supplier’s instructions and includes any fuel that is mentioned in the instruction manual for installers and end-users, on free access websites of manufacturers and suppliers, in technical or promotional material and in advertisements;

(23) ‘direct heat output’ means the heat output of the product by radiation and convection of heat, as emitted by or from the product itself to air, excluding the heat output of the product to a heat transfer fluid, expressed in kW;

(24) ‘indirect heat output’ means the heat output of the product to a heat transfer fluid by the same heat generation process that provides the direct heat output of the product, expressed in kW;

(25) ‘indirect heating functionality’ means the product is capable of transferring part of the total heat output to a heat transfer fluid, for use as space heating or domestic hot water generation.

(26) ‘nominal heat output’ (Pnom) means the heat output of a local space heater comprising both direct heat output and indirect heat output (where applicable), when operating at the setting for the maximum heat output that can be maintained over an extended period, as declared by the supplier, expressed in kW;

(27) ‘minimum heat output’ (Pmin) means the heat output of a local space heater comprising both direct heat output and indirect heat output (where applicable), when operating at the setting for the lowest heat output, as declared by the supplier, expressed in kW;

(28) ‘intended for outdoor use’ means the product is suitable for safe operation outside enclosed spaces, including possible use in outdoor conditions;

(29) ‘equivalent model’ means a model placed on the market with the same technical parameters set out in Table 2 or Table 3 of Annex V as another model placed on the market by the same supplier.

For the purposes of Annexes II to IX, additional definitions are set out in Annex I.
Article 3
Responsibilities of suppliers and timetable

1. From 1 January 2020 suppliers placing on the market or putting into service local space heaters that are not flueless heaters using solid fuels or open to chimney heaters using solid fuels shall ensure that:

(a) such local space heater is provided with a printed label in the format and containing the information set out in point 1 of Annex III and conforming to the energy efficiency classes set out in Annex II;

(b) an electronic label in the format and containing the information set out in point 1 of Annex III and conforming to the energy efficiency classes set out Annex II is made available to dealers for such local space heater model;

(c) a product fiche in accordance with Annex IV, is provided for such local space heater;

(d) an electronic product fiche, in accordance with Annex IV, is made available to dealers for such local space heater model;

(e) the technical documentation, as set out in Annex V, is provided on request to the authorities of the Contracting Parties and to the Secretariat;

(f) any advertisement related to a specific such local space heater model and containing energy-related or price information includes a reference to the energy efficiency class for that model;

(g) any technical promotional material concerning a specific such local space heater model and describing its specific technical parameters includes a reference to the energy efficiency class for that model.

2. From 1 January 2022 suppliers placing on the market or putting into service flueless heaters using solid fuels or open to chimney heaters using solid fuels shall ensure that:

(a) such local space heater is provided with a printed label in the format and containing the information set out in point 1 of Annex III and conforming to the energy efficiency classes set out in Annex II;

(b) an electronic label in the format and containing the information set out in point 1 of Annex III and conforming to the energy efficiency classes set out Annex II is made available to dealers for such local space heater model;

(c) a product fiche in accordance with Annex IV, is provided for such local space heater;

(d) an electronic product fiche, in accordance with Annex IV, is made available to dealers for such local space heater model;

(e) the technical documentation, as set out in Annex V, is provided on request to the authorities of the Contracting Parties and to the Secretariat;

(f) any advertisement related to a specific such local space heater model and containing energy-related or price information includes a reference to the energy efficiency class for that model;

(g) any technical promotional material concerning a specific such local space heater model and describing its specific technical parameters includes a reference to the energy efficiency class for that model.
**Article 4**

**Responsibilities of dealers**

Dealers of local space heaters shall ensure that:

(a) each local space heater bears, at the point of sale, the label provided by suppliers in accordance with Article 3, on the outside of the front of the local space heater, in such a way as to be clearly visible;

(b) local space heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the product displayed, are marketed with the information provided by the suppliers in accordance with Annex VI, except where the offer is made through the internet, in which case the provisions of Annex VII shall apply;

(c) any advertisement for a specific local space heater model which contains energy-related or price information includes a reference to the energy efficiency class of that model;

(d) any technical promotional material concerning a specific local space heater model which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

**Article 5**

**Measurement and calculation methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation methods which take into account the recognised state-of-the-art measurement and calculation methods, set out in Annex VIII.

**Article 6**

**Verification procedure for market surveillance purposes**

Contracting Parties shall apply the procedure laid down in Annex IX when assessing the conformity of the declared energy efficiency class of local space heaters.

**Article 7**

**Review**

<...>\(^1\)

**Article 8**

**Entry into force and application**

*This Regulation shall enter into force on the day of its adoption by the Ministerial Council.*

*It shall be transposed, implemented and applicable by 1 January 2020.*

\(^1\) Not applicable in accordance with Article 3(3)(a) of Decision 2018/03/MC-EnC
For flueless heaters using solid fuels and open to chimney heaters using solid fuels, it shall apply from 1 January 2022 as set out in Article 3(2). However, Articles 3(2)(f) and (g) and Article 4(b), (c) and (d) shall apply from 1 April 2022.

Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.
ANNEX I
Definitions applicable for Annexes II to IX

For the purposes of Annexes II to IX the following definitions shall apply:

(1) ‘conversion coefficient’ (CC) means a coefficient reflecting the estimated 40 % average EU generation efficiency referred to in Directive 2012/27/EU, as incorporated and adapted by the Ministerial Council Decision 2015/08/MC-EnC; the value of the conversion coefficient is CC = 2,5

(2) ‘net calorific value’ (NCV) means the total amount of heat released by a unit quantity of fuel containing the appropriate moisture of the fuel, when it is burned completely with oxygen, and when the products of combustion are not returned to ambient temperature;

(3) ‘useful efficiency, at either nominal or minimum heat output, ($\eta_{th,nom}$ or $\eta_{th,min}$, respectively)’ means the ratio of the useful heat output and the total energy input expressed in terms of NCV of a local space heater, expressed in %;

(4) ‘electric power requirement at nominal heat output’ ($el_{max}$) means the electric power consumption of the local space heater while providing the nominal heat output. The electric power consumption shall be established without consideration of the power consumption of a circulator in case the product offers indirect heating functionality and a circulator is incorporated, expressed in kW;

(5) ‘electric power requirement at minimum heat output’ ($el_{min}$) means the electric power consumption of the local space heater while providing the minimum heat output. The electric power consumption shall be established without consideration of the power consumption of a circulator in case the product offers indirect heating functionality and a circulator is incorporated, expressed in kW;

(6) ‘electric power requirement in standby mode’ ($el_{sb}$) means the electric power consumption of the product while in standby mode, expressed in kW;

(7) ‘permanent pilot flame power requirement’ ($P_{pilot}$) means the fuel consumption of gaseous, liquid or solid fuel of the product for the provision of a flame to serve as an ignition source for the more powerful combustion process needed for nominal or part load heat output, when lit for more than 5 minutes before the main burner is on, expressed in kW;

(8) ‘single stage heat output, no room temperature control’ means the product is not capable of varying its heat output automatically and that no feedback of room temperature is present to adapt the heat output automatically;

(9) ‘two or more manual stages, no room temperature control’ means the product is capable of varying its heat output manually by two or more levels of heat output and is not equipped with a device that automatically regulates the heat output in relation to a desired indoor temperature;

(10) ‘with mechanic thermostat room temperature control’ means the product is equipped with a non-electronic device that allows the product to automatically vary its heat output over a certain time period, in relation to a certain required level of indoor heating comfort;

(11) ‘with electronic room temperature control’ means the product is equipped with an electronic device, either integrated or external, that allows the product to automatically vary its heat output over a certain time period, in relation to a certain required level of indoor heating comfort;

---

(12) ‘with electronic room temperature control plus day timer’ means the product is equipped with an electronic device, either integrated or external, that allows the product to automatically vary its heat output over a certain time period, in relation to a certain required level of indoor heating comfort, and allows the setting of timing and temperature level for a 24-hours timer interval;

(13) ‘with electronic room temperature control plus week timer’ means the product is equipped with an electronic device, either integrated or external, that allows the product to automatically vary its heat output over a certain time period, in relation to a certain required level of indoor heating comfort, and allows the setting of timing and temperature levels for a full week. During the 7-day period the settings must allow a variation on a day-to-day basis;

(14) ‘room temperature control, with presence detection’ means the product is equipped with an electronic device, either integrated or external, that automatically reduces the set-point for the room temperature when no person is detected in the room;

(15) ‘room temperature control, with open window detection’ means the product is equipped with an electronic device, either integrated or external, that reduces the heat output when a window or door has been opened. Whenever a sensor is used to detect the opening of a window or door, it can be installed with the product, externally to the product, built in the building structure or as a combination of those options;

(16) ‘with distance control option’ means the function that allows remote interaction from outside the building in which the product is installed with the control of the product;

(17) ‘standby mode’ means a condition where the product is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only the following functions, which may persist for an indefinite time: reactivation function, or reactivation function and only an indication of enabled reactivation function, and/or information or status display;

(18) ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific local space heater model from other models with the same trade mark, supplier’s name or dealer’s name;

(19) ‘other fossil fuel’ means fossil fuel other than anthracite and dry steam coal, hard coke, low temperature coke, bituminous coal, lignite, peat or blended fossil fuel briquettes;

(20) ‘other woody biomass’ means woody biomass other than log wood with a moisture content of 25 % or less, briquetted fuel with a moisture content below 14 % or compressed wood with a moisture content below 12 %;

(21) ‘moisture content’ means the mass of water in the fuel in relation to the total mass of the fuel as used in the local space heater.
ANNEX II
Energy efficiency classes

The energy efficiency class of a local space heater shall be determined on the basis of its energy efficiency index as set out in Table 1.

Table 1

<table>
<thead>
<tr>

</table>

The energy efficiency index of a local space heater shall be calculated in accordance with Annex VIII.
ANNEX III

The label

(a) The following information shall be included in the label:

I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the energy efficiency class, determined in accordance with point 1 of Annex II; the head of the arrow containing the energy efficiency class of the local space heater shall be placed at the same height as the head of the relevant energy efficiency class;
IV. the symbol for direct heat output;
V. the direct heat output in kW, rounded to the nearest one decimal place;
VI. for local space heaters with heat transfer to a fluid, the symbol for indirect heat output;
VII. for local space heaters with heat transfer to a fluid, the indirect heat output in kW, rounded to the nearest one decimal place.

(b) The design aspects of the label for local space heaters shall be in accordance with point 2 of this Annex.

2. The design of the label for local space heaters shall be the following:

Whereby:
(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(b) The background shall be white.
(c) Colours are coded as CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):
1. **EU label border stroke**: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label**: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4. **Sub-logos border**: 1 pt, colour: cyan 100 %, length: 86 mm.
5. **Scale of energy classes**
   - Arrow: height: 6 mm, gap: 1,3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 14 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row;
6. **Energy efficiency class**:
   - Arrow: width: 22 mm, height: 12 mm, 100 % black,
7. **Direct heating functionality**:
   - Pictogram as depicted,
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm.
8. **If applicable, indirect heating functionality**:
   - Pictogram as depicted,
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm.
9. **Nominal direct heat output**:
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   - Value ‘XY,Z’: Calibri bold 34 pt, 100 % black,
   - Text ‘kW’: Calibri regular 18 pt, 100 % black.
10. **If applicable, nominal indirect heat output**:
    - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
    - Value ‘XY,Z’: Calibri bold 34 pt, 100 % black,
    - Text ‘kW’: Calibri regular 18 pt, 100 % black.
11. **Energy**:
    - Text: Calibri regular 8 pt, 100 % black.
12 Year of label introduction and number of Regulation:
- Text: Calibri bold 10 pt.

13 Supplier’s name or trademark.

14 Supplier’s model identifier:
- The supplier’s name or trade mark and model identifier shall fit in a space of 86 x 12 mm.
ANNEX IV
Product fiche

1. The information in the product fiche of the local space heater shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trademark;
(b) supplier’s model identifier;
(c) the energy efficiency class of the model, determined in accordance with point 1 of Annex II;
(d) the direct heat output in kW, rounded to the nearest one decimal place;
(e) the indirect heat output in kW, rounded to the nearest one decimal place;
(f) the energy efficiency index, rounded to the nearest integer and calculated in accordance with Annex VIII;
(g) the useful energy efficiency at nominal heat output, and at minimum load if applicable, rounded to the nearest one decimal place and calculated in accordance with Annex VIII;
(h) any specific precautions that shall be taken when the local space heater is assembled, installed or maintained.

2. One fiche may cover a number of local space heater models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.
ANNEX V

Technical documentation

For local space heaters, the technical documentation referred to in Article 3(1)(e) and Article 3(2)(e) shall include:

(a) the name and address of the supplier;
(b) the model identifier;
(c) where appropriate, the references of the harmonised standards applied;
(d) where the preferred fuel is other woody biomass, non-woody biomass, other fossil fuel or other blend of biomass and fossil fuel as referred to in Table 2, a description of the fuel sufficient for its unambiguous identification and the technical standard or specification of the fuel, including the measured moisture content and the measured ash content, and for other fossil fuel also the measured volatile content of the fuel;
(e) where appropriate, the other technical standards and specifications used;
(f) the identification and signature of the person empowered to bind the supplier;
(g) the information included in Table 2 (for solid fuel local space heaters) and Table 3 (for gaseous/liquid fuel local space heaters), measured and calculated in accordance with Annex VIII;
(h) reports of tests undertaken by suppliers or on their behalf, including the name and address of the body that conducted the tests;
(i) any specific precautions that shall be taken when the local space heater is assembled, installed or maintained;
(j) a list of equivalent models, if applicable. This information may be merged with the technical documentation provided in accordance with measures under Directive 2009/125/EC of the European Parliament and of the Council.

ANNEX VI

Information to be provided in cases where end-users cannot be expected to see the product displayed, except on the internet

1. The information referred to in Article 4(1)(b) shall be provided in the following order:
   (a) the energy efficiency class of the model, determined in accordance with point 1 of Annex II;
   (b) the direct heat output in kW, rounded to the nearest one decimal place;
   (c) the indirect heat output in kW, rounded to the nearest one decimal place.

2. The size and font in which the information referred in point 1 is printed or shown shall be legible.
ANNEX VII

Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex, the following definitions shall apply:
(a) ‘display mechanism’ means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
(b) ‘nested display’ means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
(c) ‘tactile screen’ means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
(d) ‘alternative text’ means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3(1)(b) or Article 3(2)(b) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:
(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
(c) have one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:
(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.
5. The appropriate product fiche made available by suppliers in accordance with Article 3(1)(d) or Article 3(2)(d) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate ‘Product fiche’. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
ANNEX VIII

Measurements and calculations

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published for this purpose in a dedicated section of the website of the Energy Community, or using other reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art methods. They shall meet the conditions set out in points 2 to 4.

2. General conditions for measurements and calculations

(a) Local space heaters shall be tested for the preferred fuel in order to determine the energy efficiency index, direct and indirect heat output.

(b) Declared values for direct and indirect heat output, and energy efficiency index, shall be rounded to the nearest one decimal place.

3. General conditions for energy efficiency index and consumption of local space heaters:

(a) The useful efficiency values $\eta_{th,nom}$, $\eta_{th,min}$ and the direct and indirect heat output values for $P_{nom}$, $P_{min}$ are measured, where applicable.

(b) The energy efficiency index (EEI) shall be calculated as the seasonal space heating energy efficiency in active mode ($\eta_{s,on}$) corrected for local space heaters using biomass as preferred fuel by a factor taking into account the renewable character of the preferred fuel, and corrected by contributions accounting for temperature controls, auxiliary electricity consumption and permanent pilot flame energy consumption. The energy efficiency index (EEI) is expressed as a figure equivalent to its figure expressed in percentage.

4. Specific conditions for seasonal space heating energy efficiency

(a) The energy efficiency index (EEI) of all local space heaters is defined as:

$$EEI = \left( \eta_{s,on} \cdot BLF \right) - 10\% + F(2) + F(3) - F(4) - F(5)$$

Where

- $\eta_{s,on}$ is the seasonal space heating energy efficiency in active mode, expressed in %, calculated as set out in point 4(b),
- $BLF$ is the biomass label factor, which is 1.45 for biomass local space heaters and 1 for fossil fuel local space heaters,
- $F(2)$ is a correction factor accounting for a positive contribution to the energy efficiency index due to adjusted contributions of controls of indoor heating comfort, the values of which are mutually exclusive, cannot be added on top of each other, expressed in %,
- $F(3)$ is a correction factor accounting for a positive contribution to the energy efficiency index due to adjusted contributions of controls for indoor heating comfort the values of which can be added on top of each other, expressed in %;
- $F(4)$ is a correction factor accounting for a negative contribution to the energy efficiency index by auxiliary electricity consumption, expressed in %;
- $F(5)$ is a correction factor accounting for a negative contribution to the energy efficiency index by energy consumption of a permanent pilot flame, expressed in %.
(b) The seasonal space heating energy efficiency in active mode is calculated as:

\[ S_{on} = \eta_{th,nom} \]

Where

- \( \eta_{th,nom} \) is the useful efficiency at nominal heat output, based on NCV.

(c) The correction factor \( F(2) \) accounting for a positive contribution to the energy efficiency index due to adjusted contributions of controls for indoor heating comfort, the values of which are mutually exclusive or cannot be added to each other, is calculated as follows:

For all local space heaters the correction factor \( F(2) \) is equal to one of the factors according to Table 4, depending on which control characteristic applies. Only one value can be selected.

<table>
<thead>
<tr>
<th>Table 4</th>
<th>Correction factor ( F(2) )</th>

</tr>
<tr>
<td>with electronic room temperature control plus day timer</td>
<td>6,0 %</td>
</tr>
<tr>
<td>with electronic room temperature control plus week timer</td>
<td>7,0 %</td>
</tr>
</tbody>
</table>

From 1 January 2022, \( F(2) \) shall be zero for solid fuel local space heaters with emissions, where the temperature control is set at the minimum heat output, higher than those set out in Annex II, point 2 of Commission Regulation (EU) 2015/1185. The heat output in this setting must not be higher than 50 % of the nominal heat output. From 1 January 2022, if \( F(2) \) is not zero the technical documentation shall include the relevant information on emissions at minimum heat output.

(d) The correction factor \( F(3) \) accounting for a positive contribution to the energy efficiency index due to adjusted contributions of controls for indoor heating comfort, the values of which can be added to each other, is calculated as follows:

For all local space heaters the correction factor \( F(3) \) is the summation of the values according to Table 5, depending on which control characteristic(s) applies.
Table 5

Correction factor $F(3)$

<table>
<thead>
<tr>
<th>If the product is equipped with (multiple options may apply):</th>

</tr>
</thead>
<tbody>
<tr>
<td>Fuel fired local space heaters</td>
<td></td>
</tr>
<tr>
<td>room temperature control with presence detection</td>
<td>1,0 %</td>
</tr>
<tr>
<td>room temperature control with open window detection</td>
<td>1,0 %</td>
</tr>
<tr>
<td>with distance control option</td>
<td>1,0 %</td>
</tr>
</tbody>
</table>

From 1 January 2022, $F(3)$ shall be zero for solid fuel local space heaters with emissions, where the temperature control is set at the minimum heat output, higher than those set out in Annex II, point 2 of Regulation (EU) 2015/1185. The heat output in this setting must not be higher than 50% of the nominal heat output. From 1 January 2022, if $F(3)$ is not zero the technical documentation shall include the relevant information on emissions at minimum heat output.

(e) The auxiliary electricity use correction factor $F(4)$ is calculated as:

$$F(4) = CC \cdot \frac{0.2 \cdot e_{\text{max}} + 0.8 \cdot e_{\text{min}} + 1.3 \cdot e_{\text{sb}}}{P_{\text{nom}}} \cdot 100 \,[\%]$$

This correction factor takes into account the auxiliary electricity consumption during on-mode and standby-mode operation.

For all local space heaters the auxiliary electricity consumption correction is calculated as follows: Where
- $e_{\text{max}}$ is the electric power consumption at nominal heat output, expressed in kW;
- $e_{\text{min}}$ is the electric power consumption at minimum heat output, expressed in kW. In case the product does not offer a minimum heat output the value for the electric power consumption at nominal heat output shall be used;
- $e_{\text{sb}}$ is the electric power consumption of the product while in standby mode, expressed in kW,
- $P_{\text{nom}}$ is the nominal heat output of the product, expressed in kW.

(f) The correction factor $F(5)$ related to the energy consumption of a permanent pilot flame is calculated as follows:

This correction factor takes into account the permanent pilot flame power requirement. For all local space heaters the correction factor is calculated as:

$$F(5) = 0.5 \cdot \frac{P_{\text{pilot}}}{P_{\text{nom}}} \cdot 100 \,[\%]$$

Where
- $P_{\text{pilot}}$ is the pilot flame consumption, expressed in kW,
- $P_{\text{nom}}$ is the nominal heat output of the product, expressed in kW.
ANNEX IX³

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MCEnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 6. The unit shall be tested with a fuel with characteristics in the same range as the fuel that was used by the supplier to perform the measurements described in Annex VIII.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 6.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

³ Annex IX is amended in accordance with Article 14 and Annex XIV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MCEnC.
(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VIII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 6 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

DELEGATED REGULATION (EU) 2015/1187 of 27 April 2015 supplementing Directive 2010/30/EU with regard to energy labelling of solid fuel boilers and packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in bold and blue.

Article 1
Subject matter and scope

1. This Regulation establishes requirements for the energy labelling of and the provision of supplementary product information on solid fuel boilers with a rated heat output of 70 kW or less and packages of a solid fuel boiler with a rated heat output of 70 kW or less, supplementary heaters, temperature controls and solar devices.

2. This Regulation shall not apply to:
   (a) boilers generating heat only for the purpose of providing hot drinking or sanitary water;
   (b) boilers for heating and distributing gaseous heat transfer media such as vapour or air;
   (c) solid fuel cogeneration boilers with a maximum electrical capacity of 50 kW or more;
   (d) non-woody biomass boilers.

Article 2
Definitions

In addition to the definitions set out in Article 2 of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, the following definitions shall apply for the purposes of this Regulation:

(1) ‘solid fuel boiler’ means a device equipped with one or more solid fuel heat generators that provides heat to a water-based central heating system in order to reach and maintain at a desired level the indoor temperature of one or more enclosed spaces, with a heat loss to its surrounding environment of not more than 6% of rated heat output;

(2) ‘water-based central heating system’ means a system using water as a heat transfer medium to distribute centrally generated heat to heat emitting devices for the heating of enclosed spaces within buildings or parts thereof, including block heating or district heating networks;

(3) ‘solid fuel heat generator’ means the part of a solid fuel boiler that generates the heat through the combustion of solid fuels;
(4) ‘rated heat output’ or ‘Pr’ means the declared heat output of a solid fuel boiler when providing heating of enclosed spaces with the preferred fuel, expressed in kW;

(5) ‘solid fuel’ means a fuel that is solid at normal indoor room temperatures, including solid biomass and solid fossil fuel;

(6) ‘biomass’ means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;

(7) ‘woody biomass’ means biomass originating from trees, bushes and shrubs, including log wood, chipped wood, compressed wood in the form of pellets, compressed wood in the form of briquettes, and sawdust;

(8) ‘non-woody biomass’ means biomass other than woody biomass, including straw, miscanthus, reeds, kernels, grains, olive stones, olive cakes and nut shells;

(9) ‘fossil fuel’ means fuel other than biomass, including anthracite, brown coal, coke, bituminous coal; for the purposes of this Regulation it also includes peat;

(10) ‘biomass boiler’ means a solid fuel boiler that uses biomass as the preferred fuel;

(11) ‘non-woody biomass boiler’ means a biomass boiler that uses non-woody biomass as the preferred fuel and for which woody biomass, fossil fuel or a blend of biomass and fossil fuel are not listed among its other suitable fuels;

(12) ‘preferred fuel’ means the single solid fuel which is to be preferably used for the boiler according to the supplier’s instructions;

(13) ‘other suitable fuel’ means a solid fuel, other than the preferred fuel, which can be used in the solid fuel boiler according to the supplier’s instructions and includes any fuel that is mentioned in the instruction manual for installers and end-users, on free access websites of suppliers, in technical promotional material and in advertisements;

(14) ‘solid fuel cogeneration boiler’ means a solid fuel boiler capable of simultaneously generating heat and electricity;

(15) ‘supplementary heater’ means a secondary boiler or heat pump falling within the scope of Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC, or a secondary solid fuel boiler, which generates extra heat where the heat demand is greater than the rated heat output of the primary solid fuel boiler;

(16) ‘temperature control’ means the equipment that interfaces with the end-user regarding the values and timing of the desired indoor temperature, and communicates relevant data to an interface of the solid fuel boiler such as a central processing unit, thus helping to regulate the indoor temperature(s);

(17) ‘solar device’ means a solar-only system, a solar collector, a solar hot water storage tank or a pump in the collector loop, which are placed on the market separately;

(18) ‘solar-only system’ means a device that is equipped with one or more solar collectors and solar hot water storage tanks and possibly pumps in the collector loop and other parts, which is placed on the market as one unit and is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(19) ‘solar collector’ means a device designed to absorb global solar irradiance and to transfer the heat energy so produced to a fluid passing through it;
(20) ‘solar hot water storage tank’ means a hot water storage tank storing heat energy produced by one or more solar collectors;

(21) ‘hot water storage tank’ means a vessel for storing hot water for water or space heating purposes, including any additives, which is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(22) ‘back-up immersion heater’ means a Joule effect electric resistance heater that is part of a hot water storage tank and generates heat only when the external heat source supply is disrupted (including during maintenance periods) or out of order, or that is part of a solar hot water storage tank and provides heat when the solar heat source is not sufficient to satisfy required comfort levels;

(23) ‘package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices’ means a package offered to the end-user containing a solid fuel boiler combined with one or more supplementary heaters, one or more temperature controls or one or more solar devices;

(24) ‘combination boiler’ means a solid fuel boiler that is designed to also provide heat to deliver hot drinking or sanitary water at given temperature levels, quantities and flow rates during given intervals, and is connected to an external supply of drinking or sanitary water.

For the purposes of Annexes II to X, additional definitions are set out in Annex I.

Article 3

Responsibilities of suppliers and timetable

1. From 1 January 2020 suppliers placing solid fuel boilers on the market or putting them into service, including those integrated in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, shall ensure that:

(a) each solid fuel boiler is provided with a printed label in the format and containing the information set out in point 1.1 of Annex III and conforming to the energy efficiency classes set out in Annex II, and each solid fuel boiler intended for use in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices is provided with a second label in the format and containing the information set out in point 2 of Annex III;

(b) an electronic label in the format and containing the information set out in point 1.1 of Annex III and conforming to the energy efficiency classes set out in Annex II is made available to dealers for each solid fuel boiler model;

(c) a product fiche, in accordance with point 1 of Annex IV, is provided for each solid fuel boiler, and a second fiche, in accordance with point 2 of Annex IV, is provided for each solid fuel boiler intended for use in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(d) an electronic product fiche, in accordance with point 1 of Annex IV, shall be made available to dealers for each solid fuel boiler model;

(e) the technical documentation, as set out in point 1 of Annex V, is provided on request to the authorities of the Contracting Parties and the Secretariat;

(f) any advertisement related to a specific solid fuel boiler model and containing energy-related information or price includes a reference to the energy efficiency class of that model;
(g) any technical promotional material concerning a specific solid fuel boiler model and describing its specific technical parameters includes a reference to the energy efficiency class of that model.

2. From **1 January 2020** suppliers placing solid fuel boilers on the market or putting them into service, including those integrated in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, shall ensure that:

(a) each solid fuel boiler is provided with a printed label in the format and containing the information set out in point 1.2 of Annex III and conforming to the energy efficiency classes set out in Annex II;

(b) an electronic label in the format and containing the information set out in point 1.2 of Annex III and conforming to the energy efficiency classes set out in Annex II is made available to dealers for each solid fuel boiler model.

3. From **1 January 2020** suppliers placing packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices on the market or putting them into service shall ensure that:

(a) a printed label in the format and containing the information set out in point 2 of Annex III and conforming to the energy efficiency classes set out in Annex II is provided for each package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(b) an electronic label in the format and containing the information set out in point 2 of Annex III and conforming to the energy efficiency classes set out in Annex II is made available to dealers for each model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(c) a product fiche, in accordance with point 2 of Annex IV, is provided for each package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(d) an electronic product fiche, in accordance with point 2 of Annex IV, is made available to dealers for each model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(e) the technical documentation, in accordance with point 2 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the **Secretariat**;

(f) any advertisement relating to a specific model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices and which contains energy-related information or price includes a reference to the energy efficiency class for that model;

(g) any technical promotional material concerning a specific model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices which describes its specific technical parameters includes a reference to the energy efficiency class for that model.
Article 4

Responsibilities of dealers

1. Dealers in solid fuel boilers shall ensure that:
   (a) each solid fuel boiler bears, at the point of sale, the label provided by suppliers in accordance with Article 3(1) or 3(2) on the outside of the front of the solid fuel boiler, in such a way as to be clearly visible;
   (b) solid fuel boilers offered for sale, hire or hire purchase, where the end-user cannot be expected to see the product displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex VII shall apply;
   (c) any advertisement for a specific solid fuel boiler model which contains containing energy-related or price information includes a reference to the energy efficiency class of that model;
   (d) any technical promotional material concerning a specific solid fuel boiler model which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

2. Dealers in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall ensure that:
   (a) any offer for a specific package includes the energy efficiency class for that package, by displaying on the package the label provided by the supplier in accordance with Article 3(3)(a) and the product fiche provided by the supplier in accordance with Article 3(3)(c), duly filled with the characteristics of that package;
   (b) packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices offered for sale, hire or hire purchase, where the end-user cannot be expected to see the package displayed, are marketed with the information provided in accordance with point 2 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex VII shall apply;
   (c) any advertisement relating to a specific model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar device models and which contains energy-related information or price includes a reference to the energy efficiency class for that model;
   (d) any technical promotional material concerning a specific model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices which describes its specific technical parameters includes a reference to the energy efficiency class for that model.

Article 5

Measurement and calculation methods

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation methods which take into account the recognised state-of-the-art measurement and calculation methods, set out in Annex VIII. The energy efficiency index shall be calculated as set out in Annex IX.
Article 6
Verification procedure for market surveillance purposes

Contracting Parties shall apply the procedure laid down in Annex X when assessing the conformity with this Regulation of the declared energy efficiency class of solid fuel boilers and packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices.

Article 7
Review
<...>\(^1\)

Article 8
Entry into force and application

This Regulation shall enter into force on the day of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.

Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.

\(^1\) Not applicable in accordance with Article 3(2)(a) of Decision 2018/03/MC-EnC
ANNEX I
Definitions applicable to Annexes II to X

For the purposes of Annexes II to X the following definitions shall apply:

(1) ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific model comprising a solid fuel boiler or a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices from other models with the same trade mark, supplier’s name or dealer’s name;

(2) ‘seasonal space heating energy efficiency’ or ‘\( \eta_s \)’ means the ratio between the space heating demand for a designated heating season, supplied by a solid fuel boiler and the annual energy consumption required to meet this demand, expressed in %;

(3) ‘electrical efficiency’ or ‘\( \eta_e \)’ means the ratio of the electricity output and the total energy input of a solid fuel cogeneration boiler, whereby the total energy input is expressed in terms of GCV or in terms of final energy multiplied by CC;

(4) ‘gross calorific value’ or ‘GCV’ means the total amount of heat released by a unit quantity of fuel containing the appropriate moisture content, when it is burned completely with oxygen, and when the products of combustion are returned to ambient temperature; this quantity includes the condensation heat of the water vapour formed by the combustion of any hydrogen contained in the fuel;

(5) ‘conversion coefficient’ or ‘CC’ means a coefficient reflecting the estimated 40 % average EU generation efficiency referred to in Directive 2012/27/EU of the European Parliament and of the Council, as incorporated and adapted by the Ministerial Council Decision 2015/08/MC-EnC; the value of the conversion coefficient is CC= 2,5;

(6) ‘temperature control fiche’ means the product fiche required to be provided for temperature controls by Article 3(3)(a) of Commission Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC;

(7) ‘boiler fiche’ means for solid fuel boilers the product fiche required to be provided by Article 3(1)(c) of this Regulation and for boilers other than solid fuel boilers the product fiche required to be provided for such boilers by Article 3(1)(b) of Commission Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC;

(8) ‘solar device fiche’ means the product fiche required to be provided for solar devices by Article 3(4)(a) of Commission Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC;

(9) ‘heat pump fiche’ means the product fiche required to be provided for heat pumps by Article 3(1)(b) of Commission Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC;

(10) ‘condensing boiler’ means a solid fuel boiler in which, under normal operating conditions and at given operating water temperatures, the water vapour in the combustion products is partially condensed, in order to make use of the latent heat of this water vapour for heating purposes;

(11) ‘other woody biomass’ means woody biomass other than: log wood with a moisture content of 25 % or less, chipped wood with a moisture content of 15 % or higher, compressed wood in the form of pellets.

2 Directive 2012/27/EU on Energy Efficiency, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC
or briquettes, or sawdust with a moisture content equal or less than 50 %;

(12) ‘moisture content’ means the mass of water in the fuel in relation to the total mass of the fuel as used in solid fuel boilers;

(13) ‘other fossil fuel’ means fossil fuel other than bituminous coal, brown coal (including briquettes), coke, anthracite or blended fossil fuel briquettes;

(14) ‘electric power requirement at maximum heat output’ or ‘el_{max}' means the electric power consumption of the solid fuel boiler at rated heat output, expressed in kW, excluding electricity consumption from a back-up heater and from incorporated secondary emission abatement equipment;

(15) ‘electric power requirement at minimum heat output’ or ‘el_{min}’ means the electric power consumption of the solid fuel boiler at applicable part load, expressed in kW, excluding electricity consumption from a back-up heater and from incorporated secondary emission abatement equipment;

(16) ‘back-up heater’ means a Joule-effect electric resistance element that generates heat only to prevent the solid fuel boiler or the water based central heating system from freezing or when the external heat source supply is disrupted (including during maintenance periods) or out of order;

(17) ‘applicable part load’ means for automatically stoked solid fuel boilers, operation at 30 % of rated heat output, and for manually stoked solid fuel boilers that can be operated at 50 % of rated heat output, operation at 50 % of rated heat output;

(18) ‘standby mode power consumption’ or ‘P_{SB}' means the power consumption of a solid fuel boiler in standby mode, excluding from incorporated secondary emission abatement equipment, expressed in kW;

(19) ‘standby mode’ means a condition where the solid fuel boiler is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only the following functions, which may persist for an indefinite time: reactivation function, or reactivation function and only an indication of enabled reactivation function, or information or status display;

(20) ‘seasonal space heating energy efficiency in active mode’ or ‘\eta_{son}' means

(a) for automatically stoked solid fuel boilers, a weighted average of the useful efficiency at rated heat output and the useful efficiency at 30 % of the rated heat output;

(b) for manually stoked solid fuel boilers that can be operated at 50 % of the rated heat output in continuous mode, a weighted average of the useful efficiency at rated heat output and the useful efficiency at 50 % of the rated heat output;

(c) for manually stoked solid fuel boilers that cannot be operated at 50 % or less of the rated heat output in continuous mode, the useful efficiency at rated heat output;

(d) for solid fuel cogeneration boilers, the useful efficiency at rated heat output;

(21) ‘useful efficiency’ or ‘\eta’ means the ratio of the useful heat output and the total energy input of a solid fuel boiler, whereby the total energy input is expressed in terms of GCV or in terms of final energy multiplied by CC;

(22) ‘useful heat output’ or ‘P’ means the heat output of a solid fuel boiler transmitted to the heat carrier, expressed in kW;

(23) ‘fossil fuel boiler’ means a solid fuel boiler that has fossil fuel or a blend of biomass and fossil fuel as the preferred fuel;

(24) ‘gross calorific value moisture free’ or ‘GCV_{mf}’ means the total amount of heat released by a unit quan-
tity of fuel dried of inherent moisture, when it is burned completely with oxygen, and when the products of combustion are returned to ambient temperature; this quantity includes the condensation heat of the water vapour formed by the combustion of any hydrogen contained in the fuel;

(25) ‘equivalent model’ means a model placed on the market with the same technical parameters set out in Table 4 of point 1 of Annex V, as another model placed on the market by the same supplier.
ANNEX II

Energy efficiency classes

The energy efficiency class of a solid fuel boiler shall be determined on the basis of its energy efficiency index as set out in Table 1.

The energy efficiency index of a solid fuel boiler shall be calculated in accordance with Annex IX.

ANNEX III
The labels

1. SOLID FUEL BOILERS
1.1. Label 1

(a) The following information shall be included in the label:

I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the space heating function;
IV. the energy efficiency class, determined in accordance with Annex II; the head of the arrow containing the energy efficiency class of the solid fuel boiler shall be placed at the same height as the head of the relevant energy efficiency class;
V. the rated heat output in kW, rounded to the nearest integer;
VI. for combination boilers, also the additional water heating function;
VII. for solid fuel cogeneration boilers, also the additional electricity generation function.

(b) The design aspects of the label for solid fuel boilers shall be in accordance with point 3 of this Annex. By way of exception, where a model has been granted an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

1.2. Label 2

(a) The information listed in point 1.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for solid fuel boilers shall be in accordance with point 3 of this Annex. By way of exception, where a model has been granted an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.
2. PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES

Label for packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices in energy efficiency classes A+++ to G

(a) The following information shall be included in the label:

I. dealer's or supplier's name or trade mark;
II. dealer's or supplier's model(s) identifier;
III. the space heating function;
IV. the energy efficiency class of the solid fuel boiler, determined in accordance with Annex II;
V. indication of whether a solar collector, hot water storage tank, temperature control or supplementary heater may be included in the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;
VI. the energy efficiency class of the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, determined in accordance with point 2 of Annex IV; the head of the arrow containing the energy efficiency class of the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall be placed at the same height as the head of the relevant energy efficiency class.

(b) The design aspects of the label for packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall be in accordance with point 4 of this Annex. For packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices in energy efficiency classes A+++ to D, the classes E to G in the A+++ to G scale may be omitted.
3. THE DESIGN OF THE LABEL FOR SOLID FUEL BOILERS SHALL BE THE FOLLOWING:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfill all of the following requirements (numbers refer to the figure above):

1. EU label border stroke: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. EU logo: Colours: X-80-00-00 and 00-00-X-00.
3. Energy label: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4. Sub-logos border: 1 pt, colour: cyan 100 %, length: 86 mm.
5 Space heating function:
   – Pictogram as depicted.

6 A**-G and A**+-D scales, respectively:
   – **Arrow**: height: 5 mm, gap: 1,3 mm, colours:
     – Highest class: X-00-X-00,
     – Second class: 70-00-X-00,
     – Third class: 30-00-X-00,
     – Fourth class: 00-00-X-00,
     – Fifth class: 00-30-X-00,
     – Sixth class: 00-70-X-00,
     – Seventh class: 00-X-X-00,
     – Eighth class: 00-X-X-00,
     – Last class: 00-X-X-00,
   – **Text**: Calibri bold 14 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row;
   – **Arrow**: height: 7 mm, gap: 1 mm, colours:
     – Highest class: X-00-X-00,
     – Second class: 70-00-X-00,
     – Third class: 30-00-X-00,
     – Fourth class: 00-00-X-00,
     – Fifth class: 00-30-X-00,
     – Sixth class: 00-70-X-00,
     – Last class: 00-X-X-00,
   – **Text**: Calibri bold 16 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

7 Energy efficiency class:
   – **Arrow**: width: 22 mm, height: 12 mm, 100 % black,
   – **Text**: Calibri bold 24 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

8 Rated heat output:
   – **Border**: 2 pt – colour: cyan 100 % – round corners: 3,5 mm,
   – **Value ‘YZ’**: Calibri bold 45 pt, 100 % black,
   – **Text ‘kW’**: Calibri regular 30 pt, 100 % black.

9 Water heating function
   – **Pictogram** as depicted,
   – **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

10 Electricity function:
    – **Pictogram** as depicted,
– **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

Year of label introduction and number of Regulation:
– **Text:** Calibri bold 10 pt. Supplier’s name or trademark. Supplier’s model identifier:
The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

4. **THE DESIGN OF THE LABEL FOR PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES SHALL BE THE FOLLOWING:**

![Diagram of the label with energy efficiency rating and various symbols]

whereby:
(a) The label shall be at least 210 mm wide and 297 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke:** 6 pt, colour: cyan 100 %, round corners: 3,5 mm.

2. **EU logo:** Colours: X-80-00-00 and 00-00-X-00.

3. **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 191 mm, height: 37 mm.

4. **Sub-logos border:** 2 pt, colour: cyan 100 %, length: 191 mm.

5. **Space heating function:**
   - Pictogram as depicted.

6. **Solid fuel boiler:**
   - Pictogram as depicted,
   - Energy efficiency class of solid fuel boiler:
     - Arrow: width: 24 mm, height: 14 mm, 100 % black;
     - Text: Calibri bold 28 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row,
     - Border: 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

7. **Package with solar collectors, hot water storage tanks, temperature controls and supplementary heaters:**
   - Pictograms as depicted,
   - ‘+’ symbol: Calibri bold 50 pt, cyan 100 %,
   - Boxes: width: 12 mm, height: 12 mm, border: 4 pt, cyan 100 %,
   - Border: 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

8. **A+++–G scale with border:**
   - Arrow: height: 15 mm, gap: 3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
   - If applicable, last classes: 00-X-X-00,
   - Text: Calibri bold 30 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row,
   - Border: 3 pt, colour: cyan 100 %, round corners: 3,5 mm.
Energy efficiency class for the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices:
- Arrow: width: 33 mm, height: 19 mm, 100 % black,
- Text: Calibri bold 40 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

Year of label introduction and number of Regulation:
- Text: Calibri bold 12 pt.

Dealer’s or supplier’s name or trademark.

Dealer’s or supplier’s model identifier:
The dealer’s or supplier’s name or trade mark and model identifier shall fit in a space of 191 × 19 mm.
ANNEX IV
Product fiche

1. SOLID FUEL BOILERS

1.1. The information in the product fiche of the solid fuel boiler shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:
(a) supplier’s name or trademark;
(b) supplier’s model identifier;
(c) the energy efficiency class of the model, determined in accordance with Annex II;
(d) the rated heat output in kW, rounded to the nearest integer;
(e) the energy efficiency index, rounded to the nearest integer and calculated in accordance with Annex IX;
(f) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with Annex VIII;
(g) any specific precautions that shall be taken when the solid fuel boiler is assembled, installed or maintained;
(h) in the case of solid fuel cogeneration boilers the electrical efficiency in %, rounded to the nearest integer;

1.2. One product fiche may cover a number of solid fuel boiler models supplied by the same supplier.

1.3. The information contained in the product fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1.1 not already displayed on the label shall also be provided.

2. PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES

The fiche for packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall contain the information set out in Figure 1 or Figure 2, as appropriate, for evaluating the energy efficiency index of the package offered, including the following information:
(a) I: the value of the energy efficiency index of the primary solid fuel boiler;
(b) II: the factor for weighting the heat output of primary solid fuel boiler and supplementary heaters of a package as set out in Tables 2 and 3 of this Annex, as appropriate;
(c) III: the value of the mathematical expression: \( \frac{294}{11 \eta Pr} \), whereby \( Pr \) refers to the primary solid fuel boiler;
(d) IV: the value of the mathematical expression \( \frac{115}{11 \eta Pr} \), whereby \( Pr \) refers to the primary solid fuel boiler.
### Table 2

(1) The intermediate values are calculated by linear interpolation between the two adjacent values.

(2) $P_r$ refers to the primary solid fuel boiler.

(3) $P_r$ refers to the primary solid fuel boiler.
For primary solid fuel boilers, information to be given on the product fiche for a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, indicating the energy efficiency index of the package offered.
Figure 2

For primary solid fuel cogeneration boilers, information to be given on the product fiche for a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, indicating the energy efficiency index of the package offered.

Energy efficiency index of solid fuel cogeneration boiler

Temperature control
From temperature control fiche

Class I = 1, Class II = 2, Class III = 1.5,
Class IV = 2, Class V = 3, Class VI = 4,
Class VII = 3.5, Class VIII = 5

Supplementary boiler
From boiler fiche
Seasonal space heating energy efficiency (in %) or energy efficiency index

(Space Heating Efficiency Index - 'I') x 'II' =

Solar contribution
From solar device fiche

Collector size (in m²)
Tank volume (in m³)
Collector efficiency (in %)

Tank rating
A = 0.95, A = 0.91,
B = 0.86, C = 0.83,
D-G = 0.81

('III' x + 'IV' x ) x 0.7 x ( /100) x =

Energy efficiency index of package

Energy efficiency class of package

The energy efficiency of the package of products provided for in this fiche may not correspond to its actual energy efficiency once installed in a building, as this efficiency is influenced by further factors such as heat loss in the distribution system and the dimensioning of the products in relation to building size and characteristics.
1. SOLID FUEL BOILERS
For solid fuel boilers, the technical documentation referred to in Article 3(1)(e) shall include:
(a) the name and address of the supplier;
(b) the model identifier;
(c) where appropriate, the references of the harmonised standards applied;
(d) where the preferred fuel is other woody biomass, non-woody biomass, other fossil fuel or other blend of biomass and fossil fuel as referred to in Table 4, a description of the fuel sufficient for its unambiguous identification and the technical standard or specification of the fuel, including the measured moisture content and the measured ash content, and for other fossil fuel also the measured volatile content of the fuel;
(e) where appropriate, the other technical standards and specifications used;
(f) the name and signature of the person empowered to bind the supplier;
(g) the information included in Table 4, with its technical parameters measured and calculated in accordance with Annex VIII and IX;
(h) reports of tests undertaken by suppliers or on their behalf, including the name and address of the body that conducted the test;
(i) any specific precautions that must be taken when the solid fuel boiler is assembled, installed or maintained;
(j) a list of equivalent models, if applicable.
This information may be merged with the technical documentation provided in accordance with measures under Directive 2009/125/EC of the European Parliament and of the Council.

### 2. PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES

For packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, the technical documentation referred to in Article 3(3)(e) shall include:

(a) the name and address of the supplier;
(b) a description of the model comprising the package of a solid fuel boiler, supplementary heaters, temperatures control and solar devices sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the name and signature of the person empowered to bind the supplier;
(f) technical parameters:
   1. the energy efficiency index, rounded to the nearest integer;
   2. the technical parameters set out in point 1 of this Annex and, where appropriate, the technical
parameters set out in point 1 of Annex V of Commission Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**;

(3) the technical parameters set out in points 3 and 4 of Annex V of Commission Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/ MC-EnC**;

(g) any specific precautions that must be taken when the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices is assembled, installed or maintained.
ANNEX VI

Information to be provided in cases where end-users cannot be expected to see the product displayed, except on the internet

1. SOLID FUEL BOILERS

1.1. The information referred to in Article 4(1)(b) shall be provided in the following order:
(a) the energy efficiency class of the model, determined in accordance with Annex II;
(b) the rated heat output in kW, rounded to the nearest integer;
(c) the energy efficiency index, rounded to the nearest integer and calculated in accordance with Annex IX;
(d) in the case of solid fuel cogeneration boilers the electrical efficiency in %, rounded to the nearest integer.
1.2. The size and font in which the information referred in point 1.1 is printed or shown shall be legible.

2. PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES

2.1. The information referred to in Article 4(2)(b) shall be provided in the following order:
(a) the energy efficiency class of the model, determined in accordance with Annex II;
(b) the energy efficiency index, rounded to the nearest integer;
(c) the information set out in Figure 1 and Figure 2 of Annex IV, as appropriate.
The size and font in which the information referred in point 2.1 is printed or shown shall be legible.
ANNEX VII

Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
   (a) ‘display mechanism’ means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
   (b) ‘nested display’ means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
   (c) ‘tactile screen’ means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
   (d) ‘alternative text’ means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:
   (a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;
   (b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and
   (c) have one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:
   (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;
   (b) the image shall link to the label;
   (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
   (d) the label shall be displayed by pop-up, new tab, new page or inset screen display;
   (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy
efficiency class of the product or package in a font size equivalent to that of the price.

5. The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown
on the display mechanism in proximity to the price of the product or package. The size shall be such that
the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display,
in which case the link used for accessing the fiche shall clearly and legibly indicate ‘Product fiche’. If nested
display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen
expansion on the link.
ANNEX VIII

Measurements and calculations

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published for this purpose in a dedicated section of the website of the Energy Community, or using other reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art methods. They shall meet the conditions and technical parameters set out in points 2 to 5.

2. General conditions for measurements and calculations
   
   (a) Solid fuel boilers shall be tested with the preferred fuel.
   
   (b) The declared value for the seasonal space heating energy efficiency shall be rounded to the nearest integer.

3. General conditions for the seasonal space heating energy efficiency of solid fuel boilers
   
   (a) The useful efficiency values $\eta_n$, $\eta_p$ and the useful heat output values $P_n$, $P_p$ shall be measured, as appropriate. For solid fuel cogeneration boilers the electrical efficiency value $\eta_{el,n}$ is also measured.
   
   (b) The seasonal space heating energy efficiency $\eta_s$ shall be calculated as the seasonal space heating energy efficiency in active mode $\eta_{kon}$, corrected by contributions accounting for temperature controls, auxiliary electricity consumption, and, for solid fuel cogeneration boilers, by adding the electrical efficiency multiplied by a conversion coefficient $CC$ of 2.5;
   
   (c) The consumption of electricity shall be multiplied by a conversion coefficient $CC$ of 2.5.

4. Specific conditions for the seasonal space heating energy efficiency of solid fuel boilers
   
   (a) Seasonal space heating energy efficiency $\eta_s$ is defined as:

   $$ \eta_s = \eta_{kon} - F(1) - F(2) + F(3) $$

   where:

   $\eta_{kon}$ is the seasonal space heating energy efficiency in active mode, expressed as a percentage, calculated as set out in point 4(b);
   
   $F(1)$ accounts for a loss of seasonal space heating energy efficiency due to adjusted contributions of temperature controls; $F(1) = 3 \%$;
   
   $F(2)$ accounts for a negative contribution to the seasonal space heating energy efficiency by auxiliary electricity consumption, expressed as a percentage, and is calculated as set out in point 4(c);
   
   $F(3)$ accounts for a positive contribution to the seasonal space heating energy efficiency by the electrical efficiency of solid fuel cogeneration boilers, expressed as a percentage, and is calculated as follows:

   $$ F(3) = 2.5 \times \eta_{el,n} $$
   
   (b) the seasonal space heating energy efficiency in active mode, $\eta_{kon}$, is calculated as follows:

   (1) for manually stoked solid fuel boilers that can be operated at 50 % of the rated heat output in continuous mode, and for automatically stoked solid fuel boilers:

   $$ \eta_{kon} = 0.85 \times \eta_p + 0.15 \times \eta_n $$
(2) for manually stoked solid fuel boilers that cannot be operated at 50 % or less of the rated heat output in continuous mode, and for solid fuel cogeneration boilers:

\[ \eta_{\text{conv}} = \eta_h \]

(c) \( F(2) \) is calculated as follows:

(1) for manually stoked solid fuel boilers that can be operated at 50 % of the rated heat output in continuous mode, and for automatically stoked solid fuel boilers:

\[ F(2) = 2.5 \times \left( 0.15 \times e_{\text{el,max}} + 0.85 \times e_{\text{el,min}} + 1.3 \times P_{\text{SB}} \right) / \left( 0.15 \times P_n + 0.85 \times P_p \right) \]

(2) for manually stoked solid fuel boilers that cannot be operated at 50 % or less of the rated heat output in continuous mode, and for solid fuel cogeneration boilers:

\[ F(2) = 2.5 \times (e_{\text{el,max}} + 1.3 \times P_{\text{SB}}) / P_n \]

5. Calculation of gross calorific value

The gross calorific value (GCV) shall be obtained from the gross calorific value moisture free (GCV\(_{\text{mf}}\)) by applying the following conversion:

\[ GCV = GCV_{\text{mf}} \times (1 - M) \]

where:

(a) \( GCV \) and \( GCV_{\text{mf}} \) are expressed in megajoules per kilogram;
(b) \( M \) is the moisture content of the fuel, expressed as a proportion.
ANNEX IX

Method for calculating the Energy Efficiency Index

1. The Energy Efficiency Index (EEI) of solid fuel boilers shall be calculated for the preferred fuel and rounded to the nearest integer as:

$$EEI = \eta_{\text{soc}} \times 100 \times BLF - F(1) - F(2) \times 100 + F(3) \times 100$$

where:

- $\eta_{\text{soc}}$ is the seasonal space heating energy efficiency in active mode, calculated as set out in point 4(b) of Annex VIII;
- $BLF$ is the biomass label factor, which is 1.45 for biomass boilers and 1 for fossil fuel boilers;
- $F(1)$ accounts for a negative contribution to the energy efficiency index due to adjusted contributions of temperature controls; $F(1) = 3$;
- $F(2)$ accounts for a negative contribution to the energy efficiency index by auxiliary electricity consumption, and is calculated as set out in point 4(c) of Annex VIII;
- $F(3)$ accounts for a positive contribution to the energy efficiency index by the electrical efficiency of solid fuel cogeneration boilers, and is calculated as follows: $F(3) = 2.5 \times \eta_{\text{el,n}}$.

2. The Energy Efficiency Index (EEI) of packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall determined in accordance with point 2 of Annex IV.
ANNEX X

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MCEnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 5. The unit shall be tested with a fuel with characteristics in the same range as the fuel that was used by the supplier to perform measurements according to Annex VIII.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective verification tolerances given in Table 5.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

---

3 Annex X is amended in accordance with Article 15 and Annex XV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VIII and IX.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 5 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

DELEGATED REGULATION (EU) 1254/2014 of 11 July 2014 supplementing Directive 2010/30/EU with regard to energy labelling of residential ventilation units

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in bold and blue.

**Article 1**

Subject matter and scope

1. This Regulation establishes energy labelling requirements for residential ventilation units.
2. This Regulation shall not apply to residential ventilation units which:
   (a) are unidirectional (exhaust or supply) with an electric power input of less than 30 W;
   (b) are exclusively specified as operating in a potentially explosive atmosphere as defined in Directive 94/9/EC of the European Parliament and of the Council;
   (c) are exclusively specified as operating for emergency use, for short periods of time, and which comply with the basic requirements for construction works with regard to safety in case of fire as set out in Regulation (EU) No 305/2011 of the European Parliament and of the Council;
   (d) are exclusively specified as operating:
      (i) where operating temperatures of the air being moved exceed 100 °C;
      (ii) where the operating ambient temperature for the motor, if located outside the air stream, driving the fan exceeds 65 °C;
      (iii) where the temperature of the air being moved or the operating ambient temperature for the motor, if located outside the air stream, are lower than – 40 °C;
      (iv) where the supply voltage exceeds 1000 V AC or 1500 V DC;
      (v) in toxic, highly corrosive or flammable environments or in environments with abrasive substances;
   (e) include a heat exchanger and a heat pump for heat recovery, or allowing heat transfer or extraction being additional to that of the heat recovery system, except heat transfer for frost protection or defrosting;
   (f) are classified as range hoods covered by Commission Delegated Regulation (EU) No 65/2014, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC.
Article 2
Definitions

For the purposes of this Regulation the following definitions shall apply:

(1) ‘ventilation unit’ (VU) means an electricity driven appliance equipped with at least one impeller, one motor and a casing and intended to replace utilised air by outdoor air in a building or a part of a building;

(2) ‘residential ventilation unit’ (RVU) means a ventilation unit where:
   (a) the maximum flow rate does not exceed 250 m³/h;
   (b) the maximum flow rate is between 250 and 1 000 m³/h, and the manufacturer declares its intended use as being exclusively for a residential ventilation application;

(3) ‘maximum flow rate’ is the declared maximum air volume flow rate of a ventilation unit that can be achieved with integrated or separately co-supplied controls at standard air conditions (20 °C) and 101325 Pa, where the unit is installed complete (e.g. including clean filters) and according to the manufacturer’s instructions, for ducted RVUs the maximum flow is related to the air flow at 100 Pa of external static pressure difference, and for non-ducted RVUs to the air flow at the lowest achievable total pressure difference to be chosen from a set of values of 10 (minimum)-20-50-100-150-200-250 Pa, whichever is equal or just below the measured pressure difference value;

(4) ‘unidirectional ventilation unit’ (UVU) means a ventilation unit producing an air flow in one direction only, either from indoors to outdoors (exhaust) or from outdoors to indoors (supply), where the mechanically produced air flow is balanced by natural air supply or exhaust;

(5) ‘bidirectional ventilation unit’ (BVU) means a ventilation unit producing an air flow between indoors and outdoors and which is equipped with both exhaust and supply fans;

(6) ‘equivalent ventilation unit model’ means a ventilation unit with the same technical characteristics according to the applicable product information requirements, but placed on the market as a different ventilation unit model by the same manufacturer, authorised representative or importer.

For the purposes of Annexes II to IX, additional definitions are set out in Annex I.

Article 3
Responsibilities of suppliers

1. Suppliers placing residential ventilation units on the market shall ensure that from 1 January 2020 the following requirements are fulfilled:

(a) each residential ventilation unit is accompanied by a printed label in the format and containing the information set out in Annex III, the label must be provided at least in the packaging of the unit. For each model of residential ventilation units an electronic label in the format and containing the information set out in Annex III shall be made available to dealers;

(b) a product fiche, as set out in Annex IV, is made available. The fiche must be provided at least in the packaging of the unit. For each model of residential ventilation units an electronic product fiche, as set out in Annex IV, shall be made available to dealers, and on free access websites;
(c) technical documentation, as set out in Annex V, is made available on request to the Contracting Party authorities and the Secretariat;
(d) instructions for use are made available;
(e) any advertisement for a specific model of residential ventilation units that discloses energy-related or price information contains the specific energy consumption class of that model;
(f) any technical promotional material concerning a specific model of residential ventilation unit which describes its specific technical parameters states the specific energy consumption class of that model.

2. From 1 January 2020 residential ventilation units placed on the market shall be provided with a label in the format set out in Annex III, point 1, if they are unidirectional residential ventilation units, and with a label in the format set out in Annex III, point 2, if they are bidirectional ventilation units.

**Article 4**

**Responsibilities of dealers**

Dealers shall ensure that:
(a) each residential ventilation unit, at the point of sale, bears the label provided by suppliers in accordance with Article 3(1)(a) on the outside of the front or top of the appliance in such a way as to be clearly visible;
(b) residential ventilation units offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the product displayed, are marketed with the information provided by suppliers in accordance with Annex VI, except where the offer is made on the internet, in which case the provisions of Annex VII shall apply;
(c) any advertisement for a specific model of residential ventilation unit that discloses energy-related or price information contains a reference to the specific energy consumption class of the unit;
(d) any technical promotional material concerning a specific model which describes the technical parameters of a residential ventilation unit includes the specific energy consumption class of the model and the instructions for use provided by the supplier.

**Article 5**

**Measurement methods**

For the purposes of information to be provided under Articles 3 and 4, the specific energy consumption class shall be determined in accordance with the table set out in Annex II. The specific energy consumption, the annual electricity consumption, the annual heating saved, the maximum flow rate and the sound power level shall be determined in accordance with measurement and calculation methods as set out in Annex VIII, and take into account recognised state-of-the-art measurement and calculation methods.
**Article 6**

Verification procedure for market surveillance purposes

When assessing the conformity of the ventilation unit, **Contracting Parties** shall apply the procedure laid down in Annex IX.

**Article 7**

Review

<...>¹

**Article 8**

Entry into force and application

This Regulation shall enter into force on the day of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.

Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.

¹ Not applicable in accordance with Article 3(5)(a) of Decision 2018/03/MC-EnC
ANNEX I
Definitions applicable for Annexes II to IX

(1) ‘specific energy consumption (SEC)’ (expressed in kWh/(m².a)) means a coefficient to express the energy consumed for ventilation per m² heated floor area of a dwelling or building, calculated for RVUs in accordance with Annex VIII;

(2) ‘sound power level (LWA)’ means the casing-radiated A-weighted sound power level expressed in decibels (dB) with reference to the sound power of one picowatt (1 pW), transmitted by the air at reference airflow;

(3) ‘multi-speed drive’ means a fan motor that can be operated at three or more fixed speeds plus zero (‘off’);

(4) ‘variable speed drive (VSD)’ means an electronic controller, integrated or functioning as one system or as a separate delivery with the motor and the fan, which continuously adapts the electrical power supplied to the motor in order to control the flow rate;

(5) ‘heat recovery system (HRS)’ means the part of a bidirectional ventilation unit equipped with a heat exchanger designed to transfer the heat contained in the (contaminated) exhaust air to the (fresh) supply air;

(6) ‘thermal efficiency of a residential HRS (η)’ means the ratio between supply air temperature gain and exhaust air temperature loss, both relative to the outdoor temperature, measured under dry conditions of the HRS, and standard air conditions, with balanced mass flow at reference flow rate, an indoor-outdoor temperature difference of 13 K, no correction for thermal heat gain from fan motors;

(7) ‘internal leakage rate’ means the fraction of extract air present in the supply air of ventilation units with HRS as a result of leakage between extract and supply airflows inside the casing when the unit is operated at reference air volume flow, measured at the ducts, the test shall be performed at 100 Pa;

(8) ‘carry over’ means the percentage of the exhaust air which is returned to the supply air for a regenerative heat exchanger according to the reference flow;

(9) ‘external leakage rate’ means the fraction of reference air volume flow escaping from the casing of a unit when it is subjected to a pressure test, the test shall be performed at 250 Pa for both under and over pressure;

(10) ‘mixing’ means the immediate recirculation or short-circuiting of airflows between discharge and intake ports at both the indoor and outdoor terminals so that they do not contribute to the effective ventilation of a building space, when the unit is operated at reference air volume rate;

(11) ‘mixing rate’ means the fraction of extract airflow, as part of the total reference air volume, that recirculates between discharge and intake ports at both the indoor and outdoor terminals and thus does not contribute to the effective ventilation of a building space, when the unit is operated at reference air volume (measured at 1 m distance from the indoor supply duct), less the internal leakage rate;

(12) ‘effective power input’ (expressed in W) means the electric power input at reference flow rate and corresponding external total pressure difference and includes the electrical demand for fans, controls (including remote controls) and the heat pump (if integrated);

(13) ‘specific power input (SPI)’ (expressed in W/(m³/h)) means the ratio between the effective power input (in W) and the reference flow rate (in m³/h);

(14) ‘flow rate/pressure diagram’ means a set of curves for flow rate (horizontal axis) and pressure difference of a unidirectional RVU or the supply side of a bidirectional RVU, where each curve represents one
fan speed with at least eight equidistant test-points and the number of curves is given by the number of
discrete fan speed options (one, two or three) or, in the case of a variable fan speed drive, includes at least
a minimum, maximum and appropriate intermediate curve close to the reference air volume and pressure
difference for SPI testing;
(15) ‘reference flow rate’ (expressed in m$^3$/s) is the abscissa value to a point on a curve in the flow rate/
pressure diagram which is on or closest to a reference point at 70 % at least of the maximum flow rate
and 50 Pa for ducted units and at a minimum pressure for non-ducted units. For bidirectional ventilation
units, the reference air volume flow rate applies to the air supply outlet;
(16) ‘control factor $(CTRL)$’ means a correction factor for the SEC calculation depending on the type of
control that is part of the ventilation unit, according to the description in Annex VIII Table 1;
(17) ‘control parameter’ means a measurable parameter or set of measurable parameters that are assumed
to be representative of the ventilation demand, e.g. the level of relative humidity (RH), carbon dioxide
(CO$_2$), volatile organic compounds (VOC) or other gases, presence, motion or occupancy detection from
infrared body heat or from reflection of ultrasonic waves, electrical signals from human operation of lights
or equipment;
(18) ‘manual control’ means any control type that does not use demand control;
(19) ‘demand control’ means a device or set of devices, integrated or as a separate delivery, that measures
a control parameter and uses the result to regulate automatically the flow rate of the unit and/or the flow
rates of the ducts;
(20) ‘clock control’ means a clocked (daytime-controlled) human interface to control the fan speed/flow
rate of the ventilation unit, with at least seven weekday manual settings of the adjustable flow rate for at
least two setback periods, i.e. periods in which a reduced or no flow rate applies;
(21) ‘demand controlled ventilation (DCV)’ means a ventilation unit that uses demand control;
(22) ‘ducted unit’ means a ventilation unit intended to ventilate one or more rooms or enclosed space in
a building through the use of air ducts, intended to be equipped with duct connections;
(23) ‘non-ducted unit’ means a single room ventilation unit intended to ventilate a single room or enclosed
space in a building, and not intended to be equipped with duct connections;
(24) ‘central demand control’ means a demand control of a ducted ventilation unit that continuously
regulates the fan speed(s) and flow rate based on one sensor for the whole ventilated building or part of
the building at central level;
(25) ‘local demand control’ means a demand control for a ventilation unit that continuously regulates the
fan speed(s) and flow rates based on more than one sensor for a ducted ventilation unit or one sensor
for a non-ducted unit;
(26) ‘static pressure $(p_s)$’ means the total pressure minus the fan dynamic pressure;
(27) ‘total pressure $(p_t)$’ means the difference between the stagnation pressure at the fan outlet and that
at the fan inlet;
(28) ‘stagnation pressure’ means the pressure measured at a point in a flowing gas if it were to be brought
to rest by means of an isentropic process;
(29) ‘dynamic pressure’ means the pressure calculated from the mass flow rate and the average gas density
at the outlet and the unit outlet area;
(30) ‘recuperative heat exchanger’ means a heat exchanger intended to transfer thermal energy from one air stream to another without moving parts, such as a plate or tubular heat exchanger with parallel flow, cross flow or counter flow, or a combination of these, or a plate or tubular heat exchanger with vapour diffusion;

(31) ‘regenerative heat exchanger’ means a rotary heat exchanger incorporating a rotating wheel for the purpose of transferring thermal energy from one air stream to the other, including material allowing latent heat transfer, a drive mechanism, a casing or frame, and seals to reduce bypassing and leakage of air from one stream or another, such heat exchangers have varying degrees of moisture recovery depending on the material used;

(32) ‘airflow sensitivity to pressure variations’ of a non-ducted RVU is the ratio between the maximum deviation from the maximum RVU flow rate at + 20 Pa and that at – 20 Pa external total pressure difference;

(33) ‘indoor/outdoor air tightness’ of a non-ducted RVU is the flow rate (expressed in m³/h) between indoors and outdoors when the fan(s) is(are) switched off.

1. Label for UVUs marketed after **1 January 2020**:  

The label shall provide the following information:  
I. supplier’s name or trade mark;  
II. supplier’s model identifier;  
III. energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency is indicated for an ‘average’ climate;
IV. sound power level ($L_{WA}$) in dB rounded to the nearest integer;
V. maximum flow rate in m$^3$/h rounded to the nearest integer, accompanied by one arrow representing UVUs.

2. Label for BVUs marketed after **1 January 2020**: 

The label shall provide the following information:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy
efficiency is indicated for an ‘average’ climate;

IV. sound power level ($L_{WA}$) in dB rounded to the nearest integer;

V. maximum flow rate in $m^3/h$ rounded to the nearest integer, accompanied by two arrows in opposite directions representing BVUs.

3. The design of the labels for residential ventilation units set out in points 1 to 2 shall be the following:
Whereby:
The label shall be at least 75 mm wide and 150 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
The background shall be white.
Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0%
cyan, 70 % magenta, 100 % yellow, 0 % black.
The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke:** 3,5 pt – colour: Cyan 100 % – round corners: 2,5 mm. EU logo: Colours: X-80-00-00 and 00-00-X-00.
2. **Energy logo:** Colour: X-00-00-00.
3. **Pictogram as depicted:** EU logo + energy logo: width: 62 mm, height: 12 mm.
4. **Sub-logos border:** 1 pt – colour: cyan 100 % – length: 62 mm.
5. **A–G scales:**
   - Arrow: height: 6 mm, gap: 1 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class 00-X-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 13 pt, capitals, white.
6. **Specific energy consumption class**
   - Arrow: width: 17 mm, height: 9 mm, 100 % black;
   - Text: Calibri bold 18,5 pt, capitals, white; ‘+’ symbols: Calibri bold 11 pt, white aligned on a single row.
7. **Sound power level in dB:**
   - Border: 1,5 pt – colour: cyan 100 % – round corners: 2,5 mm;
   - Value: Calibri bold 16 pt, 100 % black;
   - ‘dB’: Calibri regular 10 pt, 100 % black.
8. **Maximum flow rate in m³/h:**
   - Border: 1,5 pt – colour: cyan 100 % – round corners: 2,5 mm;
   - Value: Calibri bold 16 pt, 100 % black;
   - ‘m³/h’: Calibri bold 16 pt, 100 % black;
   - One or two arrows
     - each width: 10 mm, each height: 10 mm.
Colour: cyan 100 %.

9 Energy:
– Text: Calibri regular 6 pt, capitals, black.

10 Reference period:
– Text: Calibri bold 8 pt.

11 Supplier’s name or trademark
12 Supplier’s model identifier
13 The suppliers’ name or trade mark and model identifier shall fit in a space of 62 x 10 mm.
ANNEX IV

Product fiche

The information in the product fiche of the residential ventilation unit referred to in Article 3(1)(b) shall be given in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trade mark;
(b) supplier’s model identifier i.e. the code, usually alphanumeric, used to distinguish a specific residential ventilation unit model from other models with the same trade mark or supplier’s name;
(c) specific energy consumption (SEC) in kWh/(m².a) for each applicable climate zone and SEC class;
(d) declared typology in accordance with Article 2 of this Regulation (unidirectional or bidirectional);
(e) type of drive installed or intended to be installed (multi-speed drive or variable speed drive);
(f) type of heat recovery system (recuperative, regenerative, none);
(g) thermal efficiency of heat recovery (in % or ‘not applicable’ if the product has no heat recovery system);
(h) maximum flow rate in m³/h;
(i) electric power input of the fan drive, including any motor control equipment, at maximum flow rate (W);
(j) sound power level \( L_{WA} \), rounded to the nearest integer;
(k) reference flow rate in m³/s;
(l) reference pressure difference in Pa;
(m) SPI in W/(m³/h);
(n) control factor and control typology in accordance with the relevant definitions and classification in Annex VIII Table 1;
(o) declared maximum internal and external leakage rates (%) for bidirectional ventilation units or carry over (for regenerative heat exchangers only), and external leakage rates (%) for ducted unidirectional ventilation units;
(p) mixing rate of non-ducted bidirectional ventilation units not intended to be equipped with one duct connection on either supply or extract air side;
(q) position and description of visual filter warning for RVUs intended for use with filters, including text pointing out the importance of regular filter changes for performance and energy efficiency of the unit;
(r) for unidirectional ventilation systems, instructions to install regulated supply/exhaust grilles in the façade for natural air supply/extraction;
(s) internet address for pre-/dis-assembly instructions;
(t) for non-ducted units only: the airflow sensitivity to pressure variations at + 20 Pa and – 20 Pa;
(u) for non-ducted units only: the indoor/outdoor air tightness in m³/h;
(v) the annual electricity consumption (AEC) (in kWh electricity/a);
(w) the annual heating saved (AHS) (in kWh primary energy/a) for each type of climate (‘average’, ‘warm’, ‘cold’).
ANNEX V

Technical documentation

The technical documentation referred to in Article 3(1)(c) shall include at least the following:

(a) the name and address of the supplier;

(b) supplier’s model identifier i.e. the code, usually alphanumeric, used to distinguish a specific residential ventilation unit model from other models with the same trade mark or supplier’s name;

(c) where appropriate, the references of the harmonised standards applied;

(d) where appropriate, the other calculation methods, measurement standards and specifications used;

(e) identification and signature of the person empowered to bind the supplier;

(f) where appropriate, the technical parameters for measurements, established in accordance with Annex VIII;

(g) overall dimensions;

(h) specification of the type of RVU;

(i) the specific energy consumption class of the model as defined in Annex II;

(j) the specific energy consumption (SEC) for each applicable climate zone;

(k) sound power level (LWA);

(l) the results of calculations carried out in accordance with Annex VIII. Suppliers may include additional information at the end of the above list.
ANNEX VI

Information to be provided where end-users cannot be expected to see the product displayed, except on the internet

1. Where end-users cannot be expected to see the product displayed, except on the internet, the information shall be provided in the following order:
   (a) the specific energy consumption class of the model as defined in Annex II;
   (b) the specific energy consumption (SEC) in kWh/(m².a) for each applicable climate zone;
   (c) the maximum flow rate (in m³/h);
   (d) sound power level (LWA) in dB(A) rounded to the nearest integer.

2. Where other information contained in the product information fiche is provided, it shall be in the form and order specified in Annex IV.

3. The size and font in which the information referred in this Annex is printed or shown shall be such that it is legible.
ANNEX VII

Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex, the following definitions shall apply:
   (a) ‘display mechanism’ means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
   (b) ‘nested display’ means a visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
   (c) ‘tactile screen’ means a screen responding to touch, such as that of a tablet computer, slate computer or smartphone;
   (d) ‘alternative text’ means text provided as an alternative to a graphic, allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3(1)(a) shall be shown on the display mechanism near the price of the product in accordance with the timelines indicated in Article 3(2) and (3). The size of the label shall be such that it is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing it shall comply with the specifications in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:
   (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
   (b) indicate the energy efficiency class of the product in white in the same font size as that used for the price; and
   (c) be in one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:
   a) the image referred to in point 3 of this Annex is shown on the display mechanism in proximity to the price of the product;
   b) the image links to the label;
   c) the label is displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
   d) the label is displayed by pop-up, new tab, new page or inset screen display;
   e) for magnification of the label on tactile screens, the device conventions for tactile magnification apply;
   f) display of the label is closed by means of a close option or other standard closing mechanism;
   g) the alternative text for the graphic, to be displayed on failure to display the label, is the energy efficiency class of the product in the same font size as that used for the price.

5. The appropriate product fiche made available by suppliers in accordance with Article 3(1)(b) shall be
shown on the display mechanism near the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing it shall clearly and legibly indicate ‘Product fiche’. If nested display is used, the fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
Measurements and calculations

1. The specific energy consumption (SEC) is calculated using the following equation:

\[
SEC = i_a \cdot Pef \cdot q_{net} \cdot MISC \cdot CTRL^x \cdot SPI - t_h \cdot \Delta T_h \cdot \frac{q_{air}}{q_{ref}} \cdot (q_{ref} - q_{net} \cdot CTRL \cdot MISC \cdot (1 - \eta_t)) + Q_{defr}
\]

where:
- \(SEC\) is the specific energy consumption for ventilation per m² heated floor area of a dwelling or building [kWh/m².a];
- \(t_a\) is annual operating hours [h/a];
- \(Pef\) is the primary energy factor for electric power generation and distribution [-];
- \(q_{net}\) is net ventilation rate demand per m² heated floor area [m³/h.m²];
- \(MISC\) is an aggregated general typology factor, incorporating factors for ventilation effectiveness, duct leakage and extra infiltration [-];
- \(CTRL\) is the ventilation control factor [-];
- \(X\) is an exponent that takes into account non-linearity between thermal energy and electricity saving, depending on motor and drive characteristics [-];
- \(SPI\) is specific power input [kW/(m³/h)];
- \(t_h\) is total hours heating season [h];
- \(\Delta T_h\) is the average difference in indoor (19 °C) and outdoor temperature over a heating season, minus 3 K correction for solar and internal gains [K];
- \(\eta_t\) is the average space heating efficiency [-];
- \(c_{air}\) is the specific heat capacity of air at constant pressure and density [kWh/(m³ K)];
- \(q_{ref}\) is the reference natural ventilation rate per m² heated floor area [m³/h.m²];
- \(\eta\) is the thermal efficiency of heat recovery [-];
- \(Q_{defr}\) is the annual heating energy per m² heated floor area [kWh/m².a] for defrosting, based on a variable electric resistance heating.

\[
Q_{defr} = t_{defr} \cdot \Delta T_{defr} \cdot c_{air} \cdot q_{net} \cdot Pef
\]

where:
- \(t_{defr}\) is the duration of the defrosting period, i.e. when the outdoor temperature is below – 4 °C [h/a]; and
- \(\Delta T_{defr}\) is the average difference in K between the outdoor temperature and – 4 °C during the defrosting period.

\(Q_{defr}\) applies only to bidirectional units with recuperative heat exchanger; for unidirectional units or units with regenerative heat exchangers, \(Q_{defr} = 0\).

- \(SPI\) and \(\eta_t\) are values derived from tests and calculation methods.

Other parameters and their defaults are given in Table 1. The SEC for label classification is based on the ‘average’ climate.
2. The annual electricity consumption per 100 m² floor area (AEC) (in kWh/a electric per year); and the annual heating saved (AHS), which means the annual saving in consumption of energy for heating (in kWh fuel gross calorific value per year) are calculated as follows, using the definitions in point 1, and the default values given in Table 1, for each type of climate (average, warm and cold):

\[
AEC = t_a \cdot q_{net} \cdot MISC \cdot CTRL \cdot SPI + Q_{defr}
\]

\[
AHS = t_h \cdot \Delta T_h \cdot \frac{\Delta AS}{\Delta T_{in}} \cdot c_{air} \cdot (q_ref - q_{net} \cdot CTRL \cdot MISC \cdot (1 - \eta_b))
\]

* Defrosting applies only to bidirectional units with recuperative heat exchanger and is calculated as \(Q_{defr} = t_{defr} \cdot \Delta T_{defr} \cdot c_{air} \cdot q_{net} \cdot pef\). For unidirectional units or units with regenerative heat exchangers, \(Q_{defr} = 0\).
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 1254/2014

ANNEX IX²
Product compliance verification by market surveillance authorities

The verification tolerances defined in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish values in the technical documentation. The values and classes on the label or in the (electronic) product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all other equivalent models shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different equivalent models.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

² Annex IX is amended in accordance with Article 12 and Annex XII of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(6) If the result referred to in point 5 is not achieved, the model and all other equivalent models shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VIII. The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

DELEGATED REGULATION (EU) 65/2014 of 1 October 2013 supplementing Directive 2010/30/EU with regard to the energy labelling of domestic ovens and range hoods

Article 1
Subject matter and scope

1. This Regulation establishes requirements for the labelling and the provision of supplementary product information for domestic electric and gas ovens (including when incorporated into cookers) and for domestic electric range hoods, including when sold for non-domestic purposes.

2. This Regulation shall not apply to:
   (a) ovens that use energy sources other than electricity or gas;
   (b) ovens which offer a ‘microwave heating’ function;
   (c) small ovens;
   (d) portable ovens;
   (e) heat storage ovens;
   (f) ovens which are heated with steam as a primary heating function;
   (g) ovens designed for use only with gases of the ‘third family’ (propane and butane).

Article 2
Definitions

In addition to the definitions set out in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

(1) ‘oven’ means an appliance or part of an appliance which incorporates one or more cavities using electricity and/or gas in which food is prepared by use of a conventional or fan-forced mode;
(2) ‘cavity’ means the enclosed compartment in which the temperature can be controlled for preparation of food;
(3) ‘multi-cavity oven’ means an oven with two or more cavities, each of which is heated separately;
(4) ‘small oven’ means an oven where all cavities have a width and depth of less than 250 mm or a height less than 120 mm;
(5) ‘portable oven’ means an oven with a product mass of less than 18 kilograms, provided it is not designed for built-in installations;

(6) ‘microwave heating’ means heating of food using electromagnetic energy;

(7) ‘conventional mode’ means the operation mode of an oven only using natural convection for circulation of heated air inside the cavity of the oven;

(8) ‘fan-forced mode’ means a mode of an oven when a built-in fan circulates heated air inside the cavity of the oven;

(9) ‘cycle’ means the period of heating a standardised load in a cavity of an oven under defined conditions;

(10) ‘cooker’ means an appliance consisting of an oven and a hob using gas or electricity;

(11) ‘operation mode’ means the status of an oven during use;

(12) ‘heat source’ means the main energy form for heating an oven;

(13) ‘range hood’ means an appliance, operated by a motor which it controls, intended to collect contaminated air from above a hob, or which includes a downdraft system intended for installation adjacent to cooking ranges, hobs and similar cooking products, that draws vapour down into an internal exhaust duct;

(14) ‘automatic functioning mode during the cooking period’ means a condition in which the air flow of the range hood during the cooking period is automatically controlled through sensor(s), including as regards humidity, temperature, etc.;

(15) ‘fully automatic range hood’ means a range hood in which the air flow and/or other functions are automatically controlled through sensor(s) during 24 hours including the cooking period;

(16) ‘best efficiency point’ (BEP) means the range hood operating point with maximum fluid dynamic efficiency ($FDE_{\text{hood}}$);

(17) ‘lighting efficiency’ ($LE_{\text{hood}}$) means the ratio between the average illumination of the lighting system of the domestic range hood and the power of the lighting system in lux/W;

(18) ‘grease filtering efficiency’ ($GFE_{\text{hood}}$) means the relative share of grease retained within the range hood grease filters;

(19) ‘off mode’ means a condition in which the appliance is connected to the mains power source but is not providing any function or only provides an indication of off mode condition, or only provides functionalities intended to ensure electromagnetic compatibility pursuant to Directive 2004/108/EC of the European Parliament and of the Council;

(20) ‘standby mode’ means a condition where the appliance is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only reactivation function, or reactivation function and only an indication of enabled reactivation function, and/or information or status display which may persist for an indefinite time;

(21) ‘reactivation function’ means a function facilitating the activation of other modes, including the active mode, by remote switch including remote control, internal sensor, or timer to a condition providing additional functions, including the main function;

(22) ‘information or status display’ means a continuous function providing information or indicating the status of the equipment on a display, including clocks;
(23) ‘end-user’ means a consumer buying or expected to buy a product;
(24) ‘point of sale’ means a location where appliances are displayed and/or offered for sale or hire;
(25) ‘equivalent model’ means a model placed on the market with the same technical parameters as another model placed on the market under a different commercial code number by the same manufacturer or importer.

Article 3
Responsibilities of suppliers and timetable

Suppliers shall ensure that:
(1) as regards labels, fiches and technical documentation:
   (a) for domestic ovens:
      (i) each domestic oven is supplied with (a) printed label(s) containing information in the format set out in point 1 of Annex III for each cavity of the oven;
      (ii) a product fiche, as set out in point A of Annex IV, is made available for domestic ovens placed on the market;
      (iii) the technical documentation, as set out in point A of Annex V, is made available on request to the authorities of the Contracting Parties;
      (iv) any advertisement for a specific model of domestic oven contains the energy efficiency class, if the advertisement discloses energy-related or price information;
      (v) any technical promotional material concerning a specific model of domestic oven which describes its specific technical parameters includes the energy efficiency class of that model;
      (vi) an electronic label in the format and containing the information set out in point 1 of Annex III is made available to dealers for each cavity of each domestic oven model;
      (vii) an electronic product fiche as set out in point A of Annex IV is made available to dealers for each domestic oven model;
   (b) for domestic range hoods:
      (i) each domestic range hood is supplied with a printed label containing information in the format set out in point 2 of Annex III;
      (ii) a product fiche, as set out in point B of Annex IV, is made available for domestic range hoods placed on the market;
      (iii) the technical documentation as set out in point B of Annex V, is made available on request to the authorities of the Contracting Parties;
      (iv) any advertisement for a specific model of domestic range hood contains the energy efficiency class, if the advertisement discloses energy-related or price information;
      (v) any technical promotional material concerning a specific model of domestic range hood which describes its specific technical parameters includes the energy efficiency class of that model;
(vi) an electronic label in the format and containing the information set out in point 2 of Annex III is made available to dealers for each domestic range hood model;

(vii) an electronic product fiche as set out in point B of Annex IV is made available to dealers for each domestic range hood model;

(2) as regards efficiency classes:

(a) for domestic ovens, the energy efficiency class of the cavity of the oven shall be determined in accordance with point 1 of Annex I, and point 1 of Annex II;

(b) for domestic range hoods:

(i) the energy efficiency classes shall be determined in accordance with point 2(a) of Annex I and point 2.1 of Annex II;

(ii) the fluid dynamic efficiency classes shall be determined in accordance with point 2(b) of Annex I and point 2.2 of Annex II;

(iii) the lighting efficiency classes shall be determined in accordance with point 2(c) of Annex I and point 2.3 of Annex II;

(iv) the grease filtering efficiency classes shall be determined in accordance with point 2(d) of Annex I and point 2.4 of Annex II;

(3) as regards formats of the labels:

(a) for domestic ovens, the format of the label for the cavity of the oven shall be as set out in point 1 of Annex III, for appliances placed on the market from 1 January 2016;

(b) for domestic range hoods, the format of the label shall be as set out in point 2 of Annex III, according to the following timetable:

(i) 

(ii) for domestic range hoods placed on the market from 1 January 2016 with energy efficiency classes A+, A, B, C, D, E and F, labels shall be in accordance with point 2.1.2 of Annex III (Label 2) or, where suppliers deem appropriate, with point 2.1.3 of that Annex (Label 3);

(iii) for domestic range hoods placed on the market from 1 January 2018 with energy efficiency classes A++, A+, A, B, C, D and E, labels shall be in accordance with point 2.1.3 of Annex III (Label 3) or, where suppliers deem appropriate, with point 2.1.4 of that Annex (Label 4);

(iv) for domestic range hoods placed on the market from 1 January 2020 with energy efficiency classes A+++ , A++, A+, A, B, C and D, labels shall be in accordance with point 2.1.4 of Annex III (Label 4).
Article 4
Responsibilities of dealers

Dealers shall ensure that:

(1) for domestic ovens:
   (a) each oven presented at the point of sale carries the label for each cavity provided by suppliers in accordance with Article 3(1)(a)(i) displayed on the front or top of the appliance, or in the immediacy of the appliance, so as to be clearly visible and identifiable as the label belonging to the model without having to read the brand name and model number on the label;
   (b) ovens offered for sale or hire where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, are marketed with the information provided by suppliers in accordance with Part A of Annex VI to this Regulation, except where the offer is made through the internet in which case the provisions of Annex VII shall apply;
   (c) any advertisement for any form or medium of distance selling and marketing concerning a specific model of oven contains a reference to the energy efficiency class, if the advertisement discloses energy-related or price information;
   (d) any technical promotional material concerning a specific model which describes the technical parameters of an oven includes the energy efficiency class of the model;

(2) for domestic range hoods:
   (a) each domestic range hood presented at the point of sale is accompanied by the label provided by suppliers in accordance with Article 3(1)(b)(i) displayed on the front or top of the appliance, or in the immediacy of the appliance, so as to be clearly visible and identifiable as the label belonging to the model without having to read the brand name and model number on the label;
   (b) domestic range hoods offered for sale or hire where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, are marketed with the information provided by suppliers in accordance with Part B of Annex VI to this Regulation, except where the offer is made through the internet in which case the provisions of Annex VII shall apply;
   (c) any advertisement for any form or medium of distance selling and marketing concerning a specific model of domestic range hood contains a reference to the energy efficiency class, if the advertisement discloses energy-related or price information;
   (d) any technical promotional material concerning a specific model which describes the technical parameters of a domestic range hood includes the energy efficiency class of the model.

Article 5
Measurement and calculation methods

The information to be provided under Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art calculation and measurement methods.
Article 6
Verification procedure for market surveillance purposes

When performing the market surveillance checks for compliance with requirements set out in this Regulation, the Contracting Parties’ authorities shall apply the verification procedure described in Annex VIII.

Article 7
Review

<...>

Article 8
Repeal

<...>

Article 9
Transitional provisions

1. Domestic ovens which comply with the provisions of this Regulation and which are placed on the market or offered for sale, hire or hire-purchase before 1 January 2016 shall be regarded as complying with the requirements of Directive 2002/40/EC.

2. From 1 January 2016 to 1 April 2016, dealers may apply Article 4(1)(b) to specific ovens that fall under that provision.

3. From 1 January 2016 to 1 April 2016, dealers may apply Article 4(2)(b) to specific range hoods that fall under that provision.

Article 10
Entry into force and application

1. This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties.

2. It shall apply from 1 January 2016. However, Article 3(1)(a)(iv) and (v), Article 3(1)(b)(iv) and (v), Article 4(1)(b), (c) and (d), and Article 4(2)(b), (c) and (d) shall apply from 1 April 2016.

This Regulation shall be binding in its entirety and directly applicable in all Contracting Parties.

2 The text displayed here corresponds to Article 3(1) of Decision 2014/02/MC-EnC.
The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation.  

3 The text displayed here corresponds to Article 2(3) of Decision 2014/02/MC-EnC
ANNEX I
Efficiency classes

1. DOMESTIC OVENS
The energy efficiency classes of domestic ovens shall be determined separately for each cavity in accordance with values as set out in Table 1 of this Annex. The energy efficiency of ovens shall be determined in accordance with point 1 of Annex II.

Table 1
Energy efficiency classes of domestic ovens

<table>

ANNEX II

Measurements and calculations

For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using a reliable, accurate and reproducible method that take into account the generally recognised state-of-the-art measurement and calculation methods, including harmonised standards the reference numbers of which have been published for the purpose in the Official Journal of the European Union. They shall meet the technical definitions, conditions, equations and parameters set out in this Annex.

1. DOMESTIC OVENS

The energy consumption of a cavity of a domestic oven shall be measured for one standardised cycle, in a conventional mode and in a fan-forced mode, if available, by heating a standardised load soaked with water. It shall be verified that the temperature inside the oven cavity reaches the temperature setting of the thermostat and/or the oven control display within the duration of the test cycle. The energy consumption per cycle corresponding to the best performing mode (conventional mode or fan-forced mode) shall be used in the following calculations.

For each cavity of a domestic oven, the Energy Efficiency Index \( (EEI_{cavity}) \) shall be calculated according to the following formulas:

For domestic electric ovens:

\[
EEI_{cavity} = \frac{EC_{electric\ cavity}}{SEC_{electric\ cavity}} \times 100
\]

\[
SEC_{electric\ cavity} = 0,0042 \times V + 0,55 \quad \text{(in kWh)}
\]

For domestic gas ovens:

\[
EEI_{cavity} = \frac{EC_{gas\ cavity}}{SEC_{gas\ cavity}} \times 100
\]

\[
SEC_{gas\ cavity} = 0,044 \times V + 3,53 \quad \text{(in MJ)}
\]

Where:

- \( EEI_{cavity} \) = Energy Efficiency Index for each cavity of a domestic oven, in %, rounded to the first decimal place,
- \( SEC_{electric\ cavity} \) = Standard Energy Consumption (electricity) required to heat a standardised load in a cavity of an electric heated domestic oven during a cycle, expressed in kWh, rounded to the second decimal place,
- \( SEC_{gas\ cavity} \) = Standard Energy Consumption required to heat a standardised load in a cavity of a domestic gas-fired oven during a cycle, expressed in MJ, rounded to the second decimal place,
- \( V \) = Volume of the cavity of the domestic oven in litres (L), rounded to the nearest integer,
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 65/2014

- $EC_{\text{electric cavity}}$ = Energy consumption required to heat a standardised load in a cavity of an electric heated domestic oven during a cycle, expressed in kWh, rounded to the second decimal place,
- $EC_{\text{gas cavity}}$ = Energy consumption required to heat a standardised load in a gas-fired cavity of a domestic oven during a cycle, expressed in MJ, rounded to the second decimal place.

2. DOMESTIC RANGE HOODS

2.1. Calculation of the Energy Efficiency Index ($EEI_{\text{hood}}$)

The Energy Efficiency Index ($EEI_{\text{hood}}$) is calculated as:

$$EEI_{\text{hood}} = \frac{AEC_{\text{hood}}}{SAEChood} \times 100$$

and is rounded to the first decimal place.

Where:
- $SAEChood$ is the Standard Annual Energy consumption of the domestic range hood in kWh/a, rounded to the first decimal place,
- $AEC_{\text{hood}}$ is the Annual Energy Consumption of the domestic range hood in kWh/a, rounded to the first decimal place.

The Standard Annual Energy Consumption ($SAEChood$) of a domestic range hood shall be calculated as:

$$SAEChood = 0.55 \times (W_{BEP} + W_{L}) + 15.3$$

Where:
- $W_{BEP}$ is the electric power input of the domestic range hood at the best efficiency point, in Watt and rounded to the first decimal place,
- $W_{L}$ is the nominal electric power input of the lighting system of the domestic range hood on the cooking surface, in Watt and rounded to the first decimal place.

The Annual Energy Consumption ($AEC_{\text{hood}}$) of a domestic range hood is calculated as:

(i) for the fully automatic domestic range hoods:

$$AEC_{\text{hood}} = \left[ \frac{\left( W_{BEP} \times t_{H} \times f + W_{L} \times t_{L} \right)}{60 + 1000} + \frac{P_{3} \times (1440 - t_{H} \times f)}{2 \times 60 \times 1000} + \frac{P_{2} \times (1440 - t_{H} \times f)}{2 \times 60 \times 1000} \right] \times 365$$

(b) for all other domestic range hoods:

$$AEC_{\text{hood}} = \left[ \frac{W_{BEP} \times (i_{H} \times f) + W_{L} \times t_{L}}{60 \times 1000} \right] \times 365$$

Where:
- $t_{L}$ is the average lighting time per day, in minutes ($t_{L} = 120$),
- $t_h$ is the average running time per day for domestic range hoods, in minutes ($t_h = 60$),
- $P_0$ is the electric power input in off-mode of the domestic range hood, in Watt and rounded to the second decimal place,
- $P_s$ is the electric power input in standby mode of the domestic range hood, in Watt and rounded to the second decimal place,
- $f$ is the time increase factor, calculated and rounded to the first decimal place, as:

$$f = 2 - \left( \frac{FDE_{\text{hood}} \times 3.6}{100} \right)$$

2.2. Calculation of the Fluid Dynamic Efficiency ($FDE_{\text{hood}}$)
The Fluid Dynamic Efficiency ($FDE_{\text{hood}}$) at the best efficiency point is calculated by the following formula, and is rounded to the first decimal place:

$$FDE_{\text{hood}} = \frac{Q_{\text{BEP}} \times P_{\text{BEP}}}{3600 \times W_{\text{BEP}}} \times 100$$

Where:
- $Q_{\text{BEP}}$ is the flow rate of the domestic range hood at best efficiency point, expressed in m$^3$/h and rounded to the first decimal place,
- $P_{\text{BEP}}$ is the static pressure difference of the domestic range hood at best efficiency point, expressed in Pa and rounded to the nearest integer,
- $W_{\text{BEP}}$ is the electric power input of the domestic range hood at the best efficiency point, expressed in Watt and rounded to the first decimal place.

2.3. Calculation of the Lighting Efficiency ($LE_{\text{hood}}$)
The Lighting Efficiency ($LE_{\text{hood}}$) of a domestic range hood means the ratio between the average illumination and the nominal electric power input of the lighting system. It shall be calculated in lux per Watt and rounded at the nearest integer, as:

$$LE_{\text{hood}} = \frac{E_{\text{middle}}}{W_L}$$

Where:
- $E_{\text{middle}}$ is the average illumination of the lighting system on the cooking surface measured under standard conditions, in lux and rounded to the nearest integer,
- $W_L$ is the nominal electric power input of the lighting system of the domestic range hood on the cooking surface, in Watt and rounded to the first decimal place.

2.4. Calculation of the Grease Filtering Efficiency ($GFE_{\text{hood}}$)
The Grease Filtering Efficiency ($GFE_{\text{hood}}$) of a domestic range hood means the relative amount of grease retained within the range hood grease filters. It shall be calculated and rounded to the first decimal place as:
Where:
- \( w_g \) = the mass of oil in the grease filter, including all detachable coverings, in g and rounded to the first decimal place,
- \( w_r \) = the mass of oil retained in the airways of the range hood, in g and rounded to the first decimal place,
- \( w_t \) = the mass of oil retained in the absolute filter, in g and rounded to the first decimal place.

2.5. Noise
The Noise Value (in dB) is measured as the airborne acoustical A-weighted sound power emissions (weighted average value – \( L_{WA} \)) of a domestic range hood at the highest setting for normal use, rounded to the nearest integer.
1. LABEL FOR DOMESTIC OVENS

1.1. Domestic electric ovens

1.1.1. Label presentation – for each cavity of a domestic electric oven
1.1.2. Label information – domestic electric ovens

The following information shall be included in the label:

I. Supplier’s name or trade mark;

II. Supplier’s model identifier, where ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific domestic oven model from other models with the same trade mark or supplier’s name;

III. Energy source of the domestic oven;

IV. The energy efficiency class of the cavity determined in accordance with Annex I. The head of the arrow containing the indicator letter shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. Usable volume of the cavity in litres, rounded to the nearest integer;

VI. Energy consumption per cycle expressed in kWh/cycle (electricity consumption) for the heating function(s) (conventional and if available the forced air convection) of the cavity based on standard load determined in accordance with the test procedures, rounded to the second decimal place (EC_{electric cavity}).
1.1.3. Label design – domestic electric ovens

The design of the label for each cavity of a domestic electric oven shall be as in the following figure:

Whereby:
(i) The label shall be at least 85 mm wide and 170 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(ii) The background shall be white.
(iii) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):
PART II  ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 65/2014

1. **Border stroke**: 4 pt – colour: cyan 100 % – round corners: 3 mm.

2. **EU logo**: colours: X-80-00-00 and 00-00-X-00.

3. **Energy logo**: colour: X-00-00-00; pictogram as depicted: EU logo + energy label: width: 70 mm, height: 14 mm.

4. **Sub-logos border**: 1,5 pt – colour: cyan 100 % – length: 70 mm.

5. **Scale of energy classes**
   - **Arrow**: height: 5,5 mm, gap: 1 mm – colours:
     - Highest class: X-00-X-00
     - Second class: 70-00-X-00
     - Third class: 30-00-X-00
     - Fourth class: 00-00-X-00
     - Fifth class: 00-30-X-00
     - Sixth class: 00-70-X-00
     - Last class: 00-X-X-00
   
   - **Text**: Calibri bold 18 pt, capitals and white; ‘+’ symbol: Calibri bold 12 pt, white, aligned on a single row.

6. **Energy efficiency class**
   - **Arrow**: width: 20 mm, height: 10 mm, 100 % black;
   
   - **Text**: Calibri bold 24 pt, capitals and white; ‘+’ symbol: Calibri bold 18 pt, white, aligned on a single row.

7. **Energy consumption per cycle**
   - **Border**: 1,5 pt – colour: cyan 100 % – round corners: 3 mm.
   
   - **Value**: Calibri bold 19 pt, 100 % black; and Calibri regular 10 pt, 100 % black.

8. **Volume**
   - **Border**: 1,5 pt – colour: cyan 100 % – round corners: 3 mm.
   
   - **Value**: Calibri bold 20 pt, 100 % black; and Calibri regular 10 pt, 100 % black.

9. **Asterisk**: Calibri regular 6 pt, 100 % black.

10. **Numbering of the Regulation**: Calibri bold 10 pt, 100 % black

11. **Supplier’s name or trademark**

12. **Supplier’s model identifier**

13. **The suppliers’ name or trade mark and model identifier should fit in a space of 70 x 13 mm.**
1.2. Domestic gas ovens

1.2.1. Label presentation – for each cavity of a domestic gas oven
1.2.2. Label information

The following information shall be included in the label:

I. Supplier’s name or trade mark;

II. Supplier’s model identifier, where ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific domestic oven model from other models with the same trade mark or supplier’s name;

III. Energy source of the domestic oven;

IV. The energy efficiency class of the cavity determined in accordance with Annex I. The head of the arrow containing the indicator letter shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. Usable volume of the cavity in litres, rounded to the nearest integer;

VI. Energy consumption per cycle expressed in MJ/cycle and in kWh/cycle (gas consumption) for the heating function(s) (conventional and if available the forced air convection) of the cavity based on standard load determined in accordance with the test procedures, rounded to the second decimal place (EC\textsubscript{gas cavity}).

\footnote{1 kWh/cycle = 3.6 MJ/cycle}
1.2.3. Label design – domestic gas ovens

The design of the label for each cavity of a domestic gas oven shall be as in the following figure:

Whereby:

(i) The label shall be at least 85 mm wide and 170 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70- X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):
Border stroke: 4 pt – colour: cyan 100 % – round corners: 3 mm.

EU logo: colours: X-80-00-00 and 00-00-X-00.

Energy logo: colour: X-00-00-00; pictogram as depicted: EU logo + energy label: width: 70 mm, height: 14 mm.

Sub-logos border: 1,5 pt – colour: cyan 100 % – length: 70 mm.

Scale of energy classes
- **Arrow**: height: 5,5 mm, gap: 1 mm – colours:
  - Highest class: X-00-X-00
  - Second class: 70-00-X-00
  - Third class: 30-00-X-00
  - Fourth class: 00-00-X-00
  - Fifth class: 00-30-X-00
  - Sixth class: 00-70-X-00
  - Last class: 00-X-X-00
- **Text**: Calibri bold 18 pt, capitals and white; ‘+’ symbol: Calibri bold 12 pt, white, aligned on a single row.

Energy efficiency class
- **Arrow**: width: 20 mm, height: 10 mm, 100 % black;
- **Text**: Calibri bold 24 pt, capitals and white; ‘+’ symbol: Calibri bold 18 pt, white, aligned on a single row.

Energy consumption per cycle
- **Border**: 1,5 pt – colour: cyan 100 % – round corners: 3 mm.
- **Value**: Calibri bold 19 pt, 100 % black; and Calibri regular 10 pt, 100 % black.

Volume
- **Border**: 1,5 pt – colour: cyan 100 % – round corners: 3 mm.
- **Value**: Calibri bold 20 pt, 100 % black; and Calibri regular 10 pt, 100 % black.

Asterisk: Calibri regular 6 pt, 100 % black.

Numbering of the Regulation: Calibri bold 10 pt, 100 % black

Supplier’s name or trademark

Supplier’s model identifier

The suppliers’ name or trade mark and model identifier should fit in a space of 70 × 13 mm.
2. LABEL FOR DOMESTIC RANGE HOODS

2.1. Label formats

2.1.1. Domestic range hoods in energy efficiency classes A to G (label 1)
2.1.2. Domestic range hoods in energy efficiency classes A+ to F (label 2)
2.1.3. Domestic range hoods in energy efficiency classes A++ to E (label 3)
2.1.4. Domestic range hoods in energy efficiency classes A+++ to D (label 4)
2.2. Label information – domestic range hoods

The following information shall be included in the label:

I. Supplier’s name or trade mark;

II. Supplier’s model identifier, where ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific domestic range hood model from other models with the same trade mark or supplier’s name;

III. The energy efficiency class of the domestic range hood, determined in accordance with Annex I. The head of the arrow containing the energy efficiency class of the domestic range hood shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. Annual energy consumption \( (\text{AEC}_{\text{hood}}) \) calculated in accordance with Annex II, in kWh rounded to the nearest integer;

V. The Fluid Dynamic Efficiency class determined in accordance with Annex I;

VI. The Lighting Efficiency class determined in accordance with Annex I;

VII. The Grease Filtering Efficiency class determined in accordance with Annex I;

VIII. The Noise Value, determined in accordance with point 2.5 of Annex II, rounded to the nearest integer.
2.3. Label design – domestic range hoods

The design of the label shall be as in the following figure:

Whereby:

(i) The label shall be at least 60 mm wide and 120 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):
Border stroke: 3 pt – colour: Cyan 100 % – round corners: 2 mm.

EU logo: colours: X-80-00-00 and 00-00-X-00.

Energy logo: colour: X-00-00-00; pictogram as depicted: EU logo + energy label: width: 51 mm, height: 10 mm.

Sub-logos border: 1 pt – colour: Cyan 100 % – length: 51 mm.

Scale of energy classes
- Arrow: height: 4 mm, gap: 0,75 mm – colours:
  - Highest class: X-00-X-00
  - Second class: 70-00-X-00
  - Third class: 30-00-X-00
  - Fourth class: 00-00-X-00
  - Fifth class: 00-30-X-00
  - Sixth class: 00-70-X-00
  - Last class: 00-X-X-00
- Text: Calibri bold 10 pt, capitals and white; ‘+’ symbol: Calibri bold 7 pt, white, aligned on a single row.

Energy efficiency class
- Arrow: width: 15 mm, height: 8 mm, 100 % black;
- Text: Calibri bold 17 pt, capitals and white; ‘+’ symbol: Calibri bold 12 pt, white, aligned on a single row.

Annual energy consumption
- Border: 1 pt – colour: cyan 100 % – round corners: 2,5 mm.
- Value: Calibri bold 21 pt, 100 % black; and Calibri regular 8 pt, 100 % black.

Fluid Dynamic Efficiency
- Pictogram as depicted
- Border: 1 pt – colour: cyan 100 % – round corners: 2,5 mm.
- Value: Calibri regular 6 pt, 100 % black; and Calibri bold 11,5 pt, 100 % black.

Lighting Efficiency
- Pictogram as depicted
- Border: 1 pt – colour: cyan 100 % – round corners: 2,5 mm.
- Value: Calibri regular 6 pt, 100 % black; and Calibri bold 11,5 pt, 100 % black.

Grease Filtering Efficiency
- Pictogram as depicted
- Border: 1 pt – colour: cyan 100 % – round corners: 2,5 mm.
- Value: Calibri regular 10 pt, 100 % black; and Calibri bold 14 pt, 100 % black.

Noise level
- Pictogram as depicted
- **Border**: 1 pt – colour: cyan 100 % – round corners: 2,5 mm.
- **Value**: Calibri regular 6 pt, 100 % black; and Calibri bold 11,5 pt, 100 % black.

12 **Numbering of the Regulation**: Calibri bold 8 pt, 100 % black
13 **Supplier’s name or trademark**
14 **Supplier’s model identifier**
15 The suppliers’ name or trade mark and model identifier should fit in a space of 51 × 9 mm.
ANNEX IV
Fiche

A. FICHE FOR DOMESTIC OVENS
1. The information in the product fiche of the domestic ovens referred to in Article 3(1)(a)(ii) shall be given as defined below and in the order specified below, and shall be included in the product brochure or other literature provided with the product:
   (a) supplier’s name or trade mark;
   (b) supplier’s model identifier which means the code, usually alphanumeric, which distinguishes a specific domestic oven model from other models with the same trade mark or supplier’s name and with different declared values for any of the parameters included in the label for the domestic oven (point 1 of Annex III);
   (c) the energy efficiency index (EEI<sub>cavity</sub>) for each cavity of the model calculated in accordance with point 1 of Annex II and rounded to the first decimal place; the declared energy efficiency index shall not exceed the index reported in the technical documentation in Annex V;
   (d) the energy efficiency class of the model for each cavity as defined in Table 1 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
   (e) the energy consumption per cycle for each cavity if available in conventional mode and in fanforced convection mode (the measured energy consumption shall be expressed in kWh (electric and gas ovens) and in MJ (gas ovens), rounded to two decimal place); the declared value shall not be lower than the value reported in the technical documentation in Annex V;
   (f) the number of cavities; the heat source(s) per cavity; and the volume of each cavity.

2. Without prejudice to any requirements under the Community eco-label scheme, where a model has been granted a European Union eco-label under Regulation (EC) No 66/2010 of the European Parliament and of the Council of 25 November 2009, a copy of the eco-label may be added.

3. One fiche may cover a number of domestic oven models supplied by the same supplier.

4. The information contained in the fiche may be given in the form of a copy of the label of each cavity (either in colour or in black and white). Where this is the case, the information listed in point 1, not already displayed on the label, shall also be provided.

B. FICHE FOR DOMESTIC RANGE HOODS
1. The information in the product fiche of the domestic range hoods referred to in Article 3(1)(b)(ii) shall be given as defined below and in the order specified below, and shall be included in the product brochure or other literature provided with the product:
   (a) supplier’s name or trade mark;
   (b) supplier’s model identifier which means the code, usually alphanumeric, which distinguishes a specific domestic range hood model from other models with the same trade mark or supplier’s name and with different declared values for any of the parameters included in the label for the domestic range hood (point 2 of Annex III);
(c) the Annual Energy Consumption \( (\text{AEC}_{\text{hood}}) \) calculated according to point 2 of Annex II, in kWh/a and rounded to the first decimal place; the declared value shall not be lower than the value reported in the technical documentation in Annex V;

(d) the Energy Efficiency class, as defined in Table 2 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;

(e) the Fluid Dynamic Efficiency \( (\text{FDE}_{\text{hood}}) \) calculated according to point 2 of Annex II, rounded to the first decimal place; the declared value shall not be higher than the value reported in the technical documentation in Annex V;

(f) the Fluid Dynamic Efficiency class, as defined in Table 3 of Annex I; the declared class shall not be better than the class reported in the technical documentation in Annex V;

(g) the Lighting Efficiency \( (\text{LE}_{\text{hood}}) \) calculated according to point 2 of Annex II, in lux/Watt and rounded to the first decimal place; the declared value shall not be higher than the value reported in the technical documentation in Annex V;

(h) the Lighting Efficiency class, as defined in Table 4 of Annex I, the declared class shall not be better than the class reported in the technical documentation in Annex V;

(i) the Grease Filtering Efficiency calculated according to point 2 of Annex II, in percentage and rounded to the first decimal place; the declared value shall not be higher than the value reported in the technical documentation in Annex V;

(j) the Grease Filtering Efficiency class, as defined in Table 5 of Annex I; the declared class shall not be better than the class reported in the technical documentation in Annex V;

(k) the air flow \( (\text{m}^3/\text{h}, \text{and rounded to the nearest integer}) \), at minimum and maximum speed in normal use, intensive or boost excluded; the declared values shall not be higher than the values reported in the technical documentation in Annex V;

(l) if available, the air flow \( (\text{m}^3/\text{h} \text{ and rounded to the nearest integer}) \), at intensive or boost setting; the declared value shall not be higher than the values reported in the technical documentation in Annex V;

(m) the airborne acoustical A-weighted sound power emissions \( (\text{in dB rounded to the nearest integer}) \), at minimum and maximum speed available in normal use; the declared value shall not be lower than the value reported in the technical documentation in Annex V;

(n) if available, the airborne acoustical A-weighted sound power emissions \( (\text{in dB rounded to the nearest integer}) \), at intensive or boost setting; the declared value shall not be lower than the value reported in the technical documentation in Annex V;

(o) if applicable, the power consumption in off mode \( (P_o) \), in Watt and rounded to the second decimal place; the declared values shall not be lower than the values reported in the technical documentation in Annex V;

(p) if applicable, the power consumption in standby mode \( (P_s) \), in Watt and rounded to the second decimal place; the declared values shall not be lower than the values reported in the technical documentation in Annex V.

2. One fiche may cover a number of domestic range hood models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label (either in colour or in black and white). Where this is the case, the information listed in point 1, not already displayed on the label, shall also be provided.
ANNEX V
Technical documentation

A. TECHNICAL DOCUMENTATION FOR DOMESTIC OVENS

1. The technical documentation referred to in Article 3(1)(a)(iii) shall include at minimum:

   (a) the name and address of the supplier;

   (b) a general description of the appliance model, sufficient for it to be unequivocally and easily identified, including the supplier’s model identifier (i.e. the code, usually alphanumeric) which distinguishes a specific domestic oven model from other models with the same trade mark or supplier’s name and with different declared values for any of the parameters included in the label for the domestic oven (point 1 of Annex III);

   (c) technical parameters for measurements as follows:

      (i) the number of cavities; the volume of each cavity; the heat source(s) per cavity; the heating function(s) (conventional and/or the forced air convection) per cavity;

      (ii) the energy consumption per cycle for each cavity if available in conventional mode and in fan-forced convection mode; the measured energy consumption shall be expressed in kWh (electric and gas ovens) and in MJ (gas ovens), rounded to the second decimal place;

      (iii) the energy efficiency index (EEI_{cavity}) for each cavity of the domestic oven calculated in accordance with point 1 of Annex II and rounded to the first decimal place;

      (iv) the energy efficiency class for each cavity of the domestic oven as defined in Table 1 of Annex I;

   (d) a copy of the calculation and the results of the calculations performed in accordance with Annex II;

   (e) where appropriate, the references of the harmonised standards applied;

   (f) where appropriate, the other technical standards and specifications used;

   (g) identification and signature of the person empowered to bind the supplier.

2. Suppliers may include additional information at the end of the above list.
ANNEX VI

Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet

A. DOMESTIC OVENS

1. The information referred to in Article 4(1)(b) shall be provided in the following order:
   (a) supplier’s name or trade mark;
   (b) supplier’s model identifier, i.e. the model identifier of the specific domestic oven to which the figures quoted below apply;
   (c) the energy efficiency class of the model for each cavity as defined in Annex I, Table 1; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
   (d) the energy consumption per cycle for each cavity if available in conventional mode and in fanforced convection mode; the measured energy consumption shall be expressed in kWh (electric and gas ovens) and in MJ (gas ovens), rounded to two decimal places; the declared value shall not be lower than the value reported in the technical documentation in Annex V;
   (e) the number of cavities; the heat source(s) per cavity; the volume of each cavity.

2. Where other information contained in the product information fiche is also provided, it shall be in the form and order specified in Annex IV.

3. The size and font in which all the information referred to in this Annex is printed or shown, shall be legible.

B. DOMESTIC RANGE HOODS

1. The information referred to in Article 4(2)(b) shall be provided in the following order:
   (a) supplier’s name or trade mark;
   (b) supplier’s model identifier, i.e. the model identifier of the specific range hood to which the figures quoted below apply;
   (c) the energy efficiency class of the model as defined in Table 2 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
   (d) the annual energy consumption of the model in kWh, as defined in point 2.1 of Annex II; the declared value shall not be lower than the value reported in the technical documentation in Annex V;
   (e) the fluid dynamic efficiency class of the model as defined in Table 3 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
   (f) the lighting efficiency class of the model as defined in Table 4 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
   (g) the grease filtering efficiency class of the model as defined in Table 5 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
   (h) the airborne acoustical A-weighted sound power emissions (weighted average value – LWA) of a domestic range hood at minimum and maximum speed available in normal use, in dB rounded to the nearest integer; the declared value shall not be lower than the value reported in the technical documentation in Annex V;
documentation in Annex V.

2. Where other information contained in the product information fiche is also provided, it shall be in the form and order specified in Annex IV.

3. The size and font in which all the information referred to in this Annex is printed or shown, shall be legible.
ANNEX VII

Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
   (a) ‘display mechanism’ means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
   (b) ‘nested display’ means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
   (c) ‘tactile screen’ means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
   (d) ‘alternative text’ means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3(1)(a)(vi) or 3(1)(b)(vi) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(3). For ovens, the appropriate label shall be shown for each cavity of the oven. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:
   (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
   (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
   (c) have one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:
   (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
   (b) the image shall link to the label;
   (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
   (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
   (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
   (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

5. The appropriate product fiche made available by suppliers in accordance with Article 3(1)(a)(vii) or 3(1)(b)(vii) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate ‘Product fiche’. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
ANNEX VIII\textsuperscript{5}

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

1. The Contracting Party authorities shall verify one single unit of the model.
2. The model shall be considered to comply with the applicable requirements if:
   a. the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
   b. the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
   c. when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 6.
3. If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.
4. If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.
5. The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 6.
6. If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.
7. The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being made.

\textsuperscript{5}Annex VIII is replaced in accordance with Article 11 and Annex XI of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.
taken on the non-compliance of the model according to points 3 and 6. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex II.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 6 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

DELEGATED REGULATION (EU) 812/2013 of 18 February 2013 supplementing Directive 2010/30/EU with regard to the energy labelling of water heaters, hot water storage tanks and packages of water heater and solar device

**Article 1**
Subject matter and scope

1. This Regulation establishes requirements for the energy labelling of, and the provision of supplementary product information on, water heaters with a rated heat output ≤ 70 kW, hot water storage tanks with a storage volume ≤ 500 litres and packages of water heater ≤ 70 kW and solar device.

2. This Regulation shall not apply to:
   (a) water heaters specifically designed for using gaseous or liquid fuels predominantly produced from biomass;
   (b) water heaters using solid fuels;
   (c) water heaters within the scope of Directive 2010/75/EU of the European Parliament and of the Council;
   (d) combination heaters as defined in Article 2 of Delegated Regulation (EU) No 811/2013;
   (e) water heaters which do not meet at least the load profile with the smallest reference energy, as specified in Annex VII, Table 3;
   (f) water heaters designed for making hot drinks and/or food only.

**Article 2**
Definitions

In addition to the definitions set out in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

(1) ‘water heater’ means a device that:
   (a) is connected to an external supply of drinking or sanitary water;
   (b) generates and transfers heat to deliver drinking or sanitary hot water at given temperature levels, quantities and flow rates during given intervals; and
   (c) is equipped with one or more heat generators;

---

1 Incorporated and adapted by Ministerial Council Decision 2014/02/MC-EnC of 23 September 2014
(2) ‘heat generator’ means the part of a water heater that generates the heat using one or more of the following processes:

(a) combustion of fossil fuels and/or biomass fuels;
(b) use of the Joule effect in electric resistance heating elements;
(c) capture of ambient heat from an air source, water source or ground source, and/or waste heat;

(3) ‘rated heat output’ means the declared heat output of the water heater when providing water heating at standard rating conditions, expressed in kW;

(4) ‘storage volume’ (V) means the rated volume of a hot water storage tank, expressed in litres;

(5) ‘standard rating conditions’ means the operating conditions of water heaters for establishing the rated heat output, water heating energy efficiency and sound power level, and of hot water storage tanks for establishing the standing loss;

(6) ‘biomass’ means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;

(7) ‘biomass fuel’ means a gaseous or liquid fuel produced from biomass;

(8) ‘fossil fuel’ means a gaseous or liquid fuel of fossil origin;

(9) ‘hot water storage tank’ means a vessel for storing hot water for water and/or space heating purposes, including any additives, which is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(10) ‘back-up immersion heater’ means a Joule effect electric resistance heater that is part of a hot water storage tank and generates heat only when the external heat source is disrupted (including during maintenance periods) or out of order, or that is part of a solar hot water storage tank and provides heat when the solar heat source is not sufficient to satisfy required comfort levels;

(11) ‘solar device’ means a solar-only system, a solar collector, a solar hot water storage tank or a pump in the collector loop, which are placed on the market separately;

(12) ‘solar-only system’ means a device that is equipped with one or more solar collectors and solar hot water storage tanks and possibly pumps in the collector loop and other parts, which is placed on the market as one unit and is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(13) ‘package of water heater and solar device’ means a package offered to the end-user containing one or more water heaters and one or more solar devices;

(14) ‘water heating energy efficiency’ (T WH) means the ratio between the useful energy provided by a water heater or a package of water heater and solar device and the energy required for its generation, expressed in %;

(15) ‘sound power level’ (L WA) means the A-weighted sound power level, indoors and/or outdoors, expressed in dB;

(16) ‘standing loss’ (S) means the heating power dissipated from a hot water storage tank at given water and ambient temperatures, expressed in W;

(17) ‘heat pump water heater’ means a water heater that uses ambient heat from an air source, water
source or ground source, and/or waste heat for heat generation.

For the purposes of Annexes II to IX, additional definitions are set out in Annex I.

**Article 3**

**Responsibilities of suppliers and timetable**

1. From **1 January 2018** suppliers placing water heaters on the market and/or putting them into service, including those integrated in packages of water heater and solar device, shall ensure that:

   (a) **<...>** for water heaters intended for use in packages of water heater and solar device, a second label complying with the format and content of information set out in point 3 of Annex III is provided for each water heater;

   (b) a product fiche, as set out in point 1 of Annex IV, is provided for each water heater, whereby: for heat pump water heaters, the product fiche is provided at least for the heat generator; for water heaters intended for use in packages of water heater and solar device, a second fiche, as set out in point 4 of Annex IV, is provided;

   (c) the technical documentation, as set out in point 1 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

   (d) any advertisement relating to a specific water heater model and containing energy-related or price information includes a reference to the water heating energy efficiency class under average climate conditions for that model;

   (e) any technical promotional material concerning a specific water heater model and describing its specific technical parameters includes a reference to the water heating energy efficiency class under average climate conditions for that model;

   (f) an electronic label in the format and containing the information set out in point 1.1 of Annex III is made available to dealers for each water heater model conforming to the water heating energy efficiency classes set out in point 1 of Annex II;

   (g) an electronic product fiche as set out in point 1 of Annex IV is made available to dealers for each water heater model, whereby for heat pump water heaters models, the electronic product fiche is made available to dealers at least for the heat generator.²

From **1 January 2018** a printed label complying with the format and content of information set out in point 1.2 of Annex III shall be provided for each water heater conforming to the water heating energy efficiency classes set out in point 1 of Annex II, whereby: for heat pump water heaters, the printed label shall be provided at least in the packaging of the heat generator.

From **1 January 2020** an electronic label in the format and containing the information set out in point 1.2 of Annex III shall be made available to dealers for each water heater model conforming to the water heating energy efficiency classes set out in point 1 of Annex II.³

² Article 3, paragraph 1, points (f) and (g) are added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

³ Added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
2. From 1 January 2018 suppliers placing hot water storage tanks on the market and/or putting them into service shall ensure that:

(a) [...]

(b) a product fiche, as set out in point 2 of Annex IV, is provided;

(c) the technical documentation, as set out in point 2 of Annex V, is provided on request to the authorities of the Contracting Parties and to the Commission;

(d) any advertisement relating to a specific hot water storage tank model and containing energy-related or price information includes a reference to the energy efficiency class for that model;

(e) any technical promotional material concerning a specific hot water storage tank model and describing its specific technical parameters includes a reference to the energy efficiency class for that model;

(f) an electronic label in the format and containing the information set out in point 2.1 of Annex III is made available to dealers for each hot water storage tank model in accordance with the energy efficiency classes set out in point 2 of Annex II;

(g) an electronic product fiche as set out in point 2 of Annex IV is made available to dealers for each hot water storage tank model.4

From 1 January 2018 a printed label complying with the format and content of information as set out in point 2.2 of Annex III shall be provided for each hot water storage tank conforming to the energy efficiency classes set out in point 2 of Annex II.

From 1 January 2020 an electronic label in the format and containing the information set out in point 2.2 of Annex III shall be made available to dealers for each hot water storage tank model, in accordance with the energy efficiency classes set out in point 2 of Annex II.5

3. From 1 January 2018 suppliers placing solar devices on the market and/or putting them into service shall ensure that:

(a) a product fiche, as set out in point 3 of Annex IV, is provided;

(b) the technical documentation, as set out in point 3 of Annex V, is provided on request to the authorities of the Contracting Parties and to the Commission;

(c) an electronic product fiche, as set out in point 3 of Annex IV, is made available to dealers for each solar device model.6

4. From 1 January 2018 suppliers placing packages of water heater and solar device on the market and/or putting them into service shall ensure that:

(a) a printed label complying with the format and content of information set out in point 3 of Annex III is provided for each package of water heater and solar device conforming to the water heating energy efficiency classes set out in point 1 of Annex II;

(b) a product fiche, as set out in point 4 of Annex IV, is provided for each package of water heater and solar device;

(c) the technical documentation, as set out in point 4 of Annex V, is provided on request to the authorities.

---

4 Article 3, paragraph 2, points (f) and (g) are added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.

5 Added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.

6 Article 3, paragraph 3, point (c) is added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.
of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific package of water heater and solar device model and containing energy-related or price information includes a reference to the water heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific package of water heater and solar device model and describing its specific technical parameters includes a reference to the water heating energy efficiency class under average climate conditions for that model;

(f) an electronic label in the format and containing the information set out in point 3 of Annex III is made available to dealers for each model comprising a package of water heater and solar device, in accordance with the water heating energy efficiency classes set out in point 1 of Annex II;

(g) an electronic product fiche as set out in point 4 of Annex IV is made available to dealers for each model comprising a package of water heater and solar device.7

---

**Article 4**

**Responsibilities of dealers**

1. Dealers of water heaters shall ensure that:

(a) each water heater, at the point of sale, bears the label provided by suppliers in accordance with Article 3(1), as set out in point 1 of Annex III, on the outside of the front of the appliance, in such a way as to be clearly visible;

(b) water heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the water heater displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;8

(c) any advertisement relating to a specific water heater model and containing energy-related or price information includes a reference to the water heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific water heater model and describing its specific technical parameters includes a reference to the water heating energy efficiency class under average climate conditions for that model.

2. Dealers of hot water storage tanks shall ensure that:

(a) each hot water storage tank, at the point of sale, bears the label provided by suppliers in accordance with Article 3(2), as set out in point 2 of Annex III, on the outside of the front of the appliance, in such a way as to be clearly visible;

(b) hot water storage tanks offered for sale, hire or hire-purchase, where the end user cannot be expected to see the hot water storage tank displayed, are marketed with the information provided by the suppliers in accordance with point 2 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;8

---

7 Article 3, paragraph 4, points (f) and (g) are added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

8 Article 4, paragraph 1, point (b) is replaced in accordance with Article 10(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
made through the internet in which case the provisions in Annex X shall apply;\(^9\)

(c) any advertisement relating to a specific hot water storage tank model and containing energy-related or price information includes a reference to the energy efficiency class for that model;

(d) any technical promotional material concerning a specific hot water storage tank model and describing its specific technical parameters includes a reference to the energy efficiency class for that model.

3. Dealers of packages of water heater and solar device shall ensure, based on the label and fiches provided by suppliers in accordance with Article 3(1), (3) and (4), that:

(a) any offer for a specific package includes the water heating energy efficiency and the water heating energy efficiency class for that package under average, colder or warmer climate conditions, as applicable, by displaying with the package the label set out in point 3 of Annex III and providing the fiche set out in point 4 of Annex IV, duly filled in according to the characteristics of that package;

(b) packages of water heater and solar device offered for sale, hire or hire purchase, where the end-user cannot be expected to see the package of water heater and solar device displayed, are marketed with the information provided in accordance with point 3 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;\(^10\)

(c) any advertisement relating to a specific package of water heater and solar device model and containing energy-related or price information includes a reference to the water heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific package of water heater and solar device model and describing its specific technical parameters includes a reference to the water heating energy efficiency class under average climate conditions for that model.

### Article 5

**Measurement and calculation methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation methods which take into account the recognised state-of-the-art measurement and calculation methods, as set out in Annex VII and Annex VIII.

### Article 6

**Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure set out in Annex IX when assessing the conformity of the declared water heating energy efficiency class, water heating energy efficiency, annual energy consumption and sound power level of water heaters and the declared energy efficiency class and standing loss of hot water storage tanks.

---

\(^9\) Article 4, paragraph 2, point (b) is replaced in accordance with Article 10(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

\(^10\) Article 4, paragraph 3, point (b) is replaced in accordance with Article 10(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
Article 7

Review

Article 8

Entry into force and application

This Regulation shall apply from 1 January 2016<sup>12</sup>.

The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation<sup>13</sup>. This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties<sup>14</sup>.

ANNEX I

Definitions applicable for Annexes II to IX

For the purposes of Annexes II to IX, the following definitions shall apply:

(1) ‘conventional water heater’ means a water heater that generates heat using the combustion of fossil and/or biomass fuels and/or the Joule effect in electric resistance heating elements;

(2) ‘solar water heater’ means a water heater equipped with one or more solar collectors, solar hot water storage tanks, heat generators and possibly pumps in the collector loop and other parts, a solar water heater is placed on the market as one unit;

(3) ‘load profile’ means a given sequence of water draw-offs, as specified in Annex VII, Table 3; each water heater meets at least one load profile;

(4) ‘water draw-off’ means a given combination of useful water flow rate, useful water temperature, useful energy content and peak temperature, as specified in Annex VII, Table 3;

(5) ‘useful water flow rate’ <sup>f</sup> means the minimum flow rate, expressed in litres per minute, for which hot water is contributing to the reference energy, as specified in Annex VII, Table 3;

---

<sup>11</sup> Not applicable
<sup>12</sup> The text displayed here corresponds to Article 2(2) of Decision 2014/02/MC-EnC
<sup>13</sup> The text displayed here corresponds to Article 2(3) of Decision 2014/02/MC-EnC
<sup>14</sup> The text displayed here corresponds to Article 3(1) of Decision 2014/02/MC-EnC
(6) ‘useful water temperature’ ($T_m$) means the water temperature, expressed in degrees Celsius, at which hot water starts contributing to the reference energy, as specified in Annex VII, Table 3;

(7) ‘useful energy content’ ($Q_{tap}$) means the energy content of hot water, expressed in kWh, provided at a temperature equal to, or above, the useful water temperature, and at water flow rates equal to, or above, the useful water flow rate, as specified in Annex VII, Table 3;

(8) ‘energy content of hot water’ means the product of the specific heat capacity of water, the average temperature difference between the hot water output and cold water input, and the total mass of the hot water delivered;

(9) ‘peak temperature’ ($T_p$) means the minimum water temperature, expressed in degrees Celsius, to be achieved during water draw-off, as specified in Annex VII, Table 3;

(10) ‘reference energy’ ($Q_{ref}$) means the sum of the useful energy content of water draw-offs, expressed in kWh, in a particular load profile, as specified in Annex VII, Table 3;

(11) ‘maximum load profile’ means the load profile with the greatest reference energy that a water heater is able to provide while fulfilling the temperature and flow rate conditions of that load profile;

(12) ‘declared load profile’ means the load profile applied when determining water heating energy efficiency;

(13) ‘conversion coefficient’ (CC) means a coefficient reflecting the estimated 40 % average EU generation efficiency referred to in Directive 2012/27/EU of the European Parliament and of the Council; the value of the conversion coefficient is $CC = 2.5$;

(14) ‘daily electricity consumption’ ($Q_{elec}$) means the consumption of electricity over 24 consecutive hours under the declared load profile and under given climate conditions, expressed in kWh in terms of final energy;

(15) ‘daily fuel consumption’ ($Q_{fuel}$) means the consumption of fuels over 24 consecutive hours under the declared load profile and under given climate conditions, expressed in kWh in terms of GCV, and for the purposes of point 4 in Annex VIII expressed in GJ in terms of GCV;

(16) ‘gross calorific value’ (GCV) means the total amount of heat released by a unit quantity of fuel when it is burned completely with oxygen and when the products of combustion are returned to ambient temperature; this quantity includes the condensation heat of any water vapour contained in the fuel and of the water vapour formed by the combustion of any hydrogen contained in the fuel;

(17) ‘smart control’ means a device that automatically adapts the water heating process to individual usage conditions with the aim of reducing energy consumption;

(18) ‘smart control compliance’ (smart) means the measure of whether a water heater equipped with smart controls fulfils the criterion set out in point 5 of Annex VIII;

(19) ‘smart control factor’ (SCF) means the water heating energy efficiency gain due to smart control under the conditions set out in point 3 of Annex VII;

(20) ‘weekly electricity consumption with smart controls’ ($Q_{elec, week, smart}$) means the weekly electricity consumption of a water heater with the smart control function enabled, expressed in kWh in terms of final energy;

(21) ‘weekly fuel consumption with smart controls’ ($Q_{fuel, week, smart}$) means the weekly fuel consumption of a
water heater with the smart control function enabled, expressed in kWh in terms of GCV;

(22) ‘weekly electricity consumption without smart controls’ ($Q_{e,w, week}$) means the weekly electricity consumption of a water heater with the smart control function disabled, expressed in kWh in terms of final energy;

(23) ‘weekly fuel consumption without smart controls’ ($Q_{f,w, week}$) means the weekly fuel consumption of a water heater with the smart control function disabled, expressed in kWh in terms of GCV;

(24) ‘annual electricity consumption’ ($AEC$) means the annual electricity consumption of a water heater under the declared load profile and under given climate conditions, expressed in kWh in terms of final energy;

(25) ‘annual fuel consumption’ ($AFC$) means the annual fossil and/or biomass fuel consumption of a water heater under the declared load profile and under given climate conditions, expressed in GJ in terms of GCV;

(26) ‘ambient correction term’ ($Q_{cor}$) means a term which takes into account the fact that the place where the water heater is installed is not an isothermal place, expressed in kWh;

(27) ‘standby heat loss’ ($P_{stby}$) means the heat loss of a heat pump water heater in operating modes without heat demand, expressed in kW;

(28) ‘average climate conditions’, ‘colder climate conditions’ and ‘warmer climate conditions’ mean the temperatures and global solar irradiance conditions characteristic for the cities of Strasbourg, Helsinki and Athens, respectively;

(29) ‘annual energy consumption’ ($Q_{tota}$) means the annual energy consumption of a solar water heater, expressed in kWh in terms of primary energy and/or kWh in terms of GCV;

(30) ‘annual non-solar heat contribution’ ($Q_{nonsol}$), means the annual contribution of electricity (expressed in kWh in terms of primary energy) and/or fuels (expressed in kWh in terms of GCV) to the useful heat output of a solar water heater or a package of water heater and solar device, taking into account the annual amount of heat captured by the solar collector and the heat losses of the solar hot water storage tank;

(31) ‘solar collector’ means a device designed to absorb global solar irradiance and to transfer the heat energy so produced to a fluid passing through it; it is characterised by the collector aperture area, the zero-loss efficiency, the first order coefficient, the second-order coefficient and the incidence angle modifier;

(32) ‘global solar irradiance’ means the rate of total incoming solar energy, both direct and diffuse, on a collector plane with an inclination of 45 degrees and southward orientation at the Earth’s surface, expressed in W/m²;

(33) ‘collector aperture area’ ($A_{sol}$) means the maximum projected area through which unconcentrated solar radiation enters the collector, expressed in m²;

(34) ‘zero-loss efficiency’ ($\eta_0$) means the efficiency of the solar collector, when the solar collector mean fluid temperature is equal to the ambient temperature;

(35) ‘first-order coefficient’ ($a_1$) means the heat loss coefficient of a solar collector, expressed in W/(m² K);

(36) ‘second-order coefficient’ ($a_2$) means the coefficient measuring the temperature dependence of the first order coefficient, expressed in W/(m² K²);

(37) ‘incidence angle modifier’ (IAM) means the ratio of the useful heat output of the solar collector at a given incidence angle and its useful heat output at an incidence angle of 0 degrees;
(38) ‘incidence angle’ means the angle between the direction to the sun and the direction perpendicular to the solar collector aperture;

(39) ‘solar hot water storage tank’ means a hot water storage tank storing heat energy produced by one or more solar collectors;

(40) ‘heat generator water heating energy efficiency’ \( (\eta_{\text{wh, nonsol}}) \) means the water heating energy efficiency of a heat generator which is part of a solar water heater, expressed in %, established under average climate conditions and without using solar heat input;

(41) ‘auxiliary electricity consumption’ \( (Q_{\text{aux}}) \), for the purpose of Figure 1 in Annex IV referred to as ‘auxiliary electricity’, means the annual electricity consumption of a solar water heater or a solar-only system that is due to the pump power consumption and the standby power consumption, expressed in kWh in terms of final energy;

(42) ‘pump power consumption’ \( (\text{solpump}) \) means the rated electrical power consumption of the pump in the collector loop of a solar water heater or solar-only system, expressed in W;

(43) ‘standby power consumption’ \( (\text{solstandby}) \) means the rated electrical power consumption of a solar water heater or solar-only system when the pump and the heat generator are inactive, expressed in W;

(44) ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific water heater, hot water storage tank, solar device or package of water heater and solar device model from other models with the same trade mark, supplier’s name or dealer’s name.
### ANNEX II

#### Energy efficiency classes

### 1. WATER HEATING ENERGY EFFICIENCY CLASSES OF WATER HEATERS

The water heating energy efficiency class of a water heater shall be determined on the basis of its water heating energy efficiency as set out in Table 1.

The water heating energy efficiency of a water heater shall be calculated in accordance with point 3 of Annex VIII, for solar water heaters and heat pump water heaters under average climate conditions.

#### Table 1

Water heating energy efficiency classes of water heaters, categorised by declared load profiles, \( \eta_{\text{wh}} \) in %

ANNEX III
The labels

1. WATER HEATERS
1.1. Label 1

1.1.1. Conventional water heaters in water heating energy efficiency classes A to G

(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII;
IV. the water heating energy efficiency class, determined in accordance with point 1 of Annex II; the head of the arrow containing the water heating energy efficiency class of the water heater shall be placed at the same height as the head of the relevant energy efficiency class;
V. the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in
GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII; VI. the sound power level $L_{WA}$, indoors, in dB, rounded to the nearest integer; VII. for conventional water heaters able to work only during off-peak hours, the pictogram referred to in point 4(d)(10) of this Annex may be added.

(b) The design aspects of the label for conventional water heaters shall be in accordance with point 4 of this Annex.

1.1.2. Solar water heaters in water heating energy efficiency classes A to G

(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII;
IV. the water heating energy efficiency class under average climate conditions, determined in accordance with point 1 of Annex II; the head of the arrow containing the water heating energy efficiency class of the water heater shall be placed at the same height as the head of the relevant energy efficiency class;
V. the annual electricity consumption in kWh in terms of final energy or the annual fuel consumption in GJ in terms of GCV, under average, colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII;

VI. European solar map displaying three indicative global solar irradiance zones;

VII. the sound power level $L_{WA}$, indoors, in dB, rounded to the nearest integer.

(b) The design aspects of the label for solar water heaters shall be in accordance with point 5 of this Annex.

### 1.1.3. Heat pump water heaters in water heating energy efficiency classes A to G

(a) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier;

III. the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII;

IV. the water heating energy efficiency class under average climate conditions, determined in accordance with point 1 of Annex II; the head of the arrow containing the water heating energy efficiency class of
the water heater shall be placed at the same height as the head of the relevant energy efficiency class;

V. the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under average, colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII;

VI. European temperature map displaying three indicative temperature zones;

VII. the sound power level $L_{WA}$, indoors (if applicable) and outdoors, in dB, rounded to the nearest integer;

VIII. for heat pump water heaters able to work only during off-peak hours, the pictogram referred to in point 6(d)(11) of this Annex may be added.

(b) The design aspects of the label for heat pump water heaters shall be in accordance with point 6 of this Annex. By way of exception, where a model has been granted an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

1.2. Label 2

1.2.1. Conventional water heaters in water heating energy efficiency classes A+ to F
(a) The information listed in point 1.1.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for conventional water heaters shall be in accordance with point 4 of this Annex.

1.2.2. Solar water heaters in water heating energy efficiency classes A+ to F

(a) The information listed in point 1.1.2(a) of this Annex shall be included in the label.

(b) The design aspects of the label for solar water heaters shall be in accordance with point 5 of this Annex.
1.2.3. Heat pump water heaters in water heating energy efficiency classes A+ to F

(a) The information listed in point 1.1.3(a) of this Annex shall be included in the label.

(b) The design aspects of the label for heat pump water heaters shall be in accordance with point 6 of this Annex.
2. HOT WATER STORAGE TANKS

2.1. Label 1 for hot water storage tanks in energy efficiency classes A to G

(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the water storage function;
IV. the energy efficiency class, determined in accordance with point 2 of Annex II; the head of the arrow containing the energy efficiency class of the hot water storage tank shall be placed at the same height as the head of the relevant energy efficiency class;
V. the standing loss in W, rounded to the nearest integer;
VI. the hot water storage tank volume in litres, rounded to the nearest integer.

(b) The design aspects of the label for hot water storage tanks shall be in accordance with point 7 of this Annex.
2.2. Label 2 for hot water storage tanks in energy efficiency classes A+ to F

(a) The information listed in point 2.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for hot water storage tanks shall be in accordance with point 7 of this Annex.
3. PACKAGES OF WATER HEATER AND SOLAR DEVICE

Label for packages of water heater and solar device in water heating energy efficiency classes A+++ to G

(a) The following information shall be included in the label:
I. dealer’s and/or supplier’s name or trade mark;
II. dealer’s and/or supplier’s model(s) identifier;
III. the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII;
IV. the water heating energy efficiency class of the water heater, determined in accordance with point 1 of Annex II;
V. indication of whether a solar collector and hot water storage tank may be included in the package of water heater and solar device;
VI. the water heating energy efficiency class of the package of water heater and solar device, determined in accordance with point 4 of Annex IV, the head of the arrow containing the water heating energy efficiency class of the package of water heater and solar device shall be placed at the same height as the head of the relevant energy efficiency class.

(b) The design aspects of the label for packages of water heater and solar device shall be in accordance with point 8 of this Annex. For packages of water heater and solar device in water heating energy efficiency classes A+++ to D, the last classes E to G in the A+++ to G scale may be omitted.
4. The design of the label for conventional water heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.

2. **EU logo: Colours**: X-80-00-00 and 00-00-X-00.

3. **Energy label**: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm,
height: 17 mm.

4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.

5 **Water heating function:**
   - **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII: Calibri bold 16 pt, 100 % black.

6 **A-G or A’-F scale:**
   - **Arrow:** height: 7 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00,
   - **Text:** Calibri bold 16 pt, capitals, white, ‘+’ symbol: superscript.

7 **Water heating energy efficiency class:**
   - **Arrow:** width: 22 mm, height: 12 mm, 100 % black,
   - **Text:** Calibri bold 24 pt, capitals, white, ‘+’ symbol: superscript.

8 **Sound power level, indoors:**
   - **Pictogram** as depicted,
   - **Border:** 2 pt – colour: cyan 100 % – round corners: 3,5 mm,
   - **Value ‘YZ’:** Calibri bold 15 pt, 100 % black,
   - **Text ‘dB’:** Calibri regular 10 pt, 100 % black.

9 **Annual energy consumption in kWh/annum or GJ/annum:**
   - **Border:** 2 pt – colour: cyan 100 % – round corners: 3,5 mm,
   - **Value ‘WXYZ’ or ‘YZ’:** Calibri bold at least 20 pt, 100 % black,
   - **Text ‘kWh/annum’ or ‘GJ/annum’:** Calibri regular at least 15 pt, 100 % black.

10 **If applicable, off-peak fitness:**
    - **Pictogram** as depicted,
    - **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

11 **Year of label introduction and number of Regulation:**
    - **Text:** Calibri bold 10 pt.

12 **Supplier’s name or trademark.**

13 **Supplier’s model identifier:**
The supplier’s name or trade mark and model identifier shall fit in a space of 86 × 12 mm.
5. The design of the label for solar water heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. EU label border stroke: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. EU logo: Colours: X-80-00-00 and 00-00-X-00.
3. Energy label: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4. Sub-logos border: 1 pt, colour: cyan 100 %, length: 86 mm.
5. Water heating function:
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 812/2013

– **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII: Calibri bold 16 pt, 100 % black.

6 **A-G or A+-F scale:**
   – **Arrow**: height: 7 mm, gap: 1 mm, colours:
     – Highest class: X-00-X-00,
     – Second class: 70-00-X-00,
     – Third class: 30-00-X-00,
     – Fourth class: 00-00-X-00,
     – Fifth class: 00-30-X-00,
     – Sixth class: 00-70-X-00,
     – Last class: 00-X-X-00,
   – **Text**: Calibri bold 16 pt, capitals, white, ‘+’ symbol: superscript.

7 **Water heating energy efficiency class:**
   – **Arrow**: width: 22 mm, height: 12 mm, 100 % black,

8 **Sound power level, indoors:**
   – **Pictogram** as depicted,
   – **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   – **Value ‘YZ’**: Calibri bold 15 pt, 100 % black,
   – **Text ‘dB’**: Calibri regular 10 pt, 100 % black.

9 **Annual energy consumption in kWh/annum or GJ/annum:**
   – **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   – **Values ‘WXYZ’ or ‘YZ’**: Calibri at least 13 pt, 100 % black,
   – **Text ‘kWh/annum’ or ‘GJ/annum’**: Calibri regular at least 11 pt, 100 % black.

10 **European solar map and colour squares:**
   – **Pictogram** as depicted,
   – **Colours**: Dark blue: 86-51-00-00,
               Middle blue: 53-08-00-00,
               Light blue: 25-00-02-00.

11 **Year of label introduction and number of Regulation:**
   – **Text**: Calibri bold 10 pt.

12 **Supplier’s name or trademark.**

13 **Supplier’s model identifier:**
   The supplier’s name or trade mark and model identifier shall fit in a space of 86 x 12 mm.
6. The design of the label for heat pump water heaters shall be the following:

Whereby:
(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(b) The background shall be white.
(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. **EU logo: Colours**: X-80-00-00 and 00-00-X-00.
3. **Energy label**: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4. **Sub-logos border**: 1 pt, colour: cyan 100 %, length: 86 mm.
5. **Water heating function**:
   - Pictogram as depicted, including the declared load profile expressed as the appropriate letter in
acCORDANCE WITH TABLE 3 OF ANNEX VII: CALIBRI BOLD 16 PT, 100 % BLACK.

6 A-G OR A+-F SCALE:
   - Arrow: height: 7 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 16 pt, capitals, white, ‘+’ symbol: superscript.

7 WATER HEATING ENERGY EFFICIENCY CLASS:
   - Arrow: width: 22 mm, height: 12 mm, 100 % black,

8 SOUND POWER LEVEL, INDOORS (IF APPLICABLE) AND OUTDOORS:
   - Pictogram as depicted,
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   - Value ‘YZ’: Calibri bold 15 pt, 100 % black,
   - Text ‘dB’: Calibri regular 10 pt, 100 % black.

9 ANNUAL ENERGY CONSUMPTION IN kWh/annum OR GJ/annum:
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   - Values ‘WXYZ’ OR ‘YZ’: Calibri at least 13 pt, 100 % black,
   - Text ‘kWh/annum’ OR ‘GJ/annum’: Calibri regular at least 11 pt, 100 % black.

10 EUROPEAN TEMPERATURE MAP AND COLOUR SQUARES:
   - Pictogram as depicted,
   - Colours: Dark blue: 86-51-00-00,
              Middle blue: 53-08-00-00,
              Light blue: 25-00-02-00.

11 IF APPLICABLE, OFF-PEAK FITNESS:
   - Pictogram as depicted,
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

12 YEAR OF LABEL INTRODUCTION AND NUMBER OF REGULATION:
   - Text: Calibri bold 10 pt.

13 SUPPLIER’S NAME OR TRADEMARK.

14 SUPPLIER’S MODEL IDENTIFIER:
   The supplier’s name or trade mark and model identifier shall fit in a space of 86 × 12 mm.
7. The design of the label for hot water storage tanks shall be the following:

Whereby:
(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(b) The background shall be white.
(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label**: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.

5 **Storage function:**
   - *Pictogram* as depicted.

6 **A-G or A*-F scale:**
   - *Arrow*: height: 7 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00,

7 **Energy efficiency class:**
   - *Arrow*: width: 22 mm, height: 12 mm, 100 % black,

8 **Standing loss:**
   - *Border*: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   - *Value ‘YZ’*: Calibri bold 45 pt, 100 % black,
   - *Text ‘W’*: Calibri regular 30 pt, 100 % black.

9 **Storage volume:**
   - *Border*: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   - *Value ‘XYZ’*: Calibri bold 45 pt, 100 % black,
   - *Text ‘L’*: Calibri regular 30 pt, 100 % black.

10 **Year of label introduction and number of Regulation:**

11 **Supplier’s name or trademark.**

12 **Supplier’s model identifier:**
   The supplier’s name or trade mark and model identifier shall fit in a space of 86 × 12 mm.
8. The design of the label for packages of water heater and solar device shall be the following:

Whereby:

(a) The label shall be at least 210 mm wide and 297 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 6 pt, colour: cyan 100 %, round corners: 3,5 mm.

2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.

3. **Energy label**: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 191 mm, height: 37 mm.

4. **Sub-logos border**: 2 pt, colour: cyan 100 %, length: 191 mm.

5. **Water heating function:**
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 812/2013

- **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII: Calibri bold 22 pt, 100 % black.

6 **Water Heater:**
- **Pictogram** as depicted.
- **Water heating energy efficiency class of water heater:**
  - **Arrow**: width: 24 mm, height: 14 mm, 100 % black,
  - **Text**: Calibri bold 28 pt, capitals, white,
  - **Border**: 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

7 **Package with solar collector and/or hot water storage tank:**
- **Pictograms** as depicted,
- ‘+’ **symbol**: Calibri bold 50 pt, cyan 100 %,
- **Boxes**: width: 12 mm, height: 12 mm, border: 4 pt, cyan 100 %,
- **Border**: 3 pt – colour: cyan 100 % – round corners: 3,5 mm.

8 **A+++–G scale with border:**
- **Arrow**: height: 15 mm, gap: 3 mm, colours:
  - Highest class: X-00-X-00,
  - Second class: 70-00-X-00,
  - Third class: 30-00-X-00,
  - Fourth class: 00-00-X-00,
  - Fifth class: 00-30-X-00,
  - Sixth class: 00-70-X-00,
  - Seventh class: 00-X-X-00,
  - If applicable, last classes: 00-X-X-00,
- **Text**: Calibri bold 30 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row,
- **Border**: 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

9 **Water heating energy efficiency class for package of water heater and solar device:**
- **Arrow**: width: 33 mm, height: 19 mm, 100 % black,
- **Text**: Calibri bold 40 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

10 **Year of label introduction and number of Regulation:**
- **Text**: Calibri bold 12 pt.

11 **Dealer’s and/or supplier’s name or trademark.**

12 **Dealer’s and/or supplier’s model identifier:**
   The dealer’s and/or supplier’s name or trade mark and model identifier shall fit in a space of 91 × 19 mm.
ANNEX IV

Product Fiche

1. WATER HEATERS

1.1. The information in the product fiche of the water heater shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trade mark;
(b) supplier’s model identifier;
(c) the declared load profile, expressed by the appropriate letter and typical usage in accordance with Table 3 of Annex VII;
(d) the water heating energy efficiency class of the model, determined in accordance with point 1 of Annex II, whereby: for solar water heaters and heat pump water heaters, under average climate conditions;
(e) the water heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with point 3 of Annex VIII, whereby: for solar water heaters and heat pump water heaters, under average climate conditions;
(f) the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII, whereby: for solar water heaters and heat pump water heaters, under average climate conditions;
(g) if applicable, other load profiles for which the water heater is suitable to use and the corresponding water heating energy efficiency and annual electricity consumption as set out in points (e) and (f);
(h) the thermostat temperature settings of the water heater, as placed on the market by the supplier;
(i) the sound power level $L_{WA}$, indoors, in dB, rounded to the nearest integer (for heat pump water heaters if applicable);
(j) if applicable, an indication that the water heater is able to work only during off-peak hours;
(k) any specific precautions that shall be taken when the water heater is assembled, installed or maintained;
(l) where the value of smart is declared as being ‘1’, an indication that the information on water heating energy efficiency, annual electricity and fuel consumption, as applicable, relate to enabled smart control settings only;

in addition, for solar water heaters and heat pump water heaters:

(m) the water heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 3 of Annex VIII;
(n) the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII; in addition, for solar water heaters:
(o) the collector aperture area in m², to two decimal places;
(p) the zero-loss efficiency, to three decimal places;
(q) the first-order coefficient in W/(m² K), to two decimal places;
(r) the second-order coefficient in W/(m² K²), to three decimal places;
(s) the incidence angle modifier, to two decimal places;
(t) the storage volume in litres, rounded to the nearest integer;
(u) the pump power consumption in W, rounded to the nearest integer;
(v) the standby power consumption in W, to two decimal places; in addition, for heat pump water heaters:
(w) the sound power level $L_{WA}$, outdoors, in dB, rounded to the nearest integer.

1.2. One fiche may cover a number of water heater models supplied by the same supplier.

1.3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1.1 not already displayed on the label shall also be provided.

2. HOT WATER STORAGE TANKS

2.1. The information in the product fiche of the hot water storage tank shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:
   (a) supplier’s name or trade mark;
   (b) supplier’s model identifier;
   (c) the energy efficiency class of the model, determined in accordance with point 2 of Annex II;
   (d) the standing loss in W, rounded to the nearest integer;
   (e) the storage volume in litres, rounded to the nearest integer.

2.2. One fiche may cover a number of hot water storage tank models supplied by the same supplier.

2.3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 2.1 not already displayed on the label shall also be provided.

3. SOLAR DEVICES

3.1. The information in the product fiche of the solar device shall be provided in the following order and shall be included in the product brochure or other literature provided with the product (for pumps in the collector loop if applicable):
   (a) supplier’s name or trade mark;
   (b) supplier’s model identifier;
   (c) the collector aperture area in m², to two decimal places;
   (d) the zero-loss efficiency, to three decimal places;
   (e) the first-order coefficient in W/(m² K), to two decimal places;
   (f) the second-order coefficient in W/(m² K²), to three decimal places;
   (g) the incidence angle modifier, to two decimal places;
   (h) the storage volume in litres, rounded to the nearest integer;
   (i) the annual non-solar heat contribution $Q_{nonsol}$ in kWh in terms of primary energy for electricity and/or in kWh in terms of GCV for fuels, for the load profiles M, L, XL and XXL under average climate conditions,
rounded to the nearest integer;

(j) the pump power consumption in W, rounded to the nearest integer;

(k) the standby power consumption in W, to two decimal places;

(l) the annual auxiliary electricity consumption $Q_{aux}$ in kWh in terms of final energy, rounded to the nearest integer.

3.2. One fiche may cover a number of solar device models supplied by the same supplier.

4. PACKAGES OF WATER HEATER AND SOLAR DEVICE

The fiche for packages of water heater and solar device shall contain the elements set out in Figure 1 for evaluating the water heating energy efficiency of a package of water heater and solar device, where the following information shall be included:

– I: the value of the water heating energy efficiency of the water heater, expressed in %,

– II: the value of the mathematical expression $\frac{Q_{ref}}{Q_{nonsol}}$, where $Q_{ref}$ is taken from Table 3 in Annex VII and $Q_{nonsol}$ from the product fiche of the solar device for the declared load profile M, L, XL or XXL of the water heater,

– III: the value of the mathematical expression $\frac{Q_{aux}}{Q_{ref}}$, expressed in %, where $Q_{aux}$ is taken from the product fiche of the solar device and $Q_{ref}$ from Table 3 in Annex VII for the declared load profile M, L, XL or XXL.
Figure 1

Fiche for a package of water heater and solar device indicating the water heating energy efficiency of the package offered

The energy efficiency of the package of products provided for in this fiche may not correspond to its actual energy efficiency once installed in a building, as this efficiency is influenced by further factors such as heat loss in the distribution system and the dimensioning of the products in relation to building size and characteristics.
ANNEX V

Technical documentation

1. WATER HEATERS
For water heaters, the technical documentation referred to in Article 3(1)(c) shall include:
(a) the name and address of the supplier;
(b) a description of the water heater model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) the results of the measurements for the technical parameters specified in point 7 of Annex VII;
(g) the results of the calculations for the technical parameters specified in point 2 of Annex VIII;
(h) any specific precautions that shall be taken when the water heater is assembled, installed or maintained.

2. HOT WATER STORAGE TANKS
For hot water storage tanks, the technical documentation referred to in Article 3(2)(c) shall include:
(a) the name and address of the supplier;
(b) a description of the hot water storage tank model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) the results of the measurements for the technical parameters specified in point 8 of Annex VII;
(g) any specific precautions that shall be taken when the hot water storage tank is assembled, installed or maintained.

3. SOLAR DEVICES
The technical documentation of solar devices referred to in Article 3(3)(b) shall include:
(a) the name and address of the supplier;
(b) a description of the solar device model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) the results of the measurements for the technical parameters as specified in point 9 of Annex VII;
(g) any specific precautions that shall be taken when the solar device is assembled, installed or maintained.
4. PACKAGES OF WATER HEATER AND SOLAR DEVICE

For packages of water heater and solar device, the technical documentation referred to in Article 3(4) (c) shall include:

(a) the name and address of the supplier;

(b) a description of the package of water heater and solar device model sufficient for its unambiguous identification;

(c) where appropriate, the references of the harmonised standards applied;

(d) where appropriate, the other technical standards and specifications used;

(e) the identification and signature of the person empowered to bind the supplier;

(f) technical parameters:
   – the water heating energy efficiency in %, rounded to the nearest integer,
   – the technical parameters set out in points 1, 2 and 3 of this Annex;

(g) any specific precautions that shall be taken when the package of water heater and solar device is assembled, installed or maintained.
ANNEX VI

Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet\footnote{In Annex VI, the title is replaced in accordance with Article 10(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC}

1. WATER HEATERS

1.1. The information referred to in Article 4(1)(b) shall be provided in the following order:

(a) the declared load profile, expressed by the appropriate letter and typical usage in accordance with Table 3 of Annex VII;

(b) the water heating energy efficiency class of the model, under average climate conditions, in accordance with point 1 of Annex II;

(c) the water heating energy efficiency in %, under average climate conditions, rounded to the nearest integer and calculated in accordance with point 3 of Annex VIII;

(d) the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under average climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII;

(e) the sound power level, indoors, in dB, rounded to the nearest integer (for heat pump water heaters, if applicable); in addition, for solar water heaters and heat pump water heaters:

(f) the water heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 3 of Annex VIII;

(g) the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII; in addition, for solar water heaters:

(h) the collector aperture area in m\(^2\), to two decimal places;

(i) the storage volume in litres, rounded to the nearest integer; in addition, for heat pump water heaters:

(j) the sound power level, outdoors, in dB, rounded to the nearest integer.

1.2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in point 1 of Annex IV.

1.3. The size and font in which the information referred in points 1.1 and 1.2 is printed or shown shall be legible.

2. HOT WATER STORAGE TANKS

2.1. The information referred to in Article 4(2)(b) shall be provided in the following order:

(a) the energy efficiency class of the model, determined in accordance with point 2 of Annex II;

(b) the standing loss in W, rounded to the nearest integer;

(c) the storage volume in litres, rounded to the nearest integer.

2.2. The size and font in which the information referred in point 2.1 is printed or shown shall be legible.
3. PACKAGES OF WATER HEATER AND SOLAR DEVICE

3.1. The information referred to in Article 4(3)(b) shall be provided in the following order:

(a) the water heating energy efficiency class of the model, determined in accordance with point 1 of Annex II;

(b) the water heating energy efficiency in %, rounded to the nearest integer;

(c) the elements set out in Figure 1 of Annex IV.

3.2. The size and font in which the information referred in point 3.1 is printed or shown shall be legible.
ANNEX VII
Measurements

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements shall be made using harmonised standards the reference numbers of which have been published for this purpose in the *Official Journal of the European Union*, or using other reliable, accurate and reproducible measurement methods that take into account the generally recognised state-of-the-art methods. They shall meet the conditions and technical parameters set out in points 2 to 9.

2. General conditions for testing water heaters:
   (a) measurements shall be carried out using the load profiles set out in Table 3;
   (b) measurements shall be carried out using a 24-hour measurement cycle as follows:
       – 00:00 to 06:59: no water draw-off,
       – from 07:00: water draw-offs according to the declared load profile,
       – from end of last water draw-off until 24:00: no water draw-off;
   (c) the declared load profile shall be the maximum load profile or the load profile one below the maximum load profile.

3. Conditions for testing the smart control compliance (smart) of water heaters

Where the supplier deems it appropriate to declare the value of smart as being ‘1’, measurements of the weekly electricity and/or fuel consumption with smart controls and the weekly electricity and/or fuel consumption without smart controls shall be carried out using a two-week measurement cycle as follows:

- days 1 to 5: random sequence of load profiles chosen from the declared load profile and the load profile one below the declared load profile, and smart control disabled,
- days 6 and 7: no water draw-offs, and smart control disabled,
- days 8 to 12: repetition of the same sequence applied for days 1 to 5, and smart control enabled,
- days 13 and 14: no water draw-offs, and smart control enabled,
- the difference between the useful energy content measured during days 1 to 7 and the useful energy content measured during days 8 to 14 shall not exceed 2 % of $Q_{\text{ref}}$ of the declared load profile.

4. Conditions for testing solar water heaters

The solar collector, solar hot water storage tank, pump in the collector loop (if applicable) and heat generator shall be tested separately. Where the solar collector and solar hot water storage tank cannot be tested separately, they shall be tested in combination. The heat generator shall be tested under the conditions set out in point 2 of this Annex.

The results shall be used for the calculations set out in point 3(b) of Annex VIII under the conditions set out in Tables 4 and 5. For the purpose of establishing $Q_{\text{total}}$ the efficiency of the heat generator using the Joule effect in electric resistance heating elements is assumed to be $100/CC$, expressed in %.

5. Conditions for testing heat pump water heaters

- Heat pump water heaters shall be tested under the conditions set out in Table 6,
- Heat pump water heaters which use ventilation exhaust air as the heat source shall be tested under the conditions set out in Table 7.

6. Conditions for testing solar devices

The solar collector, solar hot water storage tank and pump in the collector loop (if applicable) shall be tested separately. Where the solar collector and solar hot water storage tank cannot be tested separately, they shall be tested in combination.

The results shall be used for the calculations of $Q_{\text{nonsol}}$ for the load profiles M, L, XL and XXL under the average climate conditions set out in Tables 4 and 5 and $Q_{\text{aux}}$.

7. Technical parameters of water heaters

The following parameters shall be established for water heaters:

(a) the daily electricity consumption $Q_{\text{elec}}$ in kWh, rounded to three decimal places;
(b) the declared load profile, expressed by the appropriate letter in accordance with Table 3 of this Annex;
(c) the sound power level in dB, indoors, rounded to the nearest integer (for heat pump water heaters, if applicable); in addition, for water heaters using fossil and/or biomass fuels:
(d) the daily fuel consumption $Q_{\text{fuel}}$ in kWh in terms of GCV, rounded to three decimal places; in addition, for water heaters for which the value of smart is declared as being ‘1’:
(e) the weekly fuel consumption with smart controls $Q_{\text{fuel, week, smart}}$ in kWh in terms of GCV, rounded to three decimal places;
(f) the weekly electricity consumption with smart controls $Q_{\text{fuel, week, smart}}$ in kWh, rounded to three decimal places;
(g) the weekly fuel consumption without smart controls $Q_{\text{fuel, week}}$ in terms of GCV, rounded to three decimal places;
(h) the weekly electricity consumption without smart controls $Q_{\text{fuel, week}}$ in kWh, rounded to three decimal places;
in addition, for solar water heaters:
(i) the collector aperture area $A_{\text{sol}}$ in m², rounded to two decimal places;
(j) the zero-loss efficiency $n_0$, rounded to three decimal places;
(k) the first-order coefficient $a_1$ in W/(m² K), rounded to two decimal places;
(l) the second-order coefficient $a_2$ in W/(m² K²), rounded to three decimal places;
(m) the incidence angle modifier $IAM$, rounded to two decimal places;
(n) the pump power consumption $solpump$ in W, rounded to two decimal places;
(o) the standby power consumption $solstandby$ in W, rounded to two decimal places; in addition, for heat pump water heaters:
(p) the sound power level $L_{\text{WA}}$ in dB, outdoors, rounded to the nearest integer.

8. Technical parameters of hot water storage tanks

The following parameters shall be established for hot water storage tanks:

(a) the storage volume $V$ in litres, rounded to one decimal place;
(b) the standing loss $S$ in W, rounded to one decimal place.
9. Technical parameters of solar devices

The following parameters shall be established for solar devices:

(a) the collector aperture area $A_{\text{sol}}$ in m$^2$, rounded to two decimal places;
(b) the zero-loss efficiency $\eta_v$, rounded to three decimal places;
(c) the first-order coefficient $a_1$ in W/(m$^2$ K), rounded to two decimal places;
(d) the second-order coefficient $a_2$ in W/(m$^2$ K$^2$), rounded to three decimal places;
(e) the incidence angle modifier $IAM$, rounded to two decimal place;
(f) the pump power consumption $solpump$ in W, rounded to two decimal places;
(g) the standby power consumption, $solstandby$ in W, rounded to two decimal places.
ANNEX VIII

Method for calculating the water heating energy efficiency of water heaters

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, calculations shall be made using harmonised standards the reference numbers of which have been published for this purpose in the *Official Journal of the European Union*, or using other appropriate calculation methods that take into account the generally recognised state-of-the-art methods. They shall meet the technical parameters and calculations set out in points 2 to 6. Technical parameters used for the calculations shall be measured in accordance with Annex VII.

2. Technical parameters of water heaters

The following parameters shall be calculated for water heaters under average climate conditions:

(a) the water heating energy efficiency $\eta_{\text{wh}}$ in $\%$, rounded to one decimal place;
(b) the annual electricity consumption $AEC$ in kWh in terms of final energy, rounded to the nearest integer;

in addition, for water heaters using fuels under average climate conditions:
(c) the annual fuel consumption $AFC$ in kWh in terms of GCV, rounded to the nearest integer; in addition, for solar water heaters under average climate conditions:
(d) the heat generator water heating energy efficiency $\eta_{\text{wh, nonsol}}$ in $\%$, rounded to one decimal place;
(e) the annual auxiliary electricity consumption $Q_{\text{aux}}$ in kWh in terms of final energy, rounded to one decimal place;

in addition, for solar water heaters and heat pump water heaters under colder and warmer climate conditions:
(f) the parameters set out in points (a) to (c);

in addition for solar water heaters under average, colder and warmer climate conditions:
(g) the annual non-solar heat contribution $Q_{\text{nonsol}}$ in kWh in terms of primary energy for electricity and/or in kWh in terms of GCV for fuels, rounded to one decimal place.

3. Calculation of the water heating energy efficiency $\eta_{\text{wh}}$

(a) Conventional water heaters and heat pump water heaters:
The water heating energy efficiency is calculated as follows:

$$\eta_{\text{wh}} = \frac{Q_{\text{ref}}}{(Q_{\text{fuel}} + CC \cdot Q_{\text{elec}}) \cdot (1 - SCF \cdot \text{smart}) + Q_{\text{cor}}}$$

For water-/brine-to-water heat pump water heaters, the electricity consumption of one or more ground water pumps shall be taken into account.
(b) Solar water heaters:
The water heating energy efficiency is calculated as follows:

\[ \eta_{\text{wh}} = \frac{0.6 \cdot 366 \cdot Q_{\text{ref}}}{Q_{\text{tota}}} \]

Where:

\[ Q_{\text{tota}} = \frac{Q_{\text{noncalc}}}{1.1 \cdot \tau_{\text{wh,noncalc}} - 0.1} + Q_{\text{aux}} \cdot CC \]

4. Calculation of the annual electricity consumption AEC and the annual fuel consumption AFC

(a) Conventional water heaters and heat pump water heaters:
The annual electricity consumption AEC in kWh in terms of final energy is calculated as follows:

\[ AEC = 0.6 \cdot 366 \cdot \left( Q_{\text{elec}} \cdot (1 - \text{SCF} \cdot \text{smart}) + \frac{Q_{\text{cor}}}{CC} \right) \]

The annual fuel consumption AFC in GJ in terms of GCV is calculated as follows:

\[ AFC = 0.6 \cdot 366 \cdot (Q_{\text{fuel}} \cdot (1 - \text{SCF} \cdot \text{smart}) + Q_{\text{cor}}) \]

(b) Solar water heaters:
The annual electricity consumption AEC in kWh in terms of final energy is calculated as follows:

\[ AEC = \frac{CC \cdot Q_{\text{elec}}}{Q_{\text{fuel}} + CC \cdot Q_{\text{elec}}} \cdot \frac{Q_{\text{tota}}}{CC} \]

The annual fuel consumption AFC in GJ in terms of GCV is calculated as follows:

\[ AFC = \frac{Q_{\text{fuel}}}{Q_{\text{fuel}} + CC \cdot Q_{\text{elec}}} \cdot Q_{\text{tota}} \]

5. Determination of the smart control factor SCF and of smart control compliance smart

(a) The smart control factor is calculated as follows:

\[ \text{SCF} = 1 - \frac{Q_{\text{fuel, week, smart}} + CC \cdot Q_{\text{elec, week, smart}}}{Q_{\text{fuel, week}} + CC \cdot Q_{\text{elec, week}}} \]

(b) If \( \text{SCF} \geq 0.07 \), the value of smart shall be 1. In all other cases, the value of smart shall be 0.

6. Determination of the ambient correction term \( Q_{\text{cor}} \)
The ambient correction term is calculated as follows:

(a) for conventional water heaters using electricity:

\[ Q_{\text{cor}} = -k \cdot (CC \cdot (Q_{\text{elec}} \cdot (1 - \text{SCF} \cdot \text{smart}) - Q_{\text{ref}})) \]
(b) for conventional water heaters using fuels:

\[ Q_{\text{cor}} = -k \cdot (Q_{\text{fuel}} \cdot (1 - \text{SCF} \cdot \text{smart}) - Q_{\text{ref}}) \]

(c) for heat pump water heaters:

\[ Q_{\text{cor}} = -k \cdot 24h \cdot P_{\text{stby}} \]

Where:
the k-values are given in Table 8 for each load profile.

ANNEX IX\textsuperscript{16}

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

1. The Contracting Party authorities shall verify one single unit of the model.

2. The model shall be considered to comply with the applicable requirements if:
   a. the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
   b. the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
   c. when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 9.

3. If the results referred to in points 2(a) or (b) are not achieved, the model and all other equivalent water heater models, hot water storage tanks models, solar device models or package of water heater and solar device models shall be considered not to comply with this Delegated Regulation.

4. If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different equivalent models.

5. The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 9.

6. If the result referred to in point 5 is not achieved, the model and all other equivalent water heater models, hot water storage tanks models, solar device models or package of water heater and solar device models shall be considered not to comply with this Delegated Regulation.

7. The Contracting Party authorities shall provide all relevant information to the authorities.

\textsuperscript{16} Annex IX is replaced in accordance with Article 10 and Annex X of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII and Annex VIII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 9 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX X
Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:
(a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;
(b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and
(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:
(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;
(b) the image shall link to the label;

17 Annex IX is added in accordance with Article 10(4) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
DELEGATED REGULATION (EU) 811/2013 of 18 February 2013 supplementing Directive 2010/30/EU with regard to the energy labelling of space heaters, combination heaters, packages of space heater, temperature control and solar device and packages of combination heater, temperature control and solar device

Article 1
Subject matter and scope

1. This Regulation establishes requirements for the energy labelling of, and the provision of supplementary product information on, space heaters and combination heaters with a rated heat output ≤ 70 kW, packages of space heater ≤ 70 kW, temperature control and solar device and packages of combination heater ≤ 70 kW, temperature control and solar device.

2. This Regulation shall not apply to:
   (a) heaters specifically designed for using gaseous or liquid fuels predominantly produced from biomass;
   (b) heaters using solid fuels;
   (c) heaters within the scope of Directive 2010/75/EU of the European Parliament and of the Council
   (d) heaters generating heat only for the purpose of providing hot drinking or sanitary water;
   (e) heaters for heating and distributing gaseous heat transfer media such as vapour or air;
   (f) cogeneration space heaters with a maximum electrical capacity of 50 kW or above.

Article 2
Definitions

In addition to the definitions set out in Article 2 of Directive 2010/30/EC, the following definitions shall apply for the purposes of this Regulation:

(1) ‘heater’ means a space heater or combination heater;
(2) ‘space heater’ means a device that
   (a) provides heat to a water-based central heating system in order to reach and maintain at a desired level the indoor temperature of an enclosed space such as a building, a dwelling or a room; and
   (b) is equipped with one or more heat generators;
(3) ‘combination heater’ means a space heater that is designed to also provide heat to deliver hot drinking or sanitary water at given temperature levels, quantities and flow rates during given intervals, and is connected to an external supply of drinking or sanitary water;

(4) ‘water-based central heating system’ means a system using water as a heat transfer medium to distribute centrally generated heat to heat emitters for the space heating of buildings, or parts thereof;

(5) ‘heat generator’ means the part of a heater that generates the heat using one or more of the following processes:
   (a) combustion of fossil fuels and/or biomass fuels;
   (b) use of the Joule effect in electric resistance heating elements;
   (c) capture of ambient heat from an air source, water source or ground source, and/or waste heat;

(6) ‘rated heat output’ (Prated) means the declared heat output of a heater when providing space heating and, if applicable, water heating at standard rating conditions, expressed in kW; for heat pump space heaters and heat pump combination heaters the standard rating conditions for establishing the rated heat output are the reference design conditions, as set out in Annex VII, Table 10;

(7) ‘standard rating conditions’ means the operating conditions of heaters under average climate conditions for establishing the rated heat output, seasonal space heating energy efficiency, water heating energy efficiency and sound power level;

(8) ‘biomass’ means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;

(9) ‘biomass fuel’ means a gaseous or liquid fuel produced from biomass;

(10) ‘fossil fuel’ means a gaseous or liquid fuel of fossil origin;

(11) ‘cogeneration space heater’ means a space heater simultaneously generating heat and electricity in a single process;

(12) ‘temperature control’ means the equipment that interfaces with the end-user regarding the values and timing of the desired indoor temperature, and communicates relevant data to an interface of the heater such as a central processing unit, thus helping to regulate the indoor temperature(s);

(13) ‘solar device’ means a solar-only system, a solar collector, a solar hot water storage tank or a pump in the collector loop, which are placed on the market separately;

(14) ‘solar-only system’ means a device that is equipped with one or more solar collectors and solar hot water storage tanks and possibly pumps in the collector loop and other parts, which is placed on the market as one unit and is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(15) ‘solar collector’ means a device designed to absorb global solar irradiance and to transfer the heat energy so produced to a fluid passing through it;

(16) ‘hot water storage tank’ means a vessel for storing hot water for water and/or space heating purposes, including any additives, which is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(17) ‘solar hot water storage tank’ means a hot water storage tank storing heat energy produced by one or more solar collectors;
(18) ‘back-up immersion heater’ means a Joule effect electric resistance heater that is part of a hot water storage tank and generates heat only when the external heat source is disrupted (including during maintenance periods) or out of order, or that is part of a solar hot water storage tank and provides heat when the solar heat source is not sufficient to satisfy required comfort levels;

(19) ‘package of space heater, temperature control and solar device’ means a package offered to the end-user containing one or more space heaters combined with one or more temperature controls and/or one or more solar devices;

(20) ‘package of combination heater, temperature control and solar device’ means a package offered to the end-user containing one or more combination heaters combined with one or more temperature controls, and/or one or more solar devices;

(21) ‘seasonal space heating energy efficiency’ ($\eta_s$) means the ratio between the space heating demand for a designated heating season, supplied by a space heater, a combination heater, a package of space heater, temperature control and solar device or a package of combination heater, temperature control and solar device, and the annual energy consumption required to meet this demand, expressed in %;

(22) ‘water heating energy efficiency’ ($\eta_{wh}$) means the ratio between the useful energy in the drinking or sanitary water provided by a combination heater or a package of combination heater, temperature control and solar device, and the energy required for its generation, expressed in %;

(23) ‘sound power level’ ($L_{WA}$) means the A-weighted sound power level, indoors and/or outdoors, expressed in dB.

For the purposes of Annexes II to VIII, additional definitions are set out in Annex I.

**Article 3**

**Responsibilities of suppliers and timetable**

1. From **1 January 2018** suppliers placing space heaters on the market and/or putting them into service, including those integrated in packages of space heater, temperature control and solar device, shall ensure that:

(a) a printed label complying with the format and content of information set out in point 1.1 of Annex III is provided for each space heater conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II, whereby: for heat pump space heaters, the printed label is provided at least in the packaging of the heat generator; for space heaters intended for use in packages of space heater, temperature control and solar device, a second label complying with the format and content of information set out in point 3 of Annex III is provided for each space heater;

(b) a product fiche, as set out in point 1 of Annex IV, is provided for each space heater, whereby: for heat pump space heaters, the product fiche is provided at least for the heat generator; for space heaters intended for use in packages of space heater, temperature control and solar device, a second fiche, as set out in point 5 of Annex IV, is provided;

(c) the technical documentation, as set out in point 1 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific space heater model and containing energy-related or price
information includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific space heater model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model

(f) an electronic label in the format and containing the information set out in point 1.1 of Annex III is made available to dealers for each space heater model conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;

(g) an electronic product fiche as set out in point 1 of Annex IV is made available to dealers for each space heater model, whereby for heat pump space heaters models, the electronic product fiche is made available to dealers at least for the heat generator.1

From 26 September 2019 a printed label complying with the format and content of information set out in point 1.2 of Annex III shall be provided for each space heater conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II, whereby: for heat pump space heaters, the printed label shall be provided at least in the packaging of the heat generator.

From 1 January 2020 an electronic label in the format and containing the information set out in point 1.2 of Annex III shall be made available to dealers for each space heater model conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II.2

2. From 1 January 2018 suppliers placing combination heaters on the market and/or putting them into service, including those integrated in packages of combination heater, temperature control and solar device, shall ensure that:

(a) a printed label complying with the format and content of information set out in point 2.1 of Annex III is provided for each combination heater conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II, whereby: for heat pump combination heaters, the printed label is provided at least in the packaging of the heat generator; for combination heaters intended for use in packages of combination heater, temperature control and solar device, a second label complying with the format and content of information set out in point 4 of Annex III is provided for each combination heater;

(b) a product fiche, as set out in point 2 of Annex IV, is provided for each combination heater, whereby: for heat pump combination heaters, the product fiche is provided at least for the heat generator; for combination heaters intended for use in packages of combination heater, temperature control and solar device, a second fiche, as set out in point 6 of Annex IV, is provided;

(c) the technical documentation, as set out in point 2 of Annex V, is provided on request to the authorities of the Contracting Parties and to the Commission;

(d) any advertisement relating to a specific combination heater model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific combination heater model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class and

---

1 Article 3, paragraph 1, points (f) and (g) are added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

2 Added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 811/2013

water heating energy efficiency class under average climate conditions for that model

(f) an electronic label in the format and containing the information set out in point 2.1 of Annex III is made available to dealers for each combination heater model conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;

(g) an electronic product fiche as set out in point 2 of Annex IV is made available to dealers for each combination heater model, whereby for heat pump combination heaters models, the electronic product fiche is made available to dealers at least for the heat generator.³

From 26 September 2019 a printed label complying with the format and content of information set out in point 2.2 of Annex III shall be provided for each combination heater conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II, whereby: for heat pump combination heaters, the printed label shall be provided at least in the packaging of the heat generator.

From 1 January 2020 an electronic label in the format and containing the information set out in point 2.2 of Annex III shall be made available to dealers for each combination heater model conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II.⁴

3. From 1 January 2018 suppliers placing temperature controls on the market and/or putting them into service shall ensure that:

(a) a product fiche, as set out in point 3 of Annex IV, is provided;

(b) the technical documentation, as set out in point 3 of Annex V, is provided on request to the authorities of the Contracting Parties and to the Commission;

(c) an electronic product fiche, as set out in point 3 of Annex IV, is made available to dealers for each temperature control model.⁵

4. From 1 January 2018 suppliers placing solar devices on the market and/or putting them into service shall ensure that:

(a) a product fiche, as set out in point 4 of Annex IV, is provided;

(b) the technical documentation, as set out in point 4 of Annex V, is provided on request to the authorities of the Contracting Parties and to the Commission;

(c) an electronic product fiche, as set out in point 4 of Annex IV, is made available to dealers for each solar device model.⁶

5. From 1 January 2018 suppliers placing packages of space heater, temperature control and solar device on the market and/or putting them into service shall ensure that:

---

3 Article 3, paragraph 2, points (f) and (g) are added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

4 Added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

5 Article 3, paragraph 3, point (c) is added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

6 Article 3, paragraph 3, point (c) is added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
6. From 1 January 2018 suppliers placing packages of combination heater, temperature control and solar device on the market and/or putting them into service shall ensure that:

(a) a printed label complying with the format and content of information set out in point 4 of Annex III is provided for each package of combination heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;

(b) a product fiche, as set out in point 6 of Annex IV, is provided for each package of combination heater, temperature control and solar device;

(c) the technical documentation, as set out in point 6 of Annex V, is provided on request to the authorities of the Contracting Parties and to the Commission;

(d) any advertisement relating to a specific package of combination heater, temperature control and solar device model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific package of combination heater, temperature control and solar device model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

(f) an electronic label in the format and containing the information set out in point 3 of Annex III is made available to dealers for each model comprising a package of space heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;

(g) an electronic product fiche as set out in point 5 of Annex IV is made available to dealers for each model comprising a package of space heater, temperature control and solar device.\(^7\)

---

\(^7\) Article 3, paragraph 5, points (f) and (g) are added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.
(f) an electronic label in the format and containing the information set out in point 4 of Annex III is made available to dealers for each model comprising a package of combination heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;

(g) an electronic product fiche as set out in point 6 of Annex IV is made available to dealers for each model comprising a package of combination heater, temperature control and solar device.  

Article 4  
Responsibilities of dealers

1. Dealers of space heaters shall ensure that:
(a) each space heater, at the point of sale, bears the label provided by suppliers in accordance with Article 3(1), as set out in point 1 of Annex III, on the outside of the front of the appliance, in such a way as to be clearly visible;

(b) space heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the space heater displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;

(c) any advertisement relating to a specific space heater model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific space heater model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model.

2. Dealers of combination heaters shall ensure that:
(a) each combination heater, at the point of sale, bears the label provided by suppliers in accordance with Article 3(2), as set out in point 2 of Annex III, on the outside of the front of the appliance, in such a way as to be clearly visible;

(b) combination heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the combination heater displayed, are marketed with the information provided by the suppliers in accordance with point 2 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;

(c) any advertisement relating to a specific combination heater model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

8 Article 3, paragraph 6, points (f) and (g) are added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

9 Article 4, paragraph 1, point (b) is replaced in accordance with Article 9(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

10 Article 4, paragraph 2, point (b) is replaced in accordance with Article 9(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(d) any technical promotional material concerning a specific combination heater model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model.

3. Dealers of packages of space heater, temperature control and solar device shall ensure, based on the label and fiches provided by suppliers in accordance with Article 3(1), (3), (4) and (5), that:

(a) any offer for a specific package includes the seasonal space heating energy efficiency and the seasonal space heating energy efficiency class for that package under average, colder or warmer climate conditions, as applicable, by displaying with the package the label set out in point 3 of Annex III and providing the fiche set out in point 5 of Annex IV, duly filled in according to the characteristics of that package;

(b) packages of space heater, temperature control and solar device offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the package of space heater, temperature control and solar device displayed, are marketed with the information provided in accordance with point 3 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;¹¹

(c) any advertisement relating to a specific package of space heater, temperature control and solar device model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific package of space heater, temperature control and solar device model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model.

4. Dealers of packages of combination heater, temperature control and solar device shall ensure, based on the label and fiches provided by suppliers in accordance with Article 3(2), (3), (4) and (6), that:

(a) any offer for a specific package of combination heater, temperature control and solar device includes the seasonal space heating energy efficiency, the water heating energy efficiency, the seasonal space heating energy efficiency class and the water heating energy efficiency class for that package under average, colder or warmer climate conditions, as applicable, by displaying with the package the label set out in point 4 of Annex III and providing the fiche set out in point 6 of Annex IV, duly filled in according to the characteristics of that package;

(b) packages of combination heater, temperature control and solar device offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the package of combination heater, temperature control and solar device displayed, are marketed with the information provided in accordance with point 4 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;¹²

(c) any advertisement relating to a specific package of combination heater, temperature control and solar device model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific package of combination heater, temperature control and solar device model and describing its specific technical parameters includes a reference to the

---

¹¹ Article 4, paragraph 3, point (b) is replaced in accordance with Article 9(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

¹² Article 4, paragraph 4, point (b) is replaced in accordance with Article 9(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model.

**Article 5**
Measurement and calculation methods

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation methods which take into account the recognised state-of-the-art measurement and calculation methods, as set out in Annex VII.

**Article 6**
Verification procedure for market surveillance purposes

**Contracting Parties** shall apply the procedure set out in Annex VIII when assessing the conformity of the declared seasonal space heating energy efficiency class, water heating energy efficiency class, seasonal space heating energy efficiency, water heating energy efficiency and sound power level of heaters.

**Article 7**
Review

<...>13

**Article 8**
Entry into force and application

This Regulation shall apply from 1 January 201614.

The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation15.

This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties16.

ANNEX I
Definitions applicable for Annexes II to VIII

For the purposes of Annexes II to VIII the following definitions shall apply:

Definitions related to heaters:

(1) ‘boiler space heater’, for the purposes of Figures 1 to 4 in Annex IV referred to as ‘boiler’, means a space heater that generates heat using the combustion of fossil fuels and/or biomass fuels, and/or using the Joule effect in electric resistance heating elements;

(2) ‘boiler combination heater’, for the purposes of Figures 1 to 4 in Annex IV referred to as ‘boiler’, means a boiler space heater that is designed to also provide heat to deliver hot drinking or sanitary water at given temperature levels, quantities and flow rates during given intervals, and is connected to an external supply of drinking or sanitary water;

(3) ‘heat pump space heater’, for the purposes of Figures 1 and 3 in Annex IV referred to as ‘heat pump’, means a space heater using ambient heat from an air source, water source or ground source, and/or waste heat for heat generation; a heat pump space heater may be equipped with one or more supplementary heaters using the Joule effect in electric resistance heating elements or the combustion of fossil and/or biomass fuels;

(4) ‘heat pump combination heater’, for the purposes of Figures 1 and 3 in Annex IV referred to as ‘heat pump’, means a heat pump space heater that is designed to also provide heat to deliver hot drinking or sanitary water at given temperature levels, quantities and flow rates during given intervals, and is connected to an external supply of drinking or sanitary water;

(5) ‘supplementary heater’ means a non-preferential heater that generates heat in cases where the heat demand is greater than the rated heat output of the preferential heater;

(6) ‘rated heat output of supplementary heater’ ($P_{sup}$) means the declared heat output of the supplementary heater when providing space heating and, if applicable, water heating at standard rating conditions, expressed in kW; if the supplementary heater is a heat pump space heater or heat pump combination heater, the standard rating condition for establishing the rated heat output of supplementary heater is the outdoor temperature $T_j = +7 \, ^\circ C$;

(7) ‘outdoor temperature’ ($T_j$) means the dry bulb outdoor air temperature, expressed in degrees Celsius; the relative humidity may be indicated by a corresponding wet bulb temperature;

(8) ‘annual energy consumption’ ($Q_{HE}$) means the annual energy consumption of a heater required for space heating to meet the reference annual heating demand for a designated heating season, expressed in kWh in terms of the final energy and/or in GJ in terms of GCV;

(9) ‘standby mode’ means a condition where the heater is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only the following functions, which may persist for an indefinite time: reactivation function, or reactivation function and only an indication of enabled reactivation function, and/or information or status display;

(10) ‘standby mode power consumption’ ($P_{SB}$) means the power consumption of a heater in standby mode, expressed in kW;
(11) ‘conversion coefficient’ (CC) means a coefficient reflecting the estimated 40 % average EU generation efficiency referred to in Directive 2012/27/EU of the European Parliament and of the Council \(^{(1)}\); the value of the conversion coefficient is \( CC = 2.5 \);

(12) ‘gross calorific value’ (GCV) means the total amount of heat released by a unit quantity of fuel when it is burned completely with oxygen and when the products of combustion are returned to ambient temperature; this quantity includes the condensation heat of any water vapour contained in the fuel and of the water vapour formed by the combustion of any hydrogen contained in the fuel;

Definitions related to boiler space heaters, boiler combination heaters and cogeneration space heaters:

(13) ‘seasonal space heating energy efficiency in active mode’ (\( \eta_{\text{son}} \)) means

– for fuel boiler space heaters and fuel boiler combination heaters, a weighted average of the useful efficiency at rated heat output and the useful efficiency at 30 % of the rated heat output, expressed in %;

– for electric boiler space heaters and electric boiler combination heaters, the useful efficiency at rated heat output, expressed in %;

– for cogeneration space heaters not equipped with supplementary heaters, the useful efficiency at rated heat output, expressed in %;

– for cogeneration space heaters equipped with supplementary heaters, a weighted average of the useful efficiency at rated heat output with supplementary heater disabled, and the useful efficiency at rated heat output with supplementary heater enabled, expressed in %;

(14) ‘useful efficiency’ (\( \eta \)) means the ratio of the useful heat output and the total energy input of a boiler space heater, boiler combination heater or cogeneration space heater, expressed in %, whereby the total energy input is expressed in terms of GCV and/or in terms of final energy multiplied by CC;

(15) ‘useful heat output’ (\( P \)) means the heat output of a boiler space heater, boiler combination heater or cogeneration space heater transmitted to the heat carrier, expressed in kW;

(16) ‘electrical efficiency’ (\( \eta_{\text{el}} \)) means the ratio of the electricity output and the total energy input of a cogeneration space heater, expressed in %, whereby the total energy input is expressed in terms of GCV and/or in terms of final energy multiplied by CC;

(17) ‘ignition burner power consumption’ (\( P_{\text{ign}} \)) means the power consumption of a burner intended to ignite the main burner, expressed in W in terms of GCV;

(18) ‘condensing boiler’ means a boiler space heater or boiler combination heater in which, under normal operating conditions and at given operating water temperatures, the water vapour in the combustion products is partially condensed, in order to make use of the latent heat of this water vapour for heating purposes;

(19) ‘auxiliary electricity consumption’ means the annual electricity required for the designated operation of a boiler space heater, boiler combination heater or cogeneration space heater, calculated from the electric power consumption at full load (\( el_{\text{max}} \)), at part load (\( el_{\text{min}} \)), in standby mode and default operating hours at each mode, expressed in kWh in terms of final energy;

(20) ‘standby heat loss’ (\( P_{\text{stby}} \)) means the heat loss of a boiler space heater, boiler combination heater or cogeneration space heater in operating modes without heat demand, expressed in kW;
Definitions related to heat pump space heaters and heat pump combination heaters:

(21) ‘rated coefficient of performance’ \((\text{COP}_{\text{rated}})\) or ‘rated primary energy ratio’ \((\text{PER}_{\text{rated}})\) means the declared heat capacity, expressed in kW, divided by the energy input, expressed in kW in terms of GCV and/or in kW in terms of final energy multiplied by \(CC\), for heating provided at standard rating conditions;

(22) ‘reference design conditions’ means the combination of the reference design temperature, the maximum bivalent temperature and the maximum operation limit temperature, as set out in Annex VII, Table 10;

(23) ‘reference design temperature’ \((T_{\text{designh}})\) means the outdoor temperature, expressed in degrees Celsius, as set out in Annex VII, Table 10, at which the part load ratio is equal to 1;

(24) ‘part load ratio’ \((p_l(T_j))\) means the outdoor temperature minus 16 °C divided by the reference design temperature minus 16 °C;

(25) ‘heating season’ means a set of operating conditions for average, colder and warmer climate conditions, describing per bin the combination of outdoor temperatures and the number of hours these temperatures occur per season;

(26) ‘bin’ \((\text{bin}_j)\) means a combination of an outdoor temperature and bin hours, as set out in Annex VII, Table 12;

(27) ‘bin hours’ \((H_j)\) means the hours per heating season, expressed in hours per year, at which an outdoor temperature occurs for each bin, as set out in Annex VII, Table 12;

(28) ‘part load for heating’ \((P_l(T_j))\) means the heating load at a specific outdoor temperature, calculated as the design load multiplied by the part load ratio and expressed in kW;

(29) ‘seasonal coefficient of performance’ \((\text{SCOP})\) or ‘seasonal primary energy ratio’ \((\text{SPER})\) means the overall coefficient of performance of a heat pump space heater or heat pump combination heater using electricity or the overall primary energy ratio of a heat pump space heater or heat pump combination heater using fuels, representative of the designated heating season, calculated as the reference annual heating demand divided by the annual energy consumption;

(30) ‘reference annual heating demand’ \((Q_{H})\) means the reference heating demand for a designated heating season, to be used as the basis for calculating \(\text{SCOP}\) or \(\text{SPER}\) and calculated as the product of the design load for heating and the annual equivalent active mode hours, expressed in kWh;

(31) ‘annual equivalent active mode hours’ \((H_{HE})\) means the assumed annual number of hours a heat pump space heater or heat pump combination heater has to provide the design load for heating to satisfy the reference annual heating demand, expressed in h;

(32) ‘active mode coefficient of performance’ \((\text{SCOP}_{\text{on}})\) or ‘active mode primary energy ratio’ \((\text{SPER}_{\text{on}})\) means the average coefficient of performance of the heat pump space heater or heat pump combination heater using electricity in active mode or the average primary energy ratio of the heat pump space heater or heat pump combination heater using fuels in active mode for the designated heating season;

(33) ‘supplementary capacity for heating’ \((\text{sup}(T_j))\) means the rated heat output \(P_{\text{sup}}\) of a supplementary heater that supplements the declared capacity for heating to meet the part load for heating, if the declared capacity for heating is less than the part load for heating, expressed in kW;

(34) ‘bin-specific coefficient of performance’ \((\text{COP}_{\text{bin}(T_j)})\) or ‘bin-specific primary energy ratio’ \((\text{PER}_{\text{bin}(T_j)})\) means the coefficient of performance of the heat pump space heater or heat pump combination heater using electricity or primary energy ratio of the heat pump space heater or heat pump combination heater using fuel.
using fuel specific for every bin in a season, derived from the part load for heating, declared capacity for heating and declared coefficient of performance for specified bins and calculated for other bins by interpolation or extrapolation, corrected where necessary by the degradation coefficient;

(35) ‘declared capacity for heating’ \( (P_{dh}(T_j)) \) means the heating capacity a heat pump space heater or heat pump combination heater is able to deliver, for an outdoor temperature, expressed in kW;

(36) ‘capacity control’ means the ability of a heat pump space heater or heat pump combination heater to change its capacity by changing the volumetric flow rate of at least one of the fluids needed to operate the refrigeration cycle, to be indicated as ‘fixed’ if the volumetric flow rate cannot be changed or ‘variable’ if the volumetric flow rate is changed or varied in series of two or more steps;

(37) ‘design load for heating’ \( (P_{designh}) \) means the rated heat output \( (P_{rated}) \) of a heat pump space heater or heat pump combination heater at the reference design temperature, whereby the design load for heating is equal to the part load for heating with outdoor temperature equal to reference design temperature, expressed in kW;

(38) ‘declared coefficient of performance’ \( (COP_{d}(T_j)) \) or ‘declared primary energy ratio’ \( (PER_{d}(T_j)) \) means the coefficient of performance or primary energy ratio at a limited number of specified bins;

(39) ‘bivalent temperature’ \( (T_{biv}) \) means the outdoor temperature declared by the supplier for heating at which the declared capacity for heating equals the part load for heating and below which the declared capacity for heating requires supplementary capacity for heating to meet the part load for heating, expressed in degrees Celsius;

(40) ‘operation limit temperature’ \( (T_{OL}) \) means the outdoor temperature declared by the supplier for heating, below which the air-to-water heat pump space heater or air-to-water heat pump combination heater will not be able to deliver any heating capacity and the declared capacity for heating is equal to zero, expressed in degrees Celsius;

(41) ‘heating water operation limit temperature’ \( (WT_{OL}) \) means the outlet water temperature declared by the supplier for heating, above which the heat pump space heater or heat pump combination heater will not be able to deliver any heating capacity and the declared capacity heating is equal to zero, expressed in degrees Celsius;

(42) ‘cycling interval capacity for heating’ \( (P_{cych}) \) means the integrated heating capacity over the cycling test interval for heating, expressed in kW;

(43) ‘cycling interval efficiency’ \( (COP_{cyc} \text{ or } PER_{cyc}) \) means the average coefficient of performance or average primary energy ratio over the cycling test interval, calculated as the integrated heating capacity over the interval, expressed in kWh, divided by the integrated energy input over that same interval, expressed in kWh in terms of GCV and/or in kWh in terms of final energy multiplied by \( CC \);

(44) ‘degradation coefficient’ \( (C_{dh}) \) means the measure of efficiency loss due to cycling of a heat pump space heater or heat pump combination heater; if \( C_{dh} \) is not determined by measurement then the default degradation coefficient is \( C_{dh} = 0.9 \);

(45) ‘active mode’ means the condition corresponding to the hours with a heating load for the enclosed space and activated heating function; this condition may involve cycling of the heat pump space heater or heat pump combination heater to reach or maintain a required indoor air temperature;

(46) ‘off mode’ means a condition in which the heat pump space heater or heat pump combination heater is connected to the mains power source and is not providing any function, including conditions
providing only an indication of off mode condition and conditions providing only functionalities intended to ensure electromagnetic compatibility pursuant to Directive 2004/108/EC of the European Parliament and of the Council [2];

(47) ‘thermostat-off mode’ means the condition corresponding to the hours with no heating load and activated heating function, whereby the heating function is switched on but the heat pump space heater or heat pump combination heater is not operational; cycling in active mode is not considered as thermostat-off mode;

(48) ‘crankcase heater mode’ means the condition in which a heating device is activated to avoid the refrigerant migrating to the compressor so as to limit the refrigerant concentration in oil when the compressor is started;

(49) ‘off mode power consumption’ \( (P_{\text{off}}) \) means the power consumption of a heat pump space heater or heat pump combination heater in off mode, expressed in kW;

(50) ‘thermostat-off mode power consumption’ \( (P_{\text{TO}}) \) means the power consumption of the heat pump space heater or heat pump combination heater while in thermostat-off mode, expressed in kW;

(51) ‘crankcase heater mode power consumption’ \( (P_{\text{CK}}) \) means the power consumption of the heat pump space heater or heat pump combination heater while in crankcase heater mode, expressed in kW;

(52) ‘low-temperature heat pump’ means a heat pump space heater that is specifically designed for low-temperature application, and that cannot deliver heating water with an outlet temperature of 52 °C at an inlet dry (wet) bulb temperature of – 7 °C (– 8 °C) in the reference design conditions for average climate;

(53) ‘low-temperature application’ means an application where the heat pump space heater delivers its declared capacity for heating at an indoor heat exchanger outlet temperature of 35 °C;

(54) ‘medium-temperature application’ means an application where the heat pump space heater or heat pump combination heater delivers its declared capacity for heating at an indoor heat exchanger outlet temperature of 55 °C;

Definitions related to water heating in combination heaters:

(55) ‘load profile’ means a given sequence of water draw-offs, as specified in Annex VII, Table 15; each combination heater meets at least one load profile;

(56) ‘water draw-off’ means a given combination of useful water flow rate, useful water temperature, useful energy content and peak temperature, as specified in Annex VII, Table 15;

(57) ‘useful water flow rate’ \( (f) \) means the minimum flow rate, expressed in litres per minute, for which hot water is contributing to the reference energy, as specified in Annex VII, Table 15;

(58) ‘useful water temperature’ \( (T_m) \) means the water temperature, expressed in degrees Celsius, at which hot water starts contributing to the reference energy, as specified in Annex VII, Table 15;

(59) ‘useful energy content’ \( (Q_{\text{tap}}) \) means the energy content of hot water, expressed in kWh, provided at a temperature equal to, or above, the useful water temperature, and at water flow rates equal to, or above, the useful water flow rate, as specified in Annex VII, Table 15;

(60) ‘energy content of hot water’ means the product of the specific heat capacity of water, the average temperature difference between the hot water output and cold water input, and the total mass of the hot water delivered;
(61) ‘peak temperature’ \( (T_p) \) means the minimum water temperature, expressed in degrees Celsius, to be achieved during water draw-off, as specified in Annex VII, Table 15;

(62) ‘reference energy’ \( (Q_{\text{ref}}) \) means the sum of the useful energy content of water draw-offs, expressed in kWh, in a particular load profile, as specified in Annex VII, Table 15;

(63) ‘maximum load profile’ means the load profile with the greatest reference energy that a combination heater is able to provide while fulfilling the temperature and flow rate conditions of that load profile;

(64) ‘declared load profile’ means the load profile applied when determining water heating energy efficiency;

(65) ‘daily electricity consumption’ \( (Q_{\text{elec}}) \) means the consumption of electricity for water heating over 24 consecutive hours under the declared load profile, expressed in kWh in terms of final energy;

(66) ‘daily fuel consumption’ \( (Q_{\text{fuel}}) \) means the consumption of fuels for water heating over 24 consecutive hours under the declared load profile, expressed in kWh in terms of GCV and, for the purposes of point 5(f) in Annex VII, expressed in GJ in terms of GCV;

(67) ‘annual electricity consumption’ \( (AEC) \) means the annual electricity consumption of a combination heater for water heating under the declared load profile and under given climate conditions, expressed in kWh in terms of final energy;

(68) ‘annual fuel consumption’ \( (AFC) \) means the annual fossil fuel and/or biomass fuel consumption of a combination heater for water heating under the declared load profile and under given climate conditions, expressed in GJ in terms of GCV;

Definitions related to solar devices:

(69) ‘annual non-solar heat contribution’ \( (Q_{\text{nonsol}}) \) means the annual contribution of electricity (expressed in kWh in terms of primary energy) and/or fuels (expressed in kWh in terms of GCV) to the useful heat output of a package of combination heater, temperature control and solar device, taking into account the annual amount of heat captured by the solar collector and the heat losses of the solar hot water storage tank;

(70) ‘collector aperture area’ \( (A_{\text{sol}}) \), for the purposes of Figures 1 to 4 in Annex IV referred to as ‘collector size’, means the maximum projected area through which unconcentrated solar radiation enters the collector, expressed in m\(^2\);

(71) ‘collector efficiency’ \( (\eta_{\text{col}}) \) means the efficiency of the solar collector at a temperature difference between the solar collector and the surrounding air of 40 K and a global solar irradiance of 1 000 W/ m\(^2\), expressed in %;

(72) ‘standing loss’ \( (S) \) means the heating power dissipated from a solar hot water storage tank at given water and ambient temperatures, expressed in W;

(73) ‘storage volume’ \( (V) \), for the purposes of Figures 1 to 4 in Annex IV referred to as ‘tank volume’, means the rated volume of a solar hot water storage tank, expressed in litres or m\(^3\);

(74) ‘auxiliary electricity consumption’ \( (Q_{\text{aux}}) \), for the purpose of Figure 5 in Annex IV referred to as ‘auxiliary electricity’, means the annual electricity consumption of a solar-only system that is due to the pump power consumption and the standby power consumption, expressed in kWh in terms of final energy;

(75) ‘pump power consumption’ \( (\text{solpump}) \) means the rated electrical power consumption of the pump in the collector loop of a solar-only system, expressed in W;
(76) ‘standby power consumption’ (solstandby) means the rated electrical power consumption of a solar-only system when the pump and the heat generator are inactive, expressed in W;

Other definitions:

(77) ‘average climate conditions’, ‘colder climate conditions’ and ‘warmer climate conditions’ mean the temperature and global solar irradiance conditions characteristic for the cities of Strasbourg, Helsinki and Athens, respectively;

(78) ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific space heater, combination heater, temperature control, solar device, package of space heater, temperature control and solar device, or package of combination heater, temperature control and solar device model from other models with the same trade mark, supplier’s name or dealer’s name.
ANNEX II
Energy efficiency classes

1. SEASONAL SPACE HEATING ENERGY EFFICIENCY CLASSES

The seasonal space heating energy efficiency class of a heater, with the exception of low-temperature heat pumps and heat pump space heaters for low-temperature application, shall be determined on the basis of its seasonal space heating energy efficiency as set out in Table 1.

The seasonal space heating energy efficiency classes of a low-temperature heat pump and a heat pump space heater for low-temperature application shall be determined on the basis of its seasonal space heating energy efficiency as set out in Table 2.

The seasonal space heating energy efficiency of a heater shall be calculated in accordance with points 3 and 4 of Annex VII, for heat pump space heaters, heat pump combination heaters and low-temperature heat pumps under average climate conditions.

2. WATER HEATING ENERGY EFFICIENCY CLASSES

The water heating energy efficiency class of a combination heater shall be determined on the basis of its water heating energy efficiency as set out in Table 3.

The water heating energy efficiency of a combination heater shall be calculated in accordance with point 5 of Annex VII.

3. ENERGY EFFICIENCY CLASSES OF SOLAR HOT WATER STORAGE TANKS, IF (PART OF) A SOLAR DEVICE

The energy efficiency class of a solar hot water storage tank, if (part of) a solar device, shall be determined on the basis of its standing loss as set out in Table 4.

Table 4

Energy efficiency classes of solar hot water storage tanks, if (part of) a solar device

ANNEX III
The labels

1. SPACE HEATERS
1.1. Label 1
1.1.1. Boiler space heaters in seasonal space heating energy efficiency classes A++ to G

(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the space heating function;
IV. the seasonal space heating energy efficiency class, determined in accordance with point 1 of Annex II;
the head of the arrow containing the seasonal space heating energy efficiency class of the boiler space
heater shall be placed at the same height as the head of the relevant energy efficiency class;
V. the rated heat output in kW, rounded to the nearest integer;
VI. the sound power level $L_{WA}$, indoors, in dB, rounded to the nearest integer.
(b) The design aspects of the label for boiler space heaters shall be in accordance with point 5 of this Annex.

1.1.2. *Cogeneration space heaters in seasonal space heating energy efficiency classes A++ to G*

![Label for space heaters](image)

(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the space heating function;

IV. the seasonal space heating energy efficiency class, determined in accordance with point 1 of Annex II; the head of the arrow containing the seasonal space heating energy efficiency class of the cogeneration space heater shall be placed at the same height as the head of the relevant energy efficiency class;

V. the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer;

VI. the sound power level $L_{w,1A}$ indoors, in dB, rounded to the nearest integer;

VII. the additional electricity generation function.

(b) The design aspects of the label for cogeneration space heaters shall be in accordance with point 6 of this Annex.

1.1.3. Heat pump space heaters, except low-temperature heat pumps, in seasonal space heating energy efficiency classes A++ to G
(a) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier;

III. the space heating function for medium- and low-temperature application, respectively;

IV. the seasonal space heating energy efficiency class under average climate conditions for medium- and low-temperature application, respectively, determined in accordance with point 1 of Annex II; the head of the arrow containing the seasonal space heating energy efficiency class of the heat pump space heater for medium- and low-temperature application, respectively, shall be placed at the same height as the head of the relevant energy efficiency class;

V. the rated heat output, including the rated heat output of any supplementary heater, in kW, under average, colder and warmer climate conditions for medium- and low-temperature application, respectively, rounded to the nearest integer;

VI. European temperature map displaying three indicative temperature zones;

VII. the sound power level $L_{WA}$, indoors (if applicable) and outdoors, in dB, rounded to the nearest integer.

(b) The design aspects of the label for heat pump space heaters shall be in accordance with point 7 of this Annex. By way of exception, where a model has been granted an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council (1), a copy of the EU Ecolabel may be added.
1.1.4. **Low-temperature heat pumps in seasonal space heating energy efficiency classes A++ to G**

(a) The following information shall be included in the label:

I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the space heating function for low-temperature application;
IV. the seasonal space heating energy efficiency class under average climate conditions, determined in accordance with point 1 of Annex II; the head of the arrow containing the seasonal space heating energy efficiency class of the low-temperature heat pump shall be placed at the same height as the head of the relevant energy efficiency class;
V. the rated heat output, including the rated heat output of any supplementary heater, in kW, under average, colder and warmer climate conditions, rounded to the nearest integer;
VI. European temperature map displaying three indicative temperature zones;
VII. the sound power level $L_{wa}$, indoors (if applicable) and outdoors, in dB, rounded to the nearest integer.

(b) The design aspects of the label for low-temperature heat pumps shall be in accordance with point 8 of this Annex. By way of exception, where a model has been granted an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

1.2. Label 2

1.2.1. **Boiler space heaters in seasonal space heating energy efficiency classes A+++ to D**

(a) The information listed in point 1.1.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for boiler space heaters shall be in accordance with point 5 of this Annex.
1.2.2. Cogeneration space heaters in seasonal space heating energy efficiency classes A+++ to D

(a) The information listed in point 1.1.2(a) of this Annex shall be included in the label.

(b) The design aspects of the label for cogeneration space heaters shall be in accordance with point 6 of this Annex.
1.2.3. **Heat pump space heaters, except low-temperature heat pumps, in seasonal space heating energy efficiency classes A+++ to D**

(a) The information listed in point 1.1.3(a) of this Annex shall be included in the label.

(b) The design aspects of the label for heat pump space heaters shall be in accordance with point 7 of this Annex.
1.2.4. Low-temperature heat pumps in seasonal space heating energy efficiency classes A+++ to D

(a) The information listed in point 1.1.4(a) of this Annex shall be included in the label.
(b) The design aspects of the label for low-temperature heat pumps shall be in accordance with point 8 of this Annex.
2. COMBINATION HEATERS

2.1. Label 1

2.1.1 **Boiler combination heaters in seasonal space heating energy efficiency classes A'' to G and in water heating energy efficiency classes A to G**

(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the space heating function and the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII;
IV. the seasonal space heating energy efficiency class and the water heating energy efficiency class, determined in accordance with points 1 and 2 of Annex II; the head of the arrows containing the seasonal space heating energy efficiency class and water heating energy efficiency class of the boiler combination...
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 811/2013

heater shall be placed at the same height as the head of the relevant energy efficiency class;
V. the rated heat output in kW, rounded to the nearest integer;
VI. the sound power level $L_{W,1A}$ indoors, in dB, rounded to the nearest integer.
VII. for boiler combination heaters able to work only during off-peak hours, the pictogram referred to in point 9(d)(11) of this Annex may be added.

(b) The design aspects of the label for boiler combination heaters shall be in accordance with point 9 of this Annex.

2.1.2. Heat pump combination heaters in seasonal space heating energy efficiency classes A** to G and in water heating energy efficiency classes A to G

(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. the space heating function for medium-temperature application and the water heating function, includ-
ing the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII;

IV. the seasonal space heating energy efficiency class under average climate conditions for medium-temperature application and the water heating energy efficiency class under average climate conditions, determined in accordance with points 1 and 2 of Annex II; the head of the arrows containing the seasonal space heating energy efficiency class and water heating energy efficiency class of the heat pump combination heater shall be placed at the same height as the head of the relevant energy efficiency class;

V. the rated heat output, including the rated heat output of any supplementary heater, in kW, under average, colder and warmer climate conditions, rounded to the nearest integer;

VI. European temperature map displaying three indicative temperature zones;

VII. the sound power level $L_{WA}$, indoors (if applicable) and outdoors, in dB, rounded to the nearest integer;

VIII. for heat pump combination heaters able to work only during off-peak hours, the pictogram referred to in point 10(d)(12) of this Annex may be added.

(b) The design aspects of the label for heat pump combination heaters shall be in accordance with point 10 of this Annex.
2.2. Label 2

2.2.1. **Boiler combination heaters in seasonal space heating energy efficiency classes A+++ to D and in water heating energy efficiency classes A+ to F**

(a) The information listed in point 2.1.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for boiler combination heaters shall be in accordance with point 9 of this Annex.
2.2.2. Heat pump combination heaters in seasonal space heating energy efficiency classes A+++ to D and in water heating energy efficiency classes A* to F

(a) The information listed in point 2.1.2(a) of this Annex shall be included in the label.
(b) The design aspects of the label for heat pump combination heaters shall be in accordance with point 10 of this Annex.
3. PACKAGES OF SPACE HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

*a Label for packages of space heater, temperature control and solar device in seasonal space heating energy efficiency classes A+++ to G*

(a) The following information shall be included in the label:

I. dealer’s and/or supplier’s name or trade mark;
II. dealer’s and/or supplier’s model(s) identifier;
III. the space heating function;
IV. the seasonal space heating energy efficiency class of the space heater, determined in accordance with point 1 of Annex II;
V. indication of whether a solar collector, hot water storage tank, temperature control and/or supplementary space heater may be included in the package of space heater, temperature control and solar device;
VI. the seasonal space heating energy efficiency class of the package of space heater, temperature control and solar device, determined in accordance with point 5 of Annex IV; the head of the arrow containing
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 811/2013

the seasonal space heating energy efficiency class

of the package of space heater, temperature control and solar device shall be placed at the same height
as the head of the relevant energy efficiency class.

(b) The design aspects of the label for packages of space heater, temperature control and solar device
shall be in accordance with point 11 of this Annex. For packages of space heater, temperature control
and solar device in seasonal space heating energy efficiency classes A+++ to D, the last classes E to G in the
A+++ to G scale may be omitted.

4. PACKAGES OF COMBINATION HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

Label for packages of combination heater, temperature control and solar device in seasonal
space heating and water heating energy efficiency classes A+++ to G

(a) The following information shall be included in the label:

I. dealer’s and/or supplier’s name or trade mark;
II. dealer’s and/or supplier’s model(s) identifier;

III. the space heating function and the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII;

IV. the seasonal space heating and water heating energy efficiency classes of the combination heater, determined in accordance with points 1 and 2 of Annex II;

V. indication of whether a solar collector, hot water storage tank, temperature control and/or supplementary heater, may be included in the package of combination heater, temperature control and solar device;

VI. the seasonal space heating energy efficiency class of the package of combination heater, temperature control and solar device, determined in accordance with point 6 of Annex IV; the head of the arrow containing the seasonal space heating energy efficiency class of the package of combination heater, temperature control and solar device shall be placed at the same height as the head of the relevant energy efficiency class;

VII. the water heating energy efficiency class of the package of combination heater, temperature control and solar device, determined in accordance with point 6 of Annex IV; the head of the arrow containing the water heating energy efficiency class of the package of combination heater, temperature control and solar device shall be placed at the same height as the head of the relevant energy efficiency class.

(b) The design aspects of the label for packages of combination heater, temperature control and solar device shall be in accordance with point 12 of this Annex. For packages of combination heater, temperature control and solar device in seasonal space heating and/or water heating energy efficiency classes A+++ to D, the last classes E to G in the A+++ to G scale may be omitted.
5. The design of the label for boiler space heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):
1. **EU label border stroke**: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label**: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4. **Sub-logos border**: 1 pt, colour: cyan 100 %, length: 86 mm.
5. **Space heating function**:
   - Pictogram as depicted.
6. **A**++-G and A**+**-D scales, respectively**:
   - Arrow: height: 5 mm, gap: 1,3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 14 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row;
   - Arrow: height: 7 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 16 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.
7. **Seasonal space heating energy efficiency class**:
   - Arrow: width: 22 mm, height: 12 mm, 100 % black,
8. **Sound power level, indoors**:
   - Pictogram as depicted,
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   - Value ‘YZ’: Calibri bold 20 pt, 100 % black,
   - Text ‘dB’: Calibri regular 15 pt, 100 % black.
9. **Rated heat output:**
   - **Border**: 2 pt – colour: cyan 100 % – round corners: 3,5 mm,
   - **Value ‘YZ’**: Calibri bold 45 pt, 100 % black,
   - **Text ‘kW’**: Calibri regular 30 pt, 100 % black.

10. **Year of label introduction and number of Regulation:**
    - **Text**: Calibri bold 10 pt.

11. **Supplier’s name or trademark.**

12. **Supplier’s model identifier:**
    The supplier’s name or trade mark and model identifier shall fit in a space of 86 x 12 mm.

6. The design of the label for cogeneration space heaters shall be the following:
Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4. **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
5. **Space heating function:**
   - Pictogram as depicted.
6. **A**++-G and A****-D scales, respectively:
   - **Arrow:** height: 5 mm, gap: 1,3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   - **Text:** Calibri bold 14 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row;
   - **Arrow:** height: 7 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00,
   - **Text:** Calibri bold 16 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.
7. **Seasonal space heating energy efficiency class:**
9 Sound power level, indoors:
- **Pictogram** as depicted,
- **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Value 'YZ'**: Calibri bold 20 pt, 100 % black,
- **Text ‘dB’**: Calibri regular 15 pt, 100 % black.

10 Rated heat output:
- **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Value ‘YZ’**: Calibri bold 45 pt, 100 % black,
- **Text ‘kW’**: Calibri regular 30 pt, 100 % black.

11 Electricity function:
- **Pictogram** as depicted,
- **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

12 Year of label introduction and number of Regulation:
- **Text**: Calibri bold 10 pt.

13 Supplier’s name or trademark.

13 Supplier’s model identifier:
The supplier’s name or trade mark and model identifier shall fit in a space of 86 x 12 mm.
7. The design of the label for heat pump space heaters shall be the following:

Whereby:
(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(b) The background shall be white.
(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):
1. **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4. **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
5. **Space heating function:**
   - Pictogram as depicted.
6. **Medium- and low-temperature application:**
   - Text ‘55 °C’ and ‘35 °C’: Calibri regular 14 pt, 100 % black.
7. **A++-G and A+++–D scales, respectively:**
   - Arrow: height: 5 mm, gap: 1,3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 14 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row;
   - Arrow: height: 7 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 16 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.
8. **Seasonal space heating energy efficiency class:**
   - Arrow: width: 19 mm, height: 12 mm, 100 % black,
9. **Sound power level, indoors (if applicable) and outdoors:**
   - Pictogram as depicted,
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm
– Value ‘YZ’: Calibri bold 20 pt, 100 % black,
– Text ‘dB’: Calibri regular 15 pt, 100 % black.

10 Rated heat output:
– Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
– Values ‘YZ’: Calibri at least 15 pt, 100 % black,
– Text ‘kW’: Calibri regular 15 pt, 100 % black.

11 European temperature map and colour squares:
– Pictogram as depicted,
– Colours:
  – Dark blue: 86-51-00-00,
  – Middle blue: 53-08-00-00,
  – Light blue: 25-00-02-00.

12 Year of label introduction and number of Regulation:
– Text: Calibri bold 10 pt.

13 Supplier’s name or trademark.

14 Supplier’s model identifier:
The supplier’s name or trade mark and model identifier shall fit in a space of 86 × 12 mm.
8. The design of the label for low-temperature heat pumps shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. **EU logo**: **Colours**: X-80-00-00 and 00-00-X-00.
3 Energy label: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.

4 Sub-logos border: 1 pt, colour: cyan 100 %, length: 86 mm.

5 Space heating function:
   - Pictogram as depicted.

6 Low-temperature application:
   Text ’35 °C’: Calibri regular 14 pt, 100 % black.

7 A++-G and A+++D scales, respectively:
   - Arrow: height: 5 mm, gap: 1,3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 14 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row;
   - Arrow: height: 7 mm, gap: 1 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 16 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

8 Seasonal space heating energy efficiency class:
   - Arrow: width: 22 mm, height: 12 mm, 100 % black,

9 Sound power level, indoors (if applicable) and outdoors:
   - Pictogram as depicted,
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   - Value ‘YZ’: Calibri bold 20 pt, 100 % black,
   - Text ‘dB’: Calibri regular 15 pt, 100 % black.
10 Rated heat output:
   – **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   – **Values ‘YZ’**: Calibri at least 18 pt, 100 % black,
   – **Text ‘kW’**: Calibri regular 13,5 pt, 100 % black.

11 European temperature map and colour squares:
   – **Pictogram** as depicted,
   – **Colours**:
     – Dark blue: 86-51-00-00,
     – Middle blue: 53-08-00-00,
     – Light blue: 25-00-02-00.

12 Year of label introduction and number of Regulation:
   – **Text**: Calibri bold 10 pt.

13 Supplier’s name or trademark.

14 Supplier’s model identifier:
   The supplier’s name or trade mark and model identifier shall fit in a space of 86 x 12 mm.
9. The design of the label for boiler combination heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label**: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4 Sub-logos border: 1 pt, colour: cyan 100 %, length: 86 mm.

5 Space heating function:
   - Pictogram as depicted.

6 Water heating function:
   - Pictogram as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII: Calibri bold 16 pt, 100 % black.

7 A**-G and A-G, A***-D or A*-F scales, respectively:
   - Arrow: height: 5 mm, gap: 1,3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 14 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row;
   - Arrow: height: 7 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   - Text: Calibri bold 16 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

8 Seasonal space heating and water heating energy efficiency classes:
   - Arrow: width: 14 mm, height: 9 mm, 100 % black,
   - Text: Calibri bold 18 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

9 Rated heat output:
   - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   - Value ‘YZ’: Calibri bold 37,5 pt, 100 % black,
   - Text ‘kW’: Calibri regular 18 pt, 100 % black.

10 Sound power level, indoors:
   - Pictogram as depicted,
If applicable, off-peak fitness:
- Pictogram as depicted,
- Border: 2 pt – colour: cyan 100 % – round corners: 3,5 mm.

Year of label introduction and number of Regulation:
- Text: Calibri bold 10 pt.

Supplier’s name or trademark.

Supplier’s model identifier:
The supplier’s name or trade mark and model identifier shall fit in a space of 86 × 12 mm.
10. The design of the label for heat pump combination heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.

2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.

3. **Energy label**: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.

5 **Space heating function:**

   - **Pictogram** as depicted.

6 **Water heating function:**

   - **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII: Calibri bold 16 pt, 100 % black.

7 **A**\(^{++-G}\) and A\(^{-G}\), A\(^{-+D}\) or A\(^{-F}\) scales, respectively:

   - **Arrow:** height: 5 mm, gap: 1,3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   
   - **Text:** Calibri bold 14 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row;

   - **Arrow:** height: 7 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Eighth class: 00-X-X-00,
     - Last class: 00-X-X-00,
   
   - **Text:** Calibri bold 16 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

8 **Seasonal space heating and water heating energy efficiency classes:**

   - **Arrow:** width: 14 mm, height: 9 mm, 100 % black,
   
   - **Text:** Calibri bold 18 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

9 **Rated heat output:**

   - **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
   
   - **Values ‘YZ’:** Calibri at least 12 pt, 100 % black,
   
   - **Text ‘kW’:** Calibri regular 10 pt, 100 % black.

10 **European temperature map and colour squares:**

   - **Pictogram** as depicted,
- Colours:
  - Dark blue: 86-51-00-00,
  - Middle blue: 53-08-00-00,
  - Light blue: 25-00-02-00.

11 Sound power level, indoors (if applicable) and outdoors:
- Pictogram as depicted,
- Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- Value ‘YZ’: Calibri bold 15 pt, 100 % black,
- Text ‘dB’: Calibri regular 10 pt, 100 % black.

12 If applicable, off-peak fitness:
- Pictogram as depicted,
- Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

13 Year of label introduction and number of Regulation:
- Text: Calibri bold 10 pt.

14 Supplier’s name or trademark.

15 Supplier’s model identifier:
The supplier’s name or trade mark and model identifier shall fit in a space of 86 x 12 mm.
11. The design of the label for packages of space heater, temperature control and solar device shall be the following:

Whereby:
(a) The label shall be at least 210 mm wide and 297 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(b) The background shall be white.
(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1 EU label border stroke: 6 pt, colour: cyan 100 %, round corners: 3,5 mm.
2 EU logo: Colours: X-80-00-00 and 00-00-X-00.

3 Energy label: Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 191 mm, height: 37 mm.

4 Sub-logos border: 2 pt, colour: cyan 100 %, length: 191 mm.

5 Space heating function:
   - Pictogram as depicted.

6 Space heater:
   - Pictogram as depicted,
   - Seasonal space heating energy efficiency class of space heater:
     - Arrow: width: 24 mm, height: 14 mm, 100 % black;
     - Text: Calibri bold 28 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row,
     - Border: 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

7 Package with solar collector, hot water storage tank, temperature control and/or supplementary heater:
   - Pictograms as depicted,
   - ‘+’ symbol: Calibri bold 50 pt, cyan 100 %,
   - Boxes: width: 12 mm, height: 12 mm, border: 4 pt, cyan 100 %,
   - Border: 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

8 A+++–G scale with border:
   - Arrow: height: 15 mm, gap: 3 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - If applicable, last classes: 00-X-X-00,
   - Text: Calibri bold 30 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row,
   - Border: 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

9 Seasonal space heating energy efficiency class for package of space heater, temperature control and solar device:
   - Arrow: width: 33 mm, height: 19 mm, 100 % black,
   - Text: Calibri bold 40 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.

10 Year of label introduction and number of Regulation:
   - Text: Calibri bold 12 pt.
11 Dealer’s and/or supplier’s name or trademark.
12 Dealer’s and/or supplier’s model identifier:

The dealer’s and/or supplier’s name or trade mark and model identifier shall fit in a space of 191 × 19 mm.
12. The design of the label for packages of combination heater, temperature control and solar device shall be the following:

Whereby:
(a) The label shall be at least 210 mm wide and 297 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
(b) The background shall be white.
(c) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):
1. **EU label border stroke:** 6 pt, colour: cyan 100 %, round corners: 3,5 mm.

2. **EU logo:** Colours: X-80-00-00 and 00-00-X-00.

3. **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 191 mm, height: 37 mm.

4. **Sub-logos border:** 2 pt, colour: cyan 100 %, length: 191 mm.

5. **Combination heater:**
   - **Pictograms** as depicted; for water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII: Calibri bold 16 pt, 100 % black.
   - **Seasonal space heating and water heating energy efficiency class of combination heater:**
     - **Arrow:** width: 19 mm, height: 11 mm, 100 % black,
     - **Text:** Calibri bold 23 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row,
     - **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

6. **Package with solar collector, hot water storage tank, temperature control and/or supplementary heater:**
   - **Pictograms** as depicted,
   - ‘+’ symbol: Calibri bold 50 pt, cyan 100 %,
   - **Boxes:** width: 12 mm, height: 12 mm, border: 4 pt, cyan 100 %,
   - **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

7. **Space heating function:**
   - **Pictogram** as depicted.

8. **A+++–G scale with border:**
   - **Arrow:** height: 6,5 mm, gap: 1 mm, colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Seventh class: 00-X-X-00,
     - If applicable, last classes: 00-X-X-00,
   - **Text:** Calibri bold 16 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row,
   - **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

9. **Seasonal space heating and water heating energy efficiency class, respectively, for package of combination heater, temperature control and solar device:**
   - **Arrow:** width: 24 mm, height: 14 mm, 100 % black,
   - **Text:** Calibri bold 28 pt, capitals, white, ‘+’ symbols: superscript, aligned on a single row.
10 Water heating function:
   – Pictogram as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII: Calibri bold 22 pt, 100 % black.

11 Year of label introduction and number of Regulation:

12 Dealer’s and/or supplier’s name or trademark.

13 Dealer’s and/or supplier’s model identifier:
   The dealer’s and/or supplier’s name or trade mark and model identifier shall fit in a space of 191 × 19 mm.
ANNEX IV

Product fiche

1. SPACE HEATERS

1.1. The information in the product fiche of the space heater shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trademark;
(b) supplier’s model identifier;
(c) the seasonal space heating energy efficiency class of the model, determined in accordance with point 1 of Annex II;
(d) the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer (for heat pump space heaters under average climate conditions);
(e) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump space heaters under average climate conditions);
(f) the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump space heaters under average climate conditions);
(g) the sound power level $L_{WA}$, indoors, in dB, rounded to the nearest integer (for heat pump space heaters if applicable);
(h) any specific precautions that shall be taken when the space heater is assembled, installed or maintained; in addition, for cogeneration space heaters:
(i) the electrical efficiency in %, rounded to the nearest integer; in addition, for heat pump space heaters:
(j) the rated heat output, including the rated heat output of any supplementary heater, in kW, under colder and warmer climate conditions, rounded to the nearest integer;
(k) the seasonal space heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII;
(l) the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII;
(m) the sound power level $L_{WA}$, outdoors, in dB, rounded to the nearest integer.

1.2. One fiche may cover a number of space heater models supplied by the same supplier.

1.3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1.1 not already displayed on the label shall also be provided.

2. COMBINATION HEATERS

2.1. The information in the product fiche of the combination heater shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:
(a) supplier’s name or trademark;
(b) supplier’s model identifier;
(c) for space heating, the medium-temperature application (and for heat pump combination heaters the low-temperature application, if applicable); for water heating, the declared load profile, expressed as the appropriate letter and typical usage in accordance with Table 15 of Annex VII;
(d) the seasonal space heating energy efficiency class and the water heating energy efficiency class of the model, determined in accordance with points 1 and 2 of Annex II;
(e) the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer (for heat pump combination heaters under average climate conditions);
(f) for space heating, the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump combination heaters under average climate conditions); for water heating, the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII (for heat pump combination heaters under average climate conditions);
(g) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump combination heaters under average climate conditions); the water heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII (for heat pump combination heaters under average climate conditions);
(h) the sound power level $L_{WA}$, indoors, in dB, rounded to the nearest integer (for heat pump combination heaters if applicable);
(i) if applicable, an indication that the combination heater is able to work only during off-peak hours;
(j) any specific precautions that shall be taken when the combination heater is assembled, installed or maintained;

in addition, for heat pump combination heaters:

(k) the rated heat output, including the rated heat output of any supplementary heater, in kW, under colder and warmer climate conditions, rounded to the nearest integer;
(l) for space heating, the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII; for water heating, the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII;
(m) the seasonal space heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII; the water heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII;
(n) the sound power level $L_{WAO}$, outdoors, in dB, rounded to the nearest integer.

2.2. One fiche may cover a number of combination heater models supplied by the same supplier.
2.3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 2.1 not already displayed on the label shall also be provided.

3. TEMPERATURE CONTROLS

3.1. The information in the product fiche of the temperature control shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:
   (a) supplier’s name or trade mark;
   (b) supplier’s model identifier;
   (c) the class of the temperature control;
   (d) the contribution of the temperature control to seasonal space heating energy efficiency in %, rounded to one decimal place.

3.2. One fiche may cover a number of temperature control models supplied by the same supplier.

4. SOLAR DEVICES

4.1. The information in the product fiche of the solar device shall be provided in the following order and shall be included in the product brochure or other literature provided with the product (for pumps in the collector loop if applicable):
   (a) supplier’s name or trade mark;
   (b) supplier’s model identifier;
   (c) the collector aperture area in m², to two decimal places;
   (d) the collector efficiency in %, rounded to the nearest integer;
   (e) the energy efficiency class of the solar hot water storage tank, determined in accordance with point 3 of Annex II;
   (f) the standing loss of the solar hot water storage tank in W, rounded to the nearest integer;
   (g) the storage volume of the solar hot water storage tank in litres and m³;
   (h) the annual non-solar heat contribution $Q_{\text{non-sol}}$ in kWh in terms of primary energy for electricity and/or in kWh in terms of GCV for fuels, for the load profiles M, L, XL and XXL under average climate conditions, rounded to the nearest integer;
   (i) the pump power consumption in W, rounded to the nearest integer;
   (j) the standby power consumption in W, to two decimal places;
   (k) the annual auxiliary electricity consumption $Q_{\text{aux}}$ in kWh in terms of final energy, rounded to the nearest integer.

4.2. One fiche may cover a number of solar device models supplied by the same supplier.

5. PACKAGES OF SPACE HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

The fiche for packages of space heater, temperature control and solar device shall contain the elements set out in Figure 1, Figure 2, Figure 3 and Figure 4, respectively, for evaluating the seasonal space heat-
ing energy efficiency of a package of space heater, temperature control and solar device, including the following information:

− I: the value of the seasonal space heating energy efficiency of the preferential space heater, expressed in %;
− II: the factor for weighting the heat output of preferential and supplementary heaters of a package as set out in Tables 5 and 6 of this Annex, respectively;
− III: the value of the mathematical expression: \( 204 / (11 \cdot \text{Prated}) \), whereby \( \text{Prated} \) is related to the preferential space heater;
− IV: the value of the mathematical expression \( 115 / (11 \cdot \text{Prated}) \), whereby \( \text{Prated} \) is related to the preferential space heater; in addition, for preferential heat pump space heaters:
− V: the value of the difference between the seasonal space heating energy efficiencies under average and colder climate conditions, expressed in %;
− VI: the value of the difference between the seasonal space heating energy efficiencies under warmer and average climate conditions, expressed in %.

6. PACKAGES OF COMBINATION HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

The fiche for packages of combination heater, temperature control and solar device shall contain the elements set out in points (a) and (b):

(a) the elements set out in Figure 1 and Figure 3, respectively, for evaluating the seasonal space heating energy efficiency of a package of combination heater, temperature control and solar device, including the following information:

− I: the value of the seasonal space heating energy efficiency of the preferential combination heater, expressed in %;
− II: the factor for weighting the heat output of the preferential and supplementary heaters of a package as set out in Tables 5 and 6 of this Annex, respectively;
− III: the value of the mathematical expression: \( 204 / (11 \cdot \text{Prated}) \), whereby \( \text{Prated} \) is related to the preferential combination heater;
− IV: the value of the mathematical expression \( 204 / (11 \cdot \text{Prated}) \), whereby \( \text{Prated} \) is related to the preferential combination heater;

in addition, for preferential heat pump combination heaters:
− V: the value of the difference between the seasonal space heating energy efficiencies under average and colder climate conditions, expressed in %;
− VI: the value of the difference between the seasonal space heating energy efficiencies under warmer and average climate conditions, expressed in %;

(b) the elements set out in Figure 5 for evaluating the water heating energy efficiency of a package of combination heater, temperature control and solar device, where the following information shall be included:
− I: the value of the water heating energy efficiency of the combination heater, expressed in %;
− II: the value of the mathematical expression \( (220 \cdot Q_{\text{ref}}) / Q_{\text{nonsol}} \), where \( Q_{\text{ref}} \) is taken from Table 15 in Annex VII and \( Q_{\text{nonsol}} \) from the product fiche of the solar device for the declared load profile M, L, XL or XXL of the combination heater;
– III: the value of the mathematical expression \( Q_{aux} \cdot 2,5 / (220 \cdot Q_{ref}) \), expressed in %, where \( Q_{aux} \) is taken from the product fiche of the solar device and \( Q_{ref} \) from Table 15 in Annex VII for the declared load profile M, L, XL or XXL.

ANNEX V
Technical documentation

1. SPACE HEATERS
For space heaters, the technical documentation referred to in Article 3(1)(c) shall include:
(a) the name and address of the supplier;
(b) a description of the space heater model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) technical parameters:
   – for boiler space heaters and cogeneration space heaters, the technical parameters set out in Table 7, measured and calculated in accordance with Annex VII;
   – for heat pump space heaters, the technical parameters set out in Table 8, measured and calculated in accordance with Annex VII;
   – for heat pump space heaters where the information relating to a specific model comprising a combination of indoor and outdoor units has been obtained by calculation on the basis of design and/or extrapolation from other combinations, the details of such calculations and/or extrapolations, and of any tests undertaken to verify the accuracy of the calculations, including details of the mathematical model for calculating the performance of such combinations and details of the measurements taken to verify this model;
(g) any specific precautions that shall be taken when the space heater is assembled, installed or maintained.

2. COMBINATION HEATERS
For combination heaters, the technical documentation referred to in Article 3(2)(c) shall include:
(a) the name and address of the supplier;
(b) a description of the combination heater model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) technical parameters:
   – for boiler combination heaters, the technical parameters set out in Table 7, measured and calculated in accordance with Annex VII;
   – for heat pump combination heaters, the technical parameters set out in Table 8, measured and calculated in accordance with Annex VII;
   – for heat pump combination heaters where the information relating to a specific model comprising a combination of indoor and outdoor units has been obtained by calculation on the basis of design and/or
or extrapolation from other combinations, the details of such calculations and/or extrapolations, and of any tests undertaken to verify the accuracy of the calculations, including details of the mathematical model for calculating the performance of such combinations and details of the measurements taken to verify this model;

(g) any specific precautions that shall be taken when the combination heater is assembled, installed or maintained.

| Daily electricity consumption | $Q_{elec}$ | x,xxx kWh | Daily fuel consumption | $Q_{fuel}$ | x,xxx kWh |
| Annual electricity consumption | $AEC$ | x | kWh | Annual fuel consumption | $AFC$ | x | GJ |

Contact details

Name and address of the supplier.

---

(1) High-temperature regime means 60 °C return temperature at heater inlet and 80 °C feed temperature at heater outlet.

(2) Low temperature means for condensing boilers 30 °C, for low-temperature boilers 37 °C and for other heaters 50 °C return temperature (at heater inlet).

(3) For heat pump space heaters and heat pump combination heaters, the rated heat output $P_{rated}$ is equal to the design load for heating $P_{designh}$, and the rated heat output of a supplementary heater $P_{sup}$ is equal to the supplementary capacity for heating $sup(Tj)$.

(4) If $C_{dh}$ is not determined by measurement then the default degradation coefficient is $C_{dh} = 0.9$. 

1610
3. TEMPERATURE CONTROLS

For temperature controls, the technical documentation referred to in Article 3(3)(b) shall include:

(a) the name and address of the supplier;
(b) a description of the temperature control model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) technical parameters:
   – the class of the temperature control;
   – the contribution of the temperature control to seasonal space heating energy efficiency in %, rounded to one decimal place;
(g) any specific precautions that shall be taken when the temperature control is assembled, installed or maintained.

4. SOLAR DEVICES

For solar devices, the technical documentation referred to in Article 3(4)(b) shall include:

(a) the name and address of the supplier;
(b) a description of the solar device model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) technical parameters (for pumps in the collector loop if applicable):
   – the collector aperture area $A_{\text{col}}$ in m$^2$, to two decimal places;
   – the collector efficiency $\eta_{\text{col}}$ in %, rounded to the nearest integer;
   – the energy efficiency class of the solar hot water storage tank, determined in accordance with point 3 of Annex II;
   – the standing loss $S$ of the solar hot water storage tank in W, rounded to the nearest integer;
   – the storage volume $V$ of the solar hot water storage tank in litres and m$^3$;
   – the annual non-solar heat contribution $Q_{\text{nonsol}}$ in kWh in terms of primary energy for electricity and/or in kWh in terms of GCV for fuels, for the load profiles M, L, XL and XXL under average climate conditions, rounded to the nearest integer;
   – the pump power consumption $\text{solpump}$ in W, rounded to the nearest integer;
   – the standby power consumption $\text{solstandby}$ in W, to two decimal places;
   – the annual auxiliary electricity consumption $Q_{\text{aux}}$ in kWh in terms of final energy, rounded to the nearest integer;
(g) any specific precautions that shall be taken when the solar device is assembled, installed or maintained.
5. PACKAGES OF SPACE HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

For packages of space heater, temperature control and solar device, the technical documentation referred to in Article 3(5)(c) shall include:

(a) the name and address of the supplier;
(b) a description of the package of space heater, temperature control and solar device model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) technical parameters:
   – the seasonal space heating energy efficiency in %, rounded to the nearest integer;
   – the technical parameters set out in points 1, 3 and 4 of this Annex;
(g) any specific precautions that shall be taken when the package of space heater, temperature control and solar device is assembled, installed or maintained.

6. PACKAGES OF COMBINATION HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

For packages of combination heater, temperature control and solar device, the technical documentation referred to in Article 3(6)(c) shall include:

(a) the name and address of the supplier;
(b) a description of the package of combination heater, temperature control and solar device model sufficient for its unambiguous identification;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) technical parameters:
   – the seasonal space heating energy efficiency and water heating energy efficiency in %, rounded to the nearest integer;
   – the technical parameters set out in points 2, 3 and 4 of this Annex;
(g) any specific precautions that shall be taken when the package of combination heater, temperature control and solar device is assembled, installed or maintained.
ANNEX VI

Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet\(^{17}\)

1. SPACE HEATERS

1.1. The information referred to in Article 4(1)(b) shall be provided in the following order:

(a) the seasonal space heating energy efficiency class of the model, determined in accordance with point 1 of Annex II;

(b) the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer (for heat pump space heaters, under average climate conditions);

(c) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump space heaters, under average climate conditions);

(d) the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump space heaters, under average climate conditions);

(e) the sound power level \(L_{WA}\), indoors, in dB, rounded to the nearest integer (for heat pump space heaters if applicable);

in addition, for cogeneration space heaters:

(f) the electrical efficiency in %, rounded to the nearest integer; in addition, for heat pump space heaters:

(g) the rated heat output, including the rated heat output of any supplementary heater, in kW, under colder and warmer climate conditions, rounded to the nearest integer;

(h) the seasonal space heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII;

(i) the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII;

(j) the sound power level \(L_{WA}\), outdoors, in dB, rounded to the nearest integer; in addition, for low-temperature heat pumps:

(k) an indication that the low-temperature heat pump is only suitable for low-temperature application;

1.2. The size and font in which the information referred in point 1.1 is printed or shown shall be legible.

2. COMBINATION HEATERS

2.1. The information referred to in Article 4(2)(b) shall be provided in the following order:

(a) for space heating, the medium-temperature application; for water heating, the declared load profile, expressed as the appropriate letter and typical usage in accordance with Table 15 of Annex VII;

(b) the seasonal space heating energy efficiency class and the water heating energy efficiency class of the model, determined in accordance with points 1 and 2 of Annex II;

\(^{17}\) Title is replaced in accordance with Article 9(3) and Annex IX of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(c) the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer (for heat pump combination heaters, under average climate conditions);
(d) for space heating, the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump combination heaters, under average climate conditions); for water heating, the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII (for heat pump combination heaters, under average climate conditions);
(e) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump combination heaters, under average climate conditions); the water heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII (for heat pump combination heaters, under average climate conditions);
(f) the sound power level $L_{WA}$, indoors, in dB, rounded to the nearest integer (for heat pump combination heaters if applicable);
(g) if applicable, an indication that the combination heater is able to work only during off-peak hours; in addition, for heat pump combination heaters:
(h) the rated heat output, including the rated heat output of any supplementary heater, in kW, under colder and warmer climate conditions, rounded to the nearest integer;
(i) for space heating, the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII; for water heating, the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII;
(j) the seasonal space heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII; the water heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII;
(k) the sound power level $L_{WA}$, outdoors, in dB, rounded to the nearest integer.

2.2. The size and font in which the information referred in point 2.1 is printed or shown shall be legible.

3. PACKAGES OF SPACE HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

3.1. The information referred to in Article 4(3)(b) shall be provided in the following order:
(a) the seasonal space heating energy efficiency class of the model, determined in accordance with point 1 of Annex II;
(b) the seasonal space heating energy efficiency in %, rounded to the nearest integer;
(c) the elements set out in Figure 1, Figure 2, Figure 3 and Figure 4, respectively, of Annex IV.

3.2. The size and font in which the information referred in point 3.1 is printed or shown shall be legible.
4. PACKAGES OF COMBINATION HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

4.1. The information referred to in Article 4(4)(b) shall be provided in the following order:

(a) the seasonal space heating energy efficiency class and the water heating energy efficiency class of the model, determined in accordance with points 1 and 2 of Annex II;

(b) the seasonal space heating energy efficiency and the water heating energy efficiency in %, rounded to the nearest integer;

(c) the elements set out in Figure 1 and Figure 3, respectively, of Annex IV;

(d) the elements set out in Figure 5 of Annex IV.

4.2. The size and font in which the information referred in point 4.1 is printed or shown shall be legible.
ANNEX VII

Measurements and calculations

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published for this purpose in the *Official Journal of the European Union*, or using other reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art methods. They shall meet the conditions and technical parameters set out in points 2 to 6.

2. General conditions for measurements and calculations

(a) For the purposes of the measurements set out in points 3 to 7, the indoor ambient temperature shall be set at 20 °C.

(b) For the purposes of the calculations set out in points 3 to 7, electricity consumption shall be multiplied by a conversion coefficient $CC$ of 2.5, unless the annual electricity consumption is expressed in final energy for the end-user, as set out in points 3(b), 4(g), 5(e) and 6.

(c) For heaters equipped with supplementary heaters, the measurement and calculation of rated heat output, seasonal space heating energy efficiency, water heating energy efficiency, sound power level and emissions of nitrogen oxides shall take account of the supplementary heater.

(d) Declared values for rated heat output, seasonal space heating energy efficiency, water heating energy efficiency, annual energy consumption and sound power level shall be rounded to the nearest integer.

3. Seasonal space heating energy efficiency and consumption of boiler space heaters, boiler combination heaters and cogeneration space heaters

(a) The seasonal space heating energy efficiency $n_s$ shall be calculated as the seasonal space heating energy efficiency in active mode $n_{on}$, corrected by contributions accounting for temperature controls, auxiliary electricity consumption, standby heat loss, ignition burner power consumption (if applicable) and, for cogeneration space heaters, corrected by adding the electrical efficiency multiplied by a conversion coefficient $CC$ of 2.5.

(b) The annual energy consumption $Q_{HE}$ in kWh in terms of final energy and/or in GJ in terms of GCV shall be calculated as the ratio of the reference annual heating demand and the seasonal space heating energy efficiency.

4. Seasonal space heating energy efficiency and consumption of heat pump space heaters and heat pump combination heaters

(a) For establishing the rated coefficient of performance $COP_{rated}$ or rated primary energy ratio $PER_{rated}$, or the sound power level, the operating conditions shall be the standard rating conditions set out in Table 9 and the same declared capacity for heating shall be used.

(b) The active mode coefficient of performance $SCOP_{on}$ for average, colder and warmer climate conditions shall be calculated on the basis of the part load for heating $Ph(T_j)$, the supplementary capacity for heating $sup(T_j)$ (if applicable), and the bin-specific coefficient of performance $COP_{bin}(T_j)$ or bin-specific primary energy ratio $PER_{bin}(T_j)$, weighted by the bin-hours for which the bin conditions apply, using the following conditions:

-- the reference design conditions set out in Table 10;
– the European reference heating season under average, colder and warmer climate conditions set out in Table 12;
– if applicable, the effects of any degradation of energy efficiency caused by cycling, depending on the type of control of the heating capacity.

c) The reference annual heating demand $Q_{\text{ref}}$ shall be the design load for heating $P_{\text{designh}}$ for average, colder and warmer climate conditions, multiplied by the annual equivalent active mode hours $H_{\text{HE}}$ of 2 066, 2 465 and 1 336 for average, colder and warmer climate conditions, respectively.

d) The annual energy consumption $Q_{\text{HE}}$ shall be calculated as the sum of:
– the ratio of the reference annual heating demand $Q_{\text{H}}$ and the active mode coefficient of performance $\text{SCOP}_{\text{on}}$ or active mode primary energy ratio $\text{SPER}_{\text{on}}$; and
– the energy consumption for off, thermostat-off, standby, and crankcase heater mode during the heating season.

(e) The seasonal coefficient of performance $\text{SCOP}$ or seasonal primary energy ratio $\text{SPER}$ shall be calculated as the ratio of the reference annual heating demand $Q_{\text{H}}$ and the annual energy consumption $Q_{\text{HE}}$.

(f) The seasonal space heating energy efficiency $S$ shall be calculated as the seasonal coefficient of performance $\text{SCOP}$ divided by the conversion coefficient $CC$ or the seasonal primary energy ratio $\text{SPER}$, corrected by contributions accounting for temperature controls and, for water-/brine-to-water heat pump space heaters and heat pump combination heaters, the electricity consumption of one or more ground water pumps.

(g) The annual energy consumption $Q_{\text{HE}}$ in kWh in terms of final energy and/or GJ in terms of GCV shall be calculated as the ratio of the reference annual heating demand $Q_{\text{H}}$ and the seasonal space heating energy efficiency $S$.

5. Water heating energy efficiency of combination heaters

The water heating energy efficiency $\eta_{\text{w}}$ of a combination heater shall be calculated as the ratio between the reference energy $Q_{\text{ref}}$ and the energy required for its generation under the following conditions:

(a) measurements shall be carried out using the load profiles set out in Table 15;
(b) measurements shall be carried out using a 24-hour measurement cycle as follows:
– 00:00 to 06:59: no water draw-off;
– from 07:00: water draw-offs according to the declared load profile;
– from end of last water draw-off until 24:00: no water draw-off;

(c) the declared load profile shall be the maximum load profile or the load profile one below the maximum load profile;

(d) for heat pump combination heaters, the following additional conditions apply:
– heat pump combination heaters shall be tested under the conditions set out in Table 9;
– heat pump combination heaters which use ventilation exhaust air as the heat source shall be tested under the conditions set out in Table 11;

(e) the annual electricity consumption $AEC$ in kWh in terms of final energy shall be calculated as daily electricity consumption $Q_{\text{elec}}$ in kWh in terms of final energy multiplied by 220;
(f) the annual fuel consumption $AFC$ in GJ in terms of $GCV$ shall be calculated as daily fuel consumption $Q_{fuel}$ multiplied by 220.

6. Conditions for measurements and calculations of solar devices

The solar collector, solar hot water storage tank and pump in the collector loop (if applicable) shall be tested separately. Where the solar collector and solar hot water storage tank cannot be tested separately, they shall be tested in combination.

The results shall be used for the determination of the standing loss $S$ and the calculations of the collector efficiency $n_{col}$, the annual non-solar heat contribution $Q_{nonsol}$ for the load profiles M, L, XL and XXL under the average climate conditions set out in Tables 13 and 14, and the annual auxiliary electricity consumption $Q_{aux}$ in kWh in terms of final energy.

ANNEX VIII\textsuperscript{18}

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 16.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 16.

(6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

\textsuperscript{18} Annex VIII is replaced in accordance with Article 9 and Annex IX of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 16 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

PART II
ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 811/2013

ANNEX IX¹⁹

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;

(b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

¹⁹ Annex IX is added in accordance with Article 9(4) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
DELEGATED REGULATION (EU) 874/2012 of 12 July 2012 supplementing Directive 2010/30/EU with regard to energy labelling of electrical lamps and luminaires

**Article 1**

Subject matter and scope

1. This Regulation establishes requirements for labelling of and providing supplementary product information on electrical lamps such as:
   (a) filament lamps;
   (b) fluorescent lamps;
   (c) high-intensity discharge lamps;
   (d) LED lamps and LED modules.

   This Regulation also establishes requirements for labelling luminaires designed to operate such lamps and marketed to end users, including when they are integrated into other products that are not dependent on energy input in fulfilling their primary purpose during use (such as furniture).

2. The following products shall be excluded from the scope of this Regulation:
   (a) lamps and LED modules with a luminous flux of less than 30 lumens;
   (b) lamps and LED modules marketed for operation with batteries;
   (c) lamps and LED modules marketed for applications where their primary purpose is not lighting, such as:
      (i) emission of light as an agent in chemical or biological processes (such as polimerisation, photodynamic therapy, horticulture, petcare, anti-insect products);
      (ii) image capture and image projection (such as camera flashlights, photocopiers, video projectors);
      (iii) heating (such as infrared lamps);
      (iv) signalling (such as airfield lamps). These lamps and LED modules are not excluded when they are marketed for lighting;
   (d) lamps and LED modules marketed as part of a luminaire and not intended to be removed by the end-user, except when they are offered for sale, hire or hire purchase or displayed separately to the end user, for example as spare parts;
   (e) lamps and LED modules marketed as part of a product whose primary purpose is not lighting. However, if they are offered for sale, hire or hire purchase or displayed separately, for example as spare parts, they
shall be included within the scope of this Regulation;

(f) lamps and LED modules that do not comply with requirements becoming applicable in 2013 and 2014 according to Regulations implementing Directive 2009/125/EC of the European Parliament and of the Council;

(g) luminaires that are designed to operate exclusively with the lamps and LED modules listed in points (a) to (c).

Article 2
Definitions

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

1. ‘Light source’ means a surface or object designed to emit mainly visible optical radiation produced by a transformation of energy. The term ‘visible’ refers to a wavelength of 380-780 nm;

2. ‘Lighting’ means the application of light to a scene, objects or their surroundings so that they may be seen by humans;

3. ‘Accent lighting’ means a form of lighting where light is directed so as to highlight an object or a part of an area;

4. ‘Lamp’ means a unit whose performance can be assessed independently and which consists of one or more light sources. It may include additional components necessary for starting, power supply or stable operation of the unit or for distributing, filtering or transforming the optical radiation, in cases where those components cannot be removed without permanently damaging the unit;

5. ‘Lamp cap’ means that part of a lamp which provides connection to the electrical supply by means of a lamp holder or lamp connector and may also serve to retain the lamp in the lamp holder;

6. ‘Lamp holder’ or ‘socket’ means a device which holds the lamp in position, usually by having the cap inserted in it, in which case it also provides the means of connecting the lamp to the electric supply;

7. ‘Directional lamp’ means a lamp having at least 80 % light output within a solid angle of π sr (corresponding to a cone with angle of 120°);

8. ‘Non-directional lamp’ means a lamp that is not a directional lamp;

9. ‘Filament lamp’ means a lamp in which light is produced by means of a threadlike conductor which is heated to incandescence by the passage of an electric current. The lamp may contain gases influencing the process of incandescence;

10. ‘Incandescent lamp’ means a filament lamp in which the filament operates in an evacuated bulb or is surrounded by inert gas;

11. ‘(Tungsten) halogen lamp’ means a filament lamp in which the filament is made of tungsten and is surrounded by gas containing halogens or halogen compounds. They may be supplied with an integrated power supply;

12. ‘Discharge lamp’ means a lamp in which the light is produced, directly or indirectly, by an electric discharge through a gas, a metal vapour or a mixture of several gases and vapours;

13. ‘Fluorescent lamp’ means a discharge lamp of the low pressure mercury type in which most of the...
light is emitted by one or more layers of phosphors excited by the ultraviolet radiation from the discharge. Fluorescent lamps may be supplied with an integrated ballast;

(14) ‘Fluorescent lamp without integrated ballast’ means a single- or double-capped fluorescent lamp without integrated ballast;

(15) ‘High-intensity discharge lamp’ means an electric discharge lamp in which the light producing arc is stabilised by wall temperature and the arc has a bulb wall loading in excess of 3 watts per square centimetre;

(16) ‘Light-emitting diode (LED)’ means a light source which consists of a solid state device embodying a p-n junction. The junction emits optical radiation when excited by an electric current;

(17) ‘LED package’ means an assembly having one or more LED(s). The assembly may include an optical element and thermal, mechanical and electrical interfaces;

(18) ‘LED module’ means an assembly having no cap and incorporating one or more LED packages on a printed circuit board. The assembly may have electrical, optical, mechanical and thermal components, interfaces and control gear;

(19) ‘LED lamp’ means a lamp incorporating one or more LED modules. The lamp may be equipped with a cap;

(20) ‘Lamp control gear’ means a device located between the electrical supply and one or more lamps, which provides a functionality related to the operation of the lamp(s), such as transforming the supply voltage, limiting the current of the lamp(s) to the required value, providing a starting voltage and preheating current, preventing cold starting, correcting the power factor or reducing radio interference. The device may be designed to connect to other lamp control gear to perform these functions. The term does not include:

– control devices,

– power supplies converting the mains voltage to another supply voltage that are designed to supply in the same installation both lighting products and products whose primary purpose is not lighting;

(21) ‘Control device’ means an electronic or mechanical device controlling or monitoring the luminous flux of the lamp by other means than power conversion for the lamp, such as timer switches, occupancy sensors, light sensors and daylight regulation devices. In addition, phase cut dimmers shall also be considered as control devices;

(22) ‘External lamp control gear’ means non-integrated lamp control gear designed to be installed outside the enclosure of a lamp or luminaire, or to be removed from the enclosure without permanently damaging the lamp or the luminaire;

(23) ‘Ballast’ means lamp control gear inserted between the supply and one or more discharge lamps which by means of inductance, capacitance or a combination of inductance and capacitance, serves mainly to limit the current of the lamp(s) to the required value;

(24) ‘Halogen lamp control gear’ means lamp control gear that transforms mains voltage to extra low voltage for halogen lamps;

(25) ‘Compact fluorescent lamp’ means a fluorescent lamp that includes all the components necessary for starting and stable operation of the lamp;

(26) ‘Luminaire’ means an apparatus which distributes, filters or transforms the light transmitted from one or more lamps and which includes all the parts necessary for supporting, fixing and protecting the lamps and, where necessary, circuit auxiliaries together with the means for connecting them to the electric supply;
Article 3
Responsibilities of suppliers

1. Suppliers of electrical lamps placed on the market as individual products shall ensure that:
   (a) a product fiche, as set out in Annex II, is made available;
   (b) the technical documentation as set out in Annex III is made available on request to the authorities of the Contracting Parties and to the Commission;
   (c) any advertisement, formal price quote or tender offer disclosing energy-related or price information for a specific lamp states the energy efficiency class;
   (d) any technical promotional material concerning a specific lamp which describes its specific technical parameters states the energy efficiency class of that lamp;
   (e) if the lamp is intended to be marketed through a point of sale, a label produced in the format and containing information as set out in Annex I.1 is placed or printed on, or attached to, the outside of the individual packaging, and the packaging displays the nominal power of the lamp outside the label;

2. Suppliers of luminaires intended to be marketed to end-users shall ensure that:
   (a) the technical documentation as set out in Annex III is made available on request to the authorities of the Contracting Parties and to the Commission;
   (b) the information contained in the label according to Annex I.2 is provided in the following situations:
      (i) in any advertisement, formal price quote or tender offer disclosing energy-related or price information for a specific luminaire;
      (ii) in any technical promotional material concerning a specific lamp which describes its specific technical parameters. In these cases the information may be provided in formats other than the one set out in Annex I.2, such as fully textual;
   (c) if the luminaire is intended to be marketed through a point of sale, a label produced in the format and containing information as set out in Annex I is made available free of charge to dealers in electronic or paper format. If the supplier chooses a delivery system in which labels are provided only on request from dealers, the supplier shall promptly deliver the labels on request;

---

1 Article 3, paragraph 1, points (f) is added in accordance with Article 7(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.
(d) if the luminaire is placed on the market in a packaging for end-users that includes electrical lamps which the end-user can replace in the luminaire, the original packaging of those lamps is included in the luminaire’s packaging. If not, then the outside or inside of the luminaire packaging must present, in some other form, the information given on the lamps’ original packaging and required by this Regulation and by Commission regulations setting ecodesign requirements for lamps pursuant to Directive 2009/125/EC;

(e) an electronic label in the format and containing information set out in point 2 of Annex I is made available to dealers for each luminaire model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other luminaire models.2

Suppliers of luminaires intended to be marketed through a point of sale who provide information under this Regulation shall be considered to have fulfilled their responsibilities as distributors with respect to the product information requirements for lamps laid down in Commission regulations setting ecodesign requirements for lamps pursuant to Directive 2009/125/EC.

Article 4
Responsibilities of dealers

1. Dealers of electrical lamps shall ensure that:

(a) each model offered for sale, hire or hire-purchase where the final owner cannot be expected to see the product displayed is marketed with the information to be provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label has been made available in accordance with Article 3(1)(f) the provisions in Annex VIII shall apply instead;3

(b) any advertisement, formal price quote or tender offer disclosing energy-related or price information for a specific model states the energy efficiency class;

(c) any technical promotional material concerning a specific model which describes its specific technical parameters states the energy efficiency class of that model.

2. Dealers of luminaires marketed to end-users shall ensure that:

(a) the information contained in the label in accordance with Annex I.2 is provided in the following situations:

(i) in any advertisement, formal price quote or tender offer disclosing energy-related or price information for a specific luminaire;

(ii) in any technical promotional material concerning a specific luminaire which describes its specific technical parameters. In these cases the information may be provided in formats other than the one set out in Annex I.2, such as fully textual;

(b) each model presented at a point of sale is accompanied by the label as set out in Annex I.2. The label shall be displayed in one or both of the following ways:

2 Article 3, paragraph 2, points (e) is added in accordance with Article 7(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

3 Article 4, paragraph 1, point (a) is replaced in accordance with Article 7(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(i) in proximity to the displayed luminaire, so as to be clearly visible and identifiable as the label belonging to the model, without having to read the brand name and model number on the label;
(ii) clearly accompanying the most directly-visible information about the displayed luminaire (such as price or technical information) in the point of sale;
(c) if the luminaire is sold in a packaging for end-users that includes electrical lamps which the end-user can replace in the luminaire, the original packaging of those lamps is included in the luminaire’s packaging. If not, then the outside or inside of the luminaire packaging must present, in some other form, the information given on the lamps’ original packaging and required by this Regulation and by Commission regulations setting ecodesign requirements for lamps pursuant to Directive 2009/125/EC.
(d) each model offered for sale, hire or hire-purchase through the internet and for which an electronic label has been made available in accordance with Article 3(2)(e) is accompanied by the label in accordance with Annex VIII.4

Article 5
Measurement methods

The information to be provided under Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods, as set out in Annex V.

Article 6
Verification procedure for market surveillance purposes

Contracting Parties shall apply the procedure laid down in Annex V when assessing the conformity of the declared energy efficiency class and energy consumption.

Article 7
Revision

Article 8
Repeal

4 Article 4, paragraph 2, points (d) is added in accordance with Article 7(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
5 Not applicable
6 Not applicable
**Article 9**

Transitional provisions

1. Articles 3(2) and 4(2) shall not apply to luminaires before **1 July 2016**.

2. Article 3(1)(c-d) and Article 4(1)(a-c) shall not apply to printed advertisements and printed technical promotional material published before **1 July 2016**.

3. Lamps referred to in Article 1(1) and (2) of Directive 98/11/EC placed on the market before **1 January 2016** shall comply with the provisions set out in Directive 98/11/EC.

4. Lamps referred to in Article 1(1) and (2) of Directive 98/11/EC which comply with the provisions of this Regulation and which are placed on the market or offered for sale, hire or hire-purchase before **1 January 2016** shall be regarded as complying with the requirements of Directive 98/11/EC.

**Article 10**

Entry into force and application

1. **This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties.**

2. It shall apply from **1 January 2016**, except in the cases listed in Article 9.

This Regulation shall be binding in its entirety and directly applicable in all **Contracting Parties**.

The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation.\(^7\)

---

\(^7\) The text displayed here corresponds to Article 3(1) of Decision 2014/02/MC-EnC
\(^8\) The text displayed here corresponds to Article 2(3) of Decision 2014/02/MC-EnC
ANNEX I

Label

1. LABEL FOR ELECTRICAL LAMPS PRESENTED AT A POINT OF SALE

(1) The label shall be as in the following illustration if it is not printed on the packaging:

(2) The following information shall be included on the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier, meaning the code, usually alphanumeric, which distinguishes a specific lamp model from other models with the same trade mark or supplier’s name;

III. the energy efficiency class determined in accordance with Annex VI; the head of the arrow containing the energy efficiency class of the lamp shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. weighted energy consumption \( (E_w) \) in kWh per 1 000 hours, calculated and rounded up to the nearest integer in accordance with Annex VII.
(3) If the label is printed on the packaging and the information specified in point (2)(I), (II) and (IV) is included elsewhere on the packaging, that information may be omitted from the label. The label shall then be chosen from the following illustrations:
(4) The design of the label shall be as follows:

where:

(a) the size specifications in the figure above and in point (d) apply to a lamp label 36 mm wide and 75 mm high. If the label is printed in a different format, its content must nevertheless remain proportionate to the specifications above.

The label version specified in points (1) and (2) must be at least 36 mm wide and 75 mm high, and the versions specified in point (3) must be, respectively, at least 36 mm wide and 68 mm high and at least 36 mm wide and 62 mm high. If no side of the packaging is large enough to contain the label and its blank border or if this would cover more than 50 % of the surface area of the largest side, the label and border may be reduced, but by no more than is required to meet both these conditions. However, in no case may the label be reduced to less than 40 % (by height) of its standard size. If the packaging is too small to take such a reduced label, a 36 mm wide and 75 mm high label must be attached to the lamp or the packaging;

(b) the background shall be white for both the multicoloured and the monochrome versions of the label;

(c) for the multicoloured version of the label, the colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black;
(d) the label shall meet all the following requirements (numbers refer to the figure above; colour specifications apply only to the multicoloured version of the label):

1. **Border stroke**: 2 pt – colour: Cyan 100 % – round corners: 1 mm.

2. **EU logo** – colours: X-80-00-00 and 00-00-X-00.

3. **Energy logo**: colour: X-00-00-00. Pictogram as depicted: EU logo and energy logo (combined): width: 30 mm, height: 9 mm.

4. **Sub-logos border**: 1 pt – colour: Cyan 100 % – length: 30 mm.

5. **A**°**°-E scale
   - **Arrow**: height: 5 mm, gap: 0,8 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00.
   - **Text**: Calibri bold 15 pt, capitals and white; ‘+’ symbols: Calibri bold 15 pt, Superscript, white, aligned on a single row.

6. **Energy efficiency class**
   - **Arrow**: width: 11,2 mm, height: 7 mm, 100 % black.
   - **Text**: Calibri bold 20 pt, capitals and white; ‘+’ symbols: Calibri bold 20 pt, Superscript, white, aligned on a single row.

7. **Weighted energy consumption**
   - **Value**: Calibri bold 16 pt, 100 % black; and Calibri regular 9 pt, 100 % black.

8. **Supplier’s name or trade mark**

9. **Supplier’s model identifier**

   The suppliers’ name or trade mark and the model identifier shall fit in a space of 30 × 7 mm.

Nothing else placed or printed on, or attached to, the individual packaging shall obscure the label or reduce its visibility.

By way of derogation, if a model has been awarded an ‘EU ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU ecolabel may be added.
2. LABEL FOR LUMINAIRES PRESENTED AT A POINT OF SALE

(1) The label shall be the relevant language version, and shall be as shown in the following illustration, or as in variants defined under points (2) and (3):

![Label Diagram]

(2) The following information shall be included in the label:

I. the supplier’s name or trade mark;

II. the supplier’s model identifier, meaning the code, usually alphanumeric, which distinguishes a specific luminaire model from other models with the same trade mark or supplier’s name;

III. the sentence as shown in the example in point (1), or one of its alternatives from the examples in point (3) below, as applicable. Instead of the word ‘luminaire’, a more precise term may be used describing the particular luminaire type or the product into which the luminaire is integrated (such as furniture), as long as it remains clear that the term refers to the product on sale that operates the light sources;

IV. the range of energy-efficiency classes according to part 1 of this Annex, accompanied by the following elements, as applicable:

(a) a ‘bulb’ pictogram indicating the classes of user-replaceable lamps with which the luminaire is compatible according to state-of-the-art requirements for compatibility;

(b) a cross over the classes of lamps with which the luminaire is not compatible according to state-of-the-art requirements for compatibility;
(c) the letters ‘LED’ arranged vertically along the classes A to A++ if the luminaire contains LED modules not intended to be removed by the end-user. If such a luminaire does not contain sockets for user-replaceable lamps, the classes from B to E shall be covered by a cross;

V. one of the following options, as applicable:

(a) if the luminaire operates with lamps that are replaceable by the end-user, and such lamps are included in the packaging of the luminaire, the sentence as shown in the example in point (1), containing the appropriate energy classes. Where necessary, the sentence can be adjusted to refer to one lamp or several lamps, and several energy classes can be listed;

(b) if the luminaire contains only LED modules not intended to be removed by the end-user, the sentence as shown in the example in point (3)(b);

(c) if the luminaire contains both LED modules not intended to be removed by the end-user and sockets for replaceable lamps, and such lamps are not included with the luminaire, the sentence as shown in the example in point (3)(d);

(d) if the luminaire operates only with lamps that are replaceable by the end-user and there are no such lamps included with the luminaire, the space shall be left empty, as shown in the example in point (3)(a).

(3) The following illustrations provide examples of typical luminaire labels in addition to the illustration in point (1), without showing all possible combinations:

(a) luminaire operating with user-replaceable lamps compatible with lamps of all energy classes with no lamps included:
(b) luminaire containing only non-replaceable LED modules:

(c) luminaire containing both non-replaceable LED modules and sockets for user-replaceable lamps, with lamps included:
(d) luminaire containing both non-replaceable LED modules and sockets for user-replaceable lamps, with lamps not included:
(4) The design of the label shall be as in the figures below:

(a) the label version shall be at least 50 mm wide and 100 mm high;
(b) the background shall be white or transparent, but the letters of the energy classes shall always be white. When the background is transparent, the dealer shall ensure that the label is applied to a surface which is white or a light shade of grey that preserves the legibility of all the elements of the label;
(c) the colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black;
(d) the label shall fulfil all of the following requirements (the numbers refer to the figure above):
   1 Border stroke: 2 pt – colour: Cyan 100 % – round corners: 1 mm.
   2 Sub-logos border: 1 pt – colour: Cyan 100 % – length: 43 mm.
   3 Luminaire logo: stroke: 1 pt – colour: Cyan 100 % – Size: 13 mm × 13 mm – round corners: 1 mm.
      Pictogram as depicted, or the supplier’s own pictogram or photo, if it describes better the luminaire
PART II

ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 874/2012

belonging to the label.

4 Text: Calibri Regular 9 pt or larger, 100 % black.

5 A++-E scale

- Arrow: height: 5 mm, gap: 0,8 mm – colours:
  - Highest class: X-00-X-00,
  - Second class: 70-00-X-00,
  - Third class: 30-00-X-00,
  - Fourth class: 00-00-X-00,
  - Fifth class: 00-30-X-00,
  - Sixth class: 00-70-X-00,
  - Last class: 00-X-X-00.

- Text: Calibri bold 14 pt, capitals and white; ‘+’ symbols: Calibri bold 14 pt, Superscript, white, aligned on a single row.

6 LED text: Verdana Regular 15 pt, 100 % black.

8 Bulb logo: Pictogram as depicted.

9 Text: Calibri Regular 10 pt or larger, 100 % black.

10 Numbering of the Regulation: Calibri bold 10 pt, 100 % black.

11 EU logo: Colours: X-80-00-00 and 00-00-X-00.

12 Supplier’s name or trademark.

13 Supplier’s model identifier:

The supplier’s name or trade mark and the model identifier shall fit into a space measuring 43 × 10 mm.

14 Energy class arrow

- Arrow: height: 3,9 mm, width: as shown in the illustration in point (4) but reduced in the same proportion as the height, colour: the colour defined in point, as applicable.

- Text: Calibri bold 10,5 pt, capitals and white; ‘+’ symbols: Calibri bold 10,5 pt, Superscript, white, aligned on a single row.

If there is not enough space for displaying the energy class arrows within the area of the sentence referred to in point (2)(V)(a), the area between the number of the Regulation and the EU logo may be used for that purpose;

(e) the label may also be displayed in horizontal orientation, in which case it shall be at least 100 mm wide and 50 mm high. The components of the label shall be as described in points (b) to (d) and shall be arranged according to the following examples, as applicable. If there is not enough space for displaying the energy class arrows in the text box to the left from the A++ to E scale, the text box may be enlarged vertically as necessary.
This luminaire is compatible with bulbs of the energy classes:

The luminaire is sold with a bulb of the energy class: U

874/2012

This luminaire contains built-in LED lamps.

The lamps cannot be changed in the luminaire.

874/2012

This luminaire is compatible with bulbs of the energy classes:
ANNEX II
Product fiche for electrical lamps

The fiche shall contain the information specified for the label. Where product brochures are not supplied, the label provided with the product can also be considered to be the fiche.
ANNEX III
Technical documentation

The technical documentation referred to in Article 3(1)(b) and (2)(a) shall include:
(a) the name and address of the supplier;
(b) a general description of the model, sufficient for it to be unequivocally and easily identified;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) the identification and signature of the person empowered to bind the supplier;
(f) the technical parameters for determining energy consumption and energy efficiency in the case of
electrical lamps, and compatibility with lamps in the case of luminaires, specifying at least one realistic
combination of product settings and conditions in which to test the product;
(g) for electrical lamps, the results of calculations performed in accordance with Annex VII.
The information contained in this technical documentation may be merged with the technical document-
tation provided in accordance with measures under Directive 2009/125/EC.
ANNEX IV

Information to be provided in cases where final owners cannot be expected to see the product displayed

1. The information referred to in Article 4(1)(a) shall be provided in the following order:
(a) the energy efficiency class as defined in Annex VI;
(b) where required by Annex I, the weighted energy consumption in kWh per 1 000 hours, rounded up to the nearest integer and calculated in accordance with part 2 of Annex VII.

2. When other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex II.

3. The size and font in which all the information referred to in this Annex is printed or shown shall be legible.
ANNEX V\textsuperscript{9}

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

1. VERIFICATION PROCEDURE FOR ELECTRICAL LAMPS AND LED MODULES MARKETED AS INDIVIDUAL PRODUCTS

(1) The Contracting Party authorities shall verify a sample batch of a minimum of 20 lamps of the same model from the same supplier, where possible obtained in equal proportions from four randomly selected sources.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when testing the units of model, the arithmetical mean of the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) is within the respective tolerance of 10%.

(3) If the results referred to in points 2(a), (b) or (c) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to point 3.

The Contracting Party authorities shall use measurement procedures that reflect generally recognised, current best practice and are reliable, accurate and reproducible, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

\textsuperscript{9} Annex V is replaced in accordance with Article 7 and Annex VII of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
The Contracting Party authorities shall only apply the verification tolerance of 10 % and shall only use the procedure described in points 1 to 4 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

2. VERIFICATION PROCEDURE FOR LUMINAIRES INTENDED TO BE MARKETED OR MARKETED TO THE END-USER

The luminaire shall be considered to comply with the requirements laid down in this Regulation if it is accompanied by the required product information, if it is claimed to be compatible with all the lamp energy efficiency classes it is compatible with, and if, when applying state-of-the-art methods and criteria for assessing compatibility, it is found to be compatible with the lamp energy efficiency classes with which it is claimed to be compatible pursuant to points (2)(IV)(a) and (b) of part 2 of Annex I.
ANNEX VI

Energy efficiency classes

The energy efficiency class of lamps shall be determined on the basis of their energy efficiency index (EEI) as set out in Table 1.

The EEI of lamps shall be determined in accordance with Annex VII.

Table 1

Energy efficiency classes for lamps

<table>
<thead>

</tbody>
</table>
ANNEX VII

Method for calculating the energy efficiency index and energy consumption

1. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the energy efficiency index (EEI) of a model, its power corrected for any control gear losses is compared with its reference power. The reference power is obtained from the useful luminous flux, which is the total flux for non-directional lamps, and the flux in a 90° or 120° cone for directional lamps. The EEI is calculated as follows and rounded to two decimal places:

\[ EEI = \frac{P_{\text{cor}}}{P_{\text{ref}}} \]

where:

- \( P_{\text{cor}} \) is the rated power \( (P_{\text{rated}}) \) for models without external control gear and the rated power \( (P_{\text{rated}}) \) corrected in accordance with Table 2 for models with external control gear. The rated power of the lamps is measured at their nominal input voltage.

- \( P_{\text{ref}} \) is the reference power obtained from the useful luminous flux of the model \( (\Phi_{\text{use}}) \) by the following formulae:
  - For models with \( \Phi_{\text{use}} < 1300 \) lumen: \( P_{\text{ref}} = 0.88 \sqrt{\Phi_{\text{use}}} + 0.049 \Phi_{\text{use}} \)
  - For models with \( \Phi_{\text{use}} \geq 1300 \) lumen: \( P_{\text{ref}} = 0.07341 \Phi_{\text{use}} \). The useful luminous flux \( (\Phi_{\text{use}}) \) is defined in accordance with Table 3.

<table>
<thead>
<tr>
<th>Scope of the correction</th>
<th>Power corrected for control gear losses ( (P_{\text{cor}}) )</th>

2. CALCULATION OF THE ENERGY CONSUMPTION

The weighted energy consumption ($E_c$) is calculated in kWh/1 000 h as follows and is rounded to two decimal places:

$$E_c = \frac{P_{cor} \times 1000h}{1000}$$

Where $P_{cor}$ is the power corrected for any control gear losses in accordance with part 1 above.
ANNEX VIII

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 4 of this Annex the following definitions shall apply:
(a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
(b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
(c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
(d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) or Article 3(2)(e) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:
(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:
(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

10 Annex VIII is added in accordance with Article 7(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.
DELEGATED REGULATION (EU) 392/2012 of 1 March 2012 supplementing Directive 2010/30/EU with regard to energy labelling of household tumble driers

Article 1
Subject matter and scope

1. This Regulation establishes requirements for the labelling of and the provision of supplementary product information on electric mains-operated and gas-fired household tumble driers and built-in household tumble driers, including those sold for non-household use.

2. This Regulation shall not apply to household combined washer-driers and household spin-extractors.

Article 2
Definitions

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

1. ‘household tumble drier’ means an appliance in which textiles are dried by tumbling in a rotating drum, through which heated air is passed and which is designed to be used principally for non-professional purposes;

2. ‘built-in household tumble drier’ means a household tumble drier intended to be installed in a cabinet, a prepared recess in a wall or a similar location, requiring furniture finishing;

3. ‘household combined washer-drier’ means a household washing machine which includes both a spin extraction function and also a means for drying the textiles, usually by heating and tumbling;

4. ‘household spin-extractor’, also known commercially as ‘spin-drier’, means an appliance in which water is removed from the textiles by centrifugal action in a rotating drum and drained through an automatic pump and which is designed to be used principally for non-professional purposes;

5. ‘air-vented tumble drier’ means a tumble drier that draws in fresh air, passes it over the textiles and vents the resulting moist air into the room or outside;

6. ‘condenser tumble drier’ means a tumble drier which includes a device (either using condensation or any other means) for removing moisture from the air used for the drying process;

7. ‘automatic tumble drier’ means a tumble drier which switches off the drying process when a certain
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 392/2012

moisture content of the load is detected, for example through conductivity or temperature sensing;

(8) ‘non-automatic tumble drier’ means a tumble drier which switches off the drying process after a pre-defined period, usually controlled by a timer, but which may also be manually switched off;

(9) ‘programme’ means a series of operations that are predefined and which are declared by the supplier as suitable for drying certain types of textile;

(10) ‘cycle’ means a complete drying process, as defined for the selected programme;

(11) ‘programme time’ means the time that elapses from the initiation of the programme until the completion of the programme, excluding any end-user programmed delay;

(12) ‘rated capacity’ means the maximum mass in kilograms, indicated by the supplier in 0.5 kilogram increments of dry textiles of a particular type, which can be treated in a household tumble drier with the selected programme, when loaded in accordance with the supplier’s instructions;

(13) ‘partial load’ means half of the rated capacity of a household tumble drier for a given programme;

(14) ‘condensation efficiency’ means the ratio between the mass of moisture condensed by a condenser tumble drier and the mass of moisture removed from the load at the end of a cycle;

(15) ‘off-mode’ means a condition where the household tumble drier is switched off using appliance controls or switches accessible to and intended for operation by the end-user during normal use to attain the lowest power consumption that may persist for an indefinite time while the household tumble drier is connected to a power source and used in accordance with the supplier’s instructions; where there is no control or switch accessible to the end-user, ‘off-mode’ means the condition reached after the household tumble drier reverts to a steady-state power consumption on its own;

(16) ‘left-on mode’ means the lowest power consumption mode that may persist for an indefinite time after completion of the programme without any further intervention by the end-user besides unloading of the household tumble drier;

(17) ‘equivalent household tumble drier’ means a model of household tumble drier placed on the market with the same rated capacity, technical and performance characteristics, energy consumption, condensation efficiency where relevant, standard cotton programme time and airborne acoustical noise emissions during drying as another model of household tumble drier placed on the market under a different commercial code number by the same supplier;

(18) ‘end-user’ means a consumer buying or expected to buy a household tumble drier;

(19) ‘point of sale’ means a location where household tumble driers are displayed or offered for sale, hire or hire-purchase.

(20) ‘standard cotton programme’ means the cycle which dries cotton laundry with an initial moisture content of the load of 60% up to a remaining moisture content of the load of 0%.

Article 3

Responsibilities of suppliers

Suppliers shall ensure that:

(a) each household tumble drier is supplied with a printed label in the format and containing the infor-
mation set out in Annex I;
(b) a product fiche, as set out in Annex II, is made available;
(c) technical documentation as set out in Annex III is made available on request to the authorities of the
Contracting Parties and to the Commission;
(d) any advertisement for a specific model of household tumble drier contains the energy efficiency class,
if the advertisement discloses energy-related or price information;
(e) any technical promotional material concerning a specific model of household tumble drier which de-
scribes its specific technical parameters includes the energy efficiency class of that model;
(f) an electronic label in the format and containing the information set out in Annex I is made
available to dealers for each household tumble drier model placed on the market from 1
January 2020 with a new model identifier. It may also be made available to dealers for other
household tumble drier models;
(g) an electronic product fiche as set out in Annex II is made available to dealers for each
household tumble drier model placed on the market from 1 January 2020 with a new model
identifier. It may also be made available to dealers for other household tumble drier models.¹

Article 4
Responsibilities of dealers

Dealers shall ensure that:
(a) each household tumble drier, at the point of sale, bears the label provided by suppliers in accordance
with Article 3(a) on the outside of the front or top of the household tumble drier, in such a way as to be
clearly visible;
(b) household tumble driers offered for sale, hire or hire-purchase where the end-user cannot
be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/ EU, as
incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, are marketed
with the information provided by suppliers in accordance with Annex IV to this Regulation.
Where the offer is made through the internet and an electronic label and an electronic prod-
uct fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of
Annex VIII shall apply instead;²
(c) any advertisement for a specific model of household tumble drier contains a reference to the energy
efficiency class, if the advertisement discloses energy-related or price information;
(d) any technical promotional material concerning a specific model of household tumble drier which de-
scribes its specific technical parameters includes a reference to the energy efficiency class of that model.

¹ Article 3, points (f) and (g) are added in accordance with Article 6(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by
Ministerial Council Decision 2018/03/MC-EnC
² Article 4, point (b) is replaced in accordance with Article 6(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Minis-
terial Council Decision 2018/03/MC-EnC
**Article 5**
Measurement methods

The information to be provided under Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods.

**Article 6**
Verification procedure for market surveillance purposes

**Contracting Parties** shall apply the procedure set out in Annex V for assessing the conformity of the declared energy efficiency class, the energy consumption per cycle, the condensation efficiency class where applicable, the rated capacity, the power consumption in off-mode and left-on mode, the duration of the left-on mode, the programme time and airborne acoustical noise emissions.

**Article 7**
Revision

1. Article 3(d) and (e) and Article 4(b), (c) and (d) shall not apply to printed advertisements and printed technical promotional material published before **30 April 2016**.

2. Household tumble driers placed on the market before **1 January 2016** shall comply with the provisions of Directive 95/13/EC.

3. Household tumble driers which comply with the provisions of this Regulation and which are placed on the market or offered for sale, hire or hire-purchase before **1 January 2016** shall be regarded as complying with the requirements of Directive 95/13/EC.

3 Not applicable
4 Not applicable

**Article 10**

**Entry into force and application**

1. **This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties.**

2. It shall apply from **1 January 2016**. However, Article 3(d) and (e) and Article 4(b), (c) and (d) shall apply from **30 April 2016**.

The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation.6

6 The text displayed here corresponds to Article 2(3) of Decision 2014/02/MC-EnC
ANNEX I
Label

1. LABEL FOR AIR-VENTED HOUSEHOLD TUMBLE DRIER

1.1. The following information shall be included in the label for air vented household tumble driers:
I. supplier’s name or trade mark;
II. supplier’s model identifier, meaning the code, usually alphanumeric, which distinguishes a specific household tumble drier model from other models with the same trade mark or supplier’s name;
III. the energy efficiency class as defined in point 1 of Annex VI; the head of the arrow containing the energy efficiency class of the household tumble drier shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
IV. weighted annual energy consumption (AEC) in kWh/year, rounded up to the nearest integer and calculated in accordance with Annex VII;
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 392/2012

V. information on the type of household tumble drier;
VI. cycle time corresponding to the standard cotton programme at full load in minutes and rounded to the nearest minute;
VII. rated capacity, in kg, for the standard cotton programme at full load;
VIII. the sound power level (weighted average value – \( L_{WA} \)), during the drying phase, for the standard cotton programme at full load, expressed in dB, rounded to the nearest integer.

1.2. The design of the label for air vented household tumble driers shall be in accordance with point 4 of this Annex. Where a model has been granted an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

2. LABEL FOR CONDENSER HOUSEHOLD TUMBLE DRIER
2.1. In addition to the information listed in point 1.1, the label for condenser household tumble driers shall include:
IX. the condensation efficiency class in accordance with point 2 of Annex VI.

2.2. The design of the label for condenser household tumble driers shall be in accordance with point 4 of this Annex. Where a model has been awarded an ‘EU Ecolabel’ under Regulation (EC) No 66/2010, a copy of the EU Ecolabel may be added.

3.1. The information listed in point 1.1 shall be included in the label for gas fired household tumble driers.

3.2. The design of the label for gas fired household tumble driers shall be in accordance with point 4 of this Annex. Where a model has been awarded an ‘EU Ecolabel’ under Regulation (EC) No 66/2010, a copy of the EU Ecolabel may be added.
4. LABEL DESIGN

4.1. For air vented household tumble driers, the design of the label shall be as in the figure below.

Whereby
(a) The label must be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.
(b) The background shall be white.
(c) Colours shall be CMYK – cyan, magenta, yellow and black following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
(d) The label shall fulfil all of the following requirements (numbers refer to the figure above).

1 Eu label border stroke: 5 pt – colour: Cyan 100 % – round corners: 3,5 mm.
2 EU logo – colours: X-80-00-00 and 00-00-X-00.
3 Energy label: colour: X-00-00-00. Pictogram as depicted; EU logo and energy logo (combined):
width: 92 mm, height: 17 mm.

4 Sub-logos border: 1 pt – colour: Cyan 100 % – length: 92,5 mm.

5 A-G scale
   - Arrow: height: 7 mm, gap: 0,75 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00.
   - Text: Calibri bold 18 pt, capitals and white; ‘+’ symbols: Calibri bold 12 pt, white aligned on a single row.

6 Energy efficiency class
   - Arrow: width: 26 mm, height: 14 mm, 100 % black;
   - Text: Calibri bold 29 pt, capitals and white; ‘+’ symbols: Calibri bold 18 pt, white aligned on a single row.

7 Energy
   - Text: Calibri regular 11 pt, capitals, 100 % black.

8 Weighted annual energy consumption:
   - Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
   - Value: Calibri bold 30 pt, 100 % black.
   - Second line: Calibri regular 14 pt, 100 % black.

9 Type of household tumble drier:
   - Pictogram as depicted

10 Cycle time:
   - Pictogram as depicted
   - Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
   - Value: Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

11 Rated capacity:
   - Pictogram as depicted
   - Border: 2 pt – colour: Cyan 100% – round corners: 3,5 mm.
   - Value: Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

12 Sound power level:
   - Pictogram as depicted
4.2. For condenser household tumble driers, the design of the label shall be as in the figure below.

Whereby

(a) The label must be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.
(b) The background shall be white.

(c) Colours shall be CMYK – cyan, magenta, yellow and black following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above).

1. **Eu label border stroke**: 5 pt – colour: Cyan 100 % – round corners: 3,5 mm.
2. **EU logo**: colours: X-80-00-00 and 00-00-X-00.
3. **Energy label**: colour: X-00-00-00. Pictogram as depicted; EU logo and energy logo (combined): width: 92 mm, height: 17 mm.
4. **Sub-logos border**: 1 pt – colour: Cyan 100 % – length: 92,5 mm.
5. **A-G scale**
   - **Arrow**: height: 7 mm, gap: 0,75 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00.
   - **Text**: Calibri bold 18 pt, capitals and white; ‘+’ symbols: Calibri bold 12 pt, white aligned on a single row.
6. **Energy efficiency class**
   - **Arrow**: width: 26 mm, height: 14 mm, 100 % black;
   - **Text**: Calibri bold 29 pt, capitals and white; ‘+’ symbols: Calibri bold 18 pt, white aligned on a single row.
7. **Energy**
   - **Text**: Calibri regular 11 pt, capitals, 100 % black.
8. **Weighted annual energy consumption**:
   - **Border**: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
   - **Value**: Calibri bold 30 pt, 100 % black.
   - **Second line**: Calibri regular 14 pt, 100 % black.
9. **Type of household tumble drier**:
   - **Pictogram** as depicted
   - **Border**: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
10. **Cycle time**:
    - **Pictogram** as depicted
    - **Border**: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
11 Rated capacity:
- Pictogram as depicted
- Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
- Value: Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

12 Sound power level:
- Pictogram as depicted
- Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
- Value: Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

13 Asterisk: Calibri regular 6 pt, 100 % black.

14 Supplier’s name or trade mark

15 Supplier’s model identifier

16 The supplier’s name or trademark and model identifier should fit in a space of 92 × 15 mm.

17 Numbering of the Regulation: Calibri bold 9 pt, 100 % black.

18 Condensation efficiency class:
- Pictogram as depicted
- Border: 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
- Value: Calibri regular 16 pt, horizontal scale 75 %, 100 % black and Calibri bold 22 pt, horizontal scale 75 %, 100 % black.
4.3. For gas fired household tumble driers, the design of the label shall be as in the figure below.

Whereby

(a) The label must be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours shall be CMYK – cyan, magenta, yellow and black following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above).

1. **Eu label border stroke:** 5 pt – colour: Cyan 100 % – round corners: 3,5 mm.
2. **EU logo** – colours: X-80-00-00 and 00-00-X-00.
3. **Energy label:** colour: X-00-00-00. Pictogram as depicted; EU logo and energy logo (combined): width: 92 mm, height: 17 mm.
4 **Sub-logos border:** 1 pt – colour: Cyan 100 % – length: 92,5 mm.

5 **A-G scale**
   - **Arrow:** height: 7 mm, gap: 0,75 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00.
   - **Text:** Calibri bold 18 pt, capitals and white; ·+· symbols: Calibri bold 12 pt, white aligned on a single row.

6 **Energy efficiency class**
   - **Arrow:** width: 26 mm, height: 14 mm, 100 % black;
   - **Text:** Calibri bold 29 pt, capitals and white; ·+· symbols: Calibri bold 18 pt, white aligned on a single row.

7 **Energy**
   - **Text:** Calibri regular 11 pt, capitals, 100 % black.

8 **Weighted annual energy consumption:**
   - **Border:** 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
   - **Value:** Calibri bold 30 pt, 100 % black.
   - **Second line:** Calibri regular 14 pt, 100 % black.

9 **Type of household tumble drier:**
   - **Pictogram** as depicted
   - **Border:** 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.

10 **Cycle time:**
   - **Pictogram** as depicted
   - **Border:** 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
   - **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

11 **Rated capacity:**
   - **Pictogram** as depicted
   - **Border:** 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
   - **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

12 **Sound power level:**
   - **Pictogram** as depicted
   - **Border:** 2 pt – colour: Cyan 100 % – round corners: 3,5 mm.
\begin{itemize}
  \item Value: Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.
  \item \textbf{Asterisk}: Calibri regular 6 pt, 100 % black
  \item \textbf{Supplier’s name or trade mark}
  \item \textbf{Supplier’s model identifier}
  \item The supplier’s name or trademark and model identifier should fit in a space of 92 × 15 mm.
  \item \textbf{Numbering of the Regulation}: Calibri bold 9 pt, 100 % black.
\end{itemize}
ANNEX II
Product Fiche

1. The information in the product fiche of household tumble driers shall be given in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trade mark;
(b) supplier’s model identifier, which means the code, usually alphanumeric, which distinguishes a specific household tumble drier model from other models with the same trade mark or supplier’s name;
(c) rated capacity in kg of cotton laundry for the standard cotton programme at full load;
(d) whether the household tumble drier is an air-vented, condenser or gas-fired household tumble drier;
(e) energy efficiency class in accordance with point 1 of Annex VI;
(f) for electric mains-operated household tumble drier:
   - the weighted Annual Energy Consumption (AE) rounded up to one decimal place; it shall be described as: ‘Energy consumption “X” kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.’;
   - for household gas-fired tumble drier:
     - the weighted Annual Energy Consumption (AE\text{Gas}) rounded up to one decimal place; it shall be described as: ‘Energy consumption “X” kWh-Gas per year, based on 160 drying cycles of the standard cotton programme at full and partial load. Actual energy consumption per cycle will depend on how the appliance is used.’;
     - and
     - the weighted Annual Energy Consumption (AE\text{Gas,el}) rounded up to one decimal place; it shall be described as: ‘Energy consumption “X” kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.’;
(g) whether the household tumble drier is an ‘automatic tumble drier’ or ‘non-automatic tumble drier’;
(h) where the household tumble drier has been awarded an ‘EU Ecolabel award’ under Regulation (EC) No 66/2010, this information may be included;
(i) the energy consumption (E\text{dry}, E\text{dry,½}, E\text{gdry}, E\text{gdry,½}, E\text{gdry,a}, E\text{gdry,½,a}) of the standard cotton programme at full and partial load;
(j) the power consumption of the off-mode (P_o) and of the left-on mode (P) for the standard cotton programme at full load;
(k) if the household tumble drier is equipped with a power management system, the duration of the ‘left-on mode’;
(l) indication that the ‘standard cotton programme’ used at full and partial load is the standard drying programme to which the information in the label and the fiche relates, that this programme is suitable for drying normal wet cotton laundry and that it is the most efficient programme in terms of energy consumption for cotton;
(m) the weighted programme time \( T_t \) of the ‘standard cotton programme at full and partial load’ in minutes and rounded to the nearest minute as well as the programme time of the ‘standard cotton programme at full load’ \( T_{dry} \) and the programme time of the ‘standard cotton programme at partial load’ \( T_{dry½} \) in minutes and rounded to the nearest minute;

(n) if the household tumble drier is a condenser tumble drier, the condensation efficiency class in accordance with point 2 of Annex VI, expressed as ‘condensation efficiency class ‘X’ on a scale from G (least efficient) to A (most efficient)’; this may be expressed by other means provided it is clear that the scale is from G (least efficient) to A (most efficient);

(o) if the household tumble drier is a condenser tumble drier, the average condensation efficiency \( C_{dry} \) and \( C_{dry½} \) of the standard cotton programme at full load and partial load and the weighted condensation efficiency \( C_t \) for the ‘standard cotton programme at full and partial load’, as a percentage and rounded to the nearest whole percent;

(p) the sound power level (weighted average value – \( L_{WA} \)) expressed in dB and rounded to the nearest integer for the standard cotton programme at full load;

(q) if the household tumble drier is intended to be built-in, an indication to this effect.

2. One product fiche may cover a number of household tumble drier models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.
ANNEX III

Technical documentation

1. The technical documentation referred to in Article 3(c) shall include:
   (a) the name and address of the supplier;
   (b) a general description of the household tumble drier model, sufficient for it to be unequivocally and easily identified;
   (c) where appropriate, the references of the harmonised standards applied;
   (d) where appropriate, the other technical standards and specifications used;
   (e) the identification and signature of the person empowered to bind the supplier;
   (f) technical parameters for measurements as follows:
      (i) for electric mains-operated household tumble drier:
         the energy consumption \( E_{\text{dry}}, E_{\text{dry} \frac{1}{2}}, E_{\text{gdry}}, E_{\text{gdry} \frac{1}{2}}, E_{\text{gdry},a}, E_{\text{gdry} \frac{1}{2},a} \) of the standard cotton programme at full and partial load,
      for household gas-fired tumble drier:
         the weighted Annual Energy Consumption \( AEC(Gas) \) rounded up to one decimal place; it shall be described as: ‘Energy consumption “X” kWh-Gas per year, based on 160 drying cycles of the standard cotton programme at full and partial load. Actual energy consumption per cycle will depend on how the appliance is used’;
         and
         the weighted Annual Energy Consumption \( AEC(Gas)_{\text{el}} \) rounded up to one decimal place; it shall be described as: ‘Energy consumption “X” kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.’;
      (ii) power consumption in ‘off-mode’ and the power consumption in ‘left-on mode’;
      (iii) the programme time of the ‘standard cotton programme at full load’ \( T_{\text{dry}} \) and the programme time of the ‘standard cotton programme at partial load’ \( T_{\text{dry} \frac{1}{2}} \), in minutes and rounded to the nearest minute;
      (iv) if the household tumble drier is equipped with a power management system, the duration of the ‘left-on mode’;
      (v) if the household tumble drier is a condenser tumble drier, the average condensation efficiency \( C_{\text{dry}} \) of the standard cotton programme at full load and the average condensation efficiency of the standard cotton programme at partial load \( C_{\text{dry} \frac{1}{2}} \);
      (vi) the sound power level;
   (g) the results of calculations performed in accordance with Annex VII.

2. Where the information included in the technical documentation for a particular household tumble drier model has been obtained by calculation on the basis of design or by extrapolation from other equivalent household tumble driers, or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken.
The information shall also include a list of all other equivalent household tumble drier models where the information was obtained in the same way.
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 392/2012

ANNEX IV

Information to be provided in cases where end-users cannot be expected to see the product displayed

1. The information referred to in Article 4(b) shall be provided in the following order:
   (a) the rated capacity in kg of cotton, for the standard cotton programme at full load;
   (b) whether the household tumble drier is an air-vented, condenser or gas-fired household tumble drier;
   (c) the energy efficiency class as defined in point 1 of Annex VI;
   (d) for electric mains-operated household tumble drier:
      the weighted Annual Energy Consumption \( A_{EC} \) rounded up to the nearest integer, to be described as: ‘Energy consumption “X” kWh per year, based on 160 drying cycles of the standard cotton programmes at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used’;
   for household gas-fired tumble drier:
      the weighted Annual Energy Consumption \( A_{EC(Gas)} \) rounded up to one decimal place; it shall be described as: ‘Energy consumption “X” kWh-Gas per year, based on 160 drying cycles of the standard cotton programme at full and partial load. Actual energy consumption per cycle will depend on how the appliance is used’;
   and
   the weighted Annual Energy Consumption \( A_{EC(Gas)el} \) rounded up to one decimal place; it shall be described as: ‘Energy consumption “X” kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used’;
   (e) whether the household tumble drier is an ‘automatic tumble drier’ or ‘non-automatic tumble drier’;
   (f) the energy consumption \( E_{dry}, E_{dry½}, E_{gdy}, E_{gdy½}, E_{gdy,a}, E_{gdy½,a} \) of the standard cotton programme at full and partial load, rounded up to two decimal places and calculated in accordance with Annex VII;
   (g) the power consumption of the off-mode \( P_o \) and the left-on mode \( P_l \) for the standard cotton programme at full load;
   (h) the programme time of the ‘standard cotton programme at full load’ \( T_{dry} \) and the programme time of the ‘standard cotton programme at partial load’ \( T_{dry½} \), in minutes and rounded to the nearest minute, calculated in accordance with Annex VII;
   (i) if the household tumble drier is a condenser tumble drier, the condensation efficiency class in accordance with point 2 of Annex VI;
   (j) the sound power level (weighted average value – \( L_{WA} \)) for the standard cotton programme at full load, expressed in dB and rounded to the nearest integer;
   (k) if the household tumble drier is intended to be built-in, an indication to this effect.
2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex II.
3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.
ANNEX V

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household tumble drier models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household tumble drier models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being

---

7 Annex V is replaced in accordance with Article 6 and Annex VI of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
taken on the non-compliance of the model according to points 3 and 6.

Contracting Parties’ authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX VI

Energy efficiency classes and condensation efficiency classes

1. ENERGY EFFICIENCY CLASSES

The energy efficiency class of a household tumble drier shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1.

The Energy Efficiency Index (EEI) of a household tumble drier shall be determined in accordance with point 1 of Annex VII.

ANNEX VII

Method for calculating the Energy Efficiency Index and the weighted condensation efficiency

1. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the Energy Efficiency Index (EEI) of a household tumble drier model, the weighted Annual Energy Consumption of a household tumble drier for the standard cotton programme at full and partial load is compared to its Standard Annual Energy Consumption.

(a) The Energy Efficiency Index (EEI) is calculated as follows and rounded to one decimal place:

\[
EEI = \frac{AEC}{SAEC} \times 100
\]

where:

\( AEC \) = weighted Annual Energy Consumption of the household tumble drier.

\( SAEC \) = standard Annual Energy Consumption of the household tumble drier.

(b) The Standard Annual Energy Consumption (SAEC) is calculated in kWh/year as follows and rounded to two decimal places:

– for all household tumble driers that are not air-vented:

\[
SAEC = 140 \times c^{0.8}
\]

– for air-vented household tumble driers:

\[
SAEC = 140 \times c^{0.8} - \left(30 \times \frac{T_t}{60}\right)
\]

where:

\( c \) is the rated capacity of the household tumble drier for the standard cotton programme.

\( T_t \) is the weighted programme time for the standard cotton programme.

(c) The weighted Annual Energy Consumption (AEC) is calculated in kWh/year as follows and is rounded to two decimal places:

\[
AEC = E_t \times 160 + \frac{P_o \times \left(\frac{525 \times 600 - (T_o \times 160)}{2}\right) + P_l \times \left(\frac{525 \times 600 - (T_l \times 160)}{2}\right)}{60 \times 1000}
\]

where:

\( E_t \) = weighted energy consumption, in kWh and rounded to two decimal places.

\( P_o \) = power in ‘off-mode’ for the standard cotton programme at full load, in W and rounded to two decimal places.

\( P_l \) = power in ‘left-on mode’ for the standard cotton programme at full load, in W and rounded to two decimal places.

\( T_o \) = weighted programme time, in minutes and rounded to the nearest minute.

160 = total number of drying cycles per year.
(ii) When the household tumble drier is equipped with a power management system, with the household tumble drier reverting automatically to ‘off-mode’ after the end of the programme, the weighted Annual Energy Consumption \( (\text{AEC}) \) is calculated taking into consideration the effective duration of the ‘left-on mode’, according to the following formula:

\[
\text{AEC} = E_t \times 160 + \frac{\{(P_1 \times T_1 \times 160) + P_0 \times [525600 - (T_t \times 160) - (T_1 \times 160)]\}}{60 \times 1000}
\]

where:

\( T_l \) = duration of the ‘left-on mode’ for the standard cotton programme at full load, in minutes and rounded to the nearest minute.

(d) The weighted programme time \( (T_t) \) for the standard cotton programme is calculated in minutes as follows and rounded to the nearest minute:

\[
T_t = (3 \times T_{\text{dry}} + 4 \times T_{\text{dry}^{1/2}})/7 \quad \text{where:}
\]

\( T_{\text{dry}} \) = programme time for the standard cotton programme at full load, in minutes and rounded to the nearest minute.

\( T_{\text{dry}^{1/2}} \) = programme time for the standard cotton programme at partial load, in minutes and rounded to the nearest minute.

(e) The weighted energy consumption \( (E_t) \) is calculated in kWh as follows and rounded to two decimal places:

\[
E_t = (3 \times E_{\text{dry}} + 4 \times E_{\text{dry}^{1/2}})/7 \quad \text{where:}
\]

\( E_{\text{dry}} \) = energy consumption of the standard cotton programme at full load, in kWh and rounded to two decimal places.

\( E_{\text{dry}^{1/2}} \) = energy consumption of the standard cotton programme at partial load, in kWh and rounded to two decimal places.

(f) For gas-fired household tumble driers, the energy consumption for the standard cotton programme at full and partial load is calculated in kWh and rounded to two decimal places, as:

\[
E_{\text{dry}} = \frac{E_{\text{dry},\text{g}}}{f_g} + E_{\text{dry},\text{a}} \quad E_{\text{dry}^{1/2}} = \frac{E_{\text{dry}^{1/2},\text{g}}}{f_g} + E_{\text{dry}^{1/2},\text{a}}
\]

where:

\( E_{\text{dry},\text{g}} \) = gas consumption of the standard cotton programme at full load, in kWh and rounded to two decimal places.

\( E_{\text{dry}^{1/2},\text{g}} \) = gas consumption of the standard cotton programme at partial load, in kWh and rounded to two decimal places.

\( E_{\text{dry},\text{a}} \) = auxiliary electricity consumption of the standard cotton programme at full load, in kWh and rounded to two decimal places.

\( E_{\text{dry}^{1/2},\text{a}} \) = auxiliary electricity consumption of the standard cotton programme at partial load, in kWh and rounded to two decimal places.

\( f_g = 2.5 \).
2. CALCULATION FOR THE PRODUCT INFORMATION DESCRIBED IN ‘ANNEX II PRODUCT FICHE’, ‘ANNEX III TECHNICAL DOCUMENTATION’ AND ‘ANNEX IV INFORMATION TO BE PROVIDED IN CASES WHERE END-USERS CANNOT BE EXPECTED TO SEE THE PRODUCT DISPLAYED’

For gas-fired household tumble driers, the energy consumption on gas for the standard cotton programme at full and partial load for the information in Annex II, III and IV is calculated in kWh and rounded to two decimal places, as:

\[ AE_{C(Gas)} = 160 \times (3 \times E_{gdry} + 4 \times E_{gdry1/2})/7 \]

For gas-fired household tumble driers, the energy consumption on electricity for the standard cotton programme at full and partial load for the information in Annex II, III and IV is calculated in kWh and rounded to two decimal places, as:

\[ AE_{C(Gas)el} = 160 \times (3 \times E_{gdry,a} + 4 \times E_{gdry1/2,a})/7 + ((P_l \times T_l \times 160) + P_o [525 600 - (T_t \times 160) - (T_f \times 160)])/60 \times 1 000 \]

3. CALCULATION OF THE WEIGHTED CONDENSATION EFFICIENCY

The condensation efficiency of a programme is the ratio between the mass of moisture condensed and collected in the container of a condenser household tumble drier and the mass of moisture removed from the load by the programme, the latter being the difference between the mass of the wet test load before drying and the mass of the test load after drying. For calculating the weighted condensation efficiency, the average condensation efficiency for the standard cotton programme at both full and partial load is considered.

The weighted condensation efficiency \( C_t \) of a programme is calculated as a percentage and rounded to the nearest whole percent as:

\[ C_t = (3 \times C_{dry} + 4 \times C_{dry1/2})/7 \]

where:

\[ C_{dry} = \text{average condensation efficiency of the standard cotton programme at full load.} \]

\[ C_{dry1/2} = \text{average condensation efficiency of the standard cotton programme at partial load.} \]

The average condensation efficiency \( C \) is calculated from the condensation efficiencies of test runs and expressed as a percentage:

\[ C = \frac{1}{(n - 1)} \sum_{j=2}^{n} \left( \frac{W_{wj}}{W_i - W_f} \times 100 \right) \]

where:

\( n \) is the number of test runs, comprising at least four valid test runs for the selected programme. \( j \) is the test run number.

\( W_{wj} \) is the mass of water collected in the condenser reservoir during test run \( j \).

\( W_i \) is the mass of the wet test load before drying.

\( W_f \) is the mass of the test load after drying.
ANNEX VIII\(^8\)

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 4 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

\[\begin{array}{c}
\text{A+++} \\
\text{A+++}
\end{array}\]

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

---

\(^8\) Annex VIII is added in accordance with Article 6(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
DELEGATED REGULATION (EU) 626/2011 of 4 May 2011 supplementing Directive 2010/30/EU with regard to energy labelling of air conditioners

**Article 1**
Subject matter and scope

1. This Regulation establishes requirements for the labelling and the provision of supplementary product information for electric mains-operated air conditioners with a rated capacity of \( \leq 12 \text{ kW} \) for cooling, or heating, if the product has no cooling function.

2. This Regulation shall not apply to:
   a) appliances that use non-electric energy sources;
   b) air conditioners of which the condensor or evaporator-side, or both, do not use air for heat transfer medium.

**Article 2**
Definitions

In addition to the definitions set out in Article 2 of Directive 2010/30/EU of the European Parliament and of the Council, the following definitions shall apply:

1. “air conditioner” means a device capable of cooling or heating, or both, indoor air, using a vapour compression cycle driven by an electric compressor, including air conditioners that provide additional functionalities such as dehumidification, air-purification, ventilation or supplemental air-heating by means of electric resistance heating and appliances that may use water (either condensate water that is formed on the evaporator side or externally added water) for evaporation on the condensor, provided that the device is also able to function without the use of additional water, using air only;

2. “double duct air conditioner” means an air conditioner in which, during cooling or heating, the condensor or evaporator intake air is introduced from the outdoor environment to the unit by a duct and rejected to the outdoor environment by a second duct, and which is placed wholly inside the space to be conditioned, near a wall;

3. “single duct air conditioner” means an air conditioner in which, during cooling or heating, the condensor or evaporator intake air is introduced from the space containing the unit and discharged outside this space;

4. “rated capacity” (Prated) means the cooling or heating capacity of the vapour compression cycle of the
PART II  ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 626/2011

unit at standard rating conditions;
(5) “end-user” means a consumer buying or expected to buy an air conditioner;
(6) “point of sale” means a location where air conditioners are displayed or offered for sale, hire or hire-purchase.
Additional definitions for the purpose of Annexes II to VIII are set out in Annex I.

**Article 3**

Responsibilities of suppliers

1. Suppliers shall take action as described in points (a) to (g):

(a) a printed label is provided for each air conditioner respecting energy efficiency classes as set out in Annex II. The label shall comply with the format and content of information as set out in Annex III. For air conditioners, except single and double duct air conditioners, a printed label must be provided, at least in the packaging of the outdoor unit, for at least one combination of indoor and outdoor units at capacity ratio 1. For other combinations, the information can be alternatively provided on a free access web site;

(b) a product fiche, as set out in Annex IV, is made available. For air conditioners, except single and double duct air conditioners, a product fiche must be provided at least in the packaging of the outdoor unit, for at least one combination of indoor and outdoor units at capacity ratio 1. For other combinations, the information can be alternatively provided on a free access web site;

(c) technical documentation as set out in Annex V is made available electronically on request to the authorities of the **Contracting Parties** and to the **Secretariat**;

(d) any advertisement for a specific model of an air conditioner shall contain the energy efficiency class, if the advertisement discloses energy-related or price information. Where more than one efficiency class is possible, the supplier or the manufacturer, as appropriate, shall declare the energy efficiency class for heating at least in “Average” heating season. Information in the cases where end-users cannot be expected to see the product displayed is to be provided as set out in Annex VI;

(e) any technical promotional material concerning a specific model of an air conditioner which describes its specific technical parameters shall include the energy efficiency class of that model as set out Annex II;

(f) instructions for use are made available;

(g) single ducts shall be named “local air conditioners” in packaging, product documentation and in any advertisement material, whether electronic or in paper;

(h) an electronic label in the format and containing the information set out in Annex III is made available to dealers for each air conditioner model placed on the market from 1 January 2020 with a new model identifier, respecting energy efficiency classes set out in Annex II. It may also be made available to dealers for other air conditioner models;

(i) an electronic product fiche as set out in Annex IV is made available to dealers for each air conditioner model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other air conditioner models.\(^1\)

---

1 Article 3, points (h) and (i) are added in accordance with Article 5(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
2. The energy efficiency class shall be determined as set out in Annex VII.

3. The format of the label for air conditioners except for single and double duct air conditioners shall be as set out in Annex III.

4. For the air conditioners, except for single and double duct air conditioners, the format of the label set out in Annex III shall be applied according to the following timetable:
   (a) as regards air conditioners, except single duct and double duct air conditioners, placed on the market from 1 January 2013, labels with energy efficiency classes A, B, C, D, E, F, G shall be in accordance with point 1.1 of Annex III for reversible air conditioners, with point 2.1 of Annex III for cooling-only air conditioners and with point 3.1 of Annex III for heating-only air conditioners;
   (b) as regards air conditioners, except single duct and double duct air conditioners, placed on the market from 1 January 2015, labels with energy efficiency classes A+, A, B, C, D, E, F shall be in accordance with point 1.2 of Annex III for reversible air conditioners, with point 2.2 of Annex III for cooling-only air conditioners and with point 3.2 of Annex III for heating-only air conditioners;
   (c) as regards air conditioners, except single duct and double duct air conditioners, placed on the market from 1 January 2017, labels with energy efficiency classes A ++, A+, A, B, C, D shall be in accordance with point 1.3 of Annex III for reversible air conditioners, with point 2.3 of Annex III for cooling-only air conditioners and with point 3.3 of Annex III for heating-only air conditioners;
   (d) as regards air conditioners, except single duct and double duct air conditioners, placed on the market from 1 January 2019, labels with energy efficiency classes A+++, A++, A, B, C, D shall be in accordance with point 1.4 of Annex III for reversible air conditioners, with point 2.4 of Annex III for cooling-only air conditioners and with point 3.4 of Annex III for heating-only air conditioners.

5. The format of the label for double duct air conditioners placed on the market from 1 January 2013 with energy efficiency classes A++, A++, A+, A, B, C, D shall be in accordance with point 4.1 of Annex III for reversible double duct air conditioners, with point 4.3 of Annex III for cooling-only double duct air conditioners and with point 4.5 of Annex III for heating-only double duct air conditioners.

6. The format of the label for single duct air conditioners placed on the market from 1 January 2013 with energy efficiency classes A++, A++, A+, A, B, C, D shall be in accordance with point 5.1 of Annex III for reversible single duct air conditioners, with point 5.3 of Annex III for cooling-only single ducts air conditioners and with point 5.5 of Annex III heating-only single duct air conditioners.

Article 4
Responsibilities of dealers

Dealers shall ensure that:

(a) air conditioners, at the point of sale, bear the label provided by suppliers in accordance with Article 3(1) on the outside of the front or top of the appliance, in such a way as to be clearly visible;

(b) air conditioners offered for sale, hire or hire purchase where the end-user cannot be expected to see the product displayed, are marketed with the information provided by suppliers in accordance with Annexes IV and VI. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with...
Article 3(1)(h) and 3(1)(i) the provisions of Annex IX shall apply instead;²
(c) any advertisement for a specific model of air conditioner contains a reference to the energy efficiency class, if the advertisement discloses energy-related or price information. Where more than one efficiency class is possible, the supplier/manufacturer will declare the energy efficiency class at least in “Average” season zone;
(d) any technical promotional material concerning a specific model which describes the technical parameters of an air conditioner includes a reference to the energy efficiency class(es) of the model and the instructions for use provided by the supplier. Where more than one efficiency class is possible, the supplier/manufacturer will declare the energy efficiency class at least in “Average” season zone;
(e) single ducts shall be named “local air conditioners” in packaging, product documentation and in any promotional or advertisement material, whether electronic or in paper.

Article 5
Measurement methods

The information to be provided under Article 3 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state of the art calculation and measurement methods, as set out in Annex VII.

Article 6
Verification procedure for market surveillance purposes

When Contracting Parties assess the conformity of the declared energy efficiency class, the annual or hourly energy consumption, as appropriate, and the noise emissions, they shall apply the procedure laid down in Annex VIII.

Article 7
Revision
<...>

Article 8
Repeal
<...>

² Article 4, point (b) is replaced in accordance with Article 5(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
**Article 9**

Transitional provision

1. Air conditioners placed on the market before 1 January 2013 shall comply with the provisions set out in Directive 2002/31/EC.

**Article 10**

Entry into force and application

1. This Decision [2011/03/MC-EnC] enters into force upon its adoption....

2. It shall apply from 1 January 2013.

This Regulation shall be binding in its entirety and directly applicable in all Contracting Parties.

**Article 2(5) of Decision 2011/03/MC-EnC**

The Secretariat shall monitor and review the implementation of [this] Delegated Regulation and shall submit a progress report to the Permanent High Level Group by 1 October 2013.

---

3 The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.
ANNEX I

Definitions applicable for the purposes of annexes II to VII

For the purposes of Annexes II to VII, the following definitions shall apply:

(1) ‘Reversible air conditioner’ means an air conditioner capable of both cooling and heating;

(2) ‘Standard rating conditions’ means the combination of indoor \( T_{in} \) and outdoor temperatures \( T_j \) that describe the operating conditions while establishing the sound power level, rated capacity, rated air flow rate, rated energy efficiency ratio \( \text{EER}_{\text{rated}} \) and/or rated coefficient of performance \( \text{COP}_{\text{rated}} \), as set out in Annex VII, table 2;

(3) ‘Indoor temperature’ \( T_{in} \) means the dry bulb indoor air temperature [°C] (with the relative humidity indicated by the corresponding wet bulb temperature);

(4) ‘Outdoor temperature’ \( T_j \) means the dry bulb outdoor air temperature [°C] (with the relative humidity indicated by the corresponding wet bulb temperature);

(5) ‘Rated energy efficiency ratio’ \( \text{EER}_{\text{rated}} \) means the declared capacity for cooling [kW] divided by the rated power input for cooling [kW] of a unit when providing cooling at standard rating conditions;

(6) ‘Rated coefficient of performance’ \( \text{COP}_{\text{rated}} \) means the declared capacity for heating [kW] divided by the rated power input for heating [kW] of a unit when providing heating at standard rating conditions;

(7) ‘Global warming potential’ \( \text{GWP} \) means the measure of how much 1 kg of the refrigerant applied in the vapour compression cycle is estimated to contribute to global warming, expressed in kg CO\(_2\) equivalents over a 100 year time horizon;

GWP values considered will be those set out in Annex I of Regulation (EC) No 842/2006 of the European Parliament and of the Council;

for fluorinated refrigerants, the GWP values shall be those published in the Third Assessment Report (TAR), adopted by the Intergovernmental Panel on Climate Change\(^4\) (2001 IPCC GWP values for a 100 year period);

for non-fluorinated gases, the GWP values are those published in the first IPCC assessment\(^5\) over a 100 year period;

total GWP values for mixtures of refrigerants shall be based on the formula stated in Annex I of the Regulation (EC) No 842/2006;

for refrigerants not included in the above references, the IPCC UNEP 2010 report on Refrigeration, Air Conditioning and Heat Pumps, dated February 2011, or newer, shall be used as a reference;

(8) ‘Off mode’ is a condition in which the air conditioner or comfort fan is connected to the mains power source and is not providing any function. As off mode also are considered conditions providing only an indication of off mode condition, as well as conditions providing only functionalities intended to ensure electromagnetic compatibility pursuant to Directive 2004/108/EC of the European Parliament and of the Council;

(9) ‘Standby mode’ means a condition where the equipment is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only the following

functions, which may persist for an indefinite time: reactivation function, or reactivation function and only
an indication of enabled reactivation function, and/or information or status display;

(10) ‘Reactivation function’ means a function facilitating the activation of other modes, including active
mode, by remote switch including remote control, internal sensor, timer to a condition providing additional
functions, including the main function;

(11) ‘Information or status display’ is a continuous function providing information or indicating the status
of the equipment on a display, including clocks;

(12) ‘Sound power level’ means the A-weighted sound power level [dB(A)] indoors and/or outdoors mea-
sured at standard rating conditions for cooling (or heating, if the product has no cooling function);

(13) ‘Reference design conditions’ means the combination of requirements for the reference design tem-
perature, the maximum bivalent temperature and the maximum operation limit temperature, as set out
in Annex VII, Table 3;

(14) ‘Reference design temperature’ means the outdoor temperature [°C] for either cooling (Tdesignc) or
heating (Tdesignh) as described in Annex VII, Table 3, at which the part load ratio shall be equal to 1, and
which varies according the designated cooling or heating season;

(15) ‘Part load ratio’ (pl(Tj)) means the outdoor temperature minus 16°C, divided by the reference design
temperature minus 16°C, for either cooling or heating;

(16) ‘Season’ means one of the four sets of operating conditions (available for four seasons: one cooling
season, three heating seasons: average / colder / warmer) describing per bin the combination of outdoor
temperatures and the number of hours these temperatures occur per season for which the unit is declared
fit for purpose;

(17) ‘Bin’ (with index ‘j’) means a combination of an outdoor temperature (Tj) and bin hours (hj), as set
out in Annex VII, Table 1;

(18) ‘Bin hours’ means the hours per season (hj) the outdoor temperature occurs for each bin, as set out
in Annex VII, Table 1;

(19) ‘Seasonal energy efficiency ratio’ (SEER) is the overall energy efficiency ratio of the unit, representative
for the whole cooling season, calculated as the reference annual cooling demand divided by the annual
electricity consumption for cooling;

(20) ‘Reference annual cooling demand’ (QC) means the reference cooling demand [kWh/a] to be used as
basis for calculation of SEER and calculated as the product of the design load for cooling (Pdesignc) and
the equivalent active mode hours for cooling (HCE);

(21) ‘Equivalent active mode hours for cooling’ (HCE) means the assumed annual number of hours [h/a]
the unit must provide the design load for cooling (Pdesignc) in order to satisfy the reference annual cooling
demand, as set out in Annex VII, Table 4;

(22) ‘Annual electricity consumption for cooling’ (QCE) means the electricity consumption [kWh/a] required
to meet the reference annual cooling demand and is calculated as the reference annual cooling demand
divided by the active mode seasonal energy efficiency ratio (SEERon), and the electricity consumption of the
unit for thermostat off-, standby-, off- and crankcase heater-mode during the cooling season;

(23) ‘Active seasonal mode energy efficiency ratio’ (SEERon) means the average energy efficiency ratio of the
unit in active mode for the cooling function, constructed from part load and bin-specific energy efficiency
ratio’s ($EER_{bin}(T_j)$) and weighted by the bin hours the bin condition occurs;

(24) ‘Part load’ means the cooling load ($Pc(T_j)$) or the heating load ($Ph(T_j)$) [kW] at a specific outdoor temperature $T_j$, calculated as the design load multiplied by the part load ratio;

(25) ‘Bin-specific energy efficiency ratio’ ($EER_{bin}(T_j)$) means the energy efficiency ratio specific for every bin $j$ with outdoor temperature $T_j$ in a season, derived from the part load, declared capacity and declared energy efficiency ratio ($EER_d(T_j)$) for specified bins ($j$) and calculated for other bins through inter/extrapolation, when necessary corrected by the degradation coefficient;

(26) ‘Seasonal coefficient of performance’ ($SCOP$) is the overall coefficient of performance of the unit, representative for the whole designated heating season (the value of SCOP pertains to a designated heating season), calculated as the reference annual heating demand divided by the annual electricity consumption for heating;

(27) ‘Reference annual heating demand’ ($Q_{H}$) means the reference heating demand [kWh/a], pertaining to a designated heating season, to be used as basis for calculation of SCOP and calculated as the product of the design load for heating ($P_{designh}$) and the seasonal equivalent active mode hours for heating ($H_{H_{el}}$);

(28) ‘Equivalent active mode hours for heating’ ($H_{H_{el}}$) means the assumed annual number of hours [h/a] the unit must provide the design load for heating ($P_{designh}$) in order to satisfy the reference annual heating demand, as set out in Annex VII, Table 4;

(29) ‘Annual electricity consumption for heating’ ($Q_{HE}$) means the electricity consumption [kWh/a] required to meet the indicated reference annual heating demand and which pertains to a designated heating season; and is calculated as the reference annual heating demand divided by the active mode seasonal coefficient of performance ($SCOP_{on}$), and the electricity consumption of the unit for thermostat off-, standby-, off- and crankcase heater-mode during the heating season;

(30) ‘Active mode seasonal coefficient of performance’ ($SCOP_{on}$) means the average coefficient of performance of the unit in active mode for the designated heating season, constructed from the part load, electric back up heating capacity (where required) and bin-specific coefficients of performance ($COP_{bin}(T_j)$) and weighted by the bin hours the bin condition occurs;

(31) ‘Electric back-up heater capacity’ ($elbu(T_j)$) is the heating capacity [kW] of a real or assumed electric back-up heater with $COP$ of 1 that supplements the declared capacity for heating ($P_{dh}(T_j)$) in order to meet the part load for heating ($Ph(T_j)$) if $P_{dh}(T_j)$ is less than $Ph(T_j)$, for the outdoor temperature ($T_j$);

(32) ‘Bin-specific coefficient of performance’ ($COP_{bin}(T_j)$) means the coefficient of performance specific for every bin $j$ with outdoor temperature $T_j$ in a season, derived from the part load, declared capacity and declared coefficient of performance ($COP_d(T_j)$) for specified bins ($j$) and calculated for other bins through inter/extrapolation, when necessary corrected by the degradation coefficient;

(33) ‘Declared capacity’ [kW] is the capacity of the vapour compression cycle of the unit for cooling ($P_{dc}(T_j)$) or heating ($P_{dh}(T_j)$), pertaining to an outdoor temperature $T_j$ and indoor temperature ($T_{in}$), as declared by the manufacturer;

(34) ‘Function’ means the indication of whether the unit is capable of indoor air cooling, indoor air heating or both;

(35) ‘Design load’ means the declared cooling load ($P_{designc}$) and/or declared heating load ($P_{designh}$) [kW] at the reference design temperature, whereby

(a) for cooling mode, $P_{designc}$ is equal to the declared capacity for cooling at $T_j = T_{designc}$;
(b) for heating mode, $P_{\text{designh}}$ is equal to the part load at $T_j$ equal to $T_{\text{designh}}$;

(36) ‘Declared energy efficiency ratio’ ($EER_d(T_j)$) means the energy efficiency ratio at a limited number of specified bins ($j$) with outdoor temperature ($T_j$), as declared by the manufacturer;

(37) ‘Declared coefficient of performance’ ($COP_d(T_j)$) means the coefficient of performance at a limited number of specified bins ($j$) with outdoor temperature ($T_j$), as declared by the manufacturer;

(38) ‘Bivalent temperature’ ($T_{\text{biv}}$) means the outdoor temperature ($T_j$) [°C] declared by the manufacturer for heating at which the declared capacity equals the part load and below which the declared capacity must be supplemented with electric back up heater capacity in order to meet the part load for heating;

(39) ‘Operation limit temperature’ ($T_{\text{ol}}$) means the outdoor temperature [°C] declared by the manufacturer for heating, below which air conditioner will not be able to deliver any heating capacity. Below this temperature, the declared capacity is equal to zero;

(40) ‘Active mode’ means the mode corresponding to the hours with a cooling or heating load of the building and whereby the cooling or heating function of the unit is activated. This condition may involve on/off-cycling of the unit in order to reach or maintain a required indoor air temperature;

(41) ‘Thermostat-off mode’ means a mode corresponding to the hours with no cooling or heating load whereby the cooling or heating function of the unit is switched on but the unit is not operational as there is no cooling or heating load. This condition is therefore related to outdoor temperatures and not to indoor loads. Cycling on/off in active mode is not considered as thermostat off;

(42) ‘Crankcase heater operation mode’ means a condition where the unit has activated a heating device to avoid the refrigerant migrating to the compressor in order to limit the refrigerant concentration in oil at compressor start;

(43) ‘Thermostat-off mode operating hours’ ($HTO$) means the annual number of hours [h/a] the unit is considered to be in thermostat-off mode, the value of which depends on the designated season and function;

(44) ‘Standby mode operating hours’ ($HSB$) means the annual number of hours [h/a] the unit is considered to be in standby mode, the value of which depends on the designated season and function;

(45) ‘Off-mode hours’ ($HOFF$) means the annual number of hours [h/a] the unit is considered to be in off-mode, the value of which depends on the designated season and function;

(46) ‘Crankcase heater mode operating hours’ ($HCK$) means the annual number of hours [h/a] the unit is considered to be in crankcase heater operation mode, the value of which depends on the designated season and function;

(47) ‘Electricity consumption of single and double ducts’ ($Q_{SD}$ respectively $Q_{DD}$) means the electricity consumption of single or double duct air conditioners for the cooling and/or heating mode (whichever applies) [single duct in kWh/h, double duct in kWh/a];

(48) ‘Capacity ratio’ means the ratio of the total declared cooling or heating capacity of all operating indoor units to the declared cooling or heating capacity of the outdoor unit at standard rating conditions.
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 626/2011

ANNEX II

Energy efficiency classes

1. The energy efficiency of air conditioners shall be determined on the basis of measurements and calculations set out Annex VII.

Both the SEER and SCOP shall take into account the reference design conditions and the operational hours per relevant mode of operation, and the SCOP shall relate to the heating season ‘average’, as laid down in Annex VII. The rated energy efficiency ratio \( (EER_{\text{rated}}) \) and the rated coefficient of performance \( (COP_{\text{rated}}) \) shall relate to standard rating conditions, as laid down in Annex VII.

ANNEX III

The label

1. LABEL OF AIR CONDITIONERS, EXCEPT SINGLE DUCT AND DOUBLE DUCT AIR CONDITIONERS
1.1. Reversible air conditioners classified in energy efficiency classes A to G
(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. text ‘SEER’ and ‘SCOP’ for cooling and heating, with a blue fan and air wave indication for SEER and red fan and air wave indication for SCOP;
IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency must be indicated for cooling and heating. For heating, energy efficiency for Average heating season is mandatory. Indication of efficiency for Warmer and Colder seasons is optional;
V. for cooling mode: design load in kW, rounded up to one decimal;
VI. for heating mode: design load in kW, for up to 3 heating seasons rounded up to one decimal.
Values for heating seasons for which the design load is not provided shall be indicated as ‘X’;
VII. for cooling mode: seasonal energy efficiency ratio (SEER value), rounded up to one decimal;
VIII. for heating mode: seasonal coefficient of performance (SCOP value), for up to 3 heating seasons rounded up to one decimal. Values for heating seasons for which SCOP is not provided shall be indicated as ‘X’;
IX. annual energy consumption in kWh per year, for cooling and heating, rounded up to the nearest integer.
Values for climate profiles for which annual energy consumption is not provided shall be indicated as ‘X’;
X. sound power levels for indoor and outdoor units expressed in dB(A) re1 pW, rounded to the nearest integer;
XI European map with a display of three indicative heating seasons and corresponding colour squares. All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 1.5. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU eco-label may be added.
1.2. Reversible air conditioners classified in energy efficiency classes A+ to F

(a) The information listed in point 1.1 shall be included in the label.
(b) The design aspects of the label shall be in accordance with point 1.5.
1.3. Reversible air conditioners classified in energy efficiency classes A++ to E

(a) The information listed in point 1.1 shall be included in the label.

(b) The design aspects of the label shall be in accordance with point 1.5.
1.4. Reversible air conditioners classified in energy efficiency classes A+++ to D

(a) The information listed in point 1.1 shall be included in the label.
(b) The design aspects of the label shall be in accordance with point 1.5.
1.5. Label design
Whereby:

(i) The label shall be at least 120 mm wide and 210 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70- X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. EU label border: stroke 5 pt – colour: cyan 100% – round corners: 3.5 mm.
2. EU logo: Colours: X-80-00-00 and 00-00-X-00.
3. Energy label:
   - Colour: X-00-00-00.
   - Pictogram as depicted: EU logo + energy label: width: 102 mm, height: 20 mm.
4. Sub-logos border: 1 pt – colour: cyan 100% – length: 103,6 mm.
5. SEER and SCOP indication:
   - Border: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
   - Text: Calibri regular 10 pt, capitals, 100% black.
6. A-G scale:
   - Arrow: height: 7 mm, gap: 1 mm – colours:
     - Highest class: X-00-X-00
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.
   - Text: Calibri bold 16 pt, capitals, white.
7. Energy efficiency class(es):
   - Arrow: width: 11 mm, height: 10 mm, 100% black;
   - Text: Calibri bold 18 pt, capitals, white.
8. Energy
   - Text: Calibri regular 9 pt, capitals, 100% black.
9. Rated capacity for cooling and heating in kW:
   - Text ‘kW’: Calibri regular 10 pt, 100% black.
   - Value ‘XY,Z’: Calibri bold 11 pt, 100% black.
10. SCOP and SEER values, rounded up to one decimal:
    - Text ‘SEER’/’SCOP’: Calibri regular 10 pt, capitals, 100% black.
– **Value ‘X,Y’**: Calibri bold 11 pt, 100% black.

11 **Annual energy consumption in kWh/annum:**
– **Text ‘kWh/annum’**: Calibri regular 10 pt, 100 % black.
– **Value ‘XY’**: Calibri bold 11 pt, 100 % black.

12 **Noise emissions:**
– **Border**: 2 pt – colour: cyan 100 % – round corners: 3,5 mm.
– **Value**: Calibri bold 15 pt, 100 % black; Calibri regular 12 pt, 100 % black.

13 **European map and colour squares:**
– **Colours**:
  - Orange: 00-46-46-00.
  - Green: 59-00-47-00.
  - Blue: 54-08-00-00.

14 **Supplier’s name or trademark.**

15 **Supplier’s model identifier:**
The suppliers’ name or trade mark and model identifier should fit in a space of 102 × 13 mm.

16 **Reference period**: Text: Calibri bold 10 pt.
2. LABEL OF AIR CONDITIONERS, EXCEPT SINGLE DUCT AND DOUBLE DUCT AIR CONDITIONERS

2.1. Cooling-only air conditioners classified in energy efficiency classes A to G
(a) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier;

III. text ‘SEER’, with a blue fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. design load for cooling in kW, rounded up to one decimal;

VI. seasonal energy efficiency ratio (SEER value), rounded up to one decimal;

VII. annual energy consumption in kWh per year, rounded up to the nearest integer;

VIII. sound power levels for indoor and outdoor units expressed in dB(A) re1 pW, rounded to the nearest integer.

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 2.5. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.
2.2. Cooling-only air conditioners classified in energy efficiency classes A+ to F

(a) The information listed in point 2.1 shall be included in the label.

(b) The design aspects of the label shall be in accordance with point 2.5.
2.3. Cooling-only air conditioners classified in energy efficiency classes A++ to E

(a) The information listed in point 2.1 shall be included in the label.
(b) The design aspects of the label shall be in accordance with point 2.5.
2.4. Cooling-only air conditioners classified in energy efficiency classes A+++ to D

(a) The information listed in point 2.1 shall be included in the label.

(b) The design aspects of the label shall be in accordance with point 2.5.
2.5. Label design
Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70- X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border**: stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.
2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label**:
   - **Colour**: X-00-00-00.
   - **Pictogram** as depicted: EU logo + energy label: width: 93 mm, height: 18 mm.
4. **Sub-logos border**: 1 pt – colour: cyan 100% – length: 93,7 mm.
5. **SEER indication**:
   - **Text**: Calibri regular 10 pt, capitals, 100% black.
6. **A-G scale**:
   - **Arrow**: height: 7 mm, gap: 1,3 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.
   - **Text**: Calibri bold 18 pt, capitals, white.
7. **Energy efficiency class**:
   - **Arrow**: Width: 23 mm, height: 15 mm, 100% black;
   - **Text**: Calibri bold 29 pt, capitals, white.
8. **Energy**:
   - **Text**: Calibri regular 8 pt, capitals, 100% black.
9. **Rated capacity in kW**:
   - **Text ‘kW’**: Calibri regular 14 pt, 100% black.
   - **Value ‘XY,Z’**: Calibri bold 22 pt, 100% black.
10. **SEER value rounded up to one decimal**:
   - **Border**: 3 pt – colour: cyan 100% – round corners: 3,5 mm.
   - **Text ‘SEER’**: Calibri regular 14 pt, capitals, 100% black.
– Value ‘X,Y’: Calibri bold 22 pt, 100% black.

11 Annual energy consumption in kWh/annum:
– Text ‘kWh/annum’: Calibri regular 14 pt, 100% black.
– Value ‘XY’: Calibri bold 22 pt, 100% black.

12 Noise emissions:
– Border: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
– Value: Calibri bold 22 pt, 100% black.
– Text: Calibri regular 14 pt, 100% black.

13 Supplier’s name or trademark.

14 Supplier’s model identifier:
The suppliers’ name or trade mark and model identifier should fit in a space of 90 × 15 mm.

3. LABEL OF AIR CONDITIONERS, EXCEPT SINGLE DUCT AND DOUBLE DUCT AIR CONDITIONERS
3.1. Heating-only air conditioners classified in energy efficiency classes A to G
(a) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier;

III. text ‘SCOP’, with red fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency for Average heating season is mandatory. Indication of efficiency for Warmer and Colder climates is optional;

V. design load for heating in kW, for up to 3 heating seasons rounded up to one decimal. Values for heating seasons for which design load is not provided shall be indicated as ‘X’;

VI. seasonal coefficient of performance (SCOP) for up to 3 heating seasons rounded up to one decimal. Values for heating seasons for which SCOP is not provided shall be indicated as ‘X’;

VII. annual energy consumption in kWh per year, rounded up to the nearest integer. Values for heating seasons for which annual energy consumption is not provided shall be indicated as ‘X’;

VIII. sound power levels for indoor and outdoor units expressed in dB(A) re1 pW, rounded to the nearest integer;

IX. European map with a display of three indicative heating seasons and corresponding colour squares. All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 3.5. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.
3.2. Heating-only air conditioners classified in energy efficiency classes A⁺ to F

(a) The information listed in point 3.1 shall be included in the label.
(b) The design aspects of the label shall be in accordance with point 3.5.
3.3. Heating-only air conditioners classified in energy efficiency classes A** to E

(a) The information listed in point 3.1 shall be included in the label.
(b) The design aspects of the label shall be in accordance with point 3.5.
3.4. Heating-only air conditioners classified in energy efficiency classes A+++ to D

(a) The information listed in point 3.1 shall be included in the label.
(b) The design aspects of the label shall be in accordance with point 3.5.
3.5. Label design
Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3.5 mm.
2. **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label:**
   - Colour: X-00-00-00.
   - Pictogram as depicted: EU logo + energy label: width: 93 mm, height: 18 mm.
4. **Sub-logos border:** 1 pt – colour: cyan 100% – length: 93.7 mm.
5. **SCOP indication:**
   - Text: Calibri regular 10 pt, capitals, 100% black.
6. **A-G scale:**
   - Arrow: height: 7 mm, gap: 1.3 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00, Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00, Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.
   - Text: Calibri bold 18 pt, capitals, white.
7. **Energy efficiency class(es):**
   - Arrow: width: 11 mm, height: 10 mm, 100% black;
   - Text: Calibri bold 18 pt, capitals, white.
8. **Rated capacity in kW:**
   - Text ‘kW’: Calibri regular 10 pt, 100% black.
   - Value ‘XY,Z’: Calibri bold 11 pt, 100% black.
9. **SCOP values, rounded up to one decimal:**
   - Text ‘SCOP’: Calibri regular 10 pt, capitals, 100% black.
   - Value ‘X,Y’: Calibri bold 11 pt, 100% black.
10. **Annual energy consumption in kWh/annum:**
    - Text ‘kWh/annum’: Calibri regular 10 pt, 100% black.
    - Value ‘XY’: Calibri bold 11 pt, 100% black.
11 Noise emissions:
   - **Border**: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
   - **Value**: Calibri bold 15 pt, 100% black.
   - **Text**: Calibri regular 12 pt, 100% black.

12 European map and colour squares:
   - **Colours**:
     - Orange: 00-46-46-00.
     - Green: 59-00-47-00.
     - Blue: 54-08-00-00.

13 **Supplier’s name or trademark.**

14 **Supplier’s model identifier:**
   The suppliers’ name or trade mark and model identifier should fit in a space of 90 × 15 mm.

15 **Energy**: Text: Calibri regular 8 pt, capitals, 100% black.

16 **Reference period**: Text: Calibri bold 10, pt.
4. LABEL OF DOUBLE DUCT AIR CONDITIONERS

4.1. Reversible double duct air conditioners classified in energy efficiency classes A*** to D
(a) The following information shall be included in the label:

I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. text ‘EER’ and ‘COP’ for cooling and heating, with a blue fan and air wave indication for EER and red fan and air wave indication for COP;
IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency must be indicated for cooling and heating;
V. Rated capacity for cooling and heating mode in kW, rounded up to one decimal;
VI. EER rated and COP rated, rounded up to one decimal;
VII. hourly energy consumption in kWh per 60 minutes, for cooling and heating mode, rounded up to the nearest integer;
VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer. All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 4.2. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.
4.2. Label Design
Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.

2. **EU logo:** **Colours:** X-80-00-00 and 00-00-X-00.

3. **Energy label:**
   - **Colour:** X-00-00-00.
   - **Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

4. **Sub-logos border:** 1 pt – colour: cyan 100% – length: 92,5 mm.

5. **EER and COP indication:**
   - **Text:** Calibri regular 10 pt, 100% black

6. **A-G scale:**
   - **Arrow:** height: 7 mm, gap: 1,3 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.
   - **Text:** Calibri bold 18 pt, capitals, white; Calibri bold 7 pt, white.

7. **Energy efficiency classes:**
   - **Arrow:** width: 11 mm, height: 10 mm, 100% black;
   - **Text:** Calibri bold 18 pt, capitals, white.

8. **Energy:**
   - **Text:** Calibri regular 8 pt, capitals, 100% black.

9. **Minutes’-translation:**
   - **Text:** Calibri regular 7 pt, 100% black.

10. **Rated capacity for cooling and heating mode in kW:**
    - **Text ‘kW’:** Calibri regular 14 pt, 100% black.
    - **Value ‘XY,Z’:** Calibri bold 22 pt, 100% black.
COP and EER values, rounded up to one decimal:
- **Text** ‘EER’/’COP’: Calibri regular 14 pt, capitals, 100% black.
- **Value** ‘X,Y’: Calibri bold 22 pt, 100% black.

Hourly energy consumption in kWh/60min:
- **Text** ‘kWh/60min*’: Calibri regular 14 pt, 100% black.
- **Value** ‘XY’: Calibri bold 22 pt, 100% black.

Noise emissions:
- **Border**: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
- **Value**: Calibri bold 22 pt, 100% black.
- **Text**: Calibri regular 14 pt, 100% black.

Supplier’s name or trademark.

Supplier’s model identifier:
The suppliers’ name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

**Reference period**: Text: Calibri bold 10 pt.
4.3. Cooling-only double duct air conditioners classified in energy efficiency classes A+++ to D
(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. text ‘EER’, with a blue fan and air wave indication;
IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
V. Rated capacity for cooling in kW, rounded up to one decimal;
VI. EER rated , rounded up to one decimal;
VII. hourly energy consumption in kWh per 60 minutes, rounded up to the nearest integer;
VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer; All the requested values shall be determined in accordance with Annex VII.
(b) The design of the label shall be in accordance with point 4.4. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.
4.4. Label Design
Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70- X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border**: stroke: 5 pt – colour: Cyan 100% – round corners: 3,5 mm.

2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.

3. **Energy label**:
   - **Colour**: X-00-00-00.
   - **Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

4. **Sub-logos border**: 1 pt – colour: cyan 100% – length: 92,5 mm.

5. **EER indication**:
   - **Text**: Calibri regular 10 pt, capitals, 100% black

6. **A-G scale**:
   - **Arrow**: height: 7 mm, gap: 1,3 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.
   - **Text**: Calibri bold 18 pt, capitals, white; Calibri bold 7 pt, white.

7. **Energy efficiency class**:
   - **Arrow**: width: 20 mm, height: 15 mm, 100% black;
   - **Text**: Calibri bold 30 pt, capitals, white; Calibri bold 14 pt, white.

8. **Energy**
   - **Text**: Calibri regular 8 pt, capitals, 100% black.

9. **‘Minutes’-translation**:
   - **Text**: Calibri regular 7 pt, 100% black.

10. **Rated capacity in kW**:
    - **Text ‘kW’**: Calibri regular 14 pt, 100% black.
– Value ‘XY,Z’: Calibri bold 22 pt, 100% black.

11 EER value, rounded up to one decimal:
   – Text ‘EER’: Calibri regular 14 pt, capitals, 100% black.
   – Value ‘X,Y’: Calibri bold 22 pt, 100% black.

12 Hourly energy consumption in kWh/60min:
   – Text ‘kWh/60min*’: Calibri regular 14 pt, 100% black.
   – Value ‘XY’: Calibri bold 22 pt, 100% black.

13 Noise emissions:
   – Border: 2 pt – colour: 100% cyan – round corners: 3,5 mm.
   – Value: Calibri bold 22 pt, 100% black.
   – Text: Calibri regular 14 pt, 100% black.

14 Supplier’s name or trademark.

15 Supplier’s model identifier:
   The suppliers’ name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

4.5. Heating-only double duct air conditioners classified in energy efficiency classes A+++ to D
(a) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier;

III. text ‘COP’ with red fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. rated capacity for heating in kW, rounded up to one decimal;

VI. COP rated , rounded up to one decimal;

VII. hourly energy consumption in kWh per 60 minutes, rounded up to the nearest integer;

VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer. All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 4.6. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.
4.6. Label Design
Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70- X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.
2. **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label:**
   - **Colour:** X-00-00-00.
   - **Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.
4. **Sub-logos border:** 1 pt – colour: 100% cyan – length: 92,5 mm.
5. **COP indication:**
   - **Text:** Calibri regular 10 pt, capitals, 100% black
6. **A-G scale:**
   - **Arrow:** height: 7 mm, gap: 1,3 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.
   - **Text:** Calibri bold 18 pt, capitals, white; Calibri bold 7 pt, white.
7. **Energy efficiency class:**
   - **Arrow:** width: 20 mm, height: 15 mm, 100% black;
   - **Text:** Calibri bold 30 pt, capitals, white; Calibri bold 14 pt, white.
8. **Energy:**
   - **Text:** Calibri regular 8 pt, capitals, 100% black.
9. **‘Minutes’-translation:**
   - **Text:** Calibri regular 7 pt, 100% black.
10. **Rated capacity in kW:**
    - **Text ‘kW’** Calibri regular 14 pt, 100% black.
    - **Value ‘XY,Z’**: Calibri bold 22 pt, 100% black.
12 Hourly energy consumption in kWh/60min:
   - Text ‘kWh/60min*’: Calibri regular 14 pt, 100% black.
   - Value ‘XY’: Calibri bold 22 pt, 100% black.

13 Noise emissions:
   - Border: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
   - Value: Calibri bold 22 pt, 100% black.
   - Text: Calibri regular 14 pt, 100% black.

14 Supplier’s name or trademark.

15 Supplier’s model identifier:
   The suppliers’ name or trade mark and model identifier should fit in a space of 82 x 10,5 mm.

5. LABEL OF SINGLE DUCT AIR CONDITIONERS

5.1. Reversible single duct air conditioners classified in energy efficiency classes A+++ to D
(a) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier;

III. text ‘EER’ and ‘COP’ for cooling and heating, with a blue fan and air wave indication for EER and red fan and air wave indication for COP;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency must be indicated for cooling and heating;

V. rated capacity for cooling and heating mode in kW, rounded up to one decimal;

VI. $\text{EER}_{\text{rated}}$ and $\text{COP}_{\text{rated}}$, rounded up to one decimal;

VII. hourly energy consumption in kWh per 60 minutes, for cooling and heating, rounded up to one decimal;

VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer. All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 5.2. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.
5.2. Label Design
Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK – cyan, magenta, yellow and black, following this example: 00-70- X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border**: stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.
2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label**:
   - **Colour**: X-00-00-00.
   - **Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.
4. **Sub-logos border**: 1 pt – colour: cyan 100% – length: 92,5 mm.
5. **EER and COP indication**:
   - **Border**: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
   - **Text**: Calibri regular 10 pt, capitals, 100% black.
6. **A-G scale**:
   - **Arrow**: height: 7 mm, gap: 1,3 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.
   - **Text**: Calibri bold 18 pt, capitals, white; Calibri bold 7 pt, white.
7. **Energy efficiency classes**:
   - **Arrow**: Width: 11 mm, height: 10 mm, 100% black;
   - **Text**: Calibri bold 18 pt, capitals, white.
8. **Energy**:
   - **Text**: Calibri regular 8 pt, capitals, 100% black.
9. **‘Minutes’-translation**:
   - **Text**: Calibri regular 7 pt, 100% black.
10. **Rated capacity for cooling and heating in kW**:
    - **Text**: ‘kW’: Calibri regular 14 pt, 100% black.
11 EER and COP values, rounded up to one decimal:
   - Text: Calibri regular 14 pt, capitals, 100% black.
   - Value ‘XY,Z’: Calibri bold 22 pt, 100% black.

12 Hourly energy consumption in kWh/60min:
   - Text ‘kWh/60min*’: Calibri regular 14 pt, 100% black.
   - Value ‘XY’: Calibri bold 22 pt, 100% black.

13 Noise emissions:
   - Border: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
   - Value: Calibri bold 22 pt, 100% black.
   - Text: Calibri regular 14 pt, 100% black.

14 Supplier’s name or trademark.

15 Supplier’s model identifier:
   The suppliers’ name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

5.3. Cooling-only single duct air conditioners classified in energy efficiency classes A+++ to D.
(a) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier;

III. text ‘EER’, with a blue fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. rated capacity for cooling in kW, rounded up to one decimal;

VI. EER rated , rounded up to one decimal;

VII. hourly energy consumption in kWh per 60 minutes, rounded up to one decimal;

VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer. All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 5.4. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.
5.4. Label Design
Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border**: stroke: 5 pt – colour: cyan 100% – round corners: 3.5 mm.

2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.

3. **Energy label**:
   - **Colour**: X-00-00-00.
   - **Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

4. **Sub-logos border**: 1 pt – colour: cyan 100% – length: 92.5 mm.

5. **EER indication**:
   - **Text**: Calibri regular 10 pt, capitals, 100% black.

6. **A-G scale**:
   - **Arrow**: height: 7 mm, gap: 1.3 mm – colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.
   - **Text**: Calibri bold 18 pt, capitals, white; Calibri bold 7 pt, white.

7. **Energy efficiency class**:
   - **Arrow**: Width: 20 mm, height: 15 mm, 100% black;
   - **Text**: Calibri bold 30 pt, capitals, white; Calibri bold 14 pt, capitals, white.

8. **Energy**:
   - **Text**: Calibri regular 8 pt, capitals, 100% black.

9. **’Minutes’-translation**:
   - **Text**: Calibri regular 7 pt, 100% black.

10. **Rated capacity in kW**:
    - **Text ‘kW’**: Calibri regular 14 pt, 100% black.
    - **Value ‘XY,Z’**: Calibri bold 22 pt, 100% black.

11. **EER value, rounded up to one decimal**:
12 Hourly energy consumption in kWh/60min:
- **Text ‘EER’**: Calibri regular 14 pt, capitals, 100% black.
- **Value ‘X,Y’**: Calibri bold 22 pt, 100% black.

13 Noise emissions:
- **Border**: 2 pt – colour: 100% cyan – round corners: 3,5 mm.
- **Value**: Calibri bold 22 pt, 100% black.
- **Text**: Calibri regular 14 pt, 100% black.

14 Supplier’s name or trademark.

15 Supplier’s model identifier:
The suppliers’ name or trade mark and model identifier should fit in a space of 82 x 10,5 mm.

16 Reference period:
- **Text**: Calibri bold 10 pt.
5.5. Heating-only single duct air conditioners classified in energy efficiency classes A+++ to D
(a) The following information shall be included in the label:
I. supplier’s name or trade mark;
II. supplier’s model identifier;
III. text ‘COP’ with red fan and air wave indication;
IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
V. rated capacity for heating in kW, rounded up to one decimal;
VI. \( \text{COP}_{\text{rated}} \), rounded up to one decimal;
VII. hourly energy consumption in kWh per 60 minutes, rounded to the nearest integer;
VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer. All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 5.6. By way of derogation, where a model has been granted an ‘EU eco-label’ under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.
5.6. Label Design
Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border**: stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.
2. **EU logo**: Colours: X-80-00-00 and 00-00-X-00.
3. **Energy label**:
   - **Colour**: X-00-00-00.
   - **Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.
4. **Sub-logos border**: 1 pt – colour: cyan 100% – length: 92,5 mm.
5. **COP indication**:
   - **Text**: Calibri regular 10 pt, capitals, 100% black
6. **A-G scale**:
   - **Arrow**: height: 7 mm, gap: 1,3 mm – colours:

   - **Arrow**: Width: 20 mm, height: 15 mm, 100% black;
   - **Text**: Calibri bold 30 pt, capitals, white;
     Calibri bold 14 pt, capitals, white.
8. **Energy**:
   - **Text**: Calibri regular 8 pt, capitals, 100% black.
9. **‘Minutes’-translation**:
   - **Text**: Calibri regular 7 pt, 100% black.
10. **Rated capacity in kW**:
    - **Text ‘kW’**: Calibri regular 14 pt, 100% black.
    - **Value ‘XY,Z’**: Calibri bold 22 pt, 100% black.
COP value, rounded up to one decimal:
  - Text ‘COP’: Calibri regular 14 pt, capitals, 100% black.
  - Value ‘X,Y’: Calibri bold 22 pt, 100% black.

Hourly energy consumption in kWh/60 minutes:
  - Text ‘kWh/60min*’: Calibri regular 14 pt, 100% black.
  - Value ‘XY’: Calibri bold 22 pt, 100% black.

Noise emissions:
  - Border: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
  - Value: Calibri bold 22 pt, 100% black.
  - Text: Calibri regular 14 pt, 100% black.

Supplier’s name or trademark.

Supplier’s model identifier:
  The suppliers’ name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

Reference period: Text: Calibri bold 10 pt.
ANNEX IV
Product fiche

1. The information in the product fiche shall be given in the order specified below:
   (a) supplier’s name or trade mark;
   (b) model identifier of the indoor air conditioner or of the indoor and outdoor elements of the air conditioner;
   (c) without prejudice to any requirements under the Union eco-label scheme, where a model has been granted a ‘European Union eco-label’ under Regulation (EC) No 66/2010, a copy of the eco-label may be added;
   (d) inside and outside sound power levels at standard rating conditions, on cooling and/or heating modes;
   (e) the name and GWP of the refrigerant used and a standard text as follows:
   ‘Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to [xxx]. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be [xxx] times higher than 1 kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.’

2. Additionally, the following information shall be included in the product fiche on air conditioners on the cooling mode, when efficiency is declared on the basis of the seasonal energy efficiency ratio (SEER):
   (a) the SEER and the energy efficiency class of the model (model of a unit or of a combination of units) determined in accordance with definitions and test procedures in Annex I and VII for the cooling mode as well as with the class limits defined in Annex II;
   (b) the indicative annual electricity consumption Q CE in kWh/a during the cooling season, determined in accordance with definitions and test procedures in Annex I and VII, respectively. It shall be described as: ‘Energy consumption “XYZ” kWh per year, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.’;
   (c) the design load Pdesignc in kW of the appliance in cooling mode determined in accordance with definitions and test procedures in Annex I and VII, respectively;

3. Additionally, the following notes define the information to be included in the fiche on the heating mode, when efficiency is declared on the basis of seasonal coefficient of performance (SCOP):
   (a) the SCOP and the energy efficiency class of the model, or combination, in heating mode determined in accordance with definitions and test procedures in Annex I and VII, respectively, as well as with the class limits defined in Annex II;
   (b) the indicative annual electricity consumption for an average heating season Q HE in kWh/a, determined in accordance with definitions and test procedures in Annex I and VII, respectively. It shall be described as: ‘Energy consumption “XYZ” kWh per year, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.’;
   (c) other designated heating seasons for which the unit is declared fit for purpose, with options of warmer (optional) or colder (optional) seasons, as defined in Annex I;
(d) the design load $P_{\text{designh}}$ in kW of the appliance in heating mode determined in accordance with definitions and test procedures in Annex I and VII;

(e) the declared capacity and an indication of the back up heating capacity assumed for the calculation of SCOP at reference design conditions.

4. Additionally, the following notes define the information to be included in the fiche of air conditioners, when efficiency is declared on the basis of energy efficiency ratio (EER$^{\text{rated}}$) or coefficient of performance (COP$^{\text{rated}}$):

(a) the energy efficiency class of the model, determined in accordance with definitions and test procedures in Annex I and VII, as well as the class limits defined in Annex II;

(b) for double ducts, the indicative hourly electricity consumption $Q_{\text{DD}}$ in kWh/60 minutes determined in accordance with definitions and test procedures in Annex I and VII. It shall be described as: “Energy consumption “X,Y” kWh per 60 minutes, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.”;

(c) for single ducts, the indicative hourly electricity consumption $Q_{\text{SD}}$ in kWh/60 minutes determined in accordance with definitions and test procedures in Annex I and VII. It shall be described as: “Energy consumption “X,Y” kWh per 60 minutes, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.”;

(d) the cooling capacity $P^{\text{rated}}$ in kW of the appliance determined in accordance with definitions and test procedures in Annex I and VII;

(e) the heating capacity $P^{\text{rated}}$ in kW of the appliance determined in accordance with definitions and test procedures in Annex I and VII.

5. One fiche may cover a number of appliance models supplied by the same supplier.

6. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in points 1-4 not already displayed on the label shall also be provided.
ANNEX V

Technical documentation

The technical documentation referred to in Article 3 (1)(c) shall include at least the following items:

(a) the name and address of the supplier;

(b) a general description of the appliance model, sufficient for it to be unequivocally and easily identified. Single ducts shall be referred to as ‘local air conditioners’;

(c) where appropriate, the references for the harmonised standards applied;

(d) where appropriate, the other calculation methods, measurement standards and specifications used;

(e) identification and signature of the person empowered to bind the supplier;

(f) where appropriate the technical parameters for measurements, established in accordance with Annex VII:
   (i) overall dimensions;
   (ii) specification of the type of the air conditioner;
   (iii) specification whether the appliance is designed for cooling or heating only or for both;
   (iv) the energy efficiency class of the model as defined in Annex II;
   (v) The energy efficiency ratio \( \text{EER}_{\text{rated}} \) and coefficient of performance \( \text{COP}_{\text{rated}} \) for single and double duct air conditioners or seasonal energy efficiency ratio \( \text{SEER} \) and seasonal coefficient of performance \( \text{SCOP} \) for other air conditioners;
      (vi) The heating season for which the appliance is declared fit for purpose;
      (vii) Sound power levels expressed in dB(A) re1 pW, rounded to the nearest integer;
      (viii) the name and GWP of refrigerant used.

(g) the results of calculations performed in accordance with Annex VII.

Suppliers may include additional information at the end of the above list.

Where the information included in the technical documentation file for a particular air conditioner model has been obtained by calculation on the basis of design, or extrapolation from other equivalent appliances, or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent appliance models where the information was obtained on the same basis.
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 626/2011

ANNEX VI

Information to be provided in the cases where end-users
Cannot be expected to see the product displayed

1. The information referred to in Article 4(b) shall be provided in the following order:
   (a) The energy efficiency class of the model as defined in Annex II;
   (b) for air conditioners other than single ducts and double ducts:
       (i) the seasonal energy efficiency ratio (SEER) and/or seasonal coefficient of performance (SCOP);
       (ii) the design load (in kW);
       (iii) the annual electricity consumption;
       (iv) the cooling and/or each heating (‘Average, Colder, Warmer’) season the appliance is declared fit
           for purpose;
   (c) for single duct and double duct air conditioners:
       (i) the energy efficiency ratio (EER) and/or coefficient of performance (COP);
       (ii) the rated capacity (kW);
       (iii) for double ducts, the hourly electricity consumption for cooling and/or heating;
       (iv) for single ducts, the hourly electricity consumption for cooling and/or heating;
   (d) Sound power levels expressed in dB(A) re1 pW, rounded to the nearest integer;
   (e) Name and GWP of refrigerant used.

2. Where other information contained in the product information fiche is also provided, it shall be in the
   form and order specified in Annex IV.

3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.
ANNEX VII

Measurements and calculations

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published in the Official Journal of European Union, or other reliable, accurate and reproducible method, which takes into account the generally recognised state of the art methods, and whose results are deemed to be of low uncertainty.

2. The determination of the seasonal energy consumption and seasonal energy efficiency ratio (SEER) and seasonal coefficient of performance (SCOP) shall take into account:

(a) European seasonal conditions, as defined in Table 1 of this Annex;
(b) Reference design conditions, as defined in Table 3 of this Annex;
(c) Electric energy consumption for all relevant modes of operation, using time periods as defined in Table 4 of this Annex;
(d) Effects of the degradation of the energy efficiency caused by on/off cycling (if applicable) depending on the type of control of the cooling and/or heating capacity;
(e) Corrections on the seasonal coefficients of performance in conditions where the heating load can not be met by the heating capacity;
(f) The contribution of a back-up heater (if applicable) in the calculation of the seasonal efficiency of a unit in heating mode.

3. Where the information relating to a specific model, being a combination of indoor and outdoor unit(s), has been obtained by calculation on the basis of design, and/or extrapolation from other combinations, the documentation should include details of such calculations and/or extrapolations, and of tests undertaken to verify the accuracy of the calculations undertaken (including details of the mathematical model for calculating performance of such combinations, and of measurements taken to verify this model).

4. The energy efficiency ratio \( \text{EER}_{\text{rated}} \) and, when applicable, coefficient of performance \( \text{COP}_{\text{rated}} \) for double ducts and single ducts shall be established at the standard rating conditions as defined in Table 2 of this Annex.

5. The calculation of electricity consumption for cooling and/or heating shall take into account electric energy consumption of all relevant modes of operation, when appropriate, using time periods as defined in Table 4 of this Annex.

ANNEX VIII

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

---

6 Annex VIII is replaced in accordance with Article 5 and Annex V of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX IX

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(h) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(4) to 3(6). The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:
(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:
(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

7 Annex IX is added in accordance with Article 5(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(1) (i) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
DELEGATED REGULATION (EU) 1062/2010 of 28 September 2010 supplementing Directive 2010/30/EU with regard to energy labelling of televisions

Article 1
Subject matter

This Regulation establishes requirements for the labelling and the provision of supplementary product information for televisions.

Article 2
Definitions

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply:

1. “television” means a television set or a television monitor;
2. “television set” means a product designed primarily for the display and reception of audiovisual signals which is placed on the market under one model or system designation, and which consists of:
   a. a display;
   b. one or more tuner(s)/receiver(s) and optional additional functions for data storage and/or display such as digital versatile disc (DVD), hard disk drive (HDD) or videocassette recorder (VCR), either in a single unit combined with the display, or in one or more separate units;
3. “television monitor” means a product designed to display on an integrated screen a video signal from a variety of sources, including television broadcast signals, which optionally controls and reproduces audio signals from an external source device, which is linked through standardised video signal paths including cinch (component, composite), SCART, HDMI, and future wireless standards (but excluding non-standardised video signal paths like DVI and SDI), but cannot receive and process broadcast signals;
4. “on-mode” means the condition where the television is connected to the mains power source and produces sound and picture;
5. “home-mode” means the television setting which is recommended by the manufacturer for normal home use;
6. “standby-mode(s)” means a condition where the equipment is connected to the mains power source,
depends on energy input from the mains power source to function properly and offers the following functions only, which may persist for an indefinite time:

(a) reactivation function, or reactivation function and only an indication of enabled reactivation function; and/or
(b) information or status display;

(7) “off-mode” means a condition in which the equipment is connected to the mains power source and is not providing any function; the following shall also be considered as off-mode:

(a) conditions providing only an indication of off-mode condition;
(b) conditions providing only functionalities intended to ensure electromagnetic compatibility pursuant to Directive 2004/108/EC of the European Parliament and of the Council;

(8) “reactivation function” means a function facilitating the activation of other modes, including on-mode, by remote switch including remote control, internal sensor, timer to a condition providing additional functions, including on-mode;

(9) “information or status display” means a continuous function providing information or indicating the status of the equipment on a display, including clocks;

(10) “forced menu” means a set of television settings, pre-defined by the manufacturer, of which the user of the television must select a particular setting upon initial start-up of the television;

(11) “peak luminance ratio” means the ratio of the peak luminance of the home-mode condition or of the on-mode condition of the television as set by the supplier, as applicable, and the peak luminance of the brightest on-mode condition;

(12) “point of sale” means a location where televisions are displayed or offered for sale, hire or hire purchase;

(13) “end-user” means a consumer buying or expected to buy a television.

**Article 3**

**Responsibilities of suppliers**

1. Suppliers shall ensure that:

(a) each television is supplied with a printed label in the format and containing information as set out in Annex V;

(b) a product fiche, as set out in Annex III, is made available;

(c) the technical documentation, as set out in Annex IV, is made available on request to the authorities of **Contracting Parties** and to the **Secretariat**;

(d) any advertisement for a specific television model contains the energy efficiency class, if the advertisement discloses energy-related or price information;

(e) any technical promotional material concerning a specific television model, which describes its specific technical parameters, includes the energy efficiency class of that model;

(f) an electronic label in the format and containing the information set out in Annex V is made available to dealers for each television model placed on the market from 1 January 2020 with
a new model identifier. It may also be made available to dealers for other television models;
(g) an electronic product fiche as set out in Annex III is made available to dealers for each television model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other television models.¹

2. The energy efficiency classes shall be based on the Energy Efficiency Index calculated in accordance with Annex II.

3. The format of the label set out in Annex V shall be applied according to the following timetable:
(a) for televisions placed on the market from 30 November 2011, labels for televisions with energy efficiency classes:
   (i) A, B, C, D, E, F, G shall be in accordance with point 1 of Annex V or, where suppliers deem appropriate, with point 2 of that Annex;
   (ii) A⁺ shall be in accordance with point 2 of Annex V;
   (iii) A++ shall be in accordance with point 3 of Annex V;
   (iv) A+++ shall be in accordance with point 4 of Annex V;
(b) for televisions placed on the market from 1 January 2014 with energy efficiency classes A⁺, A, B, C, D, E, F, labels shall be in accordance with point 2 of Annex V or, where suppliers deem appropriate, with point 3 of that Annex;
(c) for televisions placed on the market from 1 January 2017 with energy efficiency classes A++, A⁺, A, B, C, D, E, labels shall be in accordance with point 3 of Annex V or, where suppliers deem appropriate, with point 4 of that Annex;
(d) for televisions placed on the market from 1 January 2020 with energy efficiency classes A+++, A++, A⁺, A, B, C, D labels shall be in accordance with point 4 of Annex V.

Article 4
Responsibilities of dealers

Dealers shall ensure that:
(a) each television, at the point of sale, bears the label provided by suppliers in accordance with Article 3(1) on the front of the television, in such a way as to be clearly visible;
(b) televisions offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the television displayed, are marketed with the information to be provided by the suppliers in accordance with Annex VI. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1)(f) and 3(1)(g) the provisions in Annex IX shall apply instead;²
(c) any advertisement for a specific television model contains the energy efficiency class, if the advertisement discloses energy-related or price information;

¹ Article 3, points (f) and (g) are added in accordance with Article 4(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
² Article 4, point (b) is replaced in accordance with Article 4(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(d) any technical promotional material concerning a specific television model, which describes its specific technical parameters, includes the energy efficiency class of that model.

**Article 5**

**Measurement methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods, as set out in Annex VII.

**Article 6**

**Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure laid down in Annex VIII when assessing the conformity of the declared energy efficiency class.

**Article 7**

**Revision**

<...>

**Article 8**

**Transitional provision**

Article 3(1)(d) and (e) and Article 4(b), (c) and (d) shall not apply to printed advertisement and printed technical promotional material published before **30 April 2013**.

**Article 9**

**Entry into force**

This Decision [2011/03/MC-EnC] enters into force upon its adoption <...>³

It shall apply from **31 December 2012**. However, Article 3(1)(d) and (e) and Article 4(b), (c) and (d) shall apply from **30 April 2013**.

This Regulation shall be binding in its entirety and directly applicable in all **Contracting Parties**.

---

³ The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.
Article 2(5) of Decision 2011/03/MC-EnC

The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <…> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.

ANNEX I
Energy efficiency class

The energy efficiency class of a television shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1. The Energy Efficiency Index of a television shall be determined in accordance with point 1 of Annex II.

<table>
<thead>
<tr>
<th>Energy Efficiency Class</th>
<th>Energy Efficiency Index</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+++ (most efficient)</td>
<td>EEI &lt; 0.10</td>
</tr>
<tr>
<td>A++</td>
<td>0.10 ≤ EEI &lt; 0.16</td>
</tr>
<tr>
<td>A+</td>
<td>0.16 ≤ EEI &lt; 0.23</td>
</tr>
<tr>
<td>A</td>
<td>0.23 ≤ EEI &lt; 0.30</td>
</tr>
<tr>
<td>B</td>
<td>0.30 ≤ EEI &lt; 0.42</td>
</tr>
<tr>
<td>C</td>
<td>0.42 ≤ EEI &lt; 0.60</td>
</tr>
<tr>
<td>D</td>
<td>0.60 ≤ EEI &lt; 0.80</td>
</tr>
<tr>
<td>E</td>
<td>0.80 ≤ EEI &lt; 0.90</td>
</tr>
<tr>
<td>F</td>
<td>0.90 ≤ EEI &lt; 1.00</td>
</tr>
<tr>
<td>G (least efficient)</td>
<td>1.00 ≥ EEI</td>
</tr>
</tbody>
</table>
ANNEX II

Method for calculating the energy efficiency index and the Annual on-mode energy consumption

1. The Energy Efficiency Index (EEI) is calculated as EEI = P/P_{ref} (A), where:
   - \( P_{\text{ref}} (A) = P_{\text{basic}} + A \times 4.3224 \text{ Watts/dm}^2 \),
   - \( P_{\text{basic}} = 20 \text{ Watts} \) for television sets with one tuner/receiver and no hard disc,
   - \( P_{\text{basic}} = 24 \text{ Watts} \) for television sets with hard disk(s),
   - \( P_{\text{basic}} = 24 \text{ Watts} \) for television sets with two or more tuners/receivers,
   - \( P_{\text{basic}} = 28 \text{ Watts} \) for television sets with hard disk(s) and two or more tuners/receivers,
   - \( P_{\text{basic}} = 15 \text{ Watts} \) for television monitors,
   - \( A \) is the visible screen area expressed in \( \text{dm}^2 \),
   - \( P \) is the on-mode power consumption of the television in Watts measured in accordance with Annex VII, rounded to one decimal place.

2. The annual on-mode energy consumption \( E \) in kWh is calculated as \( E = 1.46 \times P \).

3. Televisions with automatic brightness control

For the purposes of calculating the Energy Efficiency Index and the annual on-mode energy consumption referred to in points 1 and 2, the on-mode power consumption as established according to the procedure set out in Annex VII is reduced by 5% if the following conditions are fulfilled when the television is placed on the market:

(a) the luminance of the television in the home-mode or the on-mode condition as set by the supplier, is automatically reduced between an ambient light intensity of at least 20 lux and 0 lux;
(b) the automatic brightness control is activated in the home-mode condition or the on-mode condition of the television as set by the supplier.
ANNEX III

Product fiche

1. The information in the product fiche of the television shall be provided in the following order, and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trade mark;

(b) supplier’s model identifier; where model identifier means the code, usually alphanumeric, which distinguishes a specific television model from other models of the same trade mark or supplier’s name;

(c) the energy efficiency class of the model in accordance with Annex I, Table 1; where the television has been awarded an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, this information may be included;

(d) the visible screen diagonal in centimetres and in inches;

(e) the on-mode power consumption measured in accordance with the procedure set out in Annex VII;

(f) the annual energy consumption calculated in accordance with Annex II in kWh per year, rounded to the first integer; it shall be described as: ‘Energy consumption XYZ kWh per year, based on the power consumption of the television operating 4 hours per day for 365 days. The actual energy consumption will depend on how the television is used.’;

(g) the standby and off-mode power consumption or both measured in accordance with the procedure set out in Annex VII;

(h) the screen resolution in physical horizontal and vertical pixel count.

2. One fiche may cover a number of television models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label must also be provided.
ANNEX IV

Technical documentation

The technical documentation referred to in Article 3(1)(c) shall include:

(a) the name and address of the supplier;
(b) a general description of the television model, sufficient for it to be unequivocally and easily identified;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) identification and signature of the person empowered to bind the supplier;
(f) test parameters for measurements:
   (i) ambient temperature;
   (ii) test voltage in V and frequency in Hz;
   (iii) total harmonic distortion of the electricity supply system;
   (iv) the input terminal for the audio and video test signals;
   (v) information and documentation on the instrumentation, set-up and circuits used for electrical testing;
(g) on-mode parameters:
   (i) the power consumption data in Watts rounded to the first decimal place for power measurements up to 100 Watts, and to the first integer for power measurements above 100 Watts;
   (ii) the characteristics of the dynamic broadcast-content video signal representing typical broadcast TV content;
   (iii) the sequence of steps for achieving a stable condition with respect to power consumption;
   (iv) for televisions with a forced menu, the ratio of the peak luminance of the home-mode and the peak luminance of the brightest on-mode condition provided by the television, expressed as a percentage;
   (v) for television monitors, a description of the relevant characteristics of the tuner used for measurements;
(h) for each standby or off-mode:
   (i) the power consumption data in Watts rounded to the second decimal place;
   (ii) the measurement method used;
   (iii) description of how the mode was selected or programmed;
   (iv) sequence of events to reach the mode where the television automatically changes modes.
ANNEX V
Label

1. LABEL 1

(a) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier, where ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific television model from other models of the same trade mark or supplier’s name;

III. the energy efficiency class of the television, determined in accordance with Annex I. The head of the arrow containing the energy efficiency class of the television shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. on-mode power consumption in Watts, rounded to the first integer;

V. annual on-mode energy consumption calculated in accordance with point 2 of Annex II, in kWh, rounded to the first integer;

VI. visible screen diagonal in inches and centimetres.

For televisions with an easily visible switch, which puts the television in a condition with power consumption not exceeding 0.01 Watts when operated to the off position, the symbol defined in point 8 of point 5 may be added.

Where a model has been granted a ‘European Union Ecolabel’ under Regulation (EC) No 66/2010, a copy of the EU Ecolabel may be added.

(b) The design aspects of the label shall be in accordance with point 5.
2. LABEL 2

(a) The information listed in point 1(a) shall be included in the label.
(b) The design aspects of the label shall be in accordance with point 5.
3. LABEL 3

(a) The information listed in point 1(a) shall be included in the label.
(b) The design aspects of the label shall be in accordance with point 5.
4. LABEL 4

(a) The information listed in point 1(a) shall be included in the label.

(b) The design aspects of the label shall be in accordance with point 5.
5. THE DESIGN OF THE LABEL SHALL BE THE FOLLOWING:

Whereby:

(a) The label shall be at least 60 mm wide and 120 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) For televisions with screen area above 29 dm² the background shall be white. For televisions with screen area of 29 dm² or below the background shall be white or transparent.

(c) Colours are CMYK - cyan, magenta, yellow and black and are given following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):
1 Border stroke: 3 pt - colour: Cyan 100% - round corners: 3,5 mm.

2 EU logo - colours: X-80-00-00 and 00-00-X-00.

3 Label logos: colour: X-00-00-00
   Pictogram as depicted; EU logo and label logo (combined): width: 51 mm, height: 9 mm.

4 Sub-logos border: 1 pt - colour: Cyan 100 % - length: 51 mm.

5 A-G scale
   - Arrow: height: 3,8 mm, gap: 0,75 mm - colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00.

6 Text: Calibri bold 10 pt, capitals, white; ‘+’ symbols: Calibri bold 7 pt, capitals, white.

6. Energy efficiency class
   - Arrow: width: 26 mm, height: 8 mm, 100 % black.
   - Text: Calibri bold 15 pt, capitals, white; ‘+’ symbols: Calibri bold 10 pt, capitals, white.

7 Energy - Text: Calibri regular 7pt, capitals, 100 % black.

8 Switch logo:
   - Pictogram as depicted, Border: 1 pt - colour: Cyan 100 % - round corners: 3,5 mm.

9. Text related to on-mode power consumption:
   - Border: 1 pt - colour: Cyan 100 % - round corners: 3,5 mm.
   - Value: Calibri bold 14 pt, 100 % black.
   - Second line: Calibri regular 11 pt, 100 % black.

10 Television screen diagonal size:
    - Pictogram as depicted
    - Border: 1 pt - colour: Cyan 100 % - round corners: 3,5 mm.
    - Value: Calibri bold 14 pt, 100 % black. Calibri regular 11pt, 100 % black.

11 Text related to annual energy consumption:
   - Border: 2 pt - colour: Cyan 100 % - round corners: 3,5 mm.
   - Value: Calibri bold 25 pt, 100 % black.
   - Second line: Calibri regular 11 pt, 100 % black.

12 Supplier’s name or trade mark

13 Supplier’s model identifier
The supplier’s name or trade mark and model information should fit in a space of 51 x 8 mm.

**Reference period:**
- **Text:** Calibri bold 8 pt
- **Text:** Calibri light 9 pt.
ANNEX VI

Information to be provided in the cases where end-users cannot be expected to see the product displayed

1. The information referred to in Article 4(b) shall be provided in the following order:
   (a) the energy efficiency class of the model as defined in Annex I;
   (b) the on-mode power consumption as referred to in point 1 of Annex II;
   (c) the annual power consumption in accordance with point 2 of Annex II;
   (d) the visible screen diagonal.

2. Where other information contained in the product information fiche is also provided, it shall be in the form and order specified in Annex III.

3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.
ANNEX VII
Measurements

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements shall be made using a reliable, accurate and reproducible measurement procedure that takes into account the generally recognised state-of-the-art measurement methods, including methods set out in documents the reference numbers of which have been published for that purpose in the Official Journal of the European Union.

2. Measurements of on-mode power consumption referred to in point 1 of Annex II
   (a) General conditions:
      (i) measurements shall be made at an ambient temperature of 23 °C +/- 5 °C;
      (ii) measurements shall be made using a dynamic broadcast-content video signal representing typical broadcast TV content; The measurement shall be the average power consumed over ten consecutive minutes;
      (iii) measurements shall be made after the television has been in the off-mode for a minimum of 1 hour immediately followed by a minimum of 1 hour in the on-mode and shall be completed before a maximum of 3 hours in on-mode. The relevant video signal shall be displayed during the entire on-mode duration. For televisions that are known to stabilise within 1 hour, these durations may be reduced if the resulting measurement can be shown to be within 2 % of the results that would otherwise be achieved using the durations described here;
      (iv) measurements shall be made with the Automatic Brightness Control function, if such a function exists, made inactive. If the Automatic Brightness Control function exists and cannot be made inactive, then the measurements shall be performed with the light entering directly into the ambient light sensor at a level of 300 lux, or more.
   (b) Conditions for measuring the on-mode power consumption of televisions:
      (i) television sets without forced menu: The power consumption shall be measured in the on-mode condition of the television as delivered by the manufacturer, that is, the brightness controls of the television shall be in the position adjusted by the manufacturer for the end user;
      (ii) television sets with forced menu: The power consumption shall be measured in the ‘home-mode’ condition;
      (iii) television monitors without forced menu: The television monitor shall be connected to an appropriate tuner. The power consumption shall be measured in the on-mode condition of the television as delivered by the manufacturer, that is, the brightness controls of the television monitor shall be in the position adjusted by the manufacturer for the end user. The power consumption of the tuner is not relevant for the measurements of on-mode power consumption of the television monitor;

4 Deleted in accordance with Article 4 and Annex IV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.
(iv) television monitors with forced menu: The television monitor shall be connected to an appropriate tuner. The power consumption shall be measured in the ‘home-mode’ condition.

3. <...>5

4. Measurements of peak luminance ratio referred to in Table 2 of Annex VII6

(a) Measurements of peak luminance shall be made with a luminance meter, detecting that portion of the screen exhibiting a full (100 %) white image, which is part of a ‘full screen test’ test pattern that does not exceed the average picture level (APL) point where any power limiting occurs in the display luminance drive system.

(b) Measurements of luminance ratio shall be made without disturbing the luminance meter’s detection point on the display whilst switching between the home-mode condition or the on-mode condition of the television as set by the supplier, as applicable, and the brightest on-mode condition.

---

5 Deleted in accordance with Article 4 and Annex IV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

6 Title is replaced in accordance with Article 4 and Annex IV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
Annex VIII7

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 2.

(3) If the result referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 2.

(6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

---

7 Annex VIII is replaced in accordance with Article 4 and Annex IV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 2 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX IX

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(3). The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 5 of Annex V. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:
(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:
(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

8 Annex IX is added in accordance with Article 4(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(1) (g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
DELEGATED REGULATION (EU) 1061/2010 of 28 September 2010
supplementing Directive 2010/30/EU with regard to energy labelling of
household washing machines

Incorporated and adapted by Ministerial Council Decision 2011/03/MC-EnC of 6 October 2011 on adopting
certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision
2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting
a framework for energy labelling, and certain Delegated Regulations on energy-related products.

Article 1
Subject matter and scope

1. This Regulation establishes requirements for the labelling of and the provision of supplementary product
information on electric mains-operated household washing machines and electric mains-operated house-
hold washing machines that can also be powered by batteries, including those sold for non-household
use and built-in household washing machines.
2. This Regulation shall not apply to household combined washer-driers.

Article 2
Definitions

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall
apply for the purposes of this Regulation:
(1) “household washing machine” means an automatic washing machine which cleans and rinses textiles
using water, which also has a spin extraction function and which is designed to be used principally for
non-professional purposes;
(2) “built-in household washing machine” means a household washing machine intended to be installed
in a cabinet, a prepared recess in a wall or a similar location, requiring furniture finishing;
(3) “automatic washing machine” means a washing machine where the load is fully treated by the machine
without the need for user intervention at any point during the programme;
(4) “household combined washer-drier” means a household washing machine which includes both a spin
extraction function and also a means for drying the textiles, usually by heating and tumbling;
(5) “programme” means a series of operations that are pre-defined and which are declared by the supplier
as suitable for washing certain types of textile;
(6) “cycle” means a complete washing, rinsing and spinning process, as defined for the selected programme;
(7) “programme time” means the time that elapses from the initiation of the programme until the com-
pletion of the programme excluding any end-user programmed delay;
(8) “rated capacity” means the maximum mass in kilograms stated by the supplier at 0.5 kg intervals of dry textiles of a particular type, which can be treated in a household washing machine on the selected programme, when loaded in accordance with the supplier’s instructions;

(9) “partial load” means half of the rated capacity of a household washing machine for a given programme;

(10) “remaining moisture content” means the amount of moisture contained in the load at the end of the spinning phase;

(11) “off-mode” means a condition where the household washing machine is switched off using appliance controls or switches accessible to and intended for operation by the end-user during normal use to attain the lowest power consumption that may persist for an indefinite time while the household washing machine is connected to a power source and used in accordance with the supplier’s instructions; where there is no control or switch accessible to the end-user, “off-mode” means the condition reached after the household washing machine reverts to a steady-state power consumption on its own;

(12) “left-on mode” means the lowest power consumption mode that may persist for an indefinite time after completion of the programme without any further intervention by the end-user besides unloading of the household washing machine;

(13) “equivalent household washing machine” means a model of household washing machine placed on the market with the same rated capacity, technical and performance characteristics, energy and water consumption and airborne acoustical noise emissions during washing and spinning as another model of household washing machine placed on the market under a different commercial code number by the same supplier;

(14) “end-user” means a consumer buying or expected to buy a household washing machine;

(15) “point of sale” means a location where household washing machines are displayed or offered for sale, hire or hire-purchase.

**Article 3**

**Responsibilities of suppliers**

Suppliers shall ensure that:

(a) each household washing machine, is supplied with a printed label in the format and containing information as set out in Annex I;

(b) a product fiche, as set out in Annex II, is made available;

(c) the technical documentation as set out in Annex III is made available on request to the authorities of the **Contracting Parties** and to the **Secretariat**;

(d) any advertisement for a specific model of household washing machine contains the energy efficiency class, if the advertisement discloses energy-related or price information;

(e) any technical promotional material concerning a specific model of household washing machine which describes its specific technical parameters includes the energy efficiency class of that model;

(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household washing machine model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other
household washing machine models;
(g) an electronic product fiche as set out in Annex II is made available to dealers for each household washing machine model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household washing machine models.¹

Article 4
Responsibilities of dealers

Dealers shall ensure that:
(a) each household washing machine, at the point of sale, bears the label provided by suppliers in accordance with Article 3(a) on the outside of the front or top of the household washing machine, in such a way as to be clearly visible;
(b) household washing machines offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed are marketed with the information to be provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;²
(c) any advertisement for a specific model of household washing machine contains a reference to its energy efficiency class, if the advertisement discloses energy-related or price information;
(d) any technical promotional material concerning a specific model of household washing machine, which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

Article 5
Measurement methods

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods.

Article 6
Verification procedure for market surveillance purposes

Contracting Parties shall apply the procedure laid down in Annex V when assessing the conformity of the declared energy efficiency class, the annual energy consumption, annual water consumption, spin-drying efficiency class, power consumption in off-mode and left-on mode, duration of the left-on mode, remaining moisture content, spin speed and airborne acoustical noise emissions.

¹ Article 3, points (f) and (g) are added in accordance with Article 3(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
² Article 4, point (b) is replaced in accordance with Article 3(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
Article 7
Revision

Article 8
Repeal

Article 9
Transitional provisions

1. Articles 3(d), (e), 4(b), (c) and (d) shall not apply to printed advertisements and printed technical promotional material published before 30 April 2013.

2. Household washing machines placed on the market before 31 December 2012 shall comply with the provisions set out in Directive 95/12/EC.

3. <...>

Article 10
Entry into force and application

1. This Decision [2011/03/MC-EnC] enters into force upon its adoption <...>³

2. It shall apply from 31 December 2012. However, Articles 3(d), (e), 4(b), (c) and (d) shall apply from 30 April 2013.

This Regulation shall be binding in its entirety and directly applicable in all Contracting Parties.

Article 2(5) of Decision 2011/03/MC-EnC

The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <...> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.

³ The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.
ANNEX I
Label

1. LABEL
(1) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier, meaning the code, usually alphanumeric, which distinguishes a specific household washing machine model from other models with the same trade mark or supplier’s name;

III. the energy efficiency class determined in accordance with point 1 of Annex VI; the head of the arrow containing the energy efficiency class of the household washing machine shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. weighted annual energy consumption (AEC) in kWh per year, rounded up to the nearest integer in accordance with Annex VII;

V. weighted annual water consumption (AWC), in litres per year, rounded up to the nearest integer in accordance with Annex VII;

VI. rated capacity, in kg, for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at full load, whichever is the lower;

VII. the spin-drying efficiency class as set out in point 2 of Annex VI;

VIII. airborne acoustical noise emissions, during the washing and spinning phases, for the standard 60 °C cotton programme at full load, expressed in dB(A) re 1 pW, rounded to the nearest integer.

(2) The design of the label shall be in accordance with point 2. By way of derogation, where a model has been awarded an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.
2. LABEL DESIGN
Whereby:

(a) The label must be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **Border stroke**: 5 pt - colour: Cyan 100% - round corners: 3,5 mm.
2. **EU logo - colours**: X-80-00-00 and 00-00-X-00.
3. **Energy logo**: colour: X-00-00-00.
   - Pictogram as depicted: EU logo and energy logo (combined): width: 92 mm, height: 17 mm.
4. **Sub-logos border**: 1 pt - colour: Cyan 100% - length: 92,5 mm.
5. **A-G scale**
   - **Arrow**: height: 7 mm, gap: 0,75 mm - colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00.
   - **Text**: Calibri bold 18 pt, capitals and white; ‘+’ symbols: Calibri bold 12 pt, capitals, white, aligned on a single row.
6. **Energy efficiency class**
   - **Arrow**: width: 26 mm, height: 14 mm, 100% black.
   - **Text**: Calibri bold 29 pt, capitals and white; ‘+’ symbols: Calibri bold 18 pt, capitals, white, aligned on a single row.
7. **Energy**: text: Calibri regular 11 pt, capitals, 100% black.
8. **Weighted annual energy consumption**
   - **Border**: 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
   - **Value**: Calibri bold 42 pt, 100% black; and Calibri regular 17 pt, 100% black.
9. **Weighted annual water consumption**
   - **Pictogram** as depicted
   - **Border**: 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
   - **Value**: Calibri bold 24 pt, 100% black; and Calibri regular 16 pt, 100% black.
10. **Rated capacity**
PART II

ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation (EU) 1061/2010

11 Spin-drying efficiency class

- Pictogram as depicted
- Border: 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
- Value: Calibri bold 24 pt, 100% black; and Calibri regular 16 pt, 100% black.

12 Airborne acoustical noise emissions

- Pictograms as depicted
- Border: 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
- Value: Calibri regular 16 pt, horizontal scale 75%, 100% black and Calibri Bold 22 pt, horizontal scale 75%, 100% black.

13 Supplier’s name or trade mark

14 Supplier’s model identifier

15 The supplier’s name or trademark and model identifier should fit in a space of 92 × 15 mm.

16 Numbering of the Regulation: Calibri bold 12 pt, 100% black.
ANNEX II

Product fiche

1. The information in the product fiche of the household washing machine shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trade mark;
(b) supplier’s model identifier, meaning the code, usually alphanumeric, which distinguishes a specific household washing machine model from other models with the same trade mark or supplier’s name;
(c) rated capacity in kg of cotton for the standard 60 °C cotton programme at full load or the 40 °C cotton programme at full load, whichever is the lower;
(d) energy efficiency class in accordance with point 1 of Annex VI;
(e) where the household washing machine has been awarded an ‘EU Ecolabel award’ under Regulation (EC) No 66/2010, this information may be included;
(f) weighted annual energy consumption (AEC) in kWh per year, rounded up to the nearest integer; it shall be described as: ‘Energy consumption “X” kWh per year, based on 220 standard washing cycles for cotton programmes at 60 °C and 40 °C at full and partial load, and the consumption of the low-power modes. Actual energy consumption will depend on how the appliance is used.’;
(g) the energy consumption (E_{1,60}, E_{1,60½}, E_{1,40½}) of the standard 60 °C cotton programme at full load and partial load and of the standard 40 °C cotton programme at partial load;
(h) weighted power consumption of the off-mode and of the left-on mode;
(i) weighted annual water consumption (AWC) in litres per year, rounded up to the nearest integer; it shall be described as: ‘Water consumption “X” litres per year, based on 220 standard washing cycles for cotton programmes at 60 °C and 40 °C at full and partial load. Actual water consumption will depend on how the appliance is used.’;
(j) spin-drying efficiency class determined in accordance with point 2 of Annex VI, expressed as ‘spin-drying efficiency class “X” on a scale from G (least efficient) to A (most efficient)’; this may be expressed by other means provided it is clear that the scale is from G (least efficient) to A (most efficient);
(k) maximum spin speed attained for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at partial load, whichever is the lower, and remaining moisture content attained for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at partial load, whichever is the greater;
(l) indication that the ‘standard 60 °C cotton programme’ and the ‘standard 40 °C cotton programme’ are the standard washing programmes to which the information in the label and the fiche relates, that these programmes are suitable to clean normally soiled cotton laundry and that they are the most efficient programmes in terms of combined energy and water consumption;
(m) the programme time of the ‘standard 60 °C cotton programme’ at full and partial load and of the ‘standard 40 °C cotton programme’ at partial load in minutes and rounded to the nearest minute;
(n) the duration of the left-on mode (Tl) if the household washing machine is equipped with a power management system;
(o) airborne acoustical noise emissions expressed in dB(A) re 1 pW and rounded to the nearest integer during the washing and spinning phases for the standard 60 °C cotton programme at full load;
(p) if the household washing machine is intended to be built-in, an indication to this effect.

2. One fiche may cover a number of household washing machine models supplied by the same supplier.
3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.
ANNEX III
Technical documentation

1. The technical documentation referred to in Article 3(c) shall include:
(a) the name and address of the supplier;
(b) a general description of the washing machine model, sufficient for it to be unequivocally and easily identified;
(c) where appropriate, the references of the harmonised standards applied;
(d) where appropriate, the other technical standards and specifications used;
(e) identification and signature of the person empowered to bind the supplier;
(f) an indication stating whether the household washing machine model releases or not silver ions during the washing cycle as follows: ‘This product releases/does not release silver ions during the washing cycle.’;
(g) technical parameters for measurements as follows:
   (i) energy consumption;
   (ii) programme time;
   (iii) water consumption;
   (iv) power consumption in ‘off-mode’;
   (v) power consumption in ‘left-on mode’;
   (vi) ‘left-on mode’ duration;
   (vii) remaining moisture content;
   (viii) airborne acoustical noise emissions;
   (ix) maximum spin speed;
(h) the results of calculations performed in accordance with Annex VII.

2. Where the information included in the technical documentation file for a particular household washing machine model has been obtained by calculation on the basis of design, or extrapolation from other equivalent household washing machines or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent household washing machine models where the information was obtained on the same basis.
ANNEX IV

Information to be provided in the cases where end-users cannot be expected to see the product displayed

1. The information referred to in Article 4(b) shall be provided in the following order:

   (a) the rated capacity in kg of cotton, for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at full load, whichever is the lower;

   (b) the energy efficiency class as defined in point 1 of Annex VI;

   (c) the weighted annual energy consumption in kWh per year, rounded up to the nearest integer and calculated in accordance with point 1(c) of Annex VII;

   (d) the weighted annual water consumption in litres per year, rounded up to the nearest integer and calculated in accordance with point 2(a) of Annex VII;

   (e) the spin-drying efficiency class in accordance with point 2 of Annex VI;

   (f) the maximum spin speed attained for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at partial load, whichever is the lower, and the remaining moisture content attained for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at partial load, whichever is the greater;

   (g) airborne acoustical noise emissions during the washing and spinning phases, for the standard 60 °C cotton programme at full load, expressed in dB(A) re 1 pW and rounded to the nearest integer;

   (h) if the household washing machine is produced in order to be built-in, an indication to this effect.

2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex II.

3. The size and font, in which all the information referred in this Annex is printed or shown, shall be legible.
ANNEX V⁴

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household washing machine models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household washing machine models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being

⁴ Annex V is replaced in accordance with Article 3 and Annex III of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
taken on the non-compliance of the model according to points 3 and 6.

Contracting Parties’ authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in the dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

### Table 1

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Verification tolerances</th>
</tr>
</thead>
</table>
| Annual energy consumption (\( AE_c \))          | The determined value shall not exceed the declared value of \( AE_c \) by more than 10 \%.
| Energy consumption (\( Et \))                   | The determined value shall not exceed the declared value of \( Et \) by more than 10 \%. Where three additional units need to be selected, the arithmetic mean of the determined values of these three units shall not exceed the declared value of \( Et \) by more than 6 \%.
| Programme time (\( T_t \))                      | The determined value shall not exceed the declared values \( T_t \) by more than 10 \%.
| Water consumption (\( W_t \))                   | The determined value shall not exceed the declared value of \( W_t \) by more than 10 \%.
| Remaining moisture content (\( D \))             | The determined value shall not exceed the declared value of \( D \) by more than 10 \%.
| Spin speed                                       | The determined value shall not be less than the declared value by more than 10 \%.
| Power consumption in off mode and left-on mode (\( P_o \) and \( P_l \)) | Determined values of power consumption \( P_o \) and \( P_l \) of more than 1,00 W shall not exceed the declared values of \( P_o \) and \( P_l \) by more than 10 \%. The determined values of power consumption \( P_o \) and \( P_l \) of less than or equal to 1,00 W shall not exceed the declared values of \( P_o \) and \( P_l \) by more than 0,10 W.
| Duration of the left-on mode (\( T_l \))         | The determined value shall not exceed the declared value of \( T_l \) by more than 10 \%.
| Airborne acoustical noise emissions              | The determined value shall meet the declared value.                                      |
ANNEX VI

Energy efficiency classes and spin-drying efficiency classes

1. ENERGY EFFICIENCY CLASSES
The energy efficiency class of a household washing machine shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1.

The Energy Efficiency Index (EEI) of a household washing machine shall be determined in accordance with point 1 of Annex VII.

<table>
<thead>

ANNEX VII
Method for calculating the energy efficiency index, annual water consumption and remaining moisture content

1. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the Energy Efficiency Index (EEI) of a household washing machine model, the weighted annual energy consumption of a household washing machine for the standard 60 °C cotton programme at full and partial load and for the standard 40 °C cotton programme at partial load is compared to its standard annual energy consumption.

(a) The Energy Efficiency Index (EEI) is calculated as follows and rounded to one decimal place:

\[ EEI = \frac{AE_C}{SAE_C} \times 100 \]

where:

- \( AE_C \) = annual energy consumption of the household washing machine;
- \( SAE_C \) = standard annual energy consumption of the household washing machine.

(b) The standard annual energy consumption (SAE_C) is calculated in kWh/year as follows and rounded to two decimal places:

\[ SAE_C = 47,0 \times C + 51,7 \]

where:

- \( c \) = rated capacity of the household washing machine for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at full load, whichever is the lower.

(c) The weighted annual energy consumption (AE_C) is calculated in kWh/year as follows and is rounded to two decimal places:

\[ AE_C = E_t \times 220 + \left( P_o \times \frac{525 \times 600 - (T_t \times 200)}{2} + P_l \times \frac{525 \times 600 - (T_t \times 200)}{2} \right) \times \frac{6 \times 1000}{2} \]

where:

- \( E_t \) = weighted energy consumption;
- \( P_o \) = weighted power in ‘off-mode’;
- \( P_l \) = weighted power in the ‘left-on mode’;
- \( T_t \) = weighted programme time;
- 220 = total number of standard washing cycles per year.
(ii) Where the household washing machine is equipped with a power management system, with the household washing machine reverting automatically to ‘off-mode’ after the end of the programme, the weighted annual energy consumption ($AE_C$) is calculated taking into consideration the effective duration of ‘left-on mode’, according to the following formula:

$$AE_C = E_t \times 220 + \frac{\{(P_l \times T_l \times 220) + P_o \times [525600 - (T_l \times 200) - (T_c \times 200)]\}}{6 \times 1000}$$

where:

$T_l$ = time in ‘left-on mode’.

(d) The weighted energy consumption ($E_t$) is calculated in kWh as follows and rounded to three decimal places:

$$E_t = \left[3 \times E_{t,60} + 2 \times E_{t,60^{1/2}} + 2 \times E_{t,40^{1/2}}\right] / 7$$

where:

$E_{t,60}$ = energy consumption of the standard 60 °C cotton programme at full load;
$E_{t,60^{1/2}}$ = energy consumption of the standard 60 °C cotton programme at partial load;
$E_{t,40^{1/2}}$ = energy consumption of the standard 40 °C cotton programme at partial load.

(e) The weighted power in ‘off-mode’ ($P_o$) is calculated in W as follows and rounded to two decimal places:

$$P_o = \left(3 \times P_{o,60} + 2 \times P_{o,60^{1/2}} + 2 \times P_{o,40^{1/2}}\right) / 7$$

where:

$P_{o,60}$ = power in ‘off-mode’ of the standard 60 °C cotton programme at full load;
$P_{o,60^{1/2}}$ = power in ‘off-mode’ of the standard 60 °C cotton programme at partial load;
$P_{o,40^{1/2}}$ = power in ‘off-mode’ of the standard 40 °C cotton programme at partial load.

(f) The weighted power in the ‘left-on mode’ ($P_l$) is calculated in W as follows and rounded to two decimal places:

$$P_l = \left(3 \times P_{l,60} + 2 \times P_{l,60^{1/2}} + 2 \times P_{l,40^{1/2}}\right) / 7$$

where:

$P_{l,60}$ = power in ‘left-on mode’ of the standard 60 °C cotton programme at full load;
$P_{l,60^{1/2}}$ = power in ‘left-on mode’ of the standard 60 °C cotton programme at partial load;
$P_{l,40^{1/2}}$ = power in ‘left-on mode’ of the standard 40 °C cotton programme at partial load.
(g) The weighted programme time ($T_t$) is calculated in minutes as follows and rounded to the nearest minute:

$$T_t = \left(3 \times T_{t,60} + 2 \times T_{t,60\frac{1}{2}} + 2 \times T_{t,40\frac{1}{2}} \right) / 7$$

where:
- $T_{t,60}$ = programme time of the standard 60 °C cotton programme at full load;
- $T_{t,60\frac{1}{2}}$ = programme time of the standard 60 °C cotton programme at partial load;
- $T_{t,40\frac{1}{2}}$ = programme time of the standard 40 °C cotton programme at partial load.

(h) The weighted time in 'left-on mode' ($T_l$) is calculated in minutes as follows and rounded to the nearest minute:

$$T_l = \left(3 \times T_{l,60} + 2 \times T_{l,60\frac{1}{2}} + 2 \times T_{l,40\frac{1}{2}} \right) / 7$$

where:
- $T_{l,60}$ = time in 'left-on mode' of the standard 60 °C cotton programme at full load;
- $T_{l,60\frac{1}{2}}$ = time in 'left-on mode' of the standard 60 °C cotton programme at partial load;
- $T_{l,40\frac{1}{2}}$ = time in 'left-on mode' of the standard 40 °C cotton programme at partial load.

2. CALCULATION OF THE WEIGHTED ANNUAL WATER CONSUMPTION

(a) The weighted annual water consumption ($AWC$) of a household washing machine is calculated in litres as follows and rounded up to the integer:

$$AWC = W_t + 220$$

where:
- $W_t$ = weighted water consumption;
- 220 = total number of standard washing cycles per year.

(b) The weighted water consumption ($W_t$) is calculated in litres as follows and rounded up to the integer

$$W_t = \left(3 \times W_{t,60} + 2 \times W_{t,60\frac{1}{2}} + 2 \times W_{t,40\frac{1}{2}} \right) / 7$$

where:
- $W_{t,60}$ = water consumption of the standard 60 °C cotton programme at full load;
- $W_{t,60\frac{1}{2}}$ = water consumption of the standard 60 °C cotton programme at partial load;
- $W_{t,40\frac{1}{2}}$ = water consumption of the standard 40 °C cotton programme at partial load.
3. CALCULATION OF THE WEIGHTED REMAINING MOISTURE CONTENT

The weighted remaining moisture content (D) of a household washing machine is calculated in percentage as follows and rounded to the nearest whole percent:

\[ D = \left( 3 \times D_{60} + 2 \times D_{60\frac{1}{2}} + 2 \times D_{40\frac{1}{2}} \right) / 7 \]

where:

- \( D_{60} \) is the residual moisture content for the standard 60 °C cotton programme at full load, in percentage and rounded to the nearest whole per cent;
- \( D_{60\frac{1}{2}} \) is the residual moisture content for the standard 60 °C cotton programme at partial load, in percentage and rounded to the nearest whole per cent;
- \( D_{40\frac{1}{2}} \) is the residual moisture content for the standard 40 °C cotton programme at partial load, in percentage and rounded to the nearest whole per cent.
ANNEX VIII

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

5 Annex VIII is added in accordance with Article 3(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
DELEGATED REGULATION (EU) 1060/2010 of 28 September 2010 supplementing Directive 2010/30/EU with regard to energy labelling of household refrigerating appliances

*The adaptations made by Ministerial Council Decisions 2011/03/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue***.

**Article 1**

Subject matter and scope

1. This Regulation establishes requirements for the labelling of and the provision of supplementary product information on electric mains-operated household refrigerating appliances with a storage volume between 10 and 1500 litres.

2. This Regulation shall apply to electric mains-operated household refrigerating appliances, including those sold for non-household use or for the refrigeration of items other than foodstuffs and including built-in appliances. It shall also apply to electric mains-operated household refrigerating appliances that can be battery-operated.

3. This Regulation shall not apply to:

   (a) refrigerating appliances that are primarily powered by energy sources other than electricity, such as liquefied petroleum gas (LPG), kerosene and bio-diesel fuels;

   (b) battery-operated refrigerating appliances that can be connected to the mains through an AC/DC converter, purchased separately;

   (c) custom-made refrigerating appliances, made on a one-off basis and not equivalent to other refrigerating appliance models;

   (d) refrigerating appliances for tertiary sector application where the removal of refrigerated foodstuffs is electronically sensed and that information can be automatically transmitted through a network connection to a remote control system for accounting;

   (e) appliances where the primary function is not the storage of foodstuffs through refrigeration, such as stand-alone ice-makers or chilled drinks dispensers.
Article 2

Definitions

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply:

(1) “foodstuffs” means food, ingredients, beverages including wine, and other items primarily intended for consumption which require refrigeration at specified temperatures;

(2) “household refrigerating appliance” means an insulated cabinet, with one or more compartments, intended for refrigerating or freezing foodstuffs, or for the storage of refrigerated or frozen foodstuffs for non-professional purposes, cooled by one or more energy-consuming processes, including appliances sold as building kits to be assembled by the end-user;

(3) “built-in appliance” means a fixed refrigerating appliance intended to be installed in a cabinet, in a prepared recess in a wall or similar location, and requiring furniture finishing;

(4) “refrigerator” means a refrigerating appliance intended for the preservation of foodstuffs with at least one compartment suitable for the storage of fresh food and/or beverages, including wine;

(5) “compression-type refrigerating appliance” means a refrigerating appliance in which refrigeration is effected by means of a motor-driven compressor;

(6) “absorption-type refrigerating appliance” means a refrigerating appliance in which refrigeration is effected by an absorption process using heat as the energy source;

(7) “refrigerator-freezer” means a refrigerating appliance with at least one fresh-food storage compartment and at least one compartment suitable for the freezing of fresh food and the storage of frozen foodstuffs under three-star storage conditions (the food-freezer compartment);

(8) “frozen-food storage cabinet” means a refrigerating appliance with one or more compartments suitable for the storage of frozen foodstuffs;

(9) “food freezer” means a refrigerating appliance with one or more compartments suitable for freezing foodstuffs with temperatures ranging from ambient temperature down to – 18 °C, and which is also suitable for the storage of frozen foodstuffs under three-star storage conditions; a food freezer may also include two-star sections and/or compartments within the compartment or cabinet;

(10) “wine storage appliance” means a refrigerating appliance that has no compartment other than one or more wine storage compartments;

(11) “multi-use appliance” means a refrigerating appliance that has no compartment other than one or more multi-use compartments;

(12) “equivalent household refrigerating appliance” means a household refrigerating appliance model placed on the market with the same gross and storage volumes, same technical, efficiency and performance characteristics, and same compartment types as another household refrigerating appliance model placed on the market under a different commercial code number by the same manufacturer;

(13) “end-user” means a consumer buying or expected to buy a household refrigerating appliance;

(14) “point of sale” means a location where household refrigerating appliances are displayed or offered for sale, hire or hire-purchase.

The definitions set out in Annex I shall also apply.
Article 3
Responsibilities of suppliers

Suppliers shall ensure that:

(a) each household refrigerating appliance is supplied with a printed label in the format and containing information as set out in Annex II;
(b) a product fiche, as set out in Annex III, is made available;
(c) the technical documentation as set out in Annex IV is made available on request to the authorities of Contracting Parties and to the Secretariat;
(d) any advertisement for a specific model of household refrigerating appliance contains the energy efficiency class, if the advertisement discloses energy-related or price information;
(e) any technical promotional material concerning a specific model of household refrigerating appliance which describes its specific technical parameters includes the energy efficiency class of that model;
(f) an electronic label in the format and containing the information set out in Annex II is made available to dealers for each household refrigerating appliance model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household refrigerating appliance models;
(g) an electronic product fiche as set out in Annex III is made available to dealers for each household refrigerating appliance model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household refrigerating appliance models.\(^1\)

Article 4
Responsibilities of dealers

Dealers shall ensure that:

(a) each household refrigerating appliance at the point of sale bears the label provided by suppliers in accordance with Article 3(a) on the outside of the front or top of the appliance, in such a way as to be clearly visible;
(b) household refrigerating appliances offered for sale, hire or hire purchase where the end-user cannot be expected to see the product displayed, are marketed with the information to be provided by the suppliers in accordance with Annex V. Where the offer for is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex X shall apply instead;\(^2\)
(c) any advertisement for a specific model of household refrigerating appliance contains its energy efficiency class, if the advertisement discloses energy-related or price information;

\(^1\) Article 3, points (f) and (g) are added in accordance with Article 2(1) of Delegated Regulation (UE) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
\(^2\) Article 4, point (b) is replaced in accordance with Article 2(2) of Delegated Regulation (UE) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(d) any technical promotional material concerning a specific model of household refrigerating appliance, which describes its specific technical parameters, includes the energy efficiency class of that model.

**Article 5**
Measurement methods

The information to be provided pursuant to Article 3 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods, as set out in Annex VI.

**Article 6**
Verification procedure for market surveillance purposes

**Contracting Parties** shall apply the procedure laid down in Annex VII when assessing the conformity of the declared energy efficiency class, the annual energy consumption, the fresh and frozen food volumes, the freezing capacity and the airborne acoustical noise emissions.

**Article 7**
Revision

<...>  

**Article 8**
Repeal

<...>  

**Article 9**
Transitional provisions

1. Articles 3(d), (e), 4(b), (c) and (d) shall not apply to printed advertisement and printed technical promotional material published before 30 April 2013.

2. Household refrigerating appliances placed on the market before 31 December 2012 shall comply with the provisions set out in Directive 94/2/EC.

3. Household refrigerating appliances which comply with the provisions of this Regulation and which are placed on the market or offered for sale, hire or hire-purchase before 31 December 2012 shall be regarded as complying with the requirements of Directive 94/2/EC.
Article 10

Entry into force and application

1. This Decision [2011/03/MC-EnC] enters into force upon its adoption <...>³

2. It shall apply from 31 December 2012. However, Articles 3(d), (e), 4(b), (c) and (d) shall apply from 30 April 2013.

This Regulation shall be binding in its entirety and directly applicable in all Contracting Parties.

Article 2(5) of Decision 2011/03/MC-EnC

The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <...> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.

³ The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.
ANNEX I
Definitions applicable for the purposes of Annexes II to IX

For the purposes of Annexes II to IX, the following definitions shall apply:

(a) ‘frost-free system’ means a system automatically operated to prevent the permanent formation of frost, where cooling is provided by forced air circulation, the evaporator or evaporators are defrosted by an automatic defrost system, and the water from defrosting is disposed of automatically;

(b) ‘frost-free compartment’ means any compartment defrosted by a frost-free system;

(c) ‘refrigerator-cellar’ means a refrigerating appliance where at least one fresh-food storage compartment and one cellar compartment, but no frozen-food storage, chill or ice-making compartments, are present;

(d) ‘cellar’ means a refrigerating appliance where only one or more cellar compartments are present;

(e) ‘refrigerator-chiller’ means a refrigerating appliance where at least a fresh-food storage compartment and a chill compartment, but no frozen-food storage compartments, are present;

(f) ‘compartments’ means any of the compartments listed in points (g) to (n);

(g) ‘fresh-food storage compartment’ means a compartment designed for the storage of unfrozen foodstuffs, which may itself be divided into sub-compartments;

(h) ‘cellar compartment’ means a compartment intended for the storage of particular foodstuffs or beverages at a temperature warmer than that of a fresh-food storage compartment;

(i) ‘chill compartment’ means a compartment intended specifically for the storage of highly perishable foodstuffs;

(j) ‘ice-making compartment’ means a low-temperature compartment intended specifically for the freezing and storage of ice;

(k) ‘frozen-food storage compartment’ means a low-temperature compartment intended specifically for the storage of frozen foodstuffs and classified according to temperature as follows:

(i) ‘one-star compartment’: a frozen-food storage compartment in which the temperature is not warmer than – 6 °C;

(ii) ‘two-star compartment’: a frozen-food storage compartment in which the temperature is not warmer than – 12 °C;

(iii) ‘three-star compartment’: a frozen-food storage compartment in which the temperature is not warmer than – 18 °C;

(iv) ‘food freezer compartment’ (or ‘four-star compartment’): a compartment suitable for freezing at least 4,5 kg of foodstuffs per 100 l of storage volume, and in no case less than 2 kg, from ambient temperature down to – 18 °C over a period of 24 hours, which is also suitable for the storage of frozen food under three-star storage conditions, and may include two-star sections within the compartment;

(v) ‘0-star compartment’: a frozen-food storage compartment in which the temperature is < 0 °C and which can also be used for the freezing and storage of ice but is not intended for the storage of highly perishable foodstuffs;

(l) ‘wine storage compartment’ means a compartment exclusively designed either for short-term wine storage to bring wines to the ideal drinking temperature or for long-term wine storage to allow wine to mature, with the following features:
(i) continuous storage temperature, either pre-set or set manually according to the manufacturer’s instructions, in the range from +5 °C to +20 °C;
(ii) storage temperature(s) within a variation over time of less than 0.5 K at each declared ambient temperature specified by the climate class for household refrigerating appliances;
(iii) active or passive control of the compartment humidity in the range from 50% to 80%;
(iv) constructed to reduce the transmission of vibration to the compartment, whether from the refrigerator compressor or from any external source;
(m) ‘multi-use compartment’ means a compartment intended for use at two or more of the temperatures of the compartment types and capable of being set by the end-user to continuously maintain the operating temperature range applicable to each compartment type according to the manufacturer’s instructions; however, where a feature can shift temperatures in a compartment to a different operating temperature range for a period of limited duration only (such as a fast-freeze facility), the compartment is not a ‘multi-use compartment’ as defined by this Regulation;
(n) ‘other compartment’ means a compartment, other than a wine storage compartment, intended for the storage of particular foodstuffs at a temperature warmer than +14 °C;
(o) ‘two-star section’ means part of a food-freezer, a food-freezer compartment, a three-star compartment or a three-star frozen-food storage cabinet which does not have its own individual access door or lid and in which the temperature is not warmer than –12 °C;
(p) ‘chest freezer’, means a food freezer in which the compartment(s) is (are) accessible from the top of the appliance or which has both top-opening type and upright type compartments but where the gross volume of the top-opening type compartment(s) exceeds 75% of the total gross volume of the appliance;
(q) ‘top-opening type’ or ‘chest type’ means a refrigerating appliance with its compartment(s) accessible from the top of the appliance;
(r) ‘upright type’ means a refrigerating appliance with its compartment(s) accessible from the front of the appliance;
(s) ‘fast freeze’ means a reversible feature to be activated by the end-user according to the manufacturer’s instructions, which decreases the storage temperature of the freezer or freezer compartment to achieve faster freezing of unfrozen foodstuffs;
(t) ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific refrigerating appliance model from other models with the same trade mark or supplier’s name.
ANNEX II

Label

1. LABEL FOR HOUSEHOLD REFRIGERATING APPLIANCES CLASSIFIED IN ENERGY EFFICIENCY CLASSES A+++ TO C

![Energy Efficiency Label](image-url)
(1) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier;

III. the energy efficiency class determined in accordance with Annex IX; the head of the arrow containing the energy efficiency class of the household refrigerating appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. annual energy consumption \( (\text{AEC}) \) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 3(2) of Annex VIII;

V. sum of the storage volumes of all compartments that do not merit a star rating (i.e. operating temperature \( > -6 \, ^\circ\text{C} \)), rounded to the nearest integer;

VI. sum of the storage volumes of all frozen-food storage compartments that merit a star rating (i.e. operating temperature \( \leq -6 \, ^\circ\text{C} \)), rounded to the nearest integer and star rating of the compartment with the highest share of that sum; where the household refrigerating appliances has no frozen-food storage compartment(s) the supplier shall declare ‘- L’ instead of a value and leave the position for star rating blank;

VII. airborne acoustical noise emissions expressed in dB(A) re1 pW, rounded to the nearest integer. However, for wine storage appliances, points V and VI are replaced by the rated capacity in number of standard bottles of 75 centilitres that may be fitted in the appliance in accordance with the manufacturer’s instructions.

(2) The design of the label shall be in accordance with point 3(1) of this Annex. By way of derogation, where a model has been awarded an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.
2. LABEL FOR HOUSEHOLD REFRIGERATING APPLIANCES CLASSIFIED IN ENERGY EFFICIENCY CLASSES D TO G
(1) The information listed in point 1(1) shall be included in this label.

(2) The design of the label shall be in accordance with point 3(2) of this Annex. By way of derogation, where a model has been awarded an ‘EU Ecolabel’ under Regulation (EC) No 66/2010, a copy of the EU Ecolabel may be added.
3. LABEL DESIGN

(1) For household refrigerating appliances classified in energy efficiency classes A+++ to C, except for wine storage appliances, the design of the label shall be as the following:
Whereby:

(a) The label shall be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background of the label shall be white.

(c) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfill all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 5 pt - colour: Cyan 100% – round corners: 3,5 mm.
2. **EU logo - colours**: X-80-00-00 and 00-00-X-00.
3. **Energy label**: colour: X-00-00-00.
   - Pictogram as depicted: EU logo + energy label: width: 92 mm, height: 17 mm.
4. **Sub-logos border**: 1 pt - colour: Cyan 100% – length: 92,5 mm.
5. **A-G scale**
   - **Arrow**: height: 7 mm, gap: 0,75 mm - colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00.
   - **Text**: Calibri bold 19 pt, capitals and white; ‘+’ symbols: Calibri bold 13 pt, capitals, white, aligned on a single row.
6. **Energy efficiency class**
   - **Arrow**: width: 26 mm, height: 14 mm, 100% black;
   - **Text**: Calibri bold 29 pt, capitals and white; ‘+’ symbols: Calibri bold 18 pt, capitals, white and aligned on a single row.
7. **Energy**
   - **Text**: Calibri regular 11 pt, capitals, black.
8. **Annual energy consumption**: 
   - **Border**: 3 pt - colour: Cyan 100% - round corners: 3,5 mm.
   - **Value**: Calibri bold 45 pt, 100% black.
   - **Second line**: Calibri regular 17 pt, 100% black.
9. **Storage volumes of all compartments that do not merit a star rating**:
   - **Border**: 3 pt - colour: Cyan 100% - round corners: 3,5 mm.
   - **Value**: Calibri bold 25 pt, 100% black. Calibri regular 17 pt, 100% black.
10 Airborne acoustical noise emissions:
   - **Border**: 3 pt - colour: Cyan 100% - round corners: 3,5 mm.
   - **Value**: Calibri bold 25 pt, 100% black.

11 Storage volumes of all frozen-food storage compartments that merit a star rating:
   - **Border**: 3 pt - colour: Cyan 100% - round corners: 3,5 mm.
   - **Value**: Calibri bold 25 pt, 100% black. Calibri regular 17 pt, 100% black.

12 Supplier’s name or trademark

13 Supplier’s model identifier

14 The supplier’s name or trademark and model identifier should fit in a space of 90 x 15 mm.

15 **Numbering of the Regulation**: Text: Calibri bold 11 pt.
(2) For household refrigerating appliances classified in energy efficiency classes D to G, except for wine storage appliances, the design of the label shall be the following:
Whereby:

The design of the label shall be in accordance with point 3(1) of this Annex except for Number 8 where the following applies:

8 Annual energy consumption:
   - **Border**: 3 pt - colour: Cyan 100% - round corners: 3,5 mm.
   - **Value**: Calibri bold 32 pt, 100% black.
   - **Second line**: Calibri regular 14 pt, 100% black.
(3) For wine storage appliances, the design of the label shall be the following:
Whereby:

(a) The label shall be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background of the label shall be white.

(c) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **EU label border stroke**: 5 pt - colour: Cyan 100% – round corners: 3,5 mm.
2. **EU logo - colours**: X-80-00-00 and 00-00-X-00.
3. **Energy label**: colour: X-00-00-00.
   - **Pictogram** as depicted: EU logo + energy label: width: 92 mm, height: 17 mm.
4. **Sub-logos border**: 1 pt - colour: Cyan 100% - length: 92,5 mm.
5. **A-G scale**
   - **Arrow**: height: 7 mm, gap: 0,75 mm - colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class(es): 00-X-X-00.

ANNEX III
Product fiche

1. The information in the product fiche shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trade mark;
(b) supplier’s model identifier as defined in Annex I, point (t);
(c) category of the household refrigerating appliance model in accordance with point 1 of Annex VIII;
(d) energy efficiency class of the model in accordance with Annex IX;
(e) where the model has been awarded an ‘EU Ecolabel award’ under Regulation (EC) No 66/2010, this information may be included;
(f) annual energy consumption (ÅEC) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 3(2) of Annex VIII. It shall be described as: ‘Energy consumption “XYZ” kWh per year, based on standard test results for 24 hours. Actual energy consumption will depend on how the appliance is used and where it is located’;
(g) storage volume of each compartment and applicable star rating in accordance with point 1(1)VI of Annex II, if any;
(h) the design temperature of ‘other compartments’ within the meaning of point (n) of Annex I. For wine storage compartments, the coldest storage temperature, either pre-set in the compartment or capable of being set by an end-user and capable of being maintained continuously according to the manufacturer’s instructions, shall be given;
(i) the mention ‘frost-free’ for the relevant compartment(s), as defined in point (b) of Annex I;
(j) ‘power cut safe “X” h’ defined as ‘temperature rise time’;
(k) ‘freezing capacity’ in kg/24 h;
(l) ‘climate class’ in accordance with point 1, Table 3 of Annex VIII, and expressed as: ‘Climate class: W [climate class]. This appliance is intended to be used at an ambient temperature between “X” [lowest temperature] °C and “X” [highest temperature] °C’;
(m) airborne acoustical noise emissions expressed in dB(A) re1 pW, rounded to the nearest integer;
(n) if the model is intended to be a built-in appliance, an indication to this effect;
(o) for wine storage appliances, the following information: ‘This appliance is intended to be used exclusively for the storage of wine’. This point shall not apply to household refrigerating appliances that are not specifically designed for wine storage but may nevertheless be used for this purpose, nor to household refrigerating appliances that have a wine storage compartment combined with any other compartment type.

2. One fiche may cover a number of refrigerating appliances models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.
ANNEX IV

Technical documentation

1. The technical documentation referred to in Article 3(c) shall include:
   (a) the name and address of the supplier;
   (b) a general description of the refrigerating appliance model, sufficient for it to be unequivocally and easily identified;
   (c) where appropriate, the references of the harmonised standards applied;
   (d) where appropriate, the other technical standards and specifications used;
   (e) identification and signature of the person empowered to bind the supplier;
   (f) technical parameters for measurements, established in accordance with Annex VIII:
      (i) overall dimensions;
      (ii) overall space required in use;
      (iii) total gross volumes(s);
      (iv) storage volume(s) and total storage volume(s);
      (v) star rating(s) of the frozen-food storage compartment(s);
      (vi) defrosting type;
      (vii) storage temperature;
      (viii) energy consumption;
      (ix) temperature rise time;
      (x) freezing capacity;
      (xi) power consumption;
      (xii) wine storage compartment humidity;
      (xiii) airborne acoustical noise emissions;
   (g) the results of calculations performed in accordance with Annex VIII.

2. Where the information included in the technical documentation file for a particular household refrigerating appliance model has been obtained by calculation on the basis of design, or extrapolation from other equivalent refrigerating appliances, or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent household refrigerating appliance models where the information was obtained on the same basis.
ANNEX V

Information to be provided in the cases where end-users cannot be expected to see the product displayed

1. The information referred to in Article 4(b) shall be provided in the following order:
   (a) the energy efficiency class of the model as defined in Annex IX;
   (b) the annual energy consumption in kWh per year, rounded up to the nearest integer and calculated in accordance with point 3(2) of Annex VIII;
   (c) the storage volume of each compartment and applicable star rating in accordance with point 1(1) VI of Annex II, if any;
   (d) the ‘climate class’ in accordance with point 1, Table 3 of Annex VIII;
   (e) airborne acoustical noise emissions expressed in dB(A) re1 pW, rounded to the nearest integer;
   (f) if the model is intended to be built-in, an indication to this effect;
   (g) for wine storage appliances the following information: ‘This appliance is intended to be used exclusively for the storage of wine’. This point shall not apply to household refrigerating appliances that are not specifically designed for wine storage but may nevertheless be used for this purpose, nor to household refrigerating appliances that have a wine storage compartment combined with any other compartment type.

2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex III.

3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.
ANNEX VI

Measurements

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements shall be made using a reliable, accurate and reproducible measurement procedure that takes into account the generally recognised state-of-the-art measurement methods, including methods set out in documents the reference numbers of which have been published for that purpose in the Official Journal of the European Union.

2. GENERAL CONDITIONS FOR TESTING

The following general conditions for testing apply:

(1) if anti-condensation heaters that can be switched on and off by the end-user are provided, they shall be switched on and - if adjustable - set at maximum heating;

(2) if ‘through-the-door devices’ (such as ice or chilled water/drinks dispensers) which can be switched on and off by the end-user are provided, they shall be switched on during the energy consumption measurement but not operated;

(3) for multi-use appliances and compartments, the storage temperature during the measurement of energy consumption shall be the nominal temperature of the coldest compartment type as claimed for continuous normal use according to the manufacturer’s instructions;

(4) the energy consumption of a household refrigerating appliance shall be determined in the coldest configuration, according to the manufacturer’s instructions for continuous normal use for any ‘other compartment’ as defined in Annex VIII, Table 5.

3. TECHNICAL PARAMETERS

The following parameters shall be established:

(a) ‘overall dimensions’, which are measured to the nearest millimetre;
(b) ‘overall space required in use’, which is measured to the nearest millimetre;
(c) ‘total gross volumes(s)’, which is measured to the nearest whole number of cubic decimetres or litres;
(d) ‘storage volume(s) and total storage volume(s)’, which is measured to the nearest whole number of cubic decimetres or of litres;
(e) ‘defrosting type’;
(f) ‘storage temperature’;
(g) ‘energy consumption’ which is expressed in kilowatt hours per 24 hours (kWh/24h), to three decimal places;
(h) ‘temperature rise time’;
(i) ‘freezing capacity’;
(j) ‘wine storage compartment humidity’, which is expressed as a percentage rounded to the nearest integer; and
(k) ‘airborne acoustical noise emissions’.
ANNEX VII⁴

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Party authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household refrigerating appliance models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household refrigerating appliance models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being

⁴ Annex VII is replaced in accordance with Article 2 and Annex II of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annexes VI and VIII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX VIII

Classification of household refrigerating appliances, method for calculating the equivalent volume and the energy efficiency index

1. CLASSIFICATION OF HOUSEHOLD REFRIGERATING APPLIANCES

Household refrigerating appliances are classified into categories as listed in Table 1. Each category is defined by the specific compartment composition as specified in Table 2 and is independent of the number of doors and/or drawers.

Table 1

Household refrigerating appliances categories

<table>
<thead>
<tr>
<th>Category</th>
<th>Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Refrigerator with one or more fresh-food storage compartments</td>
</tr>
<tr>
<td>2</td>
<td>Refrigerator-cellar, Cellar and Wine storage appliances</td>
</tr>
<tr>

</tr>
</tbody>
</table>

The refrigerating appliance shall be capable of maintaining the required storage temperatures in the different compartments simultaneously and within the permitted temperature deviations (during the for the appropriate climate classes).

Multi-use appliances and compartments shall be capable of maintaining the required storage temperatures of the different compartment types where these temperatures can be set by the end-user according to the manufacturer’s instructions.

### Table 4
**Storage temperatures**

<table>
<thead>
<tr>
<th>Storage temperatures (°C)</th>
<th>Other compartment</th>
<th>Wine storage compartment</th>
<th>Cellar compartment</th>
<th>Fresh-food storage compartment</th>
<th>Chill compartment</th>
<th>One-star compartment</th>
<th>Two-star compartment</th>
<th>Food freezer and three-star compartment/ cabinet</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>( t_{om} )</td>
<td>( t_{wma} )</td>
<td>( t_{cm} )</td>
<td>( t_{1m}, t_{2m}, t_{3m}, )</td>
<td>( t_{cc} )</td>
<td>( t^* )</td>
<td>( t^{**} )</td>
<td>( t^{***} )</td>
</tr>
<tr>
<td></td>
<td>( +5 \leq t_{wma} \leq +20 )</td>
<td>( +8 \leq t_{cm} \leq +14 )</td>
<td>( 0 \leq t_{1m}, t_{2m}, t_{3m} \leq +8; )</td>
<td>( t_{ma} \leq +4 )</td>
<td>( -2 \leq t_{cc} \leq +3 )</td>
<td>( \leq -6 )</td>
<td>( \leq -12 ) (a)</td>
<td>( \leq -18 ) (a)</td>
</tr>
</tbody>
</table>

Notes:
- \( t_{om} \): storage temperature of the other compartment.
- \( t_{wma} \): storage temperature of the wine storage compartment with a variation of 0.5 K.
- \( t_{cm} \): storage temperature of the cellar compartment.
- \( t_{1m}, t_{2m}, t_{3m} \): storage temperatures of the fresh-food compartment.
- \( t_{ma} \): average storage temperature of the fresh-food compartment.
- \( t_{cc} \): instantaneous storage temperature of the chill compartment.
– $t^*$, $t^{**}$, $t^{***}$: maximum temperatures of the frozen-food storage compartments.
– storage temperature for the ice-making compartment and for the ‘0-star’ compartment is below 0 °C.

(*) for frost-free household refrigerating appliances during the defrost cycle, a temperature deviation of no more than 3 K during a period of 4 hours or 20% of the duration of the operating cycle, whichever is the shorter, is allowed.

2. CALCULATION OF THE EQUIVALENT VOLUME

The equivalent volume of a household refrigerating appliance is the sum of the equivalent volumes of all compartments. It is calculated in litres and rounded to the nearest integer as:

$$V_{eq} = \left[ \sum_{c=1}^{n} V_c \times \frac{(25 - T_c)}{20} \times FF_c \times CC \times BI \right]$$

where:
– $n$ is the number of compartments,
– $V_c$ is the storage volume of the compartment(s),
– $T_c$ is the nominal temperature of the compartment(s) as set out in Table 2,
– $25 - T_c/20$ is the thermodynamic factor as set in Table 5,
– $FF_c$, $CC$ and $BI$ are volume correction factors as set out in Table 6.

The thermodynamic correction factor $25 - T_c/20$ is the temperature difference between the nominal temperature of a compartment $T_c$ (defined in Table 2) and the ambient temperature under standard test conditions at +25 °C, expressed as a ratio of the same difference for a fresh-food compartment at +5 °C.

The thermodynamic factors for the compartments described in Annex I, points (g) to (n), are set out in Table 5.

<table>
<thead>
<tr>
<th>Compartment</th>
<th>Nominal temperature</th>
<th>Design temperature</th>
<th>(25 − T_c)/20</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other compartment</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Cellar compartment/Wine storage compartment</td>
<td>+ 12 °C</td>
<td></td>
<td>0.65</td>
</tr>
<tr>
<td>Fresh-food storage compartment</td>
<td>+ 5 °C</td>
<td></td>
<td>1.00</td>
</tr>
<tr>
<td>Chill compartment</td>
<td>0 °C</td>
<td></td>
<td>1.25</td>
</tr>
<tr>
<td>Ice-making compartment and 0-star compartment</td>
<td>0 °C</td>
<td></td>
<td>1.25</td>
</tr>
<tr>
<td>One-star compartment</td>
<td>− 6 °C</td>
<td></td>
<td>1.55</td>
</tr>
<tr>
<td>Two-star compartment</td>
<td>− 12 °C</td>
<td></td>
<td>1.85</td>
</tr>
<tr>
<td>Three-star compartment</td>
<td>− 18 °C</td>
<td></td>
<td>2.15</td>
</tr>
<tr>
<td>Food freezer compartment (four-star compartment)</td>
<td>− 18 °C</td>
<td></td>
<td>2.15</td>
</tr>
</tbody>
</table>
Notes:
(i) for multi-use compartments, the thermodynamic factor is determined by the nominal temperature as given in Table 2 of the coldest compartment type capable of being set by the end-user and maintained continuously according to the manufacturer’s instructions;
(ii) for any two-star section (within a freezer) the thermodynamic factor is determined at $T_c = -12 \, ^\circ C$;
(iii) for other compartments the thermodynamic factor is determined by the coldest design temperature capable of being set by the end-user and maintained continuously according to the manufacturer’s instructions.

<table>
<thead>
<tr>
<th>Correction factor</th>
<th>Value</th>
<th>Conditions</th>
</tr>
</thead>
<tbody>
<tr>
<td>FF (frost-free)</td>

</tr>
<tr>
<td>BI (built-in)</td>
<td>1.2</td>
<td>For built-in appliances under 58 cm in width</td>
</tr>
<tr>
<td></td>
<td>1</td>
<td>Otherwise</td>
</tr>
</tbody>
</table>

Notes:
(i) FF is the volume correction factor for frost-free compartments;
(ii) CC is the volume correction factor for a given climate class. If a refrigerating appliance is classified in more than one climate class, the climate class with the highest correction factor is used for the calculation of the equivalent volume;
(iii) BI is the volume correction factor for built-in appliances.

3. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the Energy Efficiency Index (EEI) of a household refrigerating appliance model, the annual energy consumption of the household refrigerating appliance is compared to its standard annual energy consumption.

(1) The Energy Efficiency Index (EEI) is calculated and rounded to the first decimal place, as:

$$\text{EEI} = \frac{AEC}{SAEC} \times 100$$

where:
- $AEC = \text{annual energy consumption of the household refrigerating appliance}$
- $SAEC = \text{standard annual energy consumption of the household refrigerating appliance}$
(2) The annual energy consumption (\( AE_C \)) is calculated in kWh/year and rounded to two decimal places, as:

\[
AE_C = E_{24h} \times 365
\]

where:
- \( E_{24h} \) is the energy consumption of the household refrigerating appliance in kWh/24h and rounded to three decimal places.

(3) The standard annual energy consumption (\( SAE_C \)) is calculated in kWh/year and rounded to two decimal places, as:

\[
SAE_C = V_{eq} \times M + N + CH
\]

where:
- \( V_{eq} \) is the equivalent volume of the household refrigerating appliance
- \( CH \) is equal to 50 kWh/year for household refrigerating appliances with a chill compartment with a storage volume of at least 15 litres
- the M and N values are given in Table 7 for each household refrigerating appliance category.

**Table 7**

<table>
<thead>
<tr>
<th>Category</th>
<th>M</th>
<th>N</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>0.233</td>
<td>245</td>
</tr>
<tr>
<td>2</td>
<td>0.233</td>
<td>245</td>
</tr>
<tr>
<td>3</td>
<td>0.233</td>
<td>245</td>
</tr>
<tr>
<td>4</td>
<td>0.643</td>
<td>191</td>
</tr>
<tr>
<td>5</td>
<td>0.450</td>
<td>245</td>
</tr>
<tr>
<td>6</td>
<td>0.777</td>
<td>303</td>
</tr>
<tr>
<td>7</td>
<td>0.777</td>
<td>303</td>
</tr>
<tr>
<td>8</td>
<td>0.539</td>
<td>315</td>
</tr>
<tr>
<td>9</td>
<td>0.472</td>
<td>286</td>
</tr>
<tr>
<td>10</td>
<td>(*)</td>
<td>(*)</td>
</tr>
</tbody>
</table>

(*) Note: for Category 10 household refrigerating appliances the M and N values depend on the temperature and star rating of the compartment with the lowest storage temperature capable of being set by the end-user and maintained continuously according to the manufacturer’s instructions. When only an ‘other compartment’ as defined in Table 2 and Annex I, point (n), is present, the M and N values for Category 1 are used. Appliances with three-star compartments or food-freezer compartments are considered to be refrigerator-freezers.
ANNEX IX
Energy efficiency classes

The energy efficiency class of a household refrigerating appliance shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1 from 20 December 2011 until 30 June 2014 and Table 2 from 1 July 2014.

The Energy Efficiency Index of a household refrigerating appliance shall be determined in accordance with point 3 of Annex VIII.

Table 1

ANNEX X\textsuperscript{5}

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 3 of Annex II. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:
(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:
(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

\textsuperscript{5} Annex X is added in accordance with Article 2(3) and Annex II of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.’
DELEGATED REGULATION (EU) 1059/2010 of 28 September 2010
supplementing Directive 2010/30/EU with regard to energy labelling of
household dishwashers

Incorporated and adapted by Ministerial Council Decision 2011/03/MC-EnC of 6 October 2011 on adopting
certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision
2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting
a framework for energy labelling, and certain Delegated Regulations on energy-related products.

Article 1
Subject matter and scope

This Regulation establishes requirements for the labelling of and the provision of supplementary product
information on electric mains-operated household dishwashers and electric mains-operated dishwashers
that can also be powered by batteries, including those sold for non-household use and built-in household
dishwashers.

Article 2
Definitions

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall
apply for the purpose of this Regulation:

(1) “household dishwasher” means a machine which cleans, rinses, and dries dishware, glassware, cutlery
and cooking utensils by chemical, mechanical, thermal, and electric means and which is designed to be
used principally for non-professional purposes;

(2) “built-in household dishwasher” means a household dishwasher intended to be installed in a cabinet,
a prepared recess in a wall or a similar location, requiring furniture finishing;

(3) “place settings” means a defined set of crockery, glass and cutlery for use by one person;

(4) “rated capacity” means the maximum number of place settings together with the serving pieces, as
stated by the supplier, which can be treated in a household dishwasher on the programme selected, when
loaded in accordance with the supplier’s instructions;

(5) “programme” means a series of operations that are pre-defined and are declared as suitable by the
supplier for specified levels of soil or type of load, or both, and together form a complete cycle;

(6) “programme time” means the time that elapses from the initiation of the programme until the com-
pletion of the programme, excluding any end-user-programmed delay;

(7) “cycle” means a complete cleaning, rinsing, and drying process, as defined for the selected programme;

(8) “off-mode” means a condition where the household dishwasher is switched off using appliance con-
trols or switches accessible to and intended for operation by the end-user during normal use to attain the lowest power consumption that may persist for an indefinite time while the household dishwasher is connected to a power source and used in accordance with the supplier’s instructions; where there is no control or switch accessible to the end-user, “off-mode” means the condition reached after the household dishwasher reverts to a steady-state power consumption on its own;

(9) “left-on mode” means the lowest power consumption mode that may persist for an indefinite time after completion of the programme and unloading of the household dishwasher without any further intervention by the end-user;

(10) “equivalent household dishwasher” means a model of household dishwasher placed on the market with the same rated capacity, technical and performance characteristics, energy and water consumption and airborne acoustical noise emissions as another model of household dishwasher placed on the market under a different commercial code number by the same supplier;

(11) “end-user” means a consumer buying or expected to buy a household dishwasher;

(12) “point of sale” means a location where household dishwashers are displayed or offered for sale, hire or hire-purchase.

**Article 3**

**Responsibilities of suppliers**

Suppliers shall ensure that:

(a) each household dishwasher is supplied with a printed label in the format and containing information as set out in Annex I;

(b) a product fiche, as set out in Annex II, is made available;

(c) the technical documentation as set out in Annex III is made available on request to the authorities of the Contracting Parties and to the Secretariat;

(d) any advertisement for a specific model of household dishwasher contains the energy efficiency class, if the advertisement discloses energy-related or price information;

(e) any technical promotional material concerning a specific model of household dishwasher which describes its specific technical parameters includes the energy efficiency class of that model;

(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household dishwasher model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household dishwasher models;

(g) an electronic product fiche as set out in Annex II is made available to dealers for each household dishwasher model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household dishwasher models.¹

¹ Article 3, points (f) and (g) are added in accordance with Article 1(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC.
**Article 4**

**Responsibilities of dealers**

Dealers shall ensure that:

(a) each household dishwasher, at the point of sale, bears the label provided by suppliers in accordance with Article 3(a) on the outside of the front or top of the household dishwasher, in such a way as to be clearly visible;

(b) household dishwashers offered for sale, hire or hire-purchase where the end-user cannot be expected to see the household dishwasher displayed, are marketed with the information provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;

(c) any advertisement for a specific model of household dishwasher contains a reference to its energy efficiency class, if the advertisement discloses energy-related or price information;

(d) any technical promotional material concerning a specific model of household dishwasher which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

**Article 5**

**Measurement methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement methods, which take into account the recognised state-of-the-art measurement methods.

**Article 6**

**Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure laid down in Annex V when assessing the conformity of the declared energy efficiency class, the annual energy consumption, annual water consumption, drying efficiency index, programme time, power consumption in off-mode and left-on mode, duration of the left-on mode and airborne acoustical noise emissions.

**Article 7**

**Revision**

<...>
**Article 8**
Repeal

<...>

**Article 9**
Transitional provisions

1. Articles 3(d), (e), 4(b), (c) and (d) shall not apply to printed advertisement and printed technical promotional material published before **30 April 2013**.

2. Household dishwashers placed on the market before **31 December 2012** shall comply with the provisions set out in Directive 97/17/EC.

3. <...>

**Article 10**
Entry into force and application

This Decision [2011/03/MC-EnC] enters into force upon its adoption <...>³

It shall apply from **31 December 2012**. However, Articles 3(d), (e), 4(b), (c) and (d) shall apply from 30 April 2013.

This Regulation shall be binding in its entirety and directly applicable in all Contracting Parties.

**Article 2(5) of Decision 2011/03/MC-EnC**

The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <...> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.

---

³ The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.
ANNEX I

Label

1. LABEL
(1) The following information shall be included in the label:

I. supplier’s name or trade mark;

II. supplier’s model identifier, where ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific household dishwasher model from other models with the same trade mark or supplier’s name;

III. the energy efficiency class determined in accordance with point 1 of Annex VI; the head of the arrow containing the energy efficiency class of the household dishwasher shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. annual energy consumption (\(A_{\text{E}}\)) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 1(b) of Annex VII;

V. annual water consumption (\(A_{\text{W}}\)) in litres per year, rounded up to the nearest integer and calculated in accordance with point 3 of Annex VII;

VI. the drying efficiency class determined in accordance with point 2 of Annex VI;

VII. rated capacity in standard place settings, for the standard cleaning cycle;

VIII. airborne acoustical noise emissions expressed in dB(A) re 1 pW and rounded to the nearest integer.

(2) The design of the label shall be in accordance with point 2. By way of derogation, where a model has been granted an ‘EU Ecolabel’ under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.
2. LABEL DESIGN
The design of the label shall be as in the figure below.
Whereby

(a) The label shall be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours shall be CMYK – cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

1. **Border stroke:** 5 pt - colour: Cyan 100% - round corners: 3,5 mm.
2. **EU logo - colours:** X-80-00-00 and 00-00-X-00.
3. **Energy logo: colour:** X-00-00-00. Pictogram as depicted; EU logo and energy logo (combined): width: 92 mm, height: 17 mm.
4. **Sub-logos border:** 1 pt - colour: Cyan 100% - length: 92,5 mm.
5. **A-G scale**
   - **Arrow:** height: 7 mm, gap: 0,75 mm - colours:
     - Highest class: X-00-X-00,
     - Second class: 70-00-X-00,
     - Third class: 30-00-X-00,
     - Fourth class: 00-00-X-00,
     - Fifth class: 00-30-X-00,
     - Sixth class: 00-70-X-00,
     - Last class: 00-X-X-00.
   - **Text:** Calibri bold 18 pt, capitals and white; ‘+’ symbols: Calibri bold 12 pt, capitals, white, aligned on a single row.
6. **Energy efficiency class**
   - **Arrow:** width: 26 mm, height: 14 mm, 100% black.
   - **Text:** Calibri bold 29 pt, capitals and white; ‘+’ symbols: Calibri bold 18 pt, capitals, white, aligned on a single row.
7. **Energy**
   - **Text:** Calibri regular 11 pt, capitals, 100% black.
8. **Annual energy consumption**
   - **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
   - **Value:** Calibri bold 37 pt, 100% black.
   - **Second line:** Calibri regular 17 pt, 100% black.
9. **Annual water consumption:**
   - **Pictogram** as depicted
   - **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
10 Drying efficiency class:
- **Value**: Calibri bold 24 pt, 100% black; and Calibri regular 16 pt, 100% black.
- **Pictogram** as depicted
- **Border**: 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
- **Value**: Calibri regular 16 pt, horizontal scale 75%, 100% black; and Calibri bold 22 pt, horizontal scale 75%, 100% black.

11 Rated capacity:
- **Pictogram** as depicted
- **Border**: 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
- **Value**: Calibri bold 24 pt, 100% black; and Calibri regular 16 pt, 100% black.

12 Noise emissions:
- **Pictogram** as depicted
- **Border**: 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
- **Value**: Calibri bold 24 pt, 100% black; and Calibri regular 16 pt, 100% black.

13 Supplier’s name or trade mark

14 Supplier’s model identifier

15 The supplier’s name or trademark and model identifier should fit in a space of 92 × 15 mm.

16 **Numbering of the Regulation**: Calibri bold 9 pt, 100% black.
ANNEX II

Product fiche

1. The information in the product fiche of the household dishwasher shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier’s name or trade mark;
(b) supplier’s model identifier, meaning the code, usually alphanumeric, which distinguishes a specific household dishwasher model from other models with the same trade mark or supplier’s name;
(c) rated capacity, in standard place settings, for the standard cleaning cycle;
(d) energy efficiency class, in accordance with point 1 of Annex VI;
(e) where the household dishwasher has been awarded an ‘EU Ecolabel’ under Regulation (EC) No 66/2010, this information may be included;
(f) annual energy consumption \((AE_c)\) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 1(b) of Annex VII. It shall be described as ‘Energy consumption “X” kWh per year, based on 280 standard cleaning cycles using cold water fill and the consumption of the low power modes. Actual energy consumption will depend on how the appliance is used.’;
(g) the energy consumption \((E_t)\) of the standard cleaning cycle;
(h) the power consumption in off-mode and left-on mode \((P_o\) and \(P_l)\);
(i) annual water consumption \((AW_c)\), in litres per year, rounded up to the nearest integer and calculated in accordance with point 3 of Annex VII; it shall be described as: ‘Water consumption “X” litres per year, based on 280 standard cleaning cycles. Actual water consumption will depend on how the appliance is used.’;
(j) drying efficiency class determined in accordance with point 2 of Annex VI expressed as ‘Drying efficiency class “X” on a scale from G (least efficient) to A (most efficient)’. Where this information is provided in a table, this may be expressed by other means provided it is clear that the scale is from G (least efficient) to A (most efficient);
(k) indication that the ‘standard programme’ is the standard cleaning cycle to which the information in the label and the fiche relates, that this programme is suitable to clean normally soiled tableware, and that it is the most efficient programme in terms of combined energy and water consumption;
(l) programme time for the standard cleaning cycle, in minutes and rounded to the nearest integer;
(m) the duration of the left-on mode \((T_l)\) if the household dishwasher is equipped with a power management system;
(n) airborne acoustical noise emissions expressed in dB(A) re 1 pW and rounded to the nearest integer;
(o) if the household dishwasher is intended to be built-in, an indication to this effect.

2. One fiche may cover a number of household dishwasher models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.
ANNEX III

Technical documentation

1. The technical documentation referred to in Article 3(c) shall include:
   (a) the name and address of the supplier;
   (b) a general description of the dishwasher model, sufficient for it to be unequivocally and easily identified;
   (c) where appropriate, the references of the harmonised standards applied;
   (d) where appropriate, the other technical standards and specifications used;
   (e) identification and signature of the person empowered to bind the supplier;
   (f) technical parameters for measurements as follows:
      (i) energy consumption;
      (ii) water consumption;
      (iii) programme time;
      (iv) drying efficiency;
      (v) power consumption in ‘off-mode’;
      (vi) power consumption in ‘left-on mode’;
      (vii) ‘left-on mode’ duration;
      (viii) airborne acoustical noise emissions;
   (g) the results of calculations performed in accordance with Annex VII.

2. Where the information included in the technical documentation file for a particular household dishwasher model has been obtained by calculation on the basis of design, or extrapolation from other equivalent household dishwashers, or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent household dishwasher models where the information was obtained on the same basis.
ANNEX IV

Information to be provided in the cases where end-users cannot be expected to see the product displayed

1. The information referred to in Article 4(b) shall be provided in the following order:
   (a) the energy efficiency class, as defined in point 1 of Annex VI;
   (b) the rated capacity in standard place settings for the standard cleaning cycle;
   (c) the annual energy consumption \( (A_{E_1}) \) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 1(b) of Annex VII;
   (d) the annual water consumption \( (A_{W_1}) \) in litres per year, rounded up to the nearest integer and calculated in accordance with point 3 of Annex VII;
   (e) the drying efficiency class in accordance with point 2 of Annex VI;
   (f) airborne acoustical noise emissions in dB(A) re 1 pW and rounded to the nearest integer;
   (g) if the model is intended to be built-in, an indication to this effect.

2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex II.

3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.
ANNEX V⁴

Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

(1) The Contracting Parties authorities shall verify one single unit of the model.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household dishwasher models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.

(5) The model shall be considered to comply with the applicable requirements if, for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household dishwasher models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being

---

⁴ Annex V is replaced in accordance with Article 1 and Annex I of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
taken on the non-compliance of the model according to points 3 and 6.

Contracting Parties’ authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

ANNEX VI
Energy efficiency classes and drying efficiency classes

1. ENERGY EFFICIENCY CLASSES
The energy efficiency class of a household dishwasher shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1.

The Energy Efficiency Index (EEI) of a household dishwasher shall be calculated in accordance with point 1 of Annex VII.

Table 1

ANNEX VII
Method for calculating the energy efficiency index, the drying efficiency index and water consumption

1. CALCULATION OF THE ENERGY EFFICIENCY INDEX
For the calculation of the Energy Efficiency Index (EEI) of a household dishwasher model, the annual energy consumption of the household dishwasher is compared to its standard annual energy consumption.

(a) The Energy Efficiency Index (EEI) is calculated as follows and rounded to one decimal place:

\[
EEI = \frac{AE_C}{SAE_C} \times 100
\]

where:
- \(AE_C\) = annual energy consumption of the household dishwasher;
- \(SAE_C\) = standard annual energy consumption of the household dishwasher.

(b) The annual energy consumption (\(AE_C\)) is calculated in kWh/year as follows and rounded to two decimal places:

\[
AE_C = E_t \times 280 + \frac{P_o \times \frac{525 \times 600 - (T_t \times 280)}{2} + P_l \times \frac{525 \times 600 - (T_t \times 280)}{2}}{60 \times 1000}
\]

where:
- \(E_t\) = energy consumption for the standard cycle, in kWh and rounded to three decimal places;
- \(P_l\) = power in ‘left-on mode’ for the standard cleaning cycle, in W and rounded to two decimal places;
- \(P_o\) = power in ‘off-mode’ for the standard cleaning cycle, in W and rounded to two decimal places;
- \(T_t\) = programme time for the standard cleaning cycle, in minutes and rounded to the nearest minute;
- \(280\) = total number of standard cleaning cycles per year;

(ii) Where the household dishwasher is equipped with a power management system, with the household dishwasher reverting automatically to ‘off-mode’ after the end of the programme, \(AE_C\) is calculated taking into consideration the effective duration of ‘left-on mode’, according to the following formula:

\[
AE_C = E_t \times 280 + \frac{\{(P_l \times T_t \times 280) + P_o \times [525 \times 600 - (T_t \times 280) - (T_t \times 280)]\}}{60 \times 1000}
\]

where:
- \(T_t\) = measured time in ‘left-on mode’ for the standard cleaning cycle, in minutes and rounded to the nearest minute;
- \(280\) = total number of standard cleaning cycles per year.
(c) The standard annual energy consumption ($SAE_C$) is calculated in kWh/year as follows and rounded to two decimal places:

(i) for household dishwashers with rated capacity $ps \geq 10$ and width $> 50$ cm:

$$SAE_C = 25.2 \times ps + 378$$

(ii) for household dishwashers with rated capacity $ps \leq 9$ and household dishwashers with rated capacity $9 < ps \leq 11$ and width $\leq 50$ cm:

$$SAE_C = 25.2 \times ps + 126$$

where:

- $ps =$ number of place settings.

2. CALCULATION OF THE DRYING EFFICIENCY INDEX

For the calculation of the Drying Efficiency Index ($I_D$) of a household dishwasher model, the drying efficiency of the household dishwasher is compared to the drying efficiency of a reference dishwasher, where the reference dishwasher shall have the characteristics indicated in the generally recognised state-of-the-art measurement methods, including methods set out in documents, the reference numbers of which have been published for that purpose in the Official Journal of the European Union.

(a) The Drying Efficiency Index ($I_D$) is calculated as follows and rounded to two decimal places:

$$ln I_D = \frac{1}{n} \times \sum_{i=1}^{n} ln \left( \frac{D_{T,i}}{D_{R,i}} \right)$$

$$I_D = exp(ln I_D)$$

where:

- $D_{T,i} =$ drying efficiency of the household dishwasher under test for one test cycle ($i$);
- $D_{R,i} =$ drying efficiency of the reference dishwasher for one test cycle ($i$);
- $n =$ number of test cycles, $n \geq 5$.

(b) The drying efficiency ($D$) is the average of the wet score of each load item after completion of a standard cleaning cycle. The wet score is calculated as shown in Table 1:
Table 1

<table>
<thead>
<tr>
<th>Number of water traces ($W_t$) or wet streak ($W_s$)</th>
<th>Total wet area ($A_w$) in mm²</th>
<th>Wet score</th>
</tr>
</thead>
<tbody>
<tr>
<td>$W_t = 0$ and $W_s = 0$</td>
<td>Not applicable</td>
<td>2 (most efficient)</td>
</tr>
<tr>
<td>$1 &lt; W_t \leq 2$ or $W_s = 1$</td>
<td>$A_w &lt; 50$</td>
<td>1</td>
</tr>
<tr>
<td>$2 &lt; W_t$ or $W_s = 2$ or $W_s = 1$ and $W_t = 1$</td>
<td>$A_w &gt; 50$</td>
<td>0 (least efficient)</td>
</tr>
</tbody>
</table>

3. Calculation of the Annual Water Consumption

The annual water consumption ($AW_c$) of a household dishwasher is calculated, in litres and rounded up to the nearest integer, as:

$$AW_c = W_t \times 280$$

where:

$W_t$ = water consumption for the standard cleaning cycle, in litres and rounded to one decimal place.
ANNEX VIII

Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:
(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:
(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
(b) the image shall link to the label;
(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

5 Annex VIII is added in accordance with Article 1(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC
(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate “Product fiche”. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.
**DIRECTIVE 96/60/EC of 19 September 1996 implementing Directive 92/75/EEC with regard to energy labelling of household combined washer-driers**

*The adaptations made by Ministerial Council Decision 2010/02/MC-EnC are highlighted in bold and blue.*

**Article 1**

1. This Directive shall apply to electric mains operated household combined washer-driers. Appliances that can also use other energy sources are excluded.

2. The information required by this Directive shall be measured in accordance with harmonized standards, the reference numbers of which have been published in the Official Journal of the European Communities and for which Contracting Parties have published the reference numbers of the national standards transposing those harmonized standards. Throughout this Directive any provisions requiring the giving of information relating to noise shall apply only where that information is required pursuant to Article 3 of Council Directive 86/594/EEC. This information, where required, shall be measured in accordance with that Directive.

3. The harmonized standards referred to in paragraph 2 shall be drawn up under mandate from the Commission in accordance with Directive 83/189/EEC.

4. In this Directive, except where the context otherwise requires, expressions used have the same meaning as in Directive 92/75/EEC.

**Article 2**

1. The technical documentation referred to in Article 2 (3) of Directive 92/75/EEC shall include:
   - the name and address of the supplier,
   - a general description of the model, sufficient for it to be uniquely identified,
   - information, including drawings as relevant, on the main design features of the model and in particular items which appreciably affect its energy consumption,
   - reports of relevant measurement tests carried out on the model under the test procedures of the harmonized standards referred to in Article 1 (2) of this Directive,
   - operating instructions, if any.

2. The label referred to in Article 2 (1) of Directive 92/75/EEC shall be as specified in Annex I to this Directive. The label shall be placed on the outside of the front or top of the appliance, in such a way as to be clearly visible and not obscured.

3. The content and format of the fiche referred to in Article 2 (1) of Directive 92/75/EEC shall be as specified
PART II ACQUIS COMMUNAUTAIRE / ENERGY EFFICIENCY / Regulation 96/60/EC

in Annex II to this Directive.

4. In the circumstances covered by Article 5 of Directive 92/75/EEC, and where the offer for sale, hire or hire purchase is provided by means of a printed communication, such as a mail order catalogue, then that printed communication shall include all the information specified in Annex III to this Directive.

5. The energy efficiency class of an appliance, and its washing performance class, shall be as determined in accordance with Annex IV.

**Article 3**

**Contracting Parties** shall take all necessary measures to ensure that all suppliers and dealers established in their territory fulfil their obligations under this Directive.

**Article 4**

1. **The Contracting Parties shall implement this Directive by 31 December 2011.** However, **Contracting Parties** shall, until **30 June 2012**, permit:
   - the placing on the market, the commercialization and/or the display of products and
   - the distribution of printed communications referred to in Article 2 (4) which do not conform with this Directive.

When **Contracting Parties** adopt these provisions, these shall contain a reference to this Directive or shall be accompanied by such reference at the time of their official publication. The procedure for such reference shall be adopted by **Contracting Parties**.

2. **Contracting Parties** shall communicate to the **Secretariat** the text of the provisions of national law which they adopt in the field covered by this Directive.

**Article 5 and 6**

This Decision [2010/02/MC-EnC] enters into force upon its adoption and is addressed to the **Contracting Parties**.

**Article 2(5) of Decision 2010/02/MC-EnC**

The **Secretariat** shall monitor and review the implementation of [this] Directive … and shall submit a progress report to the Permanent High Level Group by **30 June 2012**.

This Directive will be repealed and new provisions laid down by Delegated Regulation, upon proposal by European Commission and adoption by Ministerial Council of the Energy Community

1 The text displayed here corresponds to Article 3 of Decision 2010/02/MC-EnC.
ANNEX I
The label

1. The label shall be the appropriate language version, chosen from the following illustration
Notes concerning the label

2. The following notes define the information to be included:

Note:
I. Supplier's name or trade mark.
II. Supplier's model identifier.
III. The energy efficiency class of the model, determined in accordance with Annex IV. This indicator letter shall be placed at the same level as the relevant arrow.
IV. Without prejudice to any requirements under the Community Eco-label scheme, where a model has been granted a 'Community Eco-label' pursuant to Council Regulation (EEC) No 880/92, a copy of the Eco-label may be added here. The 'washer-drier label design guide' referred to below, explains how the Eco-label may be included in the label.
V. Energy consumption in kWh per complete operating (washing, spinning and drying) cycle using standard 60°C cotton cycle, and 'dry cotton' drying cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).
VI. Energy consumption in kWh per washing (washing and spinning only) cycle using standard 60°C cotton cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).
VII. Washing performance class determined in accordance with Annex IV.
VIII. Maximum spin speed attained for standard 60°C cotton cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).
IX. Capacity (in kg) of appliance for standard 60°C cotton cycle (without drying), determined in accordance with the harmonized standards referred to in Article 1 (2).
X. Capacity (in kg) of appliance for 'dry cotton' (drying) cycle, determined in accordance with the harmonized standards referred to in Article 1 (2).
XI. Water consumption, in litres, per complete operating (washing, spinning and drying) cycle using standard 60°C cotton washing cycle and 'dry cotton' drying cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).
XII. Where applicable, noise during washing, spinning and drying cycles using standard 60°C cotton washing cycle and dry cotton' drying cycle, determined in accordance with Council Directive 86/594/EEC. The equivalent terms in other languages to those given above are set out in Annex V.

Printing
3. The following defines certain aspects of the label:
Colours used:
CMYK cyan, magenta, yellow, black.
Ex. 07XO: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black. Arrows
- A: XOXO
- B: 70XO
- C 30XO
- D: OOXO
- E: 03XO
- F: 07XO
- G: OXXO
Outline colour X070
All text is in black. The background is white.
Complete printing information is contained in a, Washer-drier energy label design guide’, which is for information only, obtainable from:
The Secretary of the Committee on energy labelling and standard product information for household appliances,
Directorate-General Energy XVII,
European Commission,
Rue de la Loi/Wetstraat 200,
B-1049 Brussels.
ANNEX II
The fiche

The fiche shall contain the following information. The information may be given in the form of a table covering a number of models supplied by the same supplier. The information shall be given in the order specified below unless it is contained in a more general description of the appliance:

1. Supplier's trade mark.
2. Supplier's model identifier.
3. The energy efficiency class of the model determined in accordance with Annex IV. Expressed as 'Energy efficiency class ... on a scale of A (more efficient) to G (less efficient)'. Where this information is provided in a table this may be expressed by other means provides it is clear that the scale is from A (more efficient) to G (less efficient).
4. Where the information is provides in a table, and where some of the appliances listed in the table have been granted a 'Community Eco-label' pursuant to Regulation (EEC) No 880/92, this information may be included here. In this case the row heading shall state 'Community Eco-label', and the entry shall consist of a copy of the Eco-label mark. This provision is without prejudice to any requirements under the EU Eco-label scheme.
5. Energy consumption for washing, spinning, and drying in kWh per complete operating cycle as defined in Annex I note V.
6. Energy consumption for washing and spinning only, in kWh per washing cycle as defined in Annex I note VI.
7. Washing performance class determined in accordance with Annex IV. Expressed as 'Washing performance class ... on a scale of A (higher) to G (lower)'. This may be expressed by other means provided it is clear that the scale is from A (higher) to G (lower).
8. Water extraction efficiency for a standard 60° C cotton washing cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2). Expressed as 'Water remaining after spin ... % (as a proportion of dry weight of wash)'.
9. Maximum spin speed attained as defined in Annex I note VIII.
10. Washing capacity of appliance for a standard 60° C cotton washing cycle, as defined in Annex I note IX.
11. Drying capacity of appliance for a standard 'dry cotton' drying cycle, as defined in Annex I note X.
12. Water consumption for washing, spinning and drying, in litres per complete operating cycle as defined in Annex I note XI.
13. Water consumption for washing and spinning only, in litres, per standard 60°C cotton washing (and spinning) cycle determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).
14. Washing and drying time. Programme time for complete operating cycle (60° C cotton washing and 'dry cotton' drying), for rated washing capacity, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).
15. Suppliers may include information under points 5 to 14 above in respect of other wash and/or drying cycles.
16. The consumption of energy and water equal to 200 times the consumption expressed in points 5 (energy) and 12 (water). This shall be expressed as 'estimated annual consumption for a four-person household, always using the drier (200 cycles)'.

17. The consumption of energy and water equal to 200 times the consumption expressed in points 6 (energy) and 13 (water). This shall be expressed as 'estimated annual consumption for four-person household, never using the drier (200 cycles)'.

18. Where applicable, noise during washing, spinning and drying cycles using standard 60° C cotton washing cycle and 'dry cotton' drying cycle, in accordance with Directive 86/594/EEC.

The information on the label may be given in the form of a representation of the label in color or in black and white.

Note:
The equivalent terms in other languages to those given above are set out in Annex V.
ANNEX III

Mail order and other distance selling

Mail order catalogues and other printed communications referred to in Article 2 (4) shall contain the following information, given in the order specified:

1. Energy efficiency class (Annex 11 point 3)
2. Energy consumption (washing, spinning, drying) (Annex 11 point 5)
3. Energy consumption (washing, spinning only) (Annex 11 point 6)
4. Washing performance class (Annex 11 point 7)
5. Water extraction efficiency (Annex 11 point 8)
6. Maximum spin speed (Annex 11 point 9)
7. Capacity (washing) (Annex 11 point 10)
8. Capacity (drying) (Annex 11 point 11)
9. Water consumption (washing, spinning, drying) (Annex 11 point 12)
10. Water consumption (washing, spinning only) (Annex 11 point 13)
11. Estimated annual consumption for a four-person household, always using the drier (200 cycles) (Annex 11 point 16)
12. Estimated annual consumption for a four-person household, never using the drier (200 cycles) (Annex 11 point 17)
13. Noise, where applicable (Annex 11 point 18)

Where other information contained in the fiche is provided, it shall be in the form specified in Annex 11 and shall be included in the above table in the order required for the fiche.

Note:
The equivalent terms in other languages to those given above are set out in Annex V.
ANNEX IV

Energy efficiency class

The energy efficiency class of an appliance shall be determined in accordance with Table 1:

Table 1

<table>
<thead>
<tr>
<th>Energy Efficiency class</th>
<th>Energy consumption ‘C’ in kWh per kg complete operating (washing, spinning and drying) cycle using standard 60°C cotton cycle, and ‘dry cotton’ drying cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2)</th>

PART II

ACQUIS COMMUNAUTAIRE

STATISTICS
REGULATION (EC) 1099/2008 of 22 October 2008 on energy statistics

Article 1

Subject matter and scope

1. This Regulation establishes a common framework for the production, transmission, evaluation and dissemination of comparable energy statistics in the Community.

2. This Regulation shall apply to statistical data concerning energy products and their aggregates in the Community.

Article 2

Definitions

For the purpose of this Regulation, the following definitions shall apply:

(a) “Community statistics” mean Community statistics as defined in the first indent of Article 2 of Regulation (EC) No 322/97;

(b) “production of statistics” means production of statistics as defined in the second indent of Article 2 of Regulation (EC) No 322/97;

(c) “Commission (Eurostat)” means the Community authority as defined in the fourth indent of Article 2 of Regulation (EC) No 322/97;

(d) “energy products” mean combustible fuels, heat, renewable energy, electricity, or any other form of energy;

(e) “aggregates” mean data aggregated at national level on the treatment or use of energy products, namely production, trade, stocks, transformation, consumption, and structural characteristics of the energy system such as installed capacities for electricity generation or production capacities for oil products;

(f) “quality of data” means the following aspects of statistical quality: relevance, accuracy, timeliness and punctuality, accessibility and clarity, comparability, coherence and completeness.
**Article 3**

**Data sources**

1. While applying the principles of maintaining a reduced burden on respondents and of administrative simplification, Member States shall compile data concerning energy products and their aggregates in the Community from the following sources:

(a) specific statistical surveys addressed to the primary and transformed energy producers and traders, distributors and transporters, importers and exporters of energy products;

(b) other statistical surveys addressed to final energy users in the sectors of manufacturing industry, transport, and other sectors, including households;

(c) other statistical estimation procedures or other sources, including administrative sources, such as regulators of the electricity and gas markets.

2. Member States shall lay down the detailed rules concerning the reporting of the data needed for the national statistics as specified in Article 4 by undertakings and other sources.

3. The list of data sources may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

**Article 4**

**Aggregates, energy products and the transmission frequency of national statistics**

1. The national statistics to be reported shall be as set out in the Annexes. They shall be transmitted with the following frequencies:

(a) annual, for the energy statistics in Annex B;

(b) monthly, for the energy statistics in Annex C;

(c) short-term monthly, for the energy statistics in Annex D.

2. Applicable clarifications or definitions of the technical terms used are provided in the individual Annexes and also in Annex A (Clarifications of terminology).

3. The data to be forwarded and the applicable clarifications or definitions may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

**Article 5**

**Transmission and dissemination**

1. Member States shall transmit to the Commission (Eurostat) the national statistics referred to in Article 4.

2. The arrangements for their transmission, including the applicable time limits, derogations and exemptions therefrom, shall be as set out in the Annexes.

3. The arrangements for the transmission of the national statistics may be modified in accordance with

---

1 Decision 2012/02/MC-EnC incorporating this Regulation is addressed to Contracting Parties.
the regulatory procedure with scrutiny referred in Article 11(2).

4. At the duly justified request of a Member States, additional exemptions or derogations may be granted by the Commission in accordance with the regulatory procedure referred to in Article 11(3), for those parts of the national statistics for which the collection would lead to an excessive burden on respondents.

5. The Commission (Eurostat) shall disseminate yearly energy statistics by 31 January of the second year following the reported period.

Article 6
Quality assessment and reports

1. Member States shall ensure the quality of the data transmitted.

3. For the purposes of this Regulation, the following quality assessment dimensions shall apply to the data to be transmitted:
   (a) “relevance” shall refer to the degree to which statistics meet current and potential needs of the users;
   (b) “accuracy” shall refer to the closeness of estimates to the unknown true values;
   (c) “timeliness” shall refer to the delay between the availability of the information and the event or phenomenon it describes;
   (d) “punctuality” shall refer to the delay between the date of the release of the data and the target date when it should have been delivered;
   (e) “accessibility” and “clarity” shall refer to the conditions and modalities by which users can obtain, use and interpret data;
   (f) “comparability” shall refer to the measurement of the impact of differences in applied statistical concepts and measurement tools and procedures where statistics are compared between geographical areas, sectoral domains or over time;
   (g) “coherence” shall refer to the adequacy of the data to be reliably combined in different ways and for various uses.

4. Every five years, Member States shall provide the Commission (Eurostat) with a report on the quality of the data transmitted as well as on any methodological changes that have been made.

5. Within six months of receipt of a request from the Commission (Eurostat), and in order to allow it to assess the quality of the data transmitted, Member States shall send to the Commission (Eurostat) a report containing any relevant information concerning the implementation of this Regulation.
Article 7
Time reference and frequency

Member States shall compile all data specified in this Regulation from the beginning of the calendar year following the adoption of this Regulation, and shall transmit them from then onwards with the frequencies laid down in Article 4(1).

Article 8
Annual nuclear statistics

The Commission (Eurostat) shall, in cooperation with the nuclear energy sector in the EU, define a set of annual nuclear statistics which shall be reported and disseminated from 2009 onwards, that year being the first reported period, without prejudice to confidentiality, where it is necessary, and avoiding any duplication of data collection, while at the same time keeping production costs low and the reporting burden reasonable.

The set of annual nuclear statistics shall be established and may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

Article 9
Renewable energy statistics and final energy consumption statistics

1. With a view to improving the quality of renewable energy and final energy consumption statistics, the Commission (Eurostat), in collaboration with the Member States, shall make sure that these statistics are comparable, transparent, detailed and flexible by:

(a) reviewing the methodology used to generate renewable energy statistics in order to make available additional, pertinent, detailed statistics on each renewable energy source, annually and in a cost-effective manner. The Commission (Eurostat) shall present and disseminate the statistics generated from 2010 (reference year) onwards;

(b) reviewing and determining the methodology used at national and Community level to generate final energy consumption statistics (sources, variables, quality, costs) based on the current situation, existing studies and feasibility pilot studies, as well as cost-benefit analyses yet to be conducted, and evaluating the findings of the pilot studies and cost-benefit analyses with a view to establishing breakdown keys for final energies by sector and main energy uses and gradually integrating the resulting elements into the statistics from 2012 (reference year) onwards.

2. The set of renewable energy statistics may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

3. The set of final energy consumption statistics shall be established and may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

Article 10
Implementing measures

1. The following measures necessary for implementation of this Regulation, designed to amend non-essential elements of this Regulation, inter alia, by supplementing it, shall be adopted in accordance with the regulatory procedure with scrutiny referred to in Article 11(2):

(a) modifications to the list of data sources (Article 3(3));
(b) modifications to the national statistics and to the applicable clarifications or definitions (Article 4(3));
(c) modifications to the transmission arrangements (Article 5(3));
(d) establishment of and modifications to the annual nuclear statistics (Article 8(2));
(e) modifications to the renewable energy statistics (Article 9(2));
(f) establishment of and modifications to the final energy consumption statistics (Article 9(3)).

2. Additional exemptions or derogations (Article 5(4)) shall be granted in accordance with the regulatory procedure referred to in Article 11(3).

3. Consideration is to be given to the principle that additional costs and the reporting burden remain within reasonable limits.

Article 11
Committee
,…>

Article 12
Entry into force and Addressees

This Decision [2012/02/MC-EnC] enters into force upon its adoption and is addressed to the Contracting Parties.

Article 1 of Decision 2012/02/MC-EnC

Article 3 of Decision 2012/02/MC-EnC
The Secretariat shall monitor and review the preparation of the implementation of Regulation (EC) No 1099/2008,…> in the Contracting Parties and shall submit an annual progress report to the Ministerial Council, the first of which shall be submitted in 2013.

Article 1 of Decision 2013/02/MC-EnC
Council on energy statistics, as regards the implementation of updates for the monthly and annual energy statistics not later than 31 December 2013.

**Article 1 of Decision 2015/02/MC-EnC**

**Article 1 of Decision 2021/12/MC-EnC**

The annual and monthly statistics, as set out in the Annexes to Regulation (EU) 2019/2146, shall be reported for the reference period starting from 1 January 2022.

The monthly statistics related to Annex D, point 2 on Crude oil imports and supply shall be reported for the reference months starting from January 2023.

**Article 3 of Decision 2021/12/MC-EnC**
Commission Regulations amending Regulation (EC) No 1099/2008 of the European Parliament and of the Council may need to be adapted to the institutional framework of the Energy Community. They shall be adapted and adopted by the Permanent High Level Group following the procedure laid down in Article 79 of the Treaty establishing the Energy Community.
ANNEX A

CLARIFICATIONS OF TERMINOLOGY

This Annex supplies explanations, geographical notes and definitions of terms that are used in the other annexes, unless specified differently in these annexes.

1. GEOGRAPHICAL NOTES
For statistical reporting purposes only, the following geographical definitions apply:
- Australia excludes its external territories,
- Denmark excludes the Faeroe Islands and Greenland,
- France includes Monaco and the French overseas departments of Guadeloupe, Martinique, Guyane, Reunion and Mayotte,
- Italy includes San Marino and the Vatican (Holy See),
- Japan includes Okinawa
- Portugal includes the Açores and Madeira,
- Spain includes the Canary Islands, the Balearic Islands, and Ceuta and Melilla,
- Switzerland does not include Liechtenstein,
- United States includes the 50 states, the District of Columbia, the US Virgin Islands, Puerto Rico and Guam.

2. AGGREGATES
Producers of electricity and heat are classified according to the purpose of production:
- main activity producers are privately- or publicly owned producers that generate electricity and/or heat for sale to third parties as their principal activity,
- autoproducers are privately- or publicly owned producers that generate electricity and/or heat wholly or partly for their own use as an activity which supports their primary activity.

Note: the Commission may further clarify the terminology by adding relevant NACE (3) references in accordance with the regulatory procedure with scrutiny referred to in Article 11(2), after a revision of the NACE classification has entered into force.

2.1. Supply
2.1.1. Production/Indigenous Production
Quantities of fuels extracted or produced are calculated after any operation that removes inert matter. Production includes the quantities consumed by the producer during the production process (e.g. for heating or operation of equipment and auxiliaries), as well as supplies to other producers of energy for transformation or other uses.

‘Indigenous production’ means production from resources within a specific territory — national territory of the reporting country.

3 NACE Rev. 2 – Statistical Classification of Economic Activities in the European Community, Rev. 2 (2008)
2.1.2. Recovered products

Applies to hard coal only. Slurries and waste-heap shale recovered by mines.

2.1.3. Receipts from other sources

Quantities of fuels whose production is covered in other fuel reporting, but which are mixed in other fuel and consumed as a mix. Further details of this component are to be provided as:

- Receipts from other sources: Coal
- Receipts from other sources: Oil and petroleum products
- Receipts from other sources: Natural Gas
- Receipts from other sources: Renewables

2.1.4. Imports/Exports

Unless otherwise specified, ‘imports’ refer to ultimate origin (the country in which the energy product was produced) for use in the country and ‘exports’ refer to the ultimate country of consumption of the produced energy product. Amounts are considered as imported or exported when they have crossed the political boundaries of the country, whether customs clearance has taken place or not.

Where no origin or destination can be reported ‘Non-specified/Other’ may be used.

2.1.5. International Marine Bunkers

Quantities of fuels delivered to ships of all flags that are engaged in international navigation. The international navigation may take place at sea, on inland lakes and waterways, and in coastal waters. The following are excluded:

- consumption by ships engaged in domestic navigation; the domestic/international split should be determined based on port of departure and port of arrival, and not by the flag or nationality of the ship;
- consumption by fishing vessels;
- consumption by military forces.

2.1.6. Stock Changes

The difference between the opening stock level and closing stock level for stocks held on national territory. Unless specified differently, a stock build is shown as a negative number and a stock draw is shown as a positive number.

2.1.7. Opening and Closing Total Stocks On National Territory

All stocks on national territory, including stocks held by governments, by major consumers or by stockholding organisations, stocks held on board incoming ocean vessels, stocks held in bonded areas and stocks held for others, whether under bilateral government agreement or not. Opening and closing refers to the first and last day of the reporting period, respectively. Stock includes stocks held in all types of special storage facilities, either on the surface or underground.

2.1.8. Direct use

Oil (Crude oil and petroleum products) used directly without being processed in petroleum refineries. Includes crude oil burned for electricity generation.
2.1.9. **Primary Product Receipts**
Includes quantities of indigenous or imported crude oil (including condensate) and indigenous NGL\(^4\) used directly without being processed in a petroleum refinery, and quantities of backflows from the petrochemical industry which, although not primary fuel, are used directly.

2.1.10. **Gross Refinery Output**
Production of finished products at a refinery or blending plant. Excludes refinery losses, but includes refinery fuel.

2.1.11. **Recycled Products**
Finished products that pass through the marketing network a second time, after having been delivered to final consumers (e.g. used lubricants which are reprocessed). These quantities should be distinguished from petrochemical backflows.

2.1.12. **Backflows**
Finished or semi-finished products which are returned from final consumers to refineries for processing, blending or sale. They are usually by-products of petrochemical manufacturing.

2.1.13. **Interproduct Transfers**
Quantities reclassified either because their specification has changed or because they are blended into another product. A negative entry for one product is compensated by a positive entry (or several entries) for one or several products and vice versa; the total net effect should be zero.

2.1.14. **Products Transferred**
Imported petroleum products which are reclassified as feedstocks for further processing in the refinery, without delivery to final consumers.

2.1.15. **Statistical Differences**
Calculated value, defined as difference between calculation from the supply perspective (top-down approach) and the calculation from the consumption perspective (bottom-up approach). Any major statistical differences should be explained.

2.2. **Transformation sector**
In the transformation sector, only quantities of fuels that were transformed into other fuels shall be reported. Quantities of fuels used for heating, operation of equipment and as general support for transformation should be declared in the energy sector.

2.2.1. **Main Activity Producer Electricity ONLY**
Quantities of fuels used by main activity producers to produce electricity in electricity-only units/plants.

2.2.2. **Main Activity Producer Combined Heat and Power (CHP) Units**
Quantities of fuels used by main activity producers to produce electricity and/or heat in CHP units.

2.2.3. **Main Activity Producer Heat ONLY**
Quantities of fuels used by main activity producers to produce heat in heat-only units/plants.

2.2.4. **Autoproducer Electricity ONLY**
Quantities of fuels used by autoproducers to produce electricity in electricity-only units/plants.

\(^4\) Natural gas liquids.
2.2.5. Autoproducer Combined Heat and Power (CHP) Units

All quantities of fuels used by autoproducers to produce electricity and the proportional part of fuels used to produce heat sold in CHP units. The proportional part of fuels used to produce heat that was not sold (auto-consumed heat) is to be reported in the relevant sector of final energy consumption based on NACE classification. Heat not sold but delivered to other entities under non-financial agreements or to entities with different ownership shall be reported based on the same principle as heat sold.

2.2.6. Autoproducer Heat ONLY

The proportional part of fuels used to produce heat sold in heat-only units/plants by autoproducers. The proportional part of fuels used to produce heat that was not sold (auto-consumed heat) is to be reported in the relevant sector of final energy consumption based on NACE classification. Heat not sold but delivered to other entities under non-financial agreements or to entities with different ownership shall be reported based on the same principle as heat sold.

2.2.7. Patent Fuel Plants

Quantities of fuels used in patent fuel plants to produce patent fuel.

2.2.8. Coke Ovens

Quantities of fuels used in coke ovens to produce coke oven coke and coke oven gas.

2.2.9. BKB/PB plants

Quantities of fuels used to produce brown coal briquettes (BKB) in BKB plants and quantities of fuels used in peat briquette plants to produce peat briquettes (PB).

2.2.10. Gas Works

Quantities of fuels used to produce gas work gas in gas works and in coal gasification plants.

2.2.11. Blast furnace

Quantities of fuels entering the blast furnace vessel, whether through the top along with the iron ore, or through the tuyeres in the bottom along with the heated blast air.

2.2.12. Coal Liquefaction

Quantities of fuel used to produce synthetic oil.

2.2.13. Gas-to-liquid plants

Quantities of gaseous fuels converted to liquid fuels.

2.2.14. Charcoal production plant

Quantities of solid biofuels converted to charcoal.

2.2.15. Petroleum refineries

Quantities of fuels used to produce petroleum products.

2.2.16. Natural gas blending plants (for blended natural gas)

Quantities of gases blended with natural gas into the gas grid (gas network).

2.2.17. For Blending with motor gasoline/diesel/kerosene:

Quantities of liquid biofuels blended with their fossil counterparts.
2.2.18. **Not Elsewhere Specified**
Quantities of fuels used for transformation activities not included elsewhere. If used, what is included under this heading should be explained in the report.

2.3. **Energy sector**
Quantities consumed by the energy industry to support extraction (mining, oil and gas production) or plant operations related to transformation activities. This corresponds to NACE Rev. 2 Divisions 05, 06, 19 and 35, NACE Rev. 2 Group 09.1 and NACE Rev. 2 classes 07.21 and 08.92.

Excludes quantities of fuels transformed into another energy form (which should be reported under the transformation sector) or used in support of the operation of oil, gas and coal slurry pipelines (which should be reported in the transport sector).

Includes the manufacture of chemical materials for atomic fission and fusion and the products of these processes.

2.3.1. **Own use of Electricity, CHP and Heat Plants**
Quantities of fuels consumed as energy for support operations at plants with electricity-only, heat-only and CHP units.

2.3.2. **Coal Mines**
Quantities of fuels consumed as energy to support the extraction and preparation of coal within the coal mining industry. Coal burned in pithead power stations should be reported in the transformation sector.

2.3.3. **Patent fuel plants**
Quantities of fuels consumed as energy for support operations at patent fuel plants.

2.3.4. **Coke Ovens**
Quantities of fuels consumed as energy for support operations in coke ovens (coking plants).

2.3.5. **BKB/PB plants**
Quantities of fuels used as energy for support operations in BKP/PB plants (briquetting plants).

2.3.6. **Gas Works/gasification works**
Quantities of fuels consumed as energy for support operations at gas works and coal gasification plants.

2.3.7. **Blast Furnaces**
Quantities of fuels consumed as energy for support operations at blast furnaces.

2.3.8. **Coal Liquefaction**
Quantities of fuels consumed as energy for support operations at coal liquefaction plants.

2.3.9. **Liquefaction (LNG)/regasification**
Quantities of fuels consumed as energy for support operations in natural gas liquefaction and regasification plants.

2.3.10. **Gasification plants (biogas)**
Quantities of fuels consumed as energy for support operations in biogas gasification plants.

2.3.11. **Gas-to-liquid (GTL) plants**
Quantities of fuels consumed as energy for support operations in gas-to-liquid conversion plants.
2.3.12. Charcoal production plants
Quantities of fuels consumed as energy for support operations in charcoal production plants.

2.3.13. Petroleum Refineries
Quantities of fuels consumed as energy for support operations at petroleum refineries.

2.3.14. Oil and Gas extraction
Quantities of fuels consumed in oil and natural gas extraction facilities. Excludes pipeline losses (to be reported as distribution losses) and energy quantities used to operate pipelines (to be reported in the transport sector).

2.3.15. Not elsewhere specified — Energy
Quantities of fuels related to energy activities not included elsewhere. If used, what is included under this heading should be explained in the report.

2.4. Distribution losses
Quantities of fuel losses which occur due to transport and distribution.

2.5. Final non-energy consumption
Quantities of fossil fuels used for non-energy purposes — fuels not combusted.

2.6. Final energy consumption (end-use specifications)
2.6.1. Industry Sector
This refers to fuel quantities consumed by the industrial undertaking in support of its primary activities. For heat-only or CHP units, only quantities of fuels consumed for the production of heat used by the entity itself (heat auto-consumed) are to be reported. Quantities of fuels consumed for the production of heat sold and for the production of electricity should be reported under the appropriate transformation sector.

2.6.1.1. Mining and Quarrying: NACE Rev. 2 Divisions 07 (excluding 07.21) and 08 (excluding 08.92); NACE Rev. 2 Group 09.9.
2.6.1.1.1. Mining of metal ores [NACE Rev. 2 Division 07; excludes NACE Rev. 2 Class 07.21 Mining of uranium and thorium ores]
2.6.1.1.2. Other mining and quarrying [NACE Rev. 2 Div. 08; excludes NACE Rev. 2 Class 08.92 Extraction of peat]
2.6.1.1.3. Mining support service activities [NACE Rev. 2 Div. 09; excludes NACE Rev. 2 Group 09.1 Support activities for petroleum and natural gas extraction]
2.6.1.2. Food, Beverages and Tobacco: NACE Rev. 2 Divisions 10, 11 and 12.
2.6.1.2.1. Manufacture of food products [NACE Rev. 2 Div. 10]
2.6.1.2.2. Manufacture of beverages [NACE Rev. 2 Div. 11]
2.6.1.2.3. Manufacture of tobacco products [NACE Rev. 2 Div. 12]
2.6.1.3. Textile and Leather [NACE Rev. 2 Div. 13, 14 and 15; includes the Manufacture of textiles, the Manufacture of wearing apparel and the Manufacture of leather and related products]
2.6.1.4. Wood and Wood Products — Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials [NACE Rev. 2 Div. 16]
2.6.1.5. Pulp, Paper and Printing: NACE Rev. 2 Divisions 17 and 18.
2.6.1.5.1. Manufacture of paper and paper products [NACE Rev. 2 Div. 17]

2.6.1.5.1.1. Manufacture of pulp [NACE Rev. 2 Class 17.11]

2.6.1.5.1.2. Other paper and paper products [NACE Rev. 2 Class 17.12 and NACE Rev. 2 Group 17.2]

2.6.1.5.2. Printing and reproduction of recorded media [NACE Rev. 2 Div. 18]

2.6.1.6. Chemical and Petrochemical: NACE Rev. 2 Divisions 20 and 21.

2.6.1.6.1. Manufacture of chemicals and chemical products [NACE Rev. 2 Div. 20]

2.6.1.6.2. Manufacture of basic pharmaceutical products and pharmaceutical preparations [NACE Rev. 2 Div. 21]

2.6.1.7. Non-Metallic Minerals [NACE Rev. 2 Div. 23]

2.6.1.7.1. Manufacture of glass and glass products [NACE Rev. 2 Group 23.1]

2.6.1.7.2. Manufacture of cement, lime and plaster (incl. Clinker) [NACE Rev. 2 Group 23.5]

2.6.1.7.3. Other non-metallic mineral products [NACE Rev. 2 Groups 23.2, 23.3, 23.4, 23.6, 23.7 and 23.9]

2.6.1.8. Iron and Steel [Manufacture of basic metals A: NACE Rev. 2 Groups 24.1, 24.2 and 24.3 and Classes 24.51 and 24.52]

2.6.1.9. Non-ferrous metals industries [Manufacture of basic metals B: NACE Rev. 2 Group 24.4 and Classes 24.53 and 24.54]

2.6.1.9.1. Aluminium production [NACE Rev. 2 Class 24.42]

2.6.1.9.2. Other non-ferrous metals industries [NACE Rev. 2 Group 24.4 — excl. NACE Rev. 2 Class 24.42; NACE Rev. 2 Classes 24.53 and 24.54]

2.6.1.10. Machinery: NACE Rev. 2 Divisions 25, 26, 27 and 28.

2.6.1.10.1. Manufacture of fabricated metal products, except machinery and equipment [NACE Rev. 2 Div. 25]

2.6.1.10.2. Manufacture of computer, electronic and optical products [NACE Rev. 2 Div. 26]

2.6.1.10.3. Manufacture of electrical equipment [NACE Rev. 2 Div. 27]

2.6.1.10.4. Manufacture of machinery and equipment n.e.c. [NACE Rev. 2 Div. 28]

2.6.1.11. Transport Equipment: Industries related to the equipment used for transport [NACE Div. 29 and 30; includes the Manufacture of motor vehicles, trailers and semi-trailers and the Manufacture of other transport equipment]

2.6.1.12. Not Elsewhere Specified — Industry: NACE Divisions 22, 31 and 32

2.6.1.12.1. Manufacture of rubber and plastic products [NACE Div. 22]

2.6.1.12.2. Manufacture of furniture [NACE Rev. 2 Div. 31]

2.6.1.12.3. Other manufacturing [NACE Rev. 2 Div. 32]

2.6.1.13. Construction [NACE Rev. 2 Div. 41, 42 and 43]

2.6.2. Transport Sector

Energy used in all transport activities irrespective of the NACE category (economic sector) in which the activity occurs. Fuels used for heating and lighting at railway stations, bus stations, shipping piers and airports should be reported under ‘Commercial and Public Services’ and not in the transport sector.
2.6.2.1. Rail
Quantities of fuels used by rail traffic, including industrial railways and rail transport as part of urban or suburban transport systems (for example trains, trams, metros).

2.6.2.2. Domestic navigation
Quantities of fuels delivered to vessels of all flags not engaged in international navigation (see international marine bunkers). The domestic/international split should be determined based on the port of departure and port of arrival and not by the flag or nationality of the ship.

2.6.2.3. Road
Quantities of fuels used in road vehicles. Includes fuel used by agricultural vehicles on highways and lubricants for use in road vehicles.

Excludes energy used in stationary engines (see ‘Other sector’), for non-highway use in tractors (see ‘Agriculture’), military use in road vehicles (see ‘Other sector — Not elsewhere specified’), bitumen used in road surfacing and energy used in engines at construction sites (see ‘Industry’ sub-sector ‘Construction’).

2.6.2.4. Pipeline Transport
Quantities of fuels used as energy in the support and operation of pipelines transporting gases, liquids, slurries and other commodities. Includes energy used for pump stations and maintenance of the pipeline.

Excludes energy used for the pipeline distribution of natural or manufactured gas, hot water or steam from the distributor to final users (to be reported in the energy sector), energy used for the final distribution of water to households, industrial, commercial and other users (to be included in Commercial and Public Services) and losses occurring during the transport between distributor and final users (to be reported as distribution losses).

2.6.2.5. International Aviation
Quantities of fuels delivered to aircrafts for international aviation. The domestic/international split should be determined based on departure and landing locations and not by the nationality of the airline. Excludes fuels used by airlines for their road vehicles (to be reported in ‘Not elsewhere specified — Transport’) and military use of aviation fuels (to be reported in ‘Not Elsewhere Specified — Other’).

2.6.2.6. Domestic Aviation
Quantities of fuels delivered to aircraft for domestic aviation. Includes fuel used for purposes other than flying, e.g. the bench testing of engines. The domestic/international split should be determined based on departure and landing locations and not by the nationality of the airline. This includes journeys of considerable length between two airports in a country with overseas territories. Excludes fuels used by airlines for their road vehicles (to be reported in ‘Not Elsewhere Specified — Transport’) and military use of aviation fuels (to be reported in ‘Not Elsewhere Specified — Other’).

2.6.2.7. Not Elsewhere Specified — Transport
Quantities of fuels used for transport activities not included elsewhere. Includes fuels used by airlines for their road vehicles and fuels used in ports for ships’ unloaders, various types of cranes. If used, what is included under this heading should be explained in the report.

2.6.3. Other Sectors
This category covers quantities of fuels used in sectors not specifically mentioned or not belonging to transformation, energy, industry or transport.
2.6.3.1. Commercial and Public Services

Quantities of fuels consumed by business and offices in the public and private sectors. NACE Rev. 2 Divisions 33, 36, 37, 38, 39, 45, 46, 47, 52, 53, 55, 56, 58, 59, 60, 61, 62, 63, 64, 65, 66, 68, 69, 70, 71, 72, 73, 74, 75, 77, 78, 79, 80, 81, 82, 84 (excluding Class 84.22), 85, 86, 87, 88, 90, 91, 92, 93, 94, 95, 96 and 99. Fuels used for heating and lighting at railway, bus stations, shipping piers and airports should be reported in this category, including fuels used for all non-transport activities of NACE Rev. 2 Division 49, 50 and 51.

2.6.3.2. Households

Quantities of fuels consumed by all households including ‘households with employed persons’. NACE Rev. 2 Divisions 97 and 98.

The following specific definitions apply for the households sector:

A household is a person living alone or a group of people living together in the same private dwelling and sharing expenditure, including the joint provision of the essentials of living. The households sector, also known as the residential or domestic sector, is therefore a collective pool of all households in a country. Collective residences, either permanent (e.g. prisons) or temporary (e.g. hospitals), should be excluded as they are covered under consumption in the service sector. Energy used in transport activities should be reported in the transport sector and not in the households sector.

Energy consumption associated with significant economic activities carried out by households should also be excluded from total household energy consumption. Such activities include agricultural economic activities on small farms and other economic activities carried out in a household’s residence and should be reported in the appropriate sector of final consumption.

2.6.3.2.1. Space heating

This energy service refers to the use of energy to provide heat in an interior area of a dwelling.

2.6.3.2.2. Space cooling:

This energy service refers to the use of energy for cooling in a dwelling, by a refrigeration system and/or unit. Fans, blowers and other appliances not connected to a refrigeration unit are excluded from this section, but should be covered in the ‘lighting and electrical appliances’ section.

2.6.3.2.3. Water heating:

This energy service refers to the use of energy to heat water for hot running water, bathing, cleaning and other non-cooking applications.

Swimming pool heating is excluded, but should be covered in the ‘other end uses’ section.

2.6.3.2.4. Cooking:

This energy service refers to the use of energy to prepare meals.

Appliances for auxiliary cooking (microwave ovens, kettles, coffee makers, etc.) are excluded and should be covered in the ‘lighting and electrical appliances’ section.

2.6.3.2.5. Lighting and electrical appliances (electricity only):

Use of electricity for lighting and any other electrical appliances in a dwelling not considered within other end uses.
2.6.3.2.6. Other end uses:
Any other energy consumption in households, such as use of energy for outdoor and any other activities
not included into the five energy end-uses mentioned above (e.g. lawn mowers, swimming pool heating,
outdoor heaters, outdoor barbecues, saunas etc.).

2.6.3.3. Agriculture/Forestry
Quantities of fuels consumed by users classified as agriculture, hunting and forestry; NACE Rev. 2 Divisions
01 and 02.

2.6.3.4. Fishing
Quantities of fuels delivered for inland, coastal and deep-sea fishing. Fishing should cover fuels delivered
to ships of all flags that have refuelled in the country (including international fishing) and energy used in
the fishing industry. NACE Rev. 2 Division 03.

2.6.3.5. Not Elsewhere Specified — Other
Quantities of fuels used for activities not included elsewhere (such as NACE Rev. 2 Class 84.22). This category
includes military fuel use for all mobile and stationary consumption (e.g. ships, aircraft, road and energy
used in living quarters), regardless of whether the fuel delivered is for the military of that country or for the
military of another country. If used, what is included under this heading should be explained in the report.

3. PRODUCTS

3.1. Coal (solid fossil fuels and manufactured gases)

3.1.1. Hard coal
Hard coal is a product aggregate equal to the sum of anthracite, coking coal and other bituminous coal.

3.1.2. Anthracite
High rank coal used for industrial and household applications. It generally has less than 10 % volatile matter
and a high carbon content (about 90 % fixed carbon). Its gross calorific value is greater than 24 000 kJ/
kg on an ash-free but moist basis.

3.1.3. Coking coal
Bituminous coal with a quality that allows the production of a coke (coke oven coke) suitable to support
a blast furnace charge. Its gross calorific value is greater than 24 000 kJ/kg on an ash-free but moist basis.

3.1.4. Other bituminous coal
Coal used for steam raising purposes and includes all bituminous coal that is not included under coking
coal nor anthracite. It is characterised by higher volatile matter than anthracite (more than 10 %) and
lower carbon content (less than 90 % fixed carbon). Its gross calorific value is greater than 24 000 kJ/kg
on an ash-free but moist basis.

3.1.5. Brown coal
Brown coal is a product aggregate equal to the sum of sub-bituminous coal and lignite.

3.1.6. Sub-bituminous coal
Refers to non-agglomerating coal with a gross calorific value between 20 000 kJ/kg and 24 000 kJ/kg
containing more than 31 % volatile matter on a dry mineral matter free basis.
3.1.7. Lignite
Non-agglomerating coal with a gross calorific value less than 20 000 kJ/kg and greater than 31 % volatile matter on a dry mineral matter free basis.

3.1.8. Patent fuel
A composition fuel manufactured from hard coal fines with the addition of a binding agent. The amount of patent fuel produced may, therefore, be slightly higher than the actual amount of coal consumed in the transformation process.

3.1.9. Coke oven coke
The solid product obtained from the carbonisation of coal, principally coking coal, at high temperature; it is low in moisture and volatile matter. Coke oven coke is used mainly in the iron and steel industry, acting as an energy source and chemical agent.

Coke breeze and foundry coke are to be reported in this category. Semi-coke (a solid product obtained from the carbonisation of coal at a low temperature) should be included in this category. Semi-coke is used as a heating fuel or by the transformation plant itself.

This heading also includes coke, coke breeze and semi-coke made from lignite.

3.1.10. Gas coke
By-product of hard coal used for production of town gas in gas works. Gas coke is used for heating purposes.

3.1.11. Coal tar
A result of the destructive distillation of bituminous coal. Coal tar is the liquid by-product of the distillation of coal to make coke in the coke oven process or is produced from brown coal (‘low-temperature tar’).

3.1.12. BKB (Brown Coal Briquettes)
BKB is a composition fuel manufactured from lignite or sub-bituminous coal, produced by briquetting under high pressure without the addition of a binding agent, including dried lignite fines and dust.

3.1.13. Manufactured gases
Manufactured gases is a product aggregate equal to the sum of gas works gas, coke oven gas, blast furnace gas and other recovered gases.

3.1.14. Gas works gas
Covers all types of gases produced in public utility or private plants whose main purpose is the manufacture, transport and distribution of gas. It includes gas produced by carbonisation (including gas produced by coke ovens and transferred to gas works gas), by total gasification with or without enrichment with oil products (LPG, residual fuel oil, etc.), and by reforming and simple mixing of gases and/or air, including blending with natural gas which will be distributed and consumed through the natural gas grid. The amount of gas resulting from transfers of other coal gases to gas works gas should be reported as the production of the gas works gas.

3.1.15. Coke Oven Gas
Coke oven gas is a gas obtained as a by-product of the manufacture of coke oven coke for the production of iron and steel.
3.1.16. Blast furnace gas

Blast furnace gas is produced during the combustion of coke in blast furnaces in the iron and steel industry. It is recovered and used as a fuel partly within the plant and partly in other steel industry processes or in power stations equipped to burn it.

3.1.17. Other recovered gases

By-product of the production of steel in an oxygen furnace, recovered on leaving the furnace. The gases are also known as converter gas, LD gas or BOS gas. The quantity of recuperated fuel should be reported on a gross calorific value basis. Also covers non-specified manufactured gases not mentioned above, such as combustible gases of solid carbonaceous origin recovered from manufacturing and chemical processes not defined elsewhere.

3.1.18. Peat

Peat is a combustible soft, porous or compressed, sedimentary deposit of plant origin with high water content (up to 90% in the raw state), easily cut, of light to dark brown colour. Peat includes sod peat and milled peat. Peat used for non-energy purposes is not included.

3.1.19. Peat Products

Products such as peat briquettes derived directly or indirectly from sod peat and milled peat.

3.1.20. Oil shale and oil sands

Oil shale and oil sands are sedimentary rock that contains organic matter in the form of kerogen. Kerogen is a waxy hydrocarbon-rich material regarded as a precursor of petroleum. Oil shale may be burned directly or processed by heating to extract shale oil. Shale oil and other products derived from liquefaction should be reported as other hydrocarbons within petroleum products.

3.2. Natural gas

3.2.1. Natural gas

Natural gas comprises gases occurring in underground deposits, whether liquefied or gaseous, consisting mainly of methane, independent from the extraction method (conventional and non-conventional). It includes both ‘non-associated’ gas originating from fields producing hydrocarbons only in gaseous form, and ‘associated’ gas produced in association with crude oil, as well as methane recovered from coal mines (colliery gas) or from coal seams (coal seam gas). Natural gas does not include biogas or manufactured gases. Transfers of these products to the natural gas network are to be reported separately from natural gas. Natural gas includes liquefied natural gas (LNG) and compressed natural gas (CNG).

3.3. Electricity and heat

3.3.1. Electricity

Electricity refers to the transfer of energy through the physical phenomenon involving electric charges and their effects when at rest and in motion. All electricity that is used, produced and consumed is to be reported, including off-grid and self-consumed.

3.3.2. Heat (Derived heat)

Heat refers to the energy obtained from the translational, rotational and vibrational motion of the constituents of matter as well as changes in its physical state. All heat produced, except for heat produced by autoproducers for their own use and not sold, is to be reported; all other forms of heat are reported as use of products from which the heat was produced.
3.4. Oil (Crude oil and petroleum products)

3.4.1. Crude Oil

Crude oil is a mineral oil of natural origin comprising a mixture of hydrocarbons and associated impurities, such as sulphur. It exists in the liquid state under normal surface temperature and pressure and its physical characteristics (density, viscosity, etc.) are highly variable. This category includes field or lease condensate recovered from associated and non-associated gas where it is commingled with the commercial crude oil stream. Report quantities independent from the extraction method (conventional and non-conventional). Crude oil excludes NGL.

3.4.2. Natural gas liquids (NGL)

NGL are liquid or liquefied hydrocarbons recovered from natural gas in separation facilities or gas processing plants. NGL include ethane, propane, butane (normal and iso-), (iso) pentane and pentanes plus (sometimes referred to as natural gasoline or plant condensate).

3.4.3. Refinery Feedstocks

A refinery feedstock is a processed oil destined for further processing (e.g. straight run fuel oil or vacuum gas oil) excluding blending. With further processing, it will be transformed into one or more components and/or finished products. This definition also covers returns from the petrochemical industry to the refining industry (e.g. pyrolysis gasoline, C4 fractions, gasoil and fuel oil fractions).

3.4.4. Additives/Oxygenates

Additives are non-hydrocarbon compounds added to or blended with a petroleum products to modify their properties (octane, cetane, cold properties, etc.). Additives include oxygenates (such as alcohols (methanol, ethanol), ethers (methyl tertiary butyl ether(MTBE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), etc.), esters (such as rapeseed oil or dimethylester, etc.), chemical compounds (such as tetramethyl lead (TML), tetraethyl lead (TEL) and detergents). Quantities of additives/oxygenates (alcohols, ethers, esters and other chemical compounds) reported in this category should relate to the quantities blended with fuels or for fuel use. This category includes biofuels that are blended with liquid fossil fuels.

3.4.5. Biofuels in Additives/Oxygenates

Quantities of liquid biofuels reported in this category relate to blended liquid biofuels and refer only to the liquid biofuel portion and not to the total volume of liquids into which the liquid biofuels are blended. Excludes all liquid biofuels that have not been blended.

3.4.6. Other Hydrocarbons

Synthetic crude oil from tar sands, shale oil, etc., liquids from coal liquefaction, output of liquids from natural gas conversion into gasoline, hydrogen and emulsified oils (e.g. orimulsion); excludes oil shale; includes the shale oil (secondary product).

3.4.7. Petroleum products

Petroleum products are a product aggregate equal to the sum of refinery gas, ethane, liquefied petroleum gases, naphtha, motor gasoline, aviation gasoline, gasoline type jet fuel, kerosene type jet fuel, other kerosene, gas/diesel oil, fuel oil, white spirit ad SPB, lubricants, bitumen, paraffin waxes, petroleum coke and other products.

3.4.8. Refinery Gas

Refinery gas includes a mixture of non-condensed gases mainly consisting of hydrogen, methane, ethane
and olefins obtained during the distillation of crude oil or treatment of oil products (e.g. cracking) in refineries. This also includes gases which are returned from the petrochemical industry.

3.4.9. Ethane
A naturally gaseous straight-chain hydrocarbon, \((\text{C}_2\text{H}_6)\) extracted from natural gas and refinery gas streams.

3.4.10. Liquefied Petroleum Gases (LPG)
LPG are light paraffinic hydrocarbons derived from refinery processes, crude oil stabilisation and natural gas processing plants. They consist mainly of propane \((\text{C}_3\text{H}_8)\) and butane \((\text{C}_4\text{H}_{10})\) or a combination of the two. They could also include propylene, butylene, isopropylene and isobutylene. LPG are normally liquefied under pressure for transportation and storage.

3.4.11. Naphtha
Naphtha is a feedstock destined for either the petrochemical industry (e.g. ethylene manufacture or aromatics production) or for gasoline production by reforming or isomerisation within the refinery. Naphtha comprises material in the 30 °C and 210 °C distillation range or part of this range.

3.4.12. Motor Gasoline
Motor gasoline consists of a mixture of light hydrocarbons distilling at between 35 °C and 215 °C. It is used as a fuel for land-based spark ignition engines. Motor gasoline may include additives, oxygenates and octane enhancers, including lead compounds. Includes motor gasoline blending components (excluding additives/oxygenates), e.g. alkylates, isomerate, reformate, cracked gasoline destined for use as finished motor gasoline. Motor gasoline is a product aggregate equal to the sum of blended biogasoline (biogasoline in motor gasoline) and non-biogasoline.

3.4.12.1. Blended biogasoline (biogasoline in motor gasoline)
Biogasoline that was blended in motor gasoline.

3.4.12.2. Non-biogasoline
The remaining part of motor gasoline — motor gasoline excluding blended biogasoline (this is mostly motor gasoline of fossil origin).

3.4.13. Aviation gasoline
Motor spirit prepared especially for aviation piston engines, with an octane number suited to the engine, a freezing point of — 60 °C and a distillation range usually within the limits of 30 °C and 180 °C.

3.4.14. Gasoline type jet fuel (Naphtha type jet fuel or JP4)
This includes all light hydrocarbon oils for use in aviation turbine power units, distilling at between 100 °C and 250 °C. They are obtained by blending kerosenes and gasoline or naphthas in such a way that the aromatic content does not exceed 25 % in volume, and the vapour pressure is between 13.7 kPa and 20.6 kPa.

3.4.15. Kerosene type jet fuel
Distillate used for aviation turbine power units. It has the same distillation characteristics at between 150 °C and 300 °C (generally not above 250 °C) and flash point as kerosene. In addition, it has particular specifications (such as freezing point) which are established by the International Air Transport Association. Includes kerosene blending components. Kerosene type jet fuel is a product aggregate equal to the sum of blended bio jet kerosene (bio jet kerosene in kerosene type jet fuel) and non-bio jet kerosene.

3.4.15.1. Blended bio jet kerosene (bio jet kerosene in kerosene type jet fuel)
Bio jet kerosene that was blended in kerosene type jet fuel.

3.4.15.2. Non-bio jet kerosene

The remaining part of kerosene type jet fuel — kerosene type jet fuel excluding blended bio jet kerosene (this is mostly kerosene type jet fuel of fossil origin).

3.4.16. Other kerosene

Refined petroleum distillate used in sectors other than aircraft transport. It distils at between 150 °C and 300 °C.

3.4.17. Gas/Diesel oil (Distillate fuel oil)

Gas/diesel oil is primarily a medium distillate distilling at between 180 °C and 380 °C. Includes blending components. Several grades are available depending on uses. Gas/diesel oil includes on-road diesel oil for diesel compression ignition engines of cars and trucks. Gas/diesel oil includes light heating oil for industrial and commercial uses, marine diesel and diesel used in rail traffic, other gas oil including heavy gas oils which distil at between 380 °C and 540 °C and which are used as petrochemical feedstocks. Gas/diesel oil is a product aggregate equal to the sum of blended biodiesels (biodiesels in gas/diesel oil) and non-biodiesels.

3.4.17.1. Blended biodiesels (biodiesels in gas/diesel oil)

Biodiesels that were blended in gas/diesel oil.

3.4.17.2. Non-biodiesels

The remaining part of gas/diesel oil — gas/diesel oil excluding blended biodiesels (this is mostly gas/diesel oil of fossil origin).

3.4.18. Fuel oil (heavy fuel oil)

All residual (heavy) fuel oils (including those obtained by blending). Kinematic viscosity is above 10 cSt at 80 °C. The flash point is always above 50 °C and density is always more than 0.90 kg/l. Fuel oil is a product aggregate equal to the sum of low sulphur fuel oil and high sulphur fuel oil.

3.4.18.1. Low sulphur fuel oil (LSFO)

Fuel oil with sulphur content lower than 1 %.

3.4.18.2. High sulphur fuel oil (HSFO)

Fuel oil with sulphur content of 1 % or higher.

3.4.19. White spirit and SBP

White spirit and SBP are defined as refined distillate intermediates with a distillation in the naphtha/kerosene range. They include industrial spirit (also called SBP; light oils distilling at between 30 °C and 200 °C in 7 or 8 grades of industrial spirit, depending on the position of the cut in the distillation range — the grades are defined according to the temperature difference between the 5 % volume and 90 % volume distillation points, which is not more than 60 °C) and white spirits (industrial spirit with a flash point above 30 °C and the distillation range between 135 °C and 200 °C).

3.4.20. Lubricants

Hydrocarbons produced from distillate by product. They are mainly used to reduce friction between bearing surfaces. Includes all finished grades of lubricating oil, from spindle oil to cylinder oil, and those used in greases, motor oils and all grades of lubricating oil base stocks.
3.4.21. Bitumen

Solid, semi-solid or viscous hydrocarbon with a colloidal structure, being brown to black in colour, obtained as a residue in the distillation of crude oil, by vacuum distillation of oil residues from atmospheric distillation. Bitumen is often referred to as asphalt and is primarily used for the construction of roads and for roofing material. Includes fluidised and cut back bitumen.

3.4.22. Paraffin waxes

These are saturated aliphatic hydrocarbons. They are residues extracted when dewaxing lubricant oils. They have a crystalline structure which is more-or-less fine according to the grade. Their main characteristics are as follows: they are colourless, odourless and translucent, with a melting point above 45 °C.

3.4.23. Petroleum coke

Black solid by-product, obtained mainly by cracking and carbonising petroleum derived feedstock, vacuum bottoms, tar and pitches in processes such as delayed coking or fluid coking. It consists mainly of carbon (90 to 95 %) and has a low ash content. It is used as a feedstock in coke ovens for the steel industry, for heating purposes, for electrode manufacture and for the production of chemicals. The two most important qualities are ‘green coke’ and ‘calcinated coke’. Includes ‘catalyst coke’ deposited on the catalyst during refining processes; this coke is not recoverable and is usually burned as refinery fuel.

3.4.24. Other products

All other products not specifically mentioned above, for example: tar and sulphur. Includes aromatics (e.g. BTX or benzene, toluene and xylene) and olefins (e.g. propylene) produced within refineries.

3.5. Renewables and waste

3.5.1. Hydro

Potential and kinetic energy of water converted into electricity in hydroelectric plants. Hydro is a product aggregate equal to the sum of pure hydro plants, mixed hydro plants and pure pumped storage plants.

3.5.1.1. Pure hydro plants

Hydro plants that only use direct natural water inflow and have no capacity for hydro pump storage (pumping water uphill).

3.5.1.2. Mixed hydro plants

Hydro plants with natural water inflow into an upper reservoir where part or all equipment can be used for pumping water uphill; the electricity generated is a consequence of both natural water inflow and water previously pumped uphill.

3.5.1.3. Pure pumped storage plants

Hydro plants with no natural water inflow into the upper reservoir; the vast majority of water that generates electricity was previously pumped uphill; excluding rainfall and snowfall.

3.5.2. Geothermal

Energy available as heat emitted from within the earth’s crust, usually in the form of hot water or steam; excluding ambient heat captured by ground source heat pumps. Geothermal energy production is the difference between the enthalpy of the fluid produced in the production borehole and that of the fluid eventually disposed of.
3.5.3. Solar
Solar is a product aggregate equal to the sum of solar photovoltaic and solar thermal.

3.5.3.1. Solar photovoltaic
Sunlight converted into electricity by the use of solar cells which exposed to light will generate electricity. All electricity produced is to be reported (including small-scale production and off-grid installations).

3.5.3.2. Solar thermal
Heat from solar radiation (sunlight) exploited for useful energy purposes. This includes, for example, solar thermal-electric plants and active systems for the production of sanitary hot water or for space heating of buildings. This energy production is the heat available to the heat transfer medium, i.e. the incident solar energy less the optical and collectors losses. Solar energy captured by passive systems for heating, cooling and lighting of buildings is not to be included; only solar energy in relation to the active systems is to be included.

3.5.4. Tide, wave, ocean
Mechanical energy derived from tidal movement, wave motion or ocean current and exploited for electricity generation.

3.5.5. Wind
Kinetic energy of wind exploited for electricity generation in wind turbines. Wind is a product aggregate equal to the sum of on-shore wind and off-shore wind.

3.5.5.1. On-shore wind
Production of electricity by wind in locations on-shore (inland, including lakes and other bodies of water located inland).

3.5.5.2. Off-shore wind
Production of electricity in locations off-shore (e.g. sea, ocean and artificial islands). For off-shore wind production outside of the territorial waters of the concerned territory, all installations located in a country’s exclusive economic zone should be taken into account.

3.5.6. Industrial waste (non-renewable portion)
Report waste of industrial non-renewable origin combusted directly at specific installations for meaningful energy purposes. The quantity of fuel used should be reported on a net calorific value basis. Waste incinerated without any energy recovery is excluded. The renewable portion of industrial waste should be reported in the biofuels category that best describes it.

3.5.7. Municipal waste
Wastes produced by households, hospitals and the tertiary sector (in general all waste that resembles household waste), combusted directly at specific installations for meaningful energy purposes. The quantity of fuel used should be reported on a net calorific value basis. Waste incinerated without any energy recovery is excluded. Municipal waste is a product aggregate equal to the sum of renewable municipal waste and non-renewable municipal waste.

3.5.7.1. Renewable municipal waste
The portion of municipal waste which is of biological origin.
3.5.7.2. Non-renewable municipal waste
The portion of municipal waste which is of non-biological origin.

3.5.8. Biofuels
Biofuels is a product aggregate equal to the sum of solid biofuels, biogas and liquid biofuels. Biofuels used for non-energy purposes are excluded from the scope of energy statistics (for example wood used for construction or as furniture, biolubricant for engine lubrication and biobitumen used for road surface).

3.5.8.1. Solid biofuels
Covers solid organic, non-fossil material of biological origin (also known as biomass) which may be used as fuel for heat production or electricity generation. Solid biofuels is a product aggregate equal to the sum of charcoal, fuelwood, wood residues and by-products, black liquor, bagasse, animal waste, other vegetal materials and residuals and renewable fraction of industrial waste.

3.5.8.1.1. Charcoal
Charcoal is a manufactured fuel from solid biofuels — the solid residue of the destructive distillation and pyrolysis of wood and other vegetal material.

3.5.8.1.2. Fuelwood, wood residues and by-products
Fuelwood or firewood (in log, brushwood, pellet or chip form) obtained from natural or managed forests or isolated trees. Included are wood residues used as fuel and in which the original composition of wood is retained; wood pellets are included. Charcoal and black liquor are excluded. The quantity of fuel used should be reported on a net calorific value basis.

3.5.8.1.2.1. Wood pellets
Wood pellets are a cylindrical product which has been agglomerated from wood residues by compression.

3.5.8.1.3. Black liquor
Energy from the alkaline-spent liquor obtained from the digesters during the production of sulphate or soda pulp required for paper manufacture. The quantity of fuel used should be reported on a net calorific value basis.

3.5.8.1.4. Bagasse
Fuel obtained from the fibre which remains after juice extraction in sugar cane processing. The quantity of fuel used should be reported on a net calorific value basis.

3.5.8.1.5. Animal waste
Energy from excreta of animals, meat and fish residues which when dry is used directly as a fuel. This excludes waste used in anaerobic fermentation plants. Fuel gases from these plants are included under biogases. The quantity of fuel used should be reported on a net calorific value basis.

3.5.8.1.6. Other vegetal materials and residuals
Biofuels not specified elsewhere and including straw, vegetable husks, ground nut shells, pruning brushwood, olive pomace and other wastes arising from the maintenance, cropping and processing of plants. The quantity of fuel used should be reported based on the net calorific value.

3.5.8.1.7. Renewable portion of industrial waste
Solid renewable portion of industrial waste combusted directly at specific installations for meaningful energy purposes (for example but not only, the portion of natural rubber in waste rubber tires or the portion of...
natural fibres in textile waste – from waste categories 07.3 and 07.6, respectively <…>\(^5\). The quantity of fuel used should be reported on a net calorific value basis.

3.5.8.2. Biogas

A gas composed principally of methane and carbon dioxide produced by anaerobic digestion of biomass or by thermal processes from biomass, including biomass in waste. The quantity of fuel used should be reported on a net calorific value basis. Biogas is a product aggregate equal to the sum of landfill gas, sewage sludge gas, other biogases from anaerobic digestion and biogases from thermal processes.

3.5.8.2.1. Landfill gas

Biogas produced from the anaerobic digestion of landfill waste.

3.5.8.2.2. Sewage sludge gas

Biogas produced from the anaerobic fermentation of sewage sludge.

3.5.8.2.3. Other biogases from anaerobic digestion

Biogas produced from the anaerobic fermentation of animal slurries and of waste in abattoirs, breweries and other agro-food industries.

3.5.8.2.4. Biogases from thermal processes

Biogas produced from thermal processes (by gasification or pyrolysis) of biomass.

3.5.8.3. Liquid biofuels

This category includes all liquid fuels of natural origin (e.g. produced from biomass and/or the biodegradable fraction of waste) suitable to be blended with or to replace liquid fuels from fossil origin. The quantities of liquid biofuels reported in this category should include the quantities of pure biofuel that were not blended with fossil fuels. In the particular case of imports and exports of liquid biofuels, only trade of quantities that have not been blended with transport fuels (i.e. in their pure form) is relevant; trade of liquid biofuels blended into transport fuels should be reported within the oil category of products. Only liquid biofuels used for energy purposes — combusted directly or blended with fossil fuels — are to be reported. Liquid biofuels is a product aggregate equal to the sum of biogasoline, biodiesels, bio jet kerosene and other liquid biofuels.

3.5.8.3.1. Biogasoline

Liquid biofuels suitable to be blended with or to replace motor gasoline from fossil origin.

3.5.8.3.1.1. Bioethanol

Ethanol as part of biogasoline.

3.5.8.3.2. Biodiesels

Liquid biofuels suitable to be blended with or to replace gas/diesel oil from fossil origin.

3.5.8.3.3. Bio jet kerosene

Liquid biofuels suitable to be blended with or to replace jet kerosene from fossil origin.

3.5.8.3.4. Other liquid biofuels

Liquid biofuels not included in any of the previous categories.

\(^5\) Not applicable according to Article 2 of Ministerial Council Decision 2021/12/MC-EnC
3.5.9. Ambient heat

Heat energy at a useful temperature level, extracted (captured) by means of heat pumps that need electricity or other auxiliary energy to function. This heat energy can be stored in the ambient air, beneath the surface of solid earth or in surface water. Values shall be reported using the same methodology as the one used for reporting heat energy captured by heat pumps under Directive 2009/28/EC, as adopted and adapted by Ministerial Council Decision 2012/04/MC-EnC. All heat pumps should be included regardless of their performance level.
ANNEX B

ANNUAL ENERGY STATISTICS

This Annex describes the scope, units, reported period, frequency, deadline and transmission modalities for the annual collection of energy statistics.

The following provisions apply to all data collections specified in this annex:

(a) Reported period: The reported period of declared data shall be a calendar year (1 January to 31 December), starting at reference year 2017.

(b) Frequency: Data shall be declared on an annual basis.

(c) Deadline for transmission of data: Data shall be sent in by 30 November of the year following the reported year, unless specified otherwise.

(d) Transmission format: The transmission format shall conform to the relevant interchange standard specified by Eurostat.

(e) Transmission method: Data shall be sent in or uploaded by electronic means to the single entry point for data at Eurostat.

Annex A includes explanations of terms for which a specific explanation is not supplied in this Annex.

1. SOLID FOSSIL FUELS AND MANUFACTURED GASES

1.1. Applicable energy products

Unless otherwise specified, this data collection applies to all energy products listed in Annex A, Chapter 3.1. COAL (solid fossil fuels and manufactured gases).

1.2. List of aggregates

The following list of aggregates must be declared for all energy products listed in the previous paragraph unless otherwise specified.

1.2.1. Supply

1.2.1.1. Production

1.2.1.1.1. Underground production

Applicable only for anthracite, coking coal, other bituminous coal, subbituminous coal and lignite.

1.2.1.1.2. Surface production

Applicable only for anthracite, coking coal, other bituminous coal, subbituminous coal and lignite.

1.2.1.2. Receipts from other sources

This consists of two components:
- recovered slurries, middlings and other low-grade coal products, which cannot be classified according to type of coal, including coal recovered from waste piles and other waste receptacles,
- receipts from other sources.

1.2.1.3. Receipts from other sources: from oil products

Not applicable for anthracite, coking coal, other bituminous coal, subbituminous coal, lignite, peat, and
oils and oil sands.

1.2.1.4. Receipts from other sources: from natural gas

Not applicable for anthracite, coking coal, other bituminous coal, subbituminous coal, lignite, peat, and oil shale and oil sands.

1.2.1.5. Receipts from other sources: from renewables

Not applicable for anthracite, coking coal, other bituminous coal, subbituminous coal, lignite, peat, oil shale and oil sands.

1.2.1.6. Imports

1.2.1.7. Exports

1.2.1.8. International Marine Bunkers

1.2.1.9. Stock changes

1.2.2. Transformation Sector

1.2.2.1. Main Activity Producer Electricity Only

1.2.2.2. Main Activity Producer Combined Heat and Power (CHP) Units

1.2.2.3. Main Activity Producer Heat Only

1.2.2.4. Autoproducer Electricity Only

1.2.2.5. Autoproducer Combined Heat and Power (CHP) Units

1.2.2.6. Autoproducer Heat Only

1.2.2.7. Patent Fuel Plants

1.2.2.8. Coke Ovens

1.2.2.9. BKB/PB Plants

1.2.2.10. Gas Works

1.2.2.11. Blast Furnaces

1.2.2.12. Coal Liquefaction

1.2.2.13. For Blended Natural Gas

1.2.2.14. Not Elsewhere Specified — Transformation

1.2.3. Energy Sector

1.2.3.1. Electricity, CHP and Heat plants

1.2.3.2. Coal Mines

1.2.3.3. Patent Fuel Plants

1.2.3.4. Coke Ovens

1.2.3.5. BKB/PB Plants

1.2.3.6. Gas Works

1.2.3.7. Blast Furnaces

1.2.3.8. Petroleum Refineries

1.2.3.9. Coal Liquefaction
1.2.3.10. Not Elsewhere Specified — Energy

1.2.4. Distribution losses
Distribution losses also include flaring of manufactured gases.

1.2.5. Non-energy use

1.2.5.1. Industry, Transformation and Energy Sectors
Non-energy use in all industry, transformation and energy sub-sectors, e.g. coal used to make methanol or ammonia.

1.2.5.1.1. Chemical and petrochemical sector
NACE Rev. 2 Divisions 20 and 21; non-energy use of coal includes use as feedstocks to produce fertiliser and as feedstocks for other petrochemical products.

1.2.5.2. Transport Sector
Non-energy use in all transport sub-sectors.

1.2.5.3. Other Sectors
Non-energy use in Commercial and Public Services, Households, Agriculture and Not Elsewhere Specified Other.

1.2.6. Final Energy Consumption — Industry Sector

1.2.6.1. Iron and Steel
1.2.6.2. Chemical and Petrochemical
1.2.6.3. Non-Ferrous Metals
1.2.6.4. Non-Metallic Minerals
1.2.6.5. Transport Equipment
1.2.6.6. Machinery
1.2.6.7. Mining and Quarrying
1.2.6.8. Food, Beverages and Tobacco
1.2.6.9. Pulp, Paper and printing
1.2.6.10. Wood and Wood Products
1.2.6.11. Construction
1.2.6.12. Textile and Leather
1.2.6.13. Not Elsewhere Specified — Industry

1.2.7. Final Energy Consumption — Transport Sector

1.2.7.1. Rail
1.2.7.2. Domestic Navigation
1.2.7.3. Not Elsewhere Specified — Transport

1.2.8. Final Energy Consumption — Other Sectors

1.2.8.1. Commercial and Public Services
1.2.8.2. Households
1.2.8.3. Agriculture/Forestry
1.2.8.4. Fishing
1.2.8.5. Not Elsewhere Specified — Other

1.2.9. Imports by country of origin AND exports by country of destination
Imports by country of origin and exports by country of destination shall be reported. Applicable to anthracite, coking coal, other bituminous coal, sub-bituminous coal, lignite, patent fuel, coke oven coke, coal tar, BKB, peat, peat products and oil shale and oil sands.

1.2.10. Calorific values
Applicable for anthracite, coking coal, other bituminous coal, sub-bituminous coal, lignite, patent fuel, coke oven coke, gas coke, coal tar, BKB, peat, peat products, oil shale and oil sands.

Both gross and net calorific values are to be declared for the following aggregates:

1.2.10.1. Production
1.2.10.2. Imports
1.2.10.3. Exports
1.2.10.4. Used in coke ovens
1.2.10.5. Used in blast furnaces
1.2.10.6. Used in Main Activity Producer Electricity only, Heat only and CHP units
1.2.10.7. Used in Industry
1.2.10.8. For Other Uses

1.3. Units of measurement
Reported quantities must be declared in kt (kilo-tonnes), except for manufactured gases (gas works gas, coke oven gas, blast furnace gas, other recovered gases), where the reported quantity must be declared in TJ GCV (tera-joules based on gross calorific values).

Calorific values must be declared in MJ/t (mega-joules per tonne).

1.4. Derogations and exemptions
Not applicable.

2. NATURAL GAS

2.1. Applicable energy products
This chapter covers the reporting of natural gas.

2.2. List of aggregates
The following list of aggregates shall be declared for natural gas.

2.2.1. Supply Sector
Declared quantities for the supply sector shall be expressed in both volume and energy units, and shall include the gross and net calorific values.

2.2.1.1. Indigenous Production
Includes off-shore production.
2.2.1.1.1. Associated Gas
Natural gas produced in association with crude oil.

2.2.1.1.2. Non-Associated Gas
Natural gas originating from fields producing hydrocarbons only in gaseous form.

2.2.1.1.3. Colliery Gas
Methane produced at coal mines or from coal seams, piped to the surface and consumed at collieries or transmitted by pipeline to consumers.

2.2.1.2. Receipts From Other Sources
2.2.1.2.1. Receipts from other sources: Oil and petroleum products
2.2.1.2.2. Receipts from other sources: Coal
2.2.1.2.3. Receipts from other sources: Renewables

2.2.1.3. Imports

2.2.1.4. Exports

2.2.1.5. International Marine Bunkers

2.2.1.6. Stock changes

2.2.1.7. Inland consumption (Observed)

2.2.1.8. Recoverable gas
Opening and closing stock levels shall be declared separately, as stocks on national territory and stocks held abroad, respectively. "Stock level" means the quantity of gas available for delivery during any input-output cycle. This refers to recoverable natural gas stored in special storage facilities (depleted gas and/or oil field, aquifer, salt cavity, mixed caverns, or other), as well as stored liquefied natural gas. Cushion gas shall be excluded. The requirement of declaring calorific values is not applicable here.

2.2.1.9. Gas Vented
The volume of gas released into the air on the production site or at the gas processing plant. The requirement of declaring calorific values is not applicable here.

2.2.1.10. Gas Flared
The volume of gas burned in flares on the production site or at the gas processing plant. The requirement of declaring calorific values is not applicable here.

2.2.2. Transformation Sector

2.2.2.1. Main Activity Producer Electricity Only

2.2.2.2. Autoproducer Electricity Only

2.2.2.3. Main Activity Producer CHP Units

2.2.2.4. Autoproducer CHP Units

2.2.2.5. Main Activity Producer Heat Only

2.2.2.6. Autoproducer Heat Only

2.2.2.7. Gas Works

2.2.2.8. Coke Ovens
2.2.2.9. Blast Furnaces
2.2.2.10. Gas to liquids
2.2.2.11. Non specified — Transformation

2.2.3. Energy Sector

2.2.3.1. Coal Mines
2.2.3.2. Oil and Gas extraction
2.2.3.3. Inputs to oil refineries
2.2.3.4. Coke Ovens
2.2.3.5. Blast Furnaces
2.2.3.6. Gas Works
2.2.3.7. Electricity, CHP and Heat Plants
2.2.3.8. Liquefaction (LNG) or Gasification
2.2.3.9. Gas to Liquids
2.2.3.10. Not Elsewhere Specified — Energy

2.2.4. Distribution losses

2.2.5. Transport Sector

Final energy consumption and final non-energy consumption shall be declared separately for the following aggregates.
2.2.5.1. Road
2.2.5.2. Pipeline transport
2.2.5.3. Not Elsewhere Specified — Transport

2.2.6. Industry Sector

Final energy consumption and final non-energy consumption shall be declared separately for the following aggregates.
2.2.6.1. Iron and Steel
2.2.6.2. Chemical and Petrochemical
2.2.6.3. Non-Ferrous Metals
2.2.6.4. Non-Metallic Minerals
2.2.6.5. Transport Equipment
2.2.6.6. Machinery
2.2.6.7. Mining and Quarrying
2.2.6.8. Food, Beverages and Tobacco
2.2.6.9. Pulp, Paper and printing
2.2.6.10. Wood and Wood Products
2.2.6.11. Construction
2.2.6.12. Textile and Leather
2.2.6.13. Not Elsewhere Specified — Industry

2.2.7. Other Sectors

Final energy consumption and final non-energy consumption shall be declared separately for the following aggregates.

2.2.7.1. Commercial and Public Services

2.2.7.2. Households

2.2.7.3. Agriculture/Forestry

2.2.7.4. Fishing

2.2.7.5. Not Elsewhere Specified — Other

2.2.8. Imports by country of origin and exports by country of destination

Both the quantities of total natural gas and of the LNG part of it shall be declared, per country of origin for imports and per country of destination for exports.

2.2.9. Gas Storage Capacities

To be reported separately as gaseous gas storage facilities and LNG terminals (to be further distinguished as LNG import terminals or LNG export terminals).

2.2.9.1. Name

Name of the site of the storage facility or the LNG terminal.

2.2.9.2. Type (for the gaseous gas storage facilities only)

Type of storage, such as depleted gas field, aquifer, salt cavern, etc.

2.2.9.3. Working Capacity

For gaseous gas storage facilities: total gas storage capacity, minus the cushion gas. The cushion gas is the total volume of gas required as a permanent inventory to maintain adequate underground storage reservoir pressures and deliverability rates throughout the output cycle.

For LNG terminals: total gas storage capacity expressed in gaseous gas equivalent.

2.2.9.4. Peak Output

Maximum rate at which gas can be withdrawn from the storage concerned; this corresponds to the maximum withdrawal capacity.

2.2.9.5. Regasifying or Liquefying Capacity (for LNG terminals only)

The regasifying capacity must be reported for import terminals and the liquefying capacity must be reported for export terminals.

2.3. Units of measurement

Quantities of natural gas shall be declared as their energy content, i.e. in TJ, based on the gross calorific value. Where physical quantities are required, the unit is in $10^6$ m$^3$ assuming reference gas conditions (15 °C, 101 325 Pa).

Calorific values shall be declared in kJ/m$^3$, assuming reference gas conditions (15 °C, 101 325 Pa).

Working capacity shall be declared in $10^6$ m$^3$, assuming reference gas conditions (15 °C, 101 325 Pa).

Peak output, regasifying capacity and liquefying capacity shall be declared in $10^6$ m$^3$/day, assuming reference gas conditions (15 °C, 101 325 Pa).
3. ELECTRICITY AND HEAT

3.1. Applicable energy products
This chapter covers heat and electricity.

3.2. List of aggregates
The following list of aggregates shall be declared for heat and electricity unless otherwise specified.

3.2.1. Electricity and heat production
The following specific definitions apply to the electricity and heat aggregates discussed in this chapter:
- Gross Electricity Production: the sum of the electrical energy produced by all the generating sets concerned (including pumped storage) measured at the output terminals of the main generators.
- Gross Heat Production: the total heat produced by the installation, including the heat used by the installation’s auxiliaries that use a hot fluid (space heating, liquid fuel heating etc.) and losses in the installation/network heat exchanges, as well as heat from chemical processes used as a primary energy form.
- Net Electricity Production: the gross electricity production less the electrical energy absorbed by the generating auxiliaries and the losses in the main generator transformers.
- Net Heat Production: the heat supplied to the distribution system as determined based on measurements of the outgoing and return flows.

Aggregates 3.2.1.1 to 3.2.1.11 must be declared separately for main activity producers and for autoproducers. Within these two types of plant, both gross and net electricity and heat production must be declared for electricity-only, heat-only and CHP units, separately wherever applicable.

3.2.1.1. Nuclear
3.2.1.2. Hydro (applicable only for electricity)
3.2.1.3. Geothermal
3.2.1.4. Solar
3.2.1.5. Tide, wave, ocean (applicable only for electricity)
3.2.1.6. Wind (applicable only for electricity)
3.2.1.7. Combustible fuels
Fuels capable of igniting or burning, i.e. reacting with oxygen to produce a significant rise in temperature, and combusted directly for the production of electricity and/or heat.
3.2.1.8. Heat Pumps (applicable only for heat)
3.2.1.9. Electric Boilers (applicable only for heat)
3.2.1.10. Heat from Chemical Processes
Heat originating from processes without input energy, such as a chemical reaction. Excludes waste heat originating from energy-driven processes, which should be reported as heat produced from the corresponding fuel.
3.2.1.11. Other Sources

3.2.2. Supply
For 3.2.2.1 and 3.2.2.2., quantities declared shall be in coherence with the values declared for aggregates 3.2.1.1 to 3.2.1.11.
3.2.2.1. Total Gross Production
3.2.2.2. Total Net Production
3.2.2.3. Imports
Amounts of electricity are considered as imported or exported when they have crossed the political boundaries of a country, whether customs clearance has taken place or not. If electricity transits through a country, the amount should be reported as both an import and an export.
3.2.2.4. Exports
See explanation under 3.2.2.3. ‘Imports’.
3.2.2.5. Used for Heat Pumps (applicable only for electricity)
3.2.2.6. Used for Electric Boilers (applicable only for electricity)
3.2.2.7. Used for Pumped Storage — pure pumped storage plants (applicable only for electricity)
3.2.2.8. Used for Pumped Storage — Mixed hydro plants (applicable only for electricity)
3.2.2.9. Used for Electricity Production (applicable only for heat)
3.2.2.10. Used for Heat Pumps (applicable only for electricity)
3.2.2.11. Used for Electric Boilers (applicable only for electricity)
3.2.2.12. Used for Pumped Storage — pure pumped storage plants (applicable only for electricity)
3.2.2.13. Used for Pumped Storage — Mixed hydro plants (applicable only for electricity)
3.2.2.14. Used for Electricity Production (applicable only for heat)
3.2.2.15. Distribution losses
For electricity, includes losses in transformers which are not considered as integral parts of power plants.
3.2.3. Final energy consumption — Transport Sector
Final energy consumption and final non-energy consumption shall be declared separately for the following aggregates.
3.2.3.1. Rail
3.2.3.2. Pipeline transport
3.2.3.3. Road
3.2.3.4. Not Elsewhere Specified — Transport
3.2.4. Final energy consumption — Other sectors
3.2.4.1. Commercial and Public Services
3.2.4.2. Households
3.2.4.3. Agriculture/Forestry
3.2.4.4. Fishing
3.2.4.5. Not Elsewhere Specified — Other
3.2.5. Energy Sector
Excludes plants’ own use for pumped storage, heat pumps and electric boilers.
3.2.5.1. Coal Mines
3.2.5.2. Oil and Gas Extraction
3.2.5.3. Patent Fuel Plants
3.2.5.4. Coke Ovens
3.2.5.5. BKB/PB Plants
3.2.5.6. Gas Works
3.2.6.7. Blast Furnaces
3.2.6.8. Petroleum Refineries
3.2.6.9. Nuclear Industry
3.2.6.10. Coal Liquefaction Plants
3.2.6.11. Liquefaction (LNG)/Regasification Plants
3.2.6.12. Gasification Plants (biogas)
3.2.6.13. Gas-to-Liquids
3.2.6.14. Charcoal Production Plants
3.2.6.15. Not Elsewhere Specified — Energy

3.2.7. Industry sector
3.2.7.1. Iron and Steel
3.2.7.2. Chemical and Petrochemical
3.2.7.3. Non-Ferrous Metals
3.2.7.4. Non-Metallic Minerals
3.2.7.5. Transport Equipment
3.2.7.6. Machinery
3.2.7.7. Mining and Quarrying
3.2.7.8. Food, Beverages and Tobacco
3.2.7.9. Pulp, Paper and printing
3.2.7.10. Wood and Wood Products
3.2.7.11. Construction
3.2.7.12. Textile and Leather
3.2.7.13. Not Elsewhere Specified — Industry

3.2.8. Imports and exports
Imports and exports of quantities of electricity and heat by country of origin and destination, respectively, have to be reported. See explanation under 3.2.2.3. ‘Imports’.

3.2.9. Net production from autoproducers
For the following plants or activities, net production of electricity and net generation of heat from auto-producers shall be declared separately for electricity-only, heat-only and CHP units:
3.2.9.1. Energy Sector: Coal Mines
3.2.9.2. Energy Sector: Oil and Gas Extraction
3.2.9.3. Energy Sector: Patent Fuel Plants
3.2.9.4. Energy Sector: Coke Ovens
3.2.9.5. Energy Sector: BKB/PB Plants
3.2.9.6. Energy Sector: Gas Works
3.2.9.7. Energy Sector: Blast Furnaces
3.2.9.8. Energy Sector: Petroleum Refineries
3.2.9.9. Energy Sector: Coal Liquefaction Plants
3.2.9.10. Energy Sector: Liquefaction (LNG)/Regasification Plants
3.2.9.11. Energy Sector: Gasification Plants (biogas)
3.2.9.13. Energy Sector: Charcoal Production Plants
3.2.9.15. Industry sector: Iron and Steel
3.2.9.16. Industry sector: Chemical and Petrochemical
3.2.9.17. Industry sector: Non-Ferrous Metals
3.2.9.18. Industry sector: Non-Metallic Minerals
3.2.9.19. Industry sector: Transport Equipment
3.2.9.20. Industry sector: Machinery
3.2.9.21. Industry sector: Mining and Quarrying
3.2.9.22. Industry sector: Food, Beverages and Tobacco
3.2.9.23. Industry sector: Pulp, Paper and printing
3.2.9.24. Industry sector: Wood and Wood Products
3.2.9.25. Industry sector: Construction
3.2.9.26. Industry sector: Textile and Leather
3.2.9.27. Industry sector: Not Elsewhere Specified — Industry
3.2.9.28. Transport Sector: Rail
3.2.9.29. Transport Sector: Pipeline transport
3.2.9.30. Transport Sector: Road
3.2.9.31. Transport Sector: Not Elsewhere Specified — Transport
3.2.9.32. Other sectors: Households
3.2.9.33. Other sectors: Commercial and Public Services
3.2.9.34. Other sectors: Agriculture/Forestry
3.2.9.35. Other sectors: Fishing
3.2.9.36. Other sectors: Not Elsewhere Specified — Other

3.2.10. Gross electricity and heat production from combustible fuels

The gross electricity produced, the heat sold and the fuel quantities used, including their corresponding total energy from the combustibles listed below, must be declared separately for main activity producers and for autoproducers. For these two types of producer, electricity and heat production must be declared separately wherever applicable for electricity-only, heat-only and CHP units.

3.2.10.1. Anthracite
3.2.10.2. Coking Coal
3.2.10.3. Other Bituminous Coal
3.2.10.4. Sub-Bituminous Coal
3.2.10.5. Lignite
3.2.10.6. Peat
3.2.10.7. Patent Fuel
3.2.10.8. Coke Oven Coke
3.2.10.9. Gas Coke
3.2.10.10. Coal Tar
3.2.10.11. BKB (Brown Coal Briquettes)
3.2.10.12. Gas Works Gas
3.2.10.13. Coke Oven Gas
3.2.10.14. Blast Furnace Gas
3.2.10.15. Other recovered Gases
3.2.10.16. Peat products
3.2.10.17. Oil shale and oil sands
3.2.10.18. Crude Oil
3.2.10.19. NGL
3.2.10.20. Refinery Gas
3.2.10.21. LPG
3.2.10.22. Naphtha
3.2.10.23. Kerosene Type Jet Fuel
3.2.10.24. Other Kerosene
3.2.10.25. Gas/Diesel oil
3.2.10.26. Fuel Oil
3.2.10.27. Bitumen
3.2.10.28. Petroleum Coke
3.2.10.29. Other Oil Products
3.2.10.30. Natural Gas
3.2.10.31. Industrial Waste
3.2.10.32. Renewable Municipal Waste
3.2.10.33. Non-Renewable Municipal Waste
3.2.10.34. Solid biofuels
3.2.10.35. Biogases
3.2.10.36. Biodiesels
3.2.10.37. Biogasolines
3.2.10.38. Other Liquid Biofuels

3.2.11. Net Maximum Electrical Capacity

The capacity shall be declared as on 31 December of the relevant reported year. Includes electrical capacity of both electricity-only and CHP units. The net maximum electrical capacity must be declared for both main activity producers and autoproducers. It is the sum of the net maximum capacities of all stations taken individually over a given period of operation. The period of operation assumed for present purposes is continuous running: in practice 15 hours or more per day. The net maximum capacity is the maximum power assumed to be solely active power that can be supplied, continuously, with the whole plant running, at the point of outlet to the network.

3.2.11.1. Nuclear

3.2.11.2. Pure hydro plants

3.2.11.3. Mixed hydro plants

3.2.11.4. Pure pumped storage plants

3.2.11.5. Geothermal

3.2.11.6. Solar photovoltaic

3.2.11.7. Solar thermal

3.2.11.8. Tide, wave, ocean

3.2.11.9. Wind

3.2.11.10. Combustible fuels

3.2.11.10.1. Type of generation: Steam

3.2.11.10.2. Type of generation: Internal combustion

3.2.11.10.3. Type of generation: Gas turbine

3.2.11.10.4. Type of generation: Combined cycle

3.2.11.10.5. Type of generation: Other

3.2.11.11. Other sources

3.2.12. Net Maximum Electrical Capacity Of Combustible Fuels

Net maximum electrical capacity of combustible fuels must be declared for both main activity producers and autoproducers, and separately for each type of single-fired or multi-fired plant mentioned below. Multi-fired systems include only units which can burn more than one fuel type on a continuous basis. Stations which have separate units using different fuels should be divided into the appropriate single-fuel categories. Indications on which type of fuel is used as primary and alternate must be added for each category of multi-fired plants.

3.2.12.1. Single Fuel Fired (for all categories of primary fuels)

3.2.12.2. Multi-Fired solids and liquids

3.2.12.3. Multi-Fired solids and natural gas

3.2.12.4. Multi-Fired liquids and natural gas

3.2.12.5. Multi-Fired solids, liquids and natural gas
3.3. Units of measurement

Electricity shall be declared in GWh (giga-watt hours), heat in TJ (tera-joules) and capacity in MW (mega-watts)

If reporting of other fuels is required, the applicable units are defined in the relevant chapters of this Annex.

4. OIL AND PETROLEUM PRODUCTS

4.1. Applicable energy products

Unless otherwise specified, this data collection applies to all energy products listed in Annex A, Chapter 3.4. Oil (crude oil and petroleum products)

4.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph, unless otherwise specified.

4.2.1. Supply of crude oil, NGL, refinery feedstocks, additives and other hydrocarbons

The following aggregates shall be declared for crude oil, NGL, refinery feedstocks, additives/oxygenates, biofuels in additives/oxygenates and other hydrocarbons:

4.2.1.1. Indigenous Production

Not applicable for refinery feedstocks and for biofuels.

4.2.1.2. Receipts From Other Sources.

Not applicable for crude oil, NGL and refinery feedstocks.

4.2.1.2.1. Receipts from other sources: from coal

4.2.1.2.2. Receipts from other sources: from natural gas

4.2.1.2.3. Receipts from other sources: from Renewables

4.2.1.3. Backflows From Petrochemical Sector

Only applicable for refinery feedstocks.

4.2.1.4. Products Transferred

Only applicable for refinery feedstocks.

4.2.1.5. Imports

Includes quantities of crude oil and products imported or exported under processing agreements (i.e. refining on account). Crude oil and NGLs should be reported as coming from the country of ultimate origin; refinery feedstocks and finished products should be reported as coming from the country of last consignment. Includes any gas liquids (e.g. LPG) extracted during the regasification of imported liquefied natural gas and petroleum products imported or exported directly by the petrochemical industry. Note: all trade of biofuels which have not been blended with transport fuels (i.e. in their pure form) should not be reported here. Re-exports of oil imported for processing within bonded areas should be included as an export of product from the processing country to the final destination.

4.2.1.6. Exports

The note for imports (4.2.1.5.) also applies to exports.
4.2.1.7. Direct Use

4.2.1.8. Stock changes

4.2.1.9. Observed Refinery Intake
Amounts measured as input to refineries

4.2.1.10. Refinery Losses
The difference between refinery intake (observed) and gross refinery output. Losses may occur during the distillation processes due to evaporation. Reported losses are positive. There may be volumetric gains but no gains in mass.

4.2.1.11. Opening Total Stocks On National Territory

4.2.1.12. Closing Total Stocks On National Territory

4.2.1.13. Net Calorific Value

4.2.1.13.1. Production (not applicable for refinery feedstocks and Biofuels in Additives/Oxygenates)

4.2.1.13.2. imports (not applicable for Biofuels in Additives/Oxygenates)

4.2.1.13.3. exports (not applicable for Biofuels in Additives/Oxygenates)

4.2.1.13.4. overall average

4.2.2. Supply of oil products
The following aggregates apply to finished products (refinery gas, ethane, LPG, naphtha, motor gasoline as well as its part of biogasoline, aviation gasoline, gasoline type jet fuel, kerosene type jet fuel as well as its bio part, other kerosene, gas/diesel oil, low and high sulphur fuel oil, white spirit and SBP, lubricants, bitumen, paraffin waxes, petroleum coke and other products). Crude oil and NGL used for direct burn should be included in deliveries of finished products and interproduct transfers.

4.2.2.1. Primary Product Receipts

4.2.2.2. Gross Refinery Output

4.2.2.3. Recycled Products

4.2.2.4. Refinery fuel (Petroleum Refineries)
Fuels used for production at refineries of electricity and heat sold should also be included in this category.

4.2.2.4.1. used in electricity only units/plants

4.2.2.4.2. used in CHP units

4.2.2.4.3. used in heat only units/plants

4.2.2.5. Imports
The note for imports in section 4.2.1.5. also applies here.

4.2.2.6. Exports
The note for imports in section 4.2.1.5. also applies here.

4.2.2.7. International Marine Bunkers

4.2.2.8. Interproduct Transfers

4.2.2.9. Products Transferred

4.2.2.10. Stock Changes
4.2.2.11. Opening Stock Levels

4.2.2.12. Closing Stock Levels

4.2.2.13. Stock Changes at main activity producers
Changes in stocks which are held by public utilities and are not included in stock levels and stock changes reported elsewhere. A stock build is shown as a negative number and a stock draw is shown as a positive number.

4.2.2.14. Average Net Calorific Values

4.2.3. Deliveries To The Petrochemical Sector
The observed delivery of finished petroleum products from primary sources (e.g. refineries, blending plants, etc.) to the inland market.

4.2.3.1. Gross Deliveries To The Petrochemical Sector

4.2.3.2. Energy Use In The Petrochemical Sector
Quantities of oil used as fuel for petrochemical processes such as steam cracking.

4.2.3.3. Non-Energy Use In The Petrochemical Sector
Quantities of oil used in the petrochemical sector for the purpose of producing ethylene, propylene, butylene, synthesis gas, aromatics, butadiene and other hydrocarbon-based raw materials in processes such as steam cracking, aromatics plants and steam reforming. Excludes amounts of oil used for fuel purposes.

4.2.3.4. Backflows From Petrochemical Sector To Refineries

4.2.4. Transformation sector
Both the quantities involved in energy use and non-energy use shall be declared.

4.2.4.1. Main Activity Producer Electricity Only

4.2.4.2. Autoproducer Electricity Only

4.2.4.3. Main Activity Producer CHP units

4.2.4.4. Autoproducer CHP units

4.2.4.5. Main Activity Producer Heat Only

4.2.4.6. Autoproducer Heat Only

4.2.4.7. Gas Works/Gasification Plants

4.2.4.8. Blended Natural Gas

4.2.4.9. Coke Ovens

4.2.4.10. Blast Furnaces

4.2.4.11. Petrochemical Industry

4.2.4.12. Patent Fuel Plants

4.2.4.13. Not Elsewhere Specified — Transformation

4.2.5. Energy sector
Both the quantities involved in energy use and non-energy use shall be declared.

4.2.5.1. Coal Mines
4.2.5.2. Oil and Gas Extraction

4.2.5.3. Coke Ovens

4.2.5.4. Blast Furnaces

4.2.5.5. Gas Works

4.2.5.6. Own use Electricity, CHP and heat plants.

4.2.5.7. Not Elsewhere Specified — Energy

4.2.6. Distribution losses

Both the quantities involved in energy use and non-energy use shall be declared.

4.2.7. Final Energy Consumption — Industry Sector

Both the quantities involved in energy use and non-energy use shall be declared.

4.2.7.1. Iron and Steel

4.2.7.2. Chemical and Petrochemical

4.2.7.3. Non-Ferrous Metals

4.2.7.4. Non-Metallic Minerals

4.2.7.5. Transport Equipment

4.2.7.6. Machinery

4.2.7.7. Mining and Quarrying

4.2.7.8. Food, Beverages and Tobacco

4.2.7.9. Pulp, Paper and printing

4.2.7.10. Wood and Wood Products

4.2.7.11. Construction

4.2.7.12. Textile and Leather

4.2.7.13. Not Elsewhere Specified — Industry

4.2.8. Final Energy Consumption — Transport Sector

Both the quantities involved in energy use and non-energy use shall be declared.

4.2.8.1. International Aviation

4.2.8.2. Domestic Aviation

4.2.8.3. Road

4.2.8.4. Rail

4.2.8.5. Domestic Navigation

4.2.8.6. Pipeline Transport

4.2.8.7. Not Elsewhere Specified — Transport

4.2.9. Final Energy Consumption — Other Sectors

Both the quantities involved in energy use and non-energy use shall be declared.

4.2.9.1. Commercial and Public Services
4.2.9.2. Households
4.2.9.3. Agriculture/Forestry
4.2.9.4. Fishing
4.2.9.5. Not Elsewhere Specified — Other

4.2.10. *Imports by country of origin and exports by country of destination*
Imports shall be declared by country of origin and exports by country of destination. The note for imports in section 4.2.1.5 also applies here.

4.2.11. *Refinery capacity*
Report the national total refining capacity and the breakdown of annual capacity by refinery in thousand metric tons per year. The following items shall be reported:

4.2.11.1. Name/Location
4.2.11.2. Atmospheric Distillation
4.2.11.3. Vacuum Distillation
4.2.11.4. Cracking (Thermal)
4.2.11.4.1. Of which Visbreaking
4.2.11.4.2. Of which Coking
4.2.11.5. Cracking (Catalytic)
4.2.11.5.1. Of which Fluid catalytic cracking (FCC)
4.2.11.5.2. Of which Hydro-cracking (HCK)
4.2.11.6. Reforming
4.2.11.7. Desulphurisation
4.2.11.8. Alkylation, Polymerisation, Isomeration
4.2.11.9. Etherification

4.3. *Units of measurement*
Reported quantities must be declared in kt (kilo-tonnes). Calorific values must be declared in MJ/t (mega-joules per tonne).

4.4. *Exemptions*
Cyprus is exempted from reporting the aggregates specified in Section 4.2.9 (Final energy consumption — Other Sectors); only the total values shall be reported. Cyprus is also exempted from reporting non-energy use under Sections 4.2.4 (Transformation sector), 4.2.5 (Energy Sector), 4.2.7 (Industry), 4.2.7.2 (Industry sector — of which Chemical and Petrochemical), 4.2.8 (Transport) and 4.2.9 (Other sectors).

5. RENEWABLE ENERGY AND ENERGY FROM WASTE

5.1. *Applicable energy products*
Unless otherwise specified, this data collection applies to all energy products listed in Annex A, Chapter 3.5. Renewables and waste. Only quantities of fuels used for energy purposes (for example in electricity and heat generation, combustion with energy recovery, in mobile engines in transport and for use in stationary
engines) should be reported. Quantities used for non-energy purposes shall be excluded from reporting (for example: wood in construction and for producing furniture, use of biolubricants for lubrication, use of biobitumen for road surface). Passive thermal energy shall also be excluded from reporting (for example: passive solar thermal heating of buildings).

5.2. List of aggregates

Unless otherwise specified, the following list of aggregates shall be declared for all energy products listed in the previous paragraph. Ambient heat (heat pumps) only needs to be reported for the following sectors: Transformation (only for aggregates related to heat sold), Energy (only total, no subcategories), Industry total (only total, no subcategories), Commercial and Public Services, Households and Not elsewhere specified — Other.

5.2.1. Gross Electricity and Heat Production

The definitions of chapter 3.2.1. apply. The aggregates 5.2.1.1 to 5.2.1.18 must be declared separately for main activity producers and for autoproducers. For these two types of plant, gross electricity and gross heat production must be declared for electricity-only, heat-only and CHP units, separately wherever applicable.

5.2.1.1. Pure hydro plants (applicable only for electricity)
5.2.1.2. Mixed hydro plants (applicable only for electricity)
5.2.1.3. Pure pumped storage plants (applicable only for electricity)
5.2.1.4. Geothermal
5.2.1.5. Solar photovoltaic (applicable only for electricity)
5.2.1.6. Solar thermal
5.2.1.7. Tide, wave, ocean (applicable only for electricity)
5.2.1.8. Wind (applicable only for electricity)
5.2.1.9. On-shore wind
5.2.1.10. Off-shore wind
5.2.1.11. Renewable municipal waste
5.2.1.12. Non-renewable municipal waste
5.2.1.13. Solid biofuels
5.2.1.14. Biogases
5.2.1.15. Biodiesels
5.2.1.16. Biogasolines
5.2.1.17. Other liquid biofuels
5.2.1.18. Heat pumps (applicable only for heat)

5.2.2. Supply
5.2.2.1. Production
5.2.2.2. Imports
5.2.2.3. Exports
5.2.2.4. Stock changes
5.2.3. **Transformation Sector**

5.2.3.1. Main Activity Producer Electricity Only
5.2.3.2. Main Activity Producer Combined Heat and Power (CHP) Units
5.2.3.3. Main Activity Producer Heat Only
5.2.3.4. Autoproducer Electricity Only
5.2.3.5. Autoproducer Combined Heat and Power (CHP) Units
5.2.3.6. Autoproducer Heat Only
5.2.3.7. Patent Fuel Plants
5.2.3.8. BKB/PB Plants
5.2.3.9. Gas Works
5.2.3.10. Blast Furnaces
5.2.3.11. Natural gas blending plants
5.2.3.12. For Blending with motor gasoline/diesel/kerosene:
5.2.3.13. Charcoal production plants
5.2.3.14. Not Elsewhere Specified — Transformation

5.2.4. **Energy Sector**

5.2.4.1. Gasification plants (biogas)
5.2.4.2. Electricity, CHP and Heat plants
5.2.4.3. Coal Mines
5.2.4.4. Patent Fuel Plants
5.2.4.5. Coke Ovens
5.2.4.6. Petroleum Refineries
5.2.4.7. BKB/PB Plants
5.2.4.8. Gas Works
5.2.4.9. Blast Furnaces
5.2.4.10. Charcoal production plants
5.2.4.11. Not Elsewhere Specified — Energy

5.2.5. **Distribution losses**

5.2.6. **Final Energy Consumption — Industry Sector**

5.2.6.1. Iron and Steel
5.2.6.2. Chemical and Petrochemical
5.2.6.3. Non-Ferrous Metals
5.2.6.4. Non-Metallic Minerals
5.2.6.5. Transport Equipment
5.2.6.6. Machinery
5.2.6.7. Mining and Quarrying
5.2.6.8. Food, Beverages and Tobacco
5.2.6.9. Pulp, Paper and printing
5.2.6.10. Wood and Wood Products
5.2.6.11. Construction
5.2.6.12. Textile and Leather
5.2.6.13. Not Elsewhere Specified — Industry

5.2.7. Final Energy Consumption — Transport Sector
5.2.7.1. Rail
5.2.7.2. Road
5.2.7.3. Domestic Navigation
5.2.7.4. Not Elsewhere Specified — Transport

5.2.8. Final Energy Consumption — Other Sectors
5.2.8.1. Commercial and Public Services
5.2.8.2. Households
5.2.8.3. Agriculture/Forestry
5.2.8.4. Fishing
5.2.8.5. Not Elsewhere Specified — Other

5.2.9. Net maximum electrical capacity

Capacity shall be declared as on 31 December of the relevant reported year. Includes the electrical capacity of both electricity-only and CHP units. The net maximum electrical capacity is the sum of the net maximum capacities of all stations taken individually over a specific period of operation. The period of operation assumed for present purposes is continuous running: in practice 15 hours or more per day. The net maximum capacity is the maximum power assumed to be solely active power that can be supplied, continuously, with the whole plant running, at the point of outlet to the network.

5.2.9.1. Pure hydro plants
5.2.9.2. Mixed hydro plants
5.2.9.3. Pure pumped storage plants
5.2.9.4. Geothermal
5.2.9.5. Solar photovoltaic
5.2.9.6. Solar thermal
5.2.9.7. Tide, wave, ocean
5.2.9.8. On-shore wind
5.2.9.9. Off-shore wind
5.2.9.10. Industrial waste
5.2.9.11. Municipal waste
5.2.9.12. Solid biofuels
5.2.9.13. Biogases
5.2.9.14. Biodiesels
5.2.9.15. Biogasolines
5.2.9.16. Other liquid biofuels

5.2.10. Technical characteristics

5.2.10.1. Solar collector surface
The total surface area of the installed solar collectors is to be declared. The solar collector surface relates only to solar collectors used for the production of solar thermal heat; solar collector surface used for electricity generation does not have to be reported here (solar PV and concentrated solar power). The surface area of all solar collectors shall be included: glazed and unglazed collectors, flat-plate and vacuum tube with a liquid or air as the energy carrier.

5.2.10.2. Production capacity for Biogasoline
5.2.10.3. Production capacity for Biodiesels
5.2.10.4. Production capacity for Bio jet kerosene
5.2.10.5. Production capacity for Other Liquid Biofuels

5.2.10.6. Average net calorific value for Biogasoline
5.2.10.7. Average net calorific value for Bioethanol
5.2.10.8. Average net calorific value for Biodiesels
5.2.10.9. Average net calorific value for Bio jet kerosene
5.2.10.10. Average net calorific value for Other Liquid Biofuels
5.2.10.11. Average net calorific value for Charcoal

5.2.11. Production of solid biofuels and biogases
The total production of solid biofuels (excluding charcoal) shall be split among the following fuels:

5.2.11.1. Fuelwood, wood residues and by-products
5.2.11.1.1. Wood pellets as part of Fuelwood, wood residues and by-products
5.2.11.2. Black liquor
5.2.11.3. Bagasse
5.2.11.4. Animal waste
5.2.11.5. Other vegetal materials and residues
5.2.11.6. Renewable fraction of industrial waste

The total production of biogas shall be split among the following production methods:

5.2.11.7. Biogases from anaerobic fermentation: landfill gas
5.2.11.8. Biogases from anaerobic fermentation: sewage sludge gas
5.2.11.9. Biogases from anaerobic fermentation: other biogases from anaerobic fermentation
5.2.11.10. Biogases from thermal processes
5.2.12. Imports by country of origin AND exports by country of destination
Imports shall be reported by country of origin and exports by country of destination. Applicable to biogas-
olines, bioethanol, bio jet kerosene, biodiesels, other liquid biofuels, wood pellets.

5.3. Units of measurement
Electricity shall be declared in GWh (giga-watt hours), heat in TJ (tera-joules) and electrical capacity in MW
(megawatts).
Reported quantities shall be declared in TJ NCV (tera-joules based on net calorific value), except for charcoal,
biogasoline, bioethanol, bio jet kerosene, biodiesels, and other liquid biofuels which shall be declared
in kt (kilo-tonnes).
Calorific values must be declared in MJ/t (mega-joules per tonne).
Solar collector surface shall be declared in 1000 m².
Production capacity shall be declared in kt (kilo-tonnes) per year.

6. ANNUAL NUCLEAR STATISTICS
The following data concerning the civil use of nuclear energy must be declared:

6.1. List of aggregates
6.1.1. Enrichment capacity
The annual separative work capacity of operational enrichment plants (isotopic separation of uranium).
6.1.2. Production capacity of fresh fuel elements
The annual production capacity of fuel fabrication plants. MOX fuel fabrication plants are excluded.
6.1.3. Production capacity of MOX fuel fabrication plants
The annual production capacity of MOX fuel fabrication plants.
MOX is a fuel that contains a mixture of plutonium and uranium (mixed oxide).
6.1.4. Production of fresh fuel elements
Production of finished fresh fuel elements in nuclear fuel fabrication plants. Rods or other partial products
are not included. Fabrication plants producing MOX fuel are also excluded.
6.1.5. Production of MOX fuel elements
Production of finished fresh fuel elements in MOX fuel fabrication plants. Rods or other partial products
are not included.
6.1.6. Production of nuclear heat
The total amount of heat generated by nuclear reactors for the production of electricity or for other useful
applications of heat.
6.1.7. Annual average burnup of definitively discharged irradiated fuel elements
Calculated average of the burnup of the fuel elements which have been definitively discharged from nuclear
reactors during the reference year concerned. Excludes fuel elements which are temporarily discharged
and are likely to be reloaded again later.
6.1.8. Production of Uranium and Plutonium in reprocessing plants
Uranium and plutonium produced in reprocessing plants during the reference year.

6.1.9. Capacity (Uranium and Plutonium) of reprocessing plants
Annual reprocessing capacity of uranium and plutonium.

6.2. Units of measurement

tSWU (tonnes of separative work units) for 6.1.1.
tHM (tonnes of heavy metal) for 6.1.4, 6.1.5., 6.1.8.
tHM (tonnes of heavy metal) per year for 6.1.2., 6.1.3, 6.1.9
TJ (tera-joules) for 6.1.6.
GWd/THM (gigawatt-day per tonne of heavy metal) for 6.1.7.

7. DETAILED STATISTICS ON FINAL ENERGY CONSUMPTION
The following disaggregated data concerning final energy consumption must be declared.

7.1. List of aggregates

7.1.1. Industry sector
To be reported as per the definitions provided in section 2.6.1 of Annex A.
7.1.1.1. Mining and Quarrying
7.1.1.1.1. Mining of metal ores
7.1.1.1.2. Other mining and quarrying
7.1.1.1.3. Mining support service activities
7.1.1.2. Food, Beverages and Tobacco
7.1.1.2.1. Manufacture of food products
7.1.1.2.2. Manufacture of beverages
7.1.1.2.3. Manufacture of tobacco products
7.1.1.3. Textile and Leather
7.1.1.4. Wood and Wood Products
7.1.1.5. Pulp, Paper and Printing
7.1.1.5.1. Manufacture of paper and paper products
7.1.1.5.1.1. Manufacture of pulp
7.1.1.5.1.2. Other paper and paper products
7.1.1.5.2. Printing and reproduction of recorded media
7.1.1.6. Chemical and Petrochemical
7.1.1.6.1. Manufacture of chemicals and chemical products
7.1.1.6.2. Manufacture of basic pharmaceutical products and pharmaceutical preparations
7.1.1.7. Non-Metallic Minerals
7.1.1.7.1. Manufacture of glass and glass products
7.1.1.7.2. Manufacture of cement, lime and plaster (incl. Clinker)
7.1.1.7.3. Other non-metallic mineral products
7.1.1.8. Iron and Steel [Manufacture of basic metals A]
7.1.1.9. Non-ferrous metals industries [Manufacture of basic metals B]
7.1.1.9.1. Aluminium production
7.1.1.9.2. Other non-ferrous metals industries
7.1.1.10. Machinery
7.1.1.10.1. Manufacture of fabricated metal products, except machinery and equipment
7.1.1.10.2. Manufacture of computer, electronic and optical products
7.1.1.10.3. Manufacture of electrical equipment
7.1.1.10.4. Manufacture of machinery and equipment n.e.c.
7.1.1.11. Transport Equipment
7.1.1.12. Not Elsewhere Specified — Industry
7.1.1.12.1. Manufacture of rubber and plastic products
7.1.1.12.2. Manufacture of furniture
7.1.1.12.3. Other manufacturing
7.1.2. Households sector
To be reported as per the definitions provided in section 2.6.3.2 of Annex A.
7.1.2.1. Households: Space heating
7.1.2.2. Households: Space cooling
7.1.2.3. Households: Water heating
7.1.2.4. Households: Cooking
7.1.2.5. Households: Lighting and appliances
Only concerns electricity
7.1.2.6. Households: Other end uses

7.2. Applicable energy products
Unless otherwise specified, this data collection applies to all energy products listed in Annex A.
Eurostat will specify the actual list of energy products for which data covered by point 7 of Annex B should be reported in the reporting template, as a subset of those listed in point 3 of Annex A.

7.3. Units of measurement
Quantities of solid fossil fuels shall be declared in kt (kilo-tonnes);
Quantities of crude oil and petroleum products must be declared in kt (kilo-tonnes);
Quantities of natural gas and manufactured gases (gas works gas, coke oven gas, blast furnace gas, other recovered gases) must be declared by energy content, in TJ GCV (terajoules based on gross calorific values);
Electricity shall be declared in GWh (giga-watt hours);
Quantities of heat must be declared in TJ (tera-joules based on net calorific values);
Quantities of renewables and waste must be declared in TJ NCV (tera-joules based on net calorific value),
except for charcoal, biogasoline, bioethanol, bio jet kerosenese, biodiesels, and other liquid biofuels, which
shall be declared in kt (kilo-tonnes).
Calorific values for solid fossil fuels, crude oil and petroleum products and renewables and waste must be
declared in MJ/t (mega-joules per tonne).
Calorific values for natural gas and manufactured gases shall be declared in kJ/m³, assuming reference gas
conditions (15 °C, 101 325 Pa).
For other energy products for which reporting is required, the applicable units are defined in the relevant
chapters of this Annex.

7.4. Deadline for transmission of data:
Data shall be submitted by 31 March of the second year following the reported year.

7.5. Exemptions
Cyprus is exempted from reporting the disaggregated final energy consumption of crude oil and petroleum
products (as defined in Section 3.4 of Annex A) for all aggregates covered by section 7.1.2 of this Annex
(Households).
ANNEX C

MONTHLY ENERGY STATISTICS

This Annex describes the scope, units, reported period, frequency, deadline and transmission modalities for the monthly collection of energy statistics.

Explanations of terms for which a specific explanation is not supplied in this Annex can be found in Annex A.

The following provisions apply to all data collections specified in this Annex:

(a) Reported period: The reported period of declared data shall be one calendar month.
(b) Frequency: Data shall be declared on a monthly basis.
(c) Transmission format: The transmission format shall conform to the relevant interchange standard specified by Eurostat.
(d) Transmission method: Data shall be submitted or uploaded by electronic means to the single entry point for data at Eurostat.

1. SOLID FUELS

1.1. Applicable energy products

This chapter covers the reporting of:

1.1.1. Hard coal
1.1.2. Brown coal
1.1.3. Peat
1.1.4. Oil shale and oil sands
1.1.5. Coke oven coke

1.2. List of aggregates

1.2.1. The following aggregates shall be declared for hard coal:

1.2.1.1. Production
1.2.1.2. Recovered products
1.2.1.3. Imports
1.2.1.4. Imports from outside EU
1.2.1.5. Exports
1.2.1.6. Opening Total Stocks On National Territory

These are the quantities held by mines, importers and consumers who import directly.

1.2.1.7. Closing Total Stocks On National Territory

These are the quantities held by mines, importers and consumers who import directly.

1.2.1.8. Deliveries to main activity producers
1.2.1.9. Deliveries to coking plants
1.2.1.10. Deliveries to total industry
1.2.1.11. Deliveries to iron and steel industry
1.2.1.12. Other deliveries (services, households, etc.). The amount of hard coal delivered to sectors not specifically mentioned or not belonging to transformation, energy, industry or transport.

1.2.2. The following aggregates shall be declared for brown coal, peat and oil shale and oil sands:

1.2.2.1. Production
1.2.2.2. Imports
1.2.2.3. Exports
1.2.2.4. Opening Total Stocks On National Territory
These are the quantities held by mines, importers and consumers who import directly.
1.2.2.5. Closing Total Stocks On National Territory
These are the quantities held by mines, importers and consumers who import directly.
1.2.2.6. For peat, stock changes can be declared instead of opening and closing total stocks.
1.2.2.7. Deliveries to main activity producers
1.2.2.8. Deliveries to iron and steel industry

1.2.3. The following aggregates shall be declared for coke oven coke:

1.2.3.1. Production
1.2.3.3. Imports
1.2.3.4. Imports from outside the EU
1.2.3.5. Exports
1.2.3.6. Opening Total Stocks On National Territory
These are the quantities held by producers, importers and consumers who import directly.
1.2.3.7. Closing Total Stocks On National Territory
These are the quantities held by producers, importers and consumers who import directly.
1.2.3.8. Deliveries to iron and steel industry

1.3. Units of measurement
Reported quantities must be declared in kt (kilo-tonnes).

1.4. Deadline for transmission of data
Within two calendar months following the reported month.

2. ELECTRICITY

2.1. Applicable energy products
This chapter covers the reporting of electricity.

2.2. List of aggregates
The following aggregates shall be declared for electricity:

2.2.1. Net electricity production from nuclear plants
2.2.2. Net electricity production from conventional thermal power generation using coal
2.2.3. Net electricity production from conventional thermal power generation using oil
2.2.4. Net electricity production from conventional thermal power generation using gas
2.2.5. Net electricity production from conventional thermal power generation using combustible renewables (such as solid biofuels, biogases, liquid biofuels, renewable municipal waste)
2.2.6. Net electricity production from conventional thermal power generation using other non-renewable combustible fuels (such as non-renewable industrial and non-renewable municipal waste)
2.2.7. Net electricity production from pure hydro plants
2.2.8. Net electricity production from mixed hydro plants
2.2.9. Net electricity production from pure pumped storage hydro plants
2.2.10. Net electricity production from wind installations on shore
2.2.11. Net electricity production from wind installations off shore
2.2.12. Net electricity production from solar PV installations
2.2.13. Net electricity production from solar thermal installations
2.2.14. Net electricity production from geothermal power generation
2.2.15. Net electricity production from other renewable sources (such as tide, wave, ocean and other non-combustible renewable sources)
2.2.16. Net electricity production from non-specified origin
2.2.17. Imports
2.2.17.1. Of which from the EU
2.2.18. Exports
2.2.18.1. Of which to the EU
2.2.19. Electricity used for pumped storage

2.3. Units of measurement
Reported quantities must be declared in GWh (giga-watt hours).

2.4. Deadline for transmission of data
Within two calendar months following the reported month.

3. OIL AND PETROLEUM PRODUCTS
3.1. Applicable energy products
Unless otherwise specified, this data collection applies to all energy products listed in Annex A, Chapter 3.4. Oil (crude oil and petroleum products).
The ‘Other Products’ category includes both the quantities that correspond to the definition in Annex A Chapter 3.4 and also the quantities of white spirit and SBP, lubricants, bitumen and paraffin waxes; these products should not be declared separately.

3.2. List of aggregates
The following aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.
3.2.1. Supply of crude oil, NGL, refinery feedstocks, additives and other hydrocarbons
Note for additives and biofuels: include here not only already blended volumes, but also all quantities destined for blending.

The following aggregates shall be declared for crude oil, NGL, refinery feedstocks, additives/oxygenates, biofuels and other hydrocarbons:

3.2.1.1. Indigenous Production (not applicable for refinery feedstocks and biofuels).

3.2.1.2. Receipts from other sources (not applicable for crude oil, NGL, refinery feedstocks)

3.2.1.3. Backflows

Finished or semi-finished products which are returned from final consumers to refineries for processing, blending or sale. They are usually by-products of petrochemical manufacturing. Only applicable for refinery feedstocks.

3.2.1.4. Products Transferred

Imported petroleum products which are reclassified as feedstocks for further processing in the refinery, without delivery to final consumers. Only applicable for refinery feedstocks.

3.2.1.5. Imports

3.2.1.6. Exports

Note for import and exports: Includes quantities of crude oil and products imported or exported under processing agreements (i.e. refining on account). Crude oil and NGLs should be reported as coming from the country of ultimate origin; refinery feedstocks and finished products should be reported as coming from the country of last consignment. Includes any gas liquids (e.g. LPG) extracted during the regasification of imported liquefied natural gas and petroleum products imported or exported directly by the petrochemical industry.

3.2.1.7. Direct Use

3.2.1.8. Stock changes

A stock build is shown as a positive number and a stock draw is shown as a negative number.

3.2.1.9. Observed Refinery Intake

This is defined as the total amount of oil (including Other hydrocarbons and Additives) observed to have entered the refinery process (input to refineries).

3.2.1.10. Refinery Losses

The difference between observed refinery intake and gross refinery output. Losses may occur during distillation processes due to evaporation. Reported losses are positive. There may be volumetric gains but no gains in mass.

3.2.2. Supply of finished products

The following aggregates shall be declared for Crude oil, NGL, Refinery gas, Ethane, LPG, Naphtha, Biogasoline, Non-biogasoline, Aviation gasoline, Gasoline type jet fuel, Bio jet kerosene, Non-bio jet Kerosene, Other kerosene, Biodiesels, Non-bio gas/diesel oil, LSFO, HSFO, Petroleum coke, and Other products:

3.2.2.1. Primary Product Receipts

3.2.2.2. Gross Refinery Output (not applicable for crude oil and NGL)

3.2.2.3. Recycled Products (not applicable for crude oil and NGL)
3.2.2.4. Refinery Fuel (not applicable for crude oil and NGL)
Annex A Chapter 2.3. Energy sector — Petroleum Refineries; Includes fuels used at the refineries for the production of electricity and heat sold.

3.2.2.5. Imports (not applicable for crude oil, NGL and refinery gas)
3.2.2.6. Exports (not applicable for crude oil, NGL and refinery gas)
The note made for imports and exports in section 3.2.1 also applies here.

3.2.2.7. International Marine Bunkers (not applicable for crude oil and NGL)
3.2.2.8. Interproduct Transfers
3.2.2.9. Products Transferred (not applicable for crude oil and NGL)
3.2.2.10. Stock Changes (not applicable for crude oil, NGL and refinery gas)
A stock build is shown as a positive number and a stock draw is shown as a negative number.

3.2.2.11. Observed Gross Inland Deliveries
The observed delivery of finished petroleum products from primary sources (e.g. refineries, blending plants, etc.) to the inland market.

3.2.2.11.1. International Aviation (applicable only for Aviation gasoline, Gasoline type jet fuel, Bio jet kerosene, Non-bio jet Kerosene)
3.2.2.11.2. Main activity producer power plants
3.2.2.11.3. Road (applicable only for LPG)
3.2.2.11.4. Domestic navigation and Rail (applicable only for Biodiesels, Non-bio gas/diesel oil)
3.2.2.12. Petrochemical
3.2.2.13. Backflow to refineries (not applicable for crude oil and NGL)

3.2.3. Imports by origin — exports by destination
Imports shall be reported by country of origin and exports by country of destination. The note made for imports and exports in section 3.2.1 also applies here.

3.2.4. Stock levels
The following opening and closing stocks must be declared for all energy products, including for additives/oxygenates but except for refinery gas:

3.2.4.1. Stocks on national territory
Stocks in the following locations: refinery tanks, bulk terminals, pipeline tankage, barges and coastal tankers (when port of departure and destination are in the same country), tankers in a port of a member country (if their cargo is to be discharged at the port), inland ship bunkers. Excludes stocks of oil held in pipelines, in rail tanks cars, in truck tanks cars, in sea-going ships’ bunkers, in service stations, in retail stores and in bunkers at sea.

3.2.4.2. Stocks held for other countries under bilateral government agreements
Stocks on national territory which belong to another country and to which access is guaranteed by an agreement between the respective governments.

3.2.4.3. Stocks with known foreign destination
Stocks not included in point 3.2.4.2 on national territory which belong to and are destined for another country. These stocks may be located inside or outside bonded areas.

3.2.4.4. Other stocks held in bonded areas
Includes stocks not included in point 3.2.4.2 nor 3.2.4.3 irrespective of whether they have received customs clearance or not.

3.2.4.5. Stocks held by major consumers
Include stocks which are subject to government control. This definition does not include other consumer stocks.

3.2.4.6. Stocks held on board incoming ocean vessels in port or at mooring
Stocks irrespective of whether they have been cleared by customs or not. This category excludes stocks on board vessels at high seas.
Includes oil in coastal tankers if both their port of departure and destination are in the same country. In the case of incoming vessels with more than one port of unloading, only report the amount to be unloaded in the reporting country.

3.2.4.7. Stocks held by government on national territory
Includes non-military stocks that are held by the government within the national territory, and are government owned or controlled and held exclusively for emergency purposes.

Excludes stocks held by state oil companies or electric utilities or stocks held directly by oil companies on behalf of governments.

3.2.4.8. Stocks held by stock holding organisation on national territory
Stocks held by both public and private corporations established to maintain stocks exclusively for emergency purposes.

Excludes mandatory stocks held by private companies.

3.2.4.9. All other stocks held on national territory
All other stocks satisfying the conditions described in point 3.2.4.1 above.

3.2.4.10. Stocks held abroad under bilateral government agreements
Stocks belonging to the reporting country but held in another country, to which access is guaranteed by an agreement between the respective governments.

3.2.4.10.1. Of which: Government stocks
3.2.4.10.2. Of which: Holding organisation’s stocks
3.2.4.10.3. Of which: Other stocks

3.2.4.11. Stocks held abroad designated definitely for import stocks
Stocks that are not included in category 10 and that belong to the reporting state but are held in another state and are awaiting import there.

3.2.4.12. Other stocks in bonded areas
Other stocks in the national territory not included in the above categories.

3.2.4.13. Pipeline fill
Oil (crude oil and petroleum products) contained in pipelines, necessary to maintain flow in the pipelines.
In addition, a breakdown of quantities per corresponding country must be declared for:

3.2.4.13.1. closing stocks held for other countries under official agreement, by beneficiary,
3.2.4.13.2. closing stocks held for other countries under official agreement, of which held as stock tickets, by beneficiary,
3.2.4.13.3. closing stocks with known foreign destination, by beneficiary,
3.2.4.13.4. closing stocks held abroad under official agreement, by location,
3.2.4.13.5. closing stocks held abroad under official agreement, of which held as stock tickets, by location,
3.2.4.13.6. closing stocks held abroad designated definitely for import into the declarer's country, by location.

‘Opening stocks’ means the stocks on the last day of the month preceding the reported one. ‘Closing stocks’ means the stocks on the last day of the reported month.

3.3. Units of measurement
Reported quantities must be declared in kt (kilo-tonnes).

3.4. Deadline for transmission of data
Within 55 days following the reported month.

3.5. Geographical notes
For statistical reporting purposes only, the clarifications in Annex A Chapter 1 apply with the following specific exception: Switzerland includes Liechtenstein

4. NATURAL GAS

4.1. Applicable energy products
This chapter covers the reporting of natural gas.

4.2. List of aggregates
The following aggregates shall be declared for natural gas.

4.2.1. Indigenous Production
All dry marketable production within national boundaries, including offshore production. Production is measured after purification and extraction of NGLs and sulphur. Excludes extraction losses and quantities reinjected, vented or flared. Includes quantities used within the natural gas industry, in gas extraction, pipeline systems and processing plants.

4.2.2. Imports (Entries)

4.2.3. Exports (Exits)

Note for imports and exports: Report all natural gas volumes which have physically crossed the national boundaries of the country, whether customs clearance has taken place or not. This includes quantities transiting your country; transit volumes should be included as an import and as an export. Imports of liquefied natural gas should cover only the dry marketable equivalent, including amounts used as own consumption in the regasification process. The amounts used as own consumption during regasification should be reported under Own use and losses of the natural gas industry (see 4.2.10). Any gas liquids (e.g. LPG) extracted during the regasification process of imported LNG should be reported under 'Receipts from other
sources’ of ‘Other hydrocarbons’ as defined in Chapter 3 of this annex (OIL AND PETROLEUM PRODUCTS).

4.2.4. Stock changes
A stock build is shown as a positive number and a stock draw is shown as a negative number.

4.2.5. Observed Gross Inland Deliveries
This category represents deliveries of marketable gas to the inland market, including gas used by the gas industry for heating and operation of their equipment (i.e. consumption in gas extraction, in the pipeline system and in processing plants); losses in transmission and distribution should also be included.

4.2.6. Opening levels of stocks held on national territory
4.2.7. Closing levels of stocks held on national territory
4.2.8. Opening levels of stocks held abroad
4.2.9. Closing levels of stocks held abroad
Note for levels of stocks: includes natural gas stored in gaseous form as well as in liquefied form.

4.2.10. Own use and losses of the natural gas industry
Quantities used by the gas industry for heating and operation of its equipment (i.e. consumption in gas extraction, in the pipeline system and in processing plants); includes losses in transmission and distribution.

4.2.11. Imports (entries) by origin and exports (exits) by destination
Imports (entries) shall be reported by country of origin and exports (exits) by country of destination. The note made for imports and exports in section 4.2.3 also applies here. Imports and exports are to be declared only for the neighbouring country or country with a direct pipeline connection or, in the case of LNG, for the country where the gas has been loaded onto the transport ship.

4.2.12. Deliveries to power generation

4.3. Units of measurement
Quantities must be declared in two units:

4.3.1. in physical quantity, in million m³ (million cubic metres) assuming reference gas conditions (15 °C, 101 325 Pa),

4.3.2. in energy content, in TJ (tera-joules), based on the gross calorific value.

4.4. Deadline for transmission of data
Within 55 days following the reported month.
ANNEX D

SHORT TERM MONTHLY STATISTICS

This Annex describes the scope, units, reported period, frequency, deadline and transmission modalities for the short-term monthly collection of statistical data.

Explanations of terms for which a specific explanation is not supplied in this Annex can be found in Annex A.

The following provisions apply to all data collections specified in this Annex:
(a) Reported period: The reported period of declared data shall be one calendar month.
(b) Frequency: Data shall be declared on a monthly basis.
(c) Transmission format: The transmission format shall conform to the relevant interchange standard specified by Eurostat.
(d) Transmission method: Data shall be submitted or uploaded by electronic means to the single entry point for data at Eurostat.

1. NATURAL GAS

1.1. Applicable energy products

This chapter covers the reporting of natural gas.

1.2. List of aggregates

The following aggregates shall be declared.

1.2.1. Production
1.2.2. Imports
1.2.3. Exports

Note for imports and exports: report all natural gas volumes which have physically crossed the national boundaries of the country, whether customs clearance has taken place or not. This includes quantities transiting your country; transit volumes should be included as an import and as an export. Imports of liquefied natural gas should cover only the dry marketable equivalent, including amounts used as own consumption in the regasification process.

1.2.4. Stock change
1.2.5. Total closing stocks on national territory

1.3. Units of measurement

Reported quantities must be declared in TJ (tera-joules), based on the gross calorific value (GCV).

1.4. Deadline for transmission of data

Within one calendar month following the reported month.

2. CRUDE OIL IMPORTS AND SUPPLY

2.1. Applicable energy products
This chapter covers the reporting of crude oil.

2.2. Definitions

2.2.1. Imports
Imports cover every quantity of crude oil which either enters the customs territory of the Contracting Party or comes from another Contracting Party for purposes other than transit. Crude oil used for stock building shall be included.

Oil extracted from the seabed over which a Contracting Party exercises exclusive rights for the purposes of exploitation and entering the customs territory of the Community shall be excluded from imports.

2.2.2. Supply:
Supply covers the crude oil imported and the crude oil produced in the Contracting Party during the reference period. The provision of crude oil from previously built stocks is excluded.

2.2.3. CIF price:
The CIF (cost, insurance and freight) price includes the FOB (free on board) price, which is the price actually invoiced at the port/place of loading in addition to the cost of transport, insurance and charges linked to crude oil transfer operations.

The CIF price of the crude oil produced in a Contracting Party is to be calculated free at port of discharge or free at frontier, i.e. at the moment when the crude oil falls under the customs jurisdiction of the importing country.

2.2.4. API gravity:
The API gravity is a measure of how heavy/light crude oil is compared to water. The API gravity is to be reported according to the following formula, with respect to the specific gravity (SG): $API = \frac{141.5}{SG} - 131.5$

2.3. List of aggregates

2.3.1. The following list of aggregates shall be declared for crude oil imports split by type and geographical area of production:

2.3.1.1. the designation of the crude oil
2.3.1.2. the average API gravity
2.3.1.3. the average sulphur content
2.3.1.4. the total volume imported
2.3.1.5. the total CIF price
2.3.1.6. the number of reporting entities.

2.3.2. The following list of aggregates shall be declared for crude oil supply:

2.3.2.1. the volume supplied
2.3.2.2. the weighted average CIF price

2.4. Units of measurement

bbl (barrel) for 2.3.1.4 and 2.3.2.1.
kt (thousand tonnes) for 2.3.2.1.
% (percentage) for 2.3.1.3.
2.5. Applicable provisions

2.5.1. Reported period:
One calendar month.

2.5.2. Frequency:
Monthly.

2.5.3. Deadline for transmission of data:
Within one calendar month following the reported month.

2.5.4. Transmission format:
The transmission format shall conform to the relevant interchange standard specified by Eurostat.

2.5.5. Transmission method:
Data shall be submitted or uploaded by electronic means to the single entry point for data at Eurostat.

3. OIL AND PETROLEUM PRODUCTS

3.1. Applicable energy products
This chapter covers the reporting of:

3.1.1. Crude oil
3.1.2. LPG
3.1.3. Gasoline (which is the sum of motor gasoline and aviation gasoline)
3.1.4. Kerosene (which is the sum of kerosene type jet fuel and other kerosene)
3.1.5. Gas/diesel oil
3.1.6. Fuel oil.

3.1.7. ‘Total oil’ means the sum of all the above listed products except crude oil, and must also include all other petroleum products defined in Annex A (such as refinery gas, ethane, naphtha, petroleum coke, white spirit and SBP, paraffin waxes, bitumen, lubricants and others).

3.2. List of aggregates
The following aggregates shall be declared for all energy products listed in the previous paragraph.

3.2.1. Production for crude oil and refinery output (gross output, including refinery fuel) for all other products listed in section 3.1.
3.2.2. Imports
3.2.3. Exports
3.2.4. Closing stocks
3.2.5. Stock change

A stock build is shown as a positive number and a stock draw is shown as a negative number.
3.2.6. *Refinery Intake* (Observed refinery throughput) for crude oil and *Demand for all other products that are listed in section 3.1.*

Demand is defined as deliveries or sales to the inland market (domestic consumption) plus Refinery Fuel plus International Marine and Aviation Bunkers. Demand for Total Oil includes Crude Oil.

**3.3. Units of measurement**

Reported quantities must be declared in kt (kilo- tonnes).

**3.4. Deadline for transmission of data**

Within 25 days following the reported month.
REGULATION (EU) 2016/1952 of 26 October 2016 on European statistics on natural gas and electricity prices

The adaptations made by Ministerial Council Decision 2018/1/MC-EnC are highlighted in bold and blue.

Article 1
Subject matter

This Regulation establishes a common framework for the development, production and dissemination of comparable European statistics on natural gas and electricity prices for household and final non-household customers in the Union.

Article 2
Definitions

For the purposes of this Regulation, the following definitions apply:
(1) ‘autoproducers’, ‘final energy consumption’ and ‘household’ have the same meaning as that attributed to those terms in Annex A to Regulation (EC) No 1099/2008 of the European Parliament and of the Council;
(4) ‘network component’ means the combination of transmission and distribution network costs as set out in point 6 of Annex I and in point 5 of Annex II.

Article 3
Data sources

Contracting Parties shall compile data on natural gas and electricity prices, and their components and sub-components concerning network costs, taxes, fees, levies and charges, and on consumption volumes, in accordance with Annexes I and II. One or more of the following sources shall be used, after taking into account the principles of reducing burden on respondents and of administrative simplification:
(a) statistical surveys;
(b) administrative sources;
(c) other sources applying statistical estimation methods.

**Article 4**

**Coverage**

1. **Contracting Parties** shall ensure that the data collection and compilation in accordance with Annexes I and II provide comprehensible and comparable high-quality data that are representative of their respective natural gas and electricity prices and consumption.

2. **Contracting Parties** shall not be obliged to transmit data on natural gas prices for household customers if the consumption of natural gas in the household sector accounts for less than 1.5% of national final energy consumption in the household sector.

3. At least every three years, **Energy Community Secretariat** shall review which **Contracting Parties** are not obliged to transmit data pursuant to paragraph 2.

**Article 5**

**Data transmission**

1. **Contracting Parties** shall provide to the Commission (Eurostat) the data as set out in Annexes I and II.

2. The Commission shall adopt implementing acts establishing the format and arrangements for the transmission of the data as set out in Annexes I and II. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 10(2).

3. **Contracting Parties** shall provide statistics to the Commission (Eurostat) within three months of the end of the relevant reference period.

**Article 6**

**Reference periods and transmission frequency**

1. The reference periods for the data specified in Annexes I and II shall be annual (January to December) or biannual (January to June and July to December). The first reference periods shall start in 2017.

2. The transmission frequency shall be:

   (a) annual (for the period from January to December) for data referred to in points 6(a) and 7 of Annex I and points 5(a) and 6 of Annex II;

   (b) biannual (for the periods from January to June and from July to December) for data referred to in point 6(b) of Annex I and point 5(b) of Annex II.
**Article 7**

**Quality assurance**

1. **Contracting Parties** shall ensure the quality of the data provided in accordance with this Regulation. To that end, the standard quality criteria laid down in Article 12(1) of Regulation (EC) No 223/2009 apply.

2. Contracting Parties shall inform the Commission (Eurostat), without delay, of any methodological or other changes that might have a significant impact on natural gas and electricity price statistics, and in any event no later than one month after that change occurs.

3. Every three years, **Contracting Parties** shall provide the Commission (Eurostat) with a standard quality report on the data in accordance with the quality criteria laid down in Article 12(1) of Regulation (EC) No 223/2009. Those reports shall include information on the scope and collection of the data, the calculation criteria, the methodology and data sources used, and any changes thereto.

4. The Commission (Eurostat) shall assess the quality of the data provided and shall use that assessment and an analysis of the quality reports referred to in paragraph 3 in order to prepare and publish a report on the quality of European statistics covered by this Regulation.

5. The Commission shall adopt implementing acts establishing technical quality assurance requirements regarding the content of the quality reports referred to in paragraph 3 of this Article. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 10(2).

**Article 8**

**Dissemination**

The Commission (Eurostat) shall disseminate natural gas and electricity price statistics no later than five months after the end of each reference period.

**Article 9**

**Derogations**

1. Derogations may be granted by the **Energy Community Secretariat** by means of implementing acts in relation to specific obligations for which the application of this Regulation to the national statistical system of a **Contracting Party** requires major adaptations or is likely to lead to a significant additional burden on respondents. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 10(2).

2. For the purposes of paragraph 1, the **Contracting Party** concerned shall submit a duly reasoned request to the **Energy Community Secretariat** by 8 August 2017.

3. Derogations granted pursuant to paragraph 1 shall remain in force for the shortest period of time possible and in any event for no longer than three years.

4. A **Contracting Party** that has been granted a derogation pursuant to paragraph 1 shall apply the relevant provisions of Directive 2008/92/EC for the duration of the derogation.
**Article 10**

Committee procedure

1. The Commission shall be assisted by the European Statistical System Committee established by Regulation (EC) No 223/2009. That Committee shall be a committee within the meaning of Regulation (EU) No 182/2011.

2. Where reference is made to this paragraph, Article 5 of Regulation (EU) No 182/2011 shall apply.

**Article 11**

Repeal of Directive 2008/92/EC

2. Notwithstanding paragraph 1 of this Article, Directive 2008/92/EC shall continue to apply under the conditions provided for in Article 9 of this Regulation.

3. References to the repealed Directive shall be construed as references to this Regulation.

**Article 12**

Entry into force

This Decision enters into force on the day of its adoption and is addressed to the Contracting Parties.

ANNEX I
NATURAL GAS PRICES

This Annex sets out the methodology for the collection and compilation of statistical data on natural gas prices for household and final non-household customers.

1 Prices
Prices shall be those charged to household and final non-household customers buying natural gas for their own use that is distributed through mains.

2 Natural gas
Natural gas shall include natural gas and other gaseous fuels blended with natural gas in the transmission and distribution network, such as biogas. Other gaseous fuels that are distributed through dedicated networks without being blended with natural gas (e.g. gas works gas, coke oven gas, blast furnace gas and biogas) shall be excluded.

3 Reporting units
The data shall include all household and final non-household customers of natural gas, but shall exclude customers who use natural gas only for:
- electricity generation in power plants or in combined heat and power (CHP) plants; or
- non-energy purposes (e.g. for use in the chemicals industry).

4 Units of measurement
Prices shall be the national average prices charged to household and final non-household customers. Prices shall be expressed in national currency per gigajoule (GJ). The unit of energy used shall be measured on the basis of the gross calorific value (GCV). Prices shall be weighted according to the market share of natural gas supply undertakings in each consumption band. If it is not possible to calculate weighted average prices, arithmetic average prices may be provided. In either case, the data shall cover a representative share of the national market.
5 Consumption bands

Prices shall be based on a system of standard annual natural gas consumption bands.

(a) For household customers, the following bands shall be applied:

<table>
<thead>
<tr>
<th>Consumption band</th>
<th>Annual natural gas consumption (GJ)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Minimum</td>
</tr>
<tr>
<td>Band D1</td>
<td></td>
</tr>
<tr>
<td>Band D2</td>
<td>≥ 20</td>
</tr>
<tr>
<td>Band D3</td>
<td>≥ 200</td>
</tr>
</tbody>
</table>

(b) For final non-household customers, the following bands shall be applied:

<table>
<thead>
<tr>
<th>Consumption band</th>
<th>Annual natural gas consumption (GJ)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Minimum</td>
</tr>
<tr>
<td>Band I1</td>
<td></td>
</tr>
<tr>
<td>Band I2</td>
<td>≥ 1 000</td>
</tr>
<tr>
<td>Band I3</td>
<td>≥ 10 000</td>
</tr>
<tr>
<td>Band I4</td>
<td>≥ 100 000</td>
</tr>
<tr>
<td>Band I5</td>
<td>≥ 1 000 000</td>
</tr>
<tr>
<td>Band I6</td>
<td>≥ 4 000 000</td>
</tr>
</tbody>
</table>

6 Level of detail

Prices shall include all charges payable: network charges plus energy consumed, minus any rebates or premiums, plus any other charges (e.g. meter rental, standing charges). Initial connection charges shall be excluded.

Detailed data shall be transmitted as specified below.

(a) **Level of detail required for components and sub-components**

Prices shall be subdivided into three main components and into separate sub-components.

The final customer price for natural gas by consumption band is the sum of the three main components: the energy and supply component, the network component (transmission and distribution) and the component comprising taxes, fees, levies and charges.

<table>
<thead>
<tr>
<th>Component and sub-component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Energy and supply</td>
<td>This component shall include the commodity price for natural gas paid by the supplier or the price of natural gas at the point of entry into the transmission system, including, if applicable, the following end-user costs: storage costs plus costs relating to the sale of natural gas to final customers.</td>
</tr>
</tbody>
</table>
Network

The network price shall include the following end-user costs: transmission and distribution tariffs, transmission and distribution losses, network costs, after-sale service costs, system service costs and meter rental and metering costs.

Sub-component

The network component shall be subdivided into end-user transmission and distribution network costs, as follows:

1. Average relative share of transmission costs for household customers and average relative share of transmission costs for final non-household customers, expressed as a percentage of total network costs.

2. Average relative share of distribution costs for household customers and average relative share of distribution costs for final non-household customers, expressed as a percentage of total network costs.

Taxes, fees, levies and charges

This component is the sum of all the sub-components (taxes, fees, levies and charges) listed below.

Sub-component

The following sub-components shall be transmitted as individual items for each consumption band defined in point 5.

2. Taxes, fees, levies or charges relating to the promotion of renewable energy sources, energy efficiency and CHP generation.

3. Taxes, fees, levies or charges relating to strategic stockpiles, capacity payments and energy security; taxes on natural gas distribution; stranded costs and levies on financing energy regulatory authorities or market and system operators.

4. Taxes, fees, levies or charges relating to air quality and for other environmental purposes; taxes on emissions of CO₂ or other greenhouse gases.

5. All other taxes, fees, levies or charges not covered by any of the previous four categories: support for district heating; local or regional fiscal charges; island compensation; concession fees relating to licences and fees for the occupation of land and public or private property by networks or other devices.

(b) Level of detail based on taxation

Prices shall be broken down into the following three levels:

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prices excluding all taxes, fees, levies and charges</td>
<td>This price level shall include only the energy and supply component and the network component.</td>
</tr>
</tbody>
</table>
### Prices excluding value added tax (VAT) and other recoverable taxes

This price level shall include the energy and supply component, the network component and taxes, fees, levies and charges considered as non-recoverable for final non-household customers. For household customers this price level shall include the energy and network components and taxes, fees, levies and charges but excludes VAT.

### Prices including all taxes

This price level shall include the energy and supply component, the network component, and all recoverable and non-recoverable taxes, fees, levies and charges, including VAT.

#### 7 Consumption volumes

Contracting Parties shall transmit information on the relative share of natural gas in each consumption band based on the total volume to which the prices refer.

The annual consumption volumes for each consumption band shall be transmitted once per year, together with the price data for the second semester.

The data shall not be older than two years.
ANNEX II
ELECTRICITY PRICES

This Annex sets out the methodology for the collection and compilation of statistical data on electricity prices for household and final non-household customers.

1 Prices
Prices shall be those charged to household and final non-household customers buying electricity for their own use.

2 Reporting units
The data shall include all household and final non-household customers of electricity, but electricity generated and subsequently consumed by autoproducers shall be excluded from the reporting obligation.

3 Units of measurement
Prices shall be the national average prices charged to household and final non-household customers. Prices shall be expressed in national currency per kilowatt-hour (kWh).

Prices shall be weighted according to the market share of electricity supply undertakings in each consumption band. If it is not possible to calculate weighted average prices, arithmetic average prices may be provided. In either case, the data shall cover a representative share of the national market.

4 Consumption bands
Prices shall be based on a system of standard annual electricity consumption bands.

(a) For household customers, the following bands shall be applied:

<table>
<thead>
<tr>
<th>Consumption band</th>
<th>Annual electricity consumption (kWh)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Minimum</td>
</tr>
<tr>
<td>Band DA</td>
<td></td>
</tr>
<tr>
<td>Band DB</td>
<td>≥ 1 000</td>
</tr>
<tr>
<td>Band DC</td>
<td>≥ 2 500</td>
</tr>
<tr>
<td>Band DD</td>
<td>≥ 5 000</td>
</tr>
<tr>
<td>Band DE</td>
<td>≥ 15 000</td>
</tr>
</tbody>
</table>
(b) For final non-household customers, the following bands shall be applied:

<table>
<thead>
<tr>
<th>Consumption band</th>
<th>Annual electricity consumption (kWh)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Minimum</td>
</tr>
<tr>
<td>Band IA</td>
<td></td>
</tr>
<tr>
<td>Band IB</td>
<td>≥ 20</td>
</tr>
<tr>
<td>Band IC</td>
<td>≥ 500</td>
</tr>
<tr>
<td>Band ID</td>
<td>≥ 2 000</td>
</tr>
<tr>
<td>Band IE</td>
<td>≥ 20 000</td>
</tr>
<tr>
<td>Band IF</td>
<td>≥ 70 000</td>
</tr>
<tr>
<td>Band IG</td>
<td>≥ 150 000</td>
</tr>
</tbody>
</table>

5 Level of detail

Prices shall include all charges payable: network charges plus energy consumed, minus any rebates or premiums, plus any other charges (e.g. meter rental, standing charges). Initial connection charges shall be excluded.

Detailed data shall be transmitted as specified below.

(a) Level of detail required for components and sub-components

Prices shall be subdivided into three main components and into separate sub-components.

The final customer price for electricity by consumption band is the sum of the three main components: the energy and supply component, the network component (transmission and distribution) and the component comprising taxes, fees, levies and charges.

<table>
<thead>
<tr>
<th>Component and sub-component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Energy and supply</td>
<td>This component shall include the following end-user costs: generation, aggregation, balancing energy, supplied energy costs, customer services, after-sales management and other supply costs.</td>
</tr>
<tr>
<td>Network</td>
<td>The network price shall include the following end-user costs: transmission and distribution tariffs, transmission and distribution losses, network costs, after-sale service costs, system service costs, and meter rental and metering costs.</td>
</tr>
<tr>
<td>Sub-component</td>
<td>The network component shall be subdivided into end-user transmission and distribution network costs, as follows:</td>
</tr>
<tr>
<td></td>
<td>1. Average relative share of transmission costs for household customers and average relative share of transmission costs for final non-household customers, expressed as a percentage of total network costs.</td>
</tr>
<tr>
<td></td>
<td>2. Average relative share of distribution costs for household customers and average relative share of distribution costs for final non-household customers, expressed as a percentage of total network costs.</td>
</tr>
<tr>
<td>Taxes, fees, levies and charges</td>
<td>This component is the sum of all the sub-components (taxes, fees, levies and charges) listed below.</td>
</tr>
</tbody>
</table>
The following sub-components shall be transmitted as individual items for each consumption band defined in point 4.

1. Value added tax as defined in Directive 2006/112/EC.

2. Taxes, fees, levies or charges relating to the promotion of renewable energy sources, energy efficiency and CHP generation.

3. Taxes, fees, levies or charges relating to capacity payments, energy security and generation adequacy; taxes on coal industry restructuring; taxes on electricity distribution; stranded costs and levies on financing energy regulatory authorities or market and system operators.

4. Taxes, fees, levies or charges relating to air quality and for other environmental purposes; taxes on emissions of CO₂ or other greenhouse gases.

5. Taxes, fees, levies or charges relating to the nuclear sector, including nuclear decommissioning, inspections and fees for nuclear installations.

6. All other taxes, fees, levies or charges not covered by any of the previous five categories: support for district heating; local or regional fiscal charges; island compensation; concession fees relating to licences and fees for the occupation of land and public or private property by networks or other devices.

(b) Level of detail based on taxation

Prices shall be broken down into the following three levels:

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prices excluding all taxes, fees, levies and charges</td>
<td>This price level shall include only the energy and supply component and the network component.</td>
</tr>
<tr>
<td>Prices excluding value added tax (VAT) and other recoverable taxes</td>
<td>This price level shall include the energy and supply component, the network component and taxes, fees, levies and charges considered as non-recoverable for final non-household customers. For household customers this price level shall include the energy and the network components and taxes, fees, levies and charges but excludes VAT.</td>
</tr>
<tr>
<td>Prices including all taxes</td>
<td>This price level shall include the energy and supply component, the network component, and all recoverable and non-recoverable taxes, fees, levies and charges, including VAT.</td>
</tr>
</tbody>
</table>

6 Consumption volumes

Contracting Parties shall transmit information on the relative share of electricity in each consumption band based on the total volume to which the prices refer.

The annual consumption volumes for each consumption band shall be transmitted once per year, together with the price data for the second semester. The data shall not be older than two years.
IMPLEMENTING REGULATION (EU) 2019/803 of 17 May 2019 concerning the technical requirements regarding the content of quality reports on European statistics on natural gas and electricity prices pursuant to Regulation (EU) 2016/1952

The adaptations made by Ministerial Council Decision 2020/03/MC-EnC are highlighted in bold and blue.

Having regard to the Treaty on the Functioning of the European Union,

**Article 1**

(1) The technical quality assurance requirements regarding the content of the quality reports on the data on natural gas and electricity prices are set out in the Annex.

(2) **Contracting Parties** shall submit the first quality reports by **15 June 2022**.

(3) Each quality report shall cover the full years elapsed since the date of the previous quality report. However, the first quality reports shall cover reference years **2019 to 2021**.

**Article 2**

The quality reports shall be provided through the single entry point provided by the Commission (Eurostat) in order to enable the Commission (Eurostat) to receive those quality reports by electronic means.

**Article 3**

**This Decision shall enter into force on the day of its adoption.**

**It is addressed to the Contracting Parties**
ANNEX

TECHNICAL QUALITY ASSURANCE REQUIREMENTS REGARDING THE CONTENT OF THE QUALITY REPORTS OF EUROPEAN STATISTICS ON NATURAL GAS AND ELECTRICITY PRICES

The quality reports shall include information on all the quality criteria laid down in Article 12(1) of Regulation (EC) No 223/2009.

1 RELEVANCE

Contracting Parties shall provide the following information in the quality reports:
(a) a description of users, their respective needs and a justification of these needs;
(b) procedures used to measure user satisfaction and produce the results;
(c) the extent to which the required statistics are available.

2 ACCURACY

The quality reports shall contain:
(a) an accuracy assessment which summarises the various dataset components;
(b) a description of the sampling errors;
(c) a description of any other errors.

3 TIMELINESS AND PUNCTUALITY

Contracting Parties shall report on:
(a) the length of time between the event or phenomenon they describe and the data availability (timeliness);
(b) the length of time between the target date for data delivery and the actual data delivery date (punctuality);
(c) the number of iterations needed in order to have fully validated data (validation iterations).

4 ACCESSIBILITY AND CLARITY

Contracting Parties shall report on the conditions and means by which users can:
(a) obtain and use the data (including, but not limited to news releases, publications, online databases, micro data access);
(b) interpret the data such as providing documentation on methodology and quality management.

5 COMPARABILITY

Contracting Parties shall report on the extent to which statistics are comparable:
(a) between geographical areas;
(b) over time.

6 COHERENCE

Contracting Parties shall report on the extent to which statistics are:

(a) reconcilable with data obtained through other sources (cross domain coherence);
(b) consistent within a given dataset (internal coherence).

Contracting Parties shall also report on the following additional quality aspects:

1 QUALITY MANAGEMENT

Contracting Parties shall report on the systems and frameworks in place to manage the quality of statistical products and processes. They shall also report on their assessment of the quality of the data.

2 DATA REVISION

Contracting Parties shall explain why validated data have been revised. The reasons may include information of new source of data available, new methods or other relevant information. The report shall also include the date, the size and the magnitude of the revisions.

In accordance with Article 7(3) of Regulation (EU) 2016/1952, those reports shall include information on the scope and collection of the data, the calculation criteria, the methodology and data sources used, and any changes made.

1 STATISTICAL PRESENTATION

Contracting Parties shall provide the following description of the disseminated data which can be displayed to users as tables, graphs or maps:

(a) data description;
(b) classification system;
(c) sector coverage;
(d) statistical concepts and definitions;
(e) statistical unit;
(f) statistical population;
(g) reference area (geographical scope);
(h) time coverage (length of time for which data are available);
(i) reference period (period covered by the report);
(j) unit of measure.
2 STATISTICAL PROCESSING
The quality reports shall cover a description of all procedures used to collect, validate and compile the data and to derive new information.

3 RELEASE POLICY
The quality reports shall report on the rules for disseminating the data at national level.

4 FREQUENCY OF DISSEMINATION
The reports shall also indicate the frequency with which the data is disseminated at national level.

*In line with the statistical principles laid down in points (e) and (f) of Article 2(1) of Regulation (EC) No 223/2009, Contracting Parties shall report on:*

1 CONFIDENTIALITY
The quality reports shall contain information on the legislative measures or other formal procedures, which prevent any unauthorised disclosure of data that could directly or indirectly cause a person or economic entity to be identified. They will also outline the rules applied to ensure statistical confidentiality and prevent unauthorised disclosure.

2 COST AND BURDEN
The quality reports shall contain information on the cost and burden associated with the collection and production of the statistical product.
PART III

MEASURES AND PROCEDURAL ACTS
BY ENERGY COMMUNITY INSTITUTIONS
RULES OF PROCEDURE of 16 October 2015 of the Ministerial Council of the Energy Community

I. GENERAL

1. These rules establish the internal procedures for operation of the Ministerial Council (the “Council”) as an institution under the Treaty establishing Energy Community (the “Treaty”).

2. In case of any contradiction between these rules and the Treaty, the rules of the Treaty shall be applied.

II. MEMBERS, PARTICIPANTS, OBSERVERS

1. The Council shall consist of representatives of the Parties to the Treaty. Each Party to the Treaty, with the exception of the European Community, shall have one representative at the Council; the European Community shall have two representatives determined pursuant to its internal decision. Parties should in principle be represented in the Council at ministerial level or equivalent.

2. In accordance with Article 95 of the Treaty, one non-voting representative of each Participant may participate in the Council meetings.

3. In accordance with Article 96 of the Treaty, Observers may attend the meetings of the Council.

4. The Presidency and the Vice-Presidency may agree to invite representatives of other institutions to attend a relevant meeting on an ad hoc basis.

5. Where the Presidency and the Vice-Presidency agreed to invite other bodies, including representatives of Civil Society Organizations and participants in the meetings of the Parliamentary Plenum, the President shall inform the Parties at least three weeks before the meeting. The Parties decide on the invitation by simple majority by submitting their views to the Secretariat within five working days from receiving this information. Tacit agreement is assumed where no reaction is received by the Secretariat within this deadline.

III. PRESIDENCY

1. The Presidency of the Council shall be held in turn by each Contracting Party\(^1\) in alphabetical order, following the names of the Parties as indicated in the Treaty, starting with the former Yugoslav Republic of Macedonia.

2. The Presidency shall chair the Ministerial Council. It will be assisted by one representative of the European Community and one representative of the incoming Presidency as Vice-Presidency.

---

\(^1\) A Contracting Party is any Party, for which the Treaty is into force, excluding the European Community.
3. Should the Presidency be not in a position to perform its duties for a particular meeting, the latter will be chaired by the Vice-President who represents the European Community.

**IV. PREPARATION OF THE MEETINGS**

1. The Council shall meet at least once per year. In urgent circumstances, agreed between the Presidency and the Vice-Presidents, the Presidency may convene the Council also outside the regular meetings.

2. The place of Council meetings shall be decided upon by the Presidency after consultations with the Vice-Presidency and the Energy Community Secretariat (the Secretariat). Normally, this decision shall be made at least two months prior to the relevant meeting.

3. The date of the meetings shall be agreed between the Presidency, the Vice-Presidency and the Energy Community Secretariat (the Secretariat). In principle, the dates shall be agreed at least two months prior to the relevant meeting.

4. The draft agenda of the meetings shall be agreed by the Presidency and the Vice-Presidency. It shall be distributed at least two weeks prior to the relevant meeting. Should there be documents related to any agenda item, these should be distributed to the representatives specified in section II paragraphs 1 to 3 together with the agenda.

5. Without prejudice to the decision making process under Title VI of the Energy Community Treaty, the Permanent High Level Group may identify Measures for adoption by the Ministerial Council without further discussion. The identified Measures shall be included in the draft agenda of the next Ministerial Council as “A” items. The draft Agenda shall specify the Title and Chapter of the Treaty under which the draft Measure identified as an “A” item will be presented for voting in the Ministerial Council. This does not exclude the possibility for any Party to have statements included in the conclusions.

6. The Secretariat is responsible for the preparation of the meetings. It will inform the Presidency and the Vice-Presidency periodically and upon request about the preparation process and follow their requests and guidance in this relation.

7. Should this be found necessary, the Presidency and the Vice-Presidency may propose that a particular committee/commission is established. The decision of the Council shall take the form of a Procedural Act and include concrete list of participants as well as the scope of work, which should be performed, together with relevant deadlines.

**V. MEETINGS OF THE COUNCIL – PROCEDURAL RULES**

1. The meetings of the Council shall not be public unless the Council decides otherwise.

2. Any member of the Council or any other attendee of the meeting may be accompanied by officials who assist them. The names and functions of those officials shall be notified in advance to the Secretariat. As a principle, these officials should not be more than three for any Party to the Treaty, and not more than two for any other participant in the meeting. However, the Presidency may further advise on the maximum number of representatives per delegation.
3. The Council may take decisions only if two thirds of the Parties are represented. Abstentions in a vote from the Parties present shall not count as votes cast.

4. As provided in Article 80 of the Treaty, each Party shall have one vote.

5. The Agenda for the meeting shall be approved at its beginning. In urgent circumstances, new items may be included also during the meeting subject to the agreement of the President and Vice-Presidency.

6. Re-opening discussion on Measures included in the draft agenda of the next Ministerial Council as “A” items requires simple majority.

7. The Participants may participate in the discussions but they do not take part in voting.

8. The observers may make statements upon permission or invited by the Presidency. The Observers do not have voting rights.

9. Conclusions of each meeting shall be drawn up with the assistance of the Secretariat. These shall be signed by the Presidency and distributed to the members and the attendees. In case it is not possible to finalize the conclusions by the end of the relevant meeting, the Presidency shall assure that they are drafted and distributed within 7 days after its end. Further, any member of the Council might request corrections within 7 days upon receipt of the draft. The Presidency shall arrange that the final version is distributed within 7 days upon the expiry of the deadline for comments.

10. Any vote shall be explicitly described in the Conclusions.

11. The conclusions cannot in any way restrict the scope or effects of legal acts or the Treaty. No statements or conclusions which contradict binding legal provisions shall be made. Conclusions cannot form part of legal acts nor have any normative effect.

VI. ACTS OF THE COUNCIL – PROCEDURAL ASPECTS

1. To ensure that the objectives set out in the Treaty are attained, the Council provides general policy guidelines, takes Measures and adopt Procedural Acts.

1. General Policy Guidelines

2. The Council shall provide general policy guidelines, when requested or upon its own initiative.

3. The general policy guidelines shall reflect the political consensus of the Parties on strategic issues of mutual interest in line with the Treaty objectives.

4. The issue or amendment of general policy guidelines may be requested by any member of the Council. The request shall be in writing and shall contain sufficient information explaining the necessity of adoption of the proposed guidelines by the Council.

5. The written request shall be submitted by the requesting member of the Council to the Presidency with copy to the Vice-Presidency. The Presidency notifies all members of the Council within seven days after the request has been received.

6. The Presidency, in consultation with the Vice-Presidency, shall organize the preparation of a draft position

2 All days are calendar days.
of the Council, which shall be presented for discussion at the next Council meeting. The draft position shall be sent to the Members of the Council at least 30 days before the meeting.

7. General policy guidelines might be adopted ad hoc on the ground of consensus of all members of the Council.

2. Measures

8. Unless otherwise specified in these rules or in a separate decision of the Council, the adoption of Measures (Decisions and Recommendations) shall follow the same procedure.

9. Any proposal for a Measure from the European Commission, from the relevant Party or from the Secretariat shall be made in writing at least 60 days before the meeting of the Council at which it shall be discussed.

10. The proposal shall be sent to the Presidency with copy to all the members of the Council and to the Secretariat. It shall be accompanied by relevant explanatory notes. Where necessary, position of the Regulatory Board shall be requested by the Party or the institution, which makes the relevant proposal for a Measure.

11. During the meeting of the Council at which the proposal for a Measure shall be discussed, the Presidency shall identify the required quorum in accordance with the Treaty. The Presidency shall do so prior to the discussion of the proposal. The quorum availability will be respectively reflected in a protocol.

12. Measures under Title II of the Treaty – extension of the acquis communautaire – shall be taken by a majority of the votes cast only on the ground of a proposal from the European Commission, which may alter or withdraw its proposal at any time before the final adoption of the Measure.

13. Measures under Title III of the Treaty – Mechanism for operation of Network Energy Markets – shall be taken by a two third majority of the votes cast, including a positive vote of the European Community, upon a proposal from a Party or the Secretariat, which also shall take account of a position of the Regulatory Board.

14. Measures under Title IV – The Creation of a Single Energy Market – may be taken on a proposal from a Party only by unanimity. The European Commission on its own initiative or upon request of any party may request a position of the Regulatory Board.

3. Procedural Acts

15. The Council adopts Procedural Acts in cases envisaged in the Treaty and in accordance with the required majority. During the meeting of the Council at which the proposal for a Procedural Act shall be discussed, the Presidency shall identify the required quorum in accordance with the Treaty. The Presidency shall do so prior to the discussion of the proposal. The quorum availability will be respectively reflected in a protocol.

16. Unless otherwise envisaged by the Treaty, any member of the Council may propose adoption of a Procedural Act.

17. The preparation of draft Procedural Acts is coordinated by the Presidency in consultation with the Vice-Presidency. The Presidency may ask the Party, which has initiated the preparation of a Procedural Act, and/or the Secretariat to assist in the process of this preparation.

18. Draft Procedural Acts, related to organizational, budgetary and transparency issues, shall be distributed
at least 30 days before the meeting at which they will be discussed.

19. Procedural Act related to the appointment of the Director of the Secretariat, provided for in Article 69 of the Treaty, shall be proposed by the European Commission. The draft shall be distributed at least 30 days before the meeting at which it will be discussed.

20. Procedural Act on budgetary matters, provided for in Article 73 and 74 of the Treaty, shall be proposed by the European Commission at least 30 days before the meeting at which it will be discussed.

21. Procedural Act conferring powers on the Regulatory Board, provided for in Article 47(c) of the Treaty, may be proposed by any member of the Council or by the Secretariat, at least 30 days before the meeting at which the relevant proposal shall be discussed. In case the opinion of the Regulatory Board is requested through the Presidency, it shall be part of explanatory documents to be submitted with the proposal for that act.

4. Work Programme

22. The Council shall adopt a work programme for the next two years. A proposal for the work programme is prepared by the Secretariat and sent to the Council Members upon agreement by the President and Vice-President.

5. Rules For Decision-Making by Correspondence

23. The Council may, in the intervals between the meetings of the Council, take decisions by correspondence. The Presidency, upon the proposal by a Party for a decision to be taken by correspondence or upon its own initiative shall decide, after consulting and in agreement with the Vice-Presidency, whether the matter warrants the taking of the decision by correspondence.

24. When it is decided that a decision should be taken by correspondence, the Presidency shall instruct the Secretariat to dispatch a letter or telex to each Party containing the proposed decision together with such information as the Presidency, after consultation and in agreement with the Vice-Presidency, considers necessary to an informed decision. The Presidency, after consultation and in agreement with the Vice-Presidency, shall also specify whether and, if so, under which conditions, amendments to the proposal may be made by the Parties.

25. Presidency, after consultation and in agreement with the Vice-Presidency, shall determine the date and hour by which responses must be received, which shall in no case be earlier than 10 calendar days from the date of transmission of the letter or telex referred to above. In exceptional circumstances, upon request or at its own discretion, may the Presidency, after consultation and in agreement with the Vice-Presidency, extend the time limit for the receipt of responses. Any Party who has not replied in writing (including telex) within the given time limit is regarded as abstaining from the vote.

26. The votes cast by correspondence shall be reviewed by at least three persons, including a representative of the Presidency, the European Commission and the Secretariat. Once a decision is adopted, it shall be promptly circulated by the Secretariat to all Parties and Participants, together with the information on the votes cast in favor of the decision. It shall be formally signed by the Presidency at the earliest meeting of the PHLG.
27. This procedure may be used for adoption of Measures or other decisions following agreement of the President and Vice-Presidents.

VII. RULINGS ON DISPUTE SETTLEMENT AND IMPLEMENTATION OF DECISIONS

1. Any Party to the Treaty, the Secretariat or the Regulatory Board may bring to the Council’s attention circumstances which suggest that a Party failed to comply with a Treaty obligation or failed to implement a Decision addressed to it within the required period.

2. A Party’s, Secretariat’s or Regulatory Board’s communication to the ministerial Council pursuant to the preceding paragraph shall take the form of a reasoned request. The request shall therefore be based on concrete factual findings and backed up by sufficient analysis. The request also shall contain a proposal for a Council’s decision.

3. The request shall be made at least 30 days before the meeting of the Council.

4. The notification shall be sent to the Presidency and the Vice-Presidency. Prior to including the item on the Council’s agenda, the Presidency, in consultation with the Vice-Presidency, may request additional information from the Party or the institution which has made the notification.

5. The Presidency shall inform the Party, which is subject to the claim, within 7 days after receiving it, by sending the relevant materials, and ask it to present its views in writing.

6. During the meeting of the Council at which the request or other issue under Title VII of the Treaty is discussed, the Presidency shall identify the required quorum in accordance with the Treaty. The Presidency shall do so prior to the discussion of the proposal. The quorum availability will be respectively reflected in a protocol.

VIII. INTERPRETATION OF THE TREATY

1. The Council may give guidance to the interpretation of the Treaty upon request by any Party or any of the institutions established by the Treaty.

2. The request for interpretation shall be submitted to the Presidency and copied to the Vice-Presidency.

3. The Presidency shall ask the European Commission and the Secretariat for a reasoned opinion regarding the interpretative issue specified in the request.

4. Unless otherwise decided, any guidance on interpretation of the Treaty, given by the Council, shall be immediately enforceable and is binding on the Parties and the institutions under the Treaty.

IX. DISCLOSURE OF DOCUMENTS

1. The draft agenda and the relevant materials shall be distributed to all the members of the Council, to the Participants and to the Observers. Material of interest to them will also be distributed to the representatives of any other institutions, which are invited to take part in the relevant meeting. Any of the Presidency and the Vice-Presidency may request that the draft agenda and the relevant materials are distributed to other institutions.
2. Unless otherwise decided, the finalized documents of the meetings (agenda, conclusions, etc.) shall be made public via the website of the Secretariat.

X. FINAL PROVISIONS

1. The Participants, Observers and other attendees are expected to follow any requirements for confidentiality, which are valid to the Parties. Such requirements are reflected in the conclusions of the relevant meeting.

2. All acts of the Ministerial Council shall be signed by the Presidency.

3. The Rules have been adopted by the Council on the ground of Article 49 of the Treaty. In accordance with that provision, any amendments to these Rules shall be adopted by a Procedural Act.

4. If application of these Rules to a specific situation is unclear or ambiguous, the Presidency in consultation and agreement with the Vice-Presidency shall interpret the Rules to resolve the situation.

5. The Council meetings shall be conducted in a businesslike manner.

6. At the latest one year from the entry of these Rules into force, based on the practical experience with their application, the Secretariat may propose eventual amendments to these Rules it deems useful or necessary. Where a Party wishes to propose such amendment, it is encouraged to consult it first with the Secretariat.

The Rules become effective on 16 October 2015, which is the day of their adoption by the Energy Community Ministerial Council.
RULES OF PROCEDURE of 16 October 2015 of the Permanent High Level Group of the Energy Community

I. GENERAL

1. These rules establish the internal procedures for operation of the Permanent High Level Group (called “PHLG”) as an institution under the Treaty establishing the Energy Community.
2. In case of any contradiction between these rules and the Treaty establishing the Energy Community (the “Treaty”), the rules of the Treaty shall be applied.

II. MEMBERS – PARTICIPANTS - OBSERVERS

1. (i) The PHLG shall consist of representatives of the Parties to the Treaty. Each Contracting Party to the Treaty shall have one representative at the PHLG; the European Community shall have two representatives upon its internal decision.
   (ii) The members of the PHLG shall be senior officials in the ministry in charge of energy. The act of appointment shall provide evidence that the member is mandated to express the position of the respective Party in a manner binding on that Party and has the obligation as well as all necessary powers to coordinate positions internally before expressing them at the meetings of the PHLG.
2. The members of the PHLG shall express the positions of the relevant Parties. In case a member of the PHLG cannot attend its meeting, he/she might be represented by another person at the appropriate level.
3. In accordance with Article 54 of the Treaty, one non-voting representative of each Participant may participate in the meetings.
4. In accordance with Article 96 of the Treaty, Observers may attend the meetings of the PHLG. Each Observer may have one representative.
5. The Presidency and the Vice-Presidency may agree to invite any other bodies to attend a relevant meeting on ad hoc basis.
6. Where the Presidency and the Vice-Presidency agreed to invite other bodies as observers, including representatives of Civil Society Organizations and participants in the meetings of the Parliamentary Plenum, the President shall inform the Parties at least three weeks before the meeting. The Parties decide on the invitation by simple majority by submitting their views to the Secretariat within five working days from receiving this information. Tacit agreement is assumed where no reaction is received by the Secretariat within this deadline.
III. PRESIDENCY

1. The Contracting Party holding the Presidency of the Ministerial Council shall also hold the Presidency of the PHLG.

2. The Presidency shall chair the PHLG meetings with the operational support of the European Commission.¹

3. The Presidency shall be assisted by one representative of the European Community and one representative of the incoming Presidency as Vice-Presidency.

4. Should the Presidency be not in a position to perform its duties for a particular meeting, the latter will be chaired by the Vice-Presidency who represents the European Community.

IV. PREPARATION OF THE MEETINGS

1. The PHLG shall meet on regular basis at least once every six months. In urgent circumstances, agreed between the Presidency and the Vice-Presidency, the Presidency shall convene PHLG also outside the regular meetings.

2. The Presidency shall convene the PHLG in a place decided upon by the Presidency after consultation with the Vice-Presidency. In principle, following the requirements of most cost effective approach, the meetings of the PHLG shall take place in Vienna, Austria. Any proposal for a meeting in other place shall consider the relevant financial, administrative and organizational aspects.

3. The date of the meetings shall be agreed between the Presidency, the Vice-Presidency and the Energy Community Secretariat (“the Secretariat”). In principle, the dates shall be agreed at least two months prior to the relevant meeting.

4. The draft agenda of the meetings shall be agreed by the Presidency and the Vice-Presidency. It shall be distributed at least two weeks prior to the relevant meeting. Should there be documents, related to any agenda item, these should be distributed to the representatives specified in Section II, Paras. 1 to 4 together with the agenda.

5. The Secretariat is responsible for the preparation of the meetings. It will inform the Presidency and the Vice-Presidents periodically and upon request about the preparation process and follow their requests and guidance in this relation.

6. Should this be found necessary, the Presidency and the Vice-Presidents may propose that a committee/commission under the authority of the PHLG is established. The decision of the PHLG shall take a form of a Procedural Act and shall include concrete list of participants as well as the scope of work, which should be performed, together with relevant deadlines.

¹ See Article 4 of the Treaty, page 13.
V. MEETINGS OF THE PHLG – PROCEDURAL RULES

1. The PHLG meetings shall be conducted in a business-like manner.
2. The meetings of the PHLG shall not be public unless the PHLG decides otherwise.
3. Any member of the PHLG or any other attendee of the meeting may be accompanied by experts who assist them. The names and functions of those experts shall be notified in advance to the Secretariat. As a principle, these experts should not be more than three for any Party to the Treaty, and not more than two for any other participant in the meeting. However, the Presidency may further advise on the maximum number of representatives per delegation.
4. PHLG may act only, if two third of the Parties are represented. Abstentions in a vote from the Parties present shall not count as votes cast.
5. The PHLG shall act in accordance with the voting rules required by the Treaty, depending on the agenda item. The Presidency shall identify the necessary majority before the vote on the ground of the substance of the agenda item.
6. As provided in Article 80 of the Treaty, each Party shall have one vote.
7. The Agenda for the meeting shall be approved in its beginning. In urgent circumstances, new items may be included also during the meeting subject to the agreement of the Presidency and Vice-Presidency.
8. The Participants may participate in the discussions, but they do not take part in voting (cf II.3).
9. The Observers may make statements upon permission or when invited by the Presidency. The Observers do not have voting rights.
10. At the end of each meeting, conclusions shall be drafted and discussed. They shall be distributed to the members and attendees by the Secretariat. The conclusions are final if, within five working days from their distribution, no change requests are submitted to the Secretariat. If a member or attendee requests amendments to a particular item in the conclusions, the items concerned shall be put on the agenda of and discussed at the next meeting. Items of the conclusions for which no changes have been requested within five working days shall be considered adopted. They are to be made publicly available by the Secretariat.
11. The Secretariat shall distribute draft conclusions for each Permanent High Level Group meeting one week ahead of the meeting to the Parties, Participants and Observers on the basis of the draft agenda and the documents received.
12. Any vote shall be explicitly described in the Conclusions.
13. The conclusions cannot in any way restrict the scope or effects of legal acts or the Treaty. No statements or conclusions which contradict binding legal provisions shall be made. Conclusions cannot form part of legal acts nor have any normative effect. Without prejudice to the decision making process under Title VI of the Energy Community Treaty, the Permanent High Level Group may identify Measures for adoption by the Ministerial Council without further discussion. This does not exclude the possibility for any Party to have statements included in the conclusions of the PHLG.
VI. ACTS OF THE PHLG – PROCEDURAL ASPECTS

1. General

1. The PHLG may take Measures (Decisions and Recommendations), if so empowered by the Ministerial Council, and adopt Procedural Acts.

2. The PHLG adopts Procedural Acts, not involving the conferral of tasks, powers or obligations on other institutions of the Energy Community, upon proposal of the Parties or the Secretariat.

2. Measures

3. Unless otherwise specified in these rules or in a separate decision of the PHLG or the Ministerial Council, the adoption of Decisions and Recommendations shall follow the same procedure.

4. Any proposal for a Measure from the European Commission, from the relevant Party or from the Secretariat shall be made in writing at least 30 days before the meeting of the PHLG when it shall be discussed.

5. The proposal shall be sent to the Presidency with copy to all the members of the PHLG and the Secretariat. It shall be accompanied by relevant explanatory notes. Where necessary in accordance with its competences, position of the Regulatory Board shall be requested by the Party or the institution, which makes the relevant proposal for a measure.

6. Measures under Title II of the Treaty – extension of the *acquis communautaire* – shall be taken by a majority of the votes cast only on the ground of a proposal from the European Commission, which may alter or withdraw its proposal at any time before the final adoption of the measure.

7. Measures under Title III of the Treaty – Mechanism for operation of Network Energy Markets – shall be taken by a two third majority of the votes cast, including a positive vote of the European Community, upon a proposal from a Party or the Secretariat, which shall also take account of a position of the Regulatory Board.

8. Measures under Title IV – The Creation of a Single Energy Market – may be taken on a proposal from a Party only by unanimity. The European Commission on its own request or upon request of any Party, might request a position of the Regulatory Board.

3. Rules for Decision-Making by Correspondence

9. The PHLG may, in the intervals between the meetings of the PHLG, take decisions by correspondence. The Presidency, upon the proposal by a Party for a decision to be taken by correspondence or upon its own initiative shall decide, after consulting and in agreement with the Vice-Presidents, whether the matter warrants the taking of the decision by correspondence.

10. When it is decided that a decision should be taken by correspondence, the Presidency shall instruct the Secretariat to dispatch a letter or telefacsimile to each Party containing the proposed decision together with such information as the Presidency, after consultation and in agreement with the Vice-Presidency, considers necessary to an informed decision. The Presidency, after consultation and in agreement with
the Vice-Presidency, shall also specify whether and, if so, under which conditions, amendments to the proposal may be made by the Parties.

11. Presidency, after consultation and in agreement with the Vice-Presidents, shall determine the date and hour by which responses must be received, which shall in no case be earlier than 10 calendar days from the date of transmission of the letter or facsimile referred to above. In exceptional circumstances, upon request or at its own discretion, may the Presidency, after consultation and in agreement with the Vice-Presidency, extend the time limit for the receipt of responses. Any Party, that has not replied in writing (including telefacsimile) within the given time limit, is regarded as abstaining from the vote.

12. The votes cast by correspondence shall be reviewed by at least three persons, including a representative of the Presidency, the European Commission and the Secretariat. Once a decision is adopted, it shall be promptly circulated by the Secretariat to all Parties and Participants, together with the information on the votes cast in favor of the decision. It shall be formally signed by the Presidency at the earliest meeting of the PHLG.

13. This procedure may be used for adoption of Measures or other decisions following agreement of the President and Vice-Presidency.

4. Procedural Acts

14. Procedural Acts shall regulate organizational and other issues, envisaged in the Treaty and also referred to in these Rules. They shall be binding.

15. Any member of the PHLG may propose adoption of a Procedural Act and submit the draft of the act itself.

16. When the PHLG has agreed on the necessity for a Procedural Act, it may ask the Presidency to organize its preparation in consultation with the Vice-Presidency.

17. The Presidency may ask the Party, which has initiated the preparation of a procedural act, and/ or the Secretariat to assist in the process of this preparation.

18. The drafts of Procedural Acts with the relevant materials shall be distributed at least 30 days before the meeting at which they will be discussed.

VII. DISCLOSURE OF DOCUMENTS

1. The draft agenda and the relevant materials shall be distributed to all the members of the PHLG, to the Participants and to the Observers. Material of interest to them will also be distributed to the representatives of any other institutions, which are invited to take part in the relevant meeting. Any of the Presidency and the Vice-Presidency may request that the draft agenda and the relevant materials are distributed to other institutions.

2. Unless otherwise decided, the finalized documents of the meetings (agenda, conclusions) shall be made public via the website of the Secretariat.
VIII. FINAL PROVISIONS

1. All acts of the PHLG shall be signed by the Presidency.
2. The Rules have been adopted by the PHLG on the ground of Article 55 of the Treaty.
3. If application of these Rules to a specific situation is unclear or ambiguous, the Presidency in consultation and agreement with the Vice-Presidency shall interpret the Rules to resolve the situation.
4. At the latest one year from the entry of these Rules into force, based on the practical experience with their application, the Secretariat may propose eventual amendments to these Rules it deems useful or necessary. Where a Party wishes to propose such amendment, it is encouraged to consult it first with the Secretariat.
5. In accordance with Article 55 of the Treaty, any amendments to these Rules shall be adopted by a Procedural Act.

The Rules become effective on 15 October 2015, which is the day of their adoption by the PHLG.
Article 1
Purpose

1.1 The Rules regulate the organization of the Energy Community Regulatory Board and establish the procedures of its meetings.

1.2 The Energy Community Regulatory Board (hereinafter: “ECRB” or “Board”) shall discharge the tasks entrusted to it by Article 58 of the Energy Community Treaty.

1.3 The ECRB, upon request of the Ministerial Council, the PHLG and the European Commission, or on its own initiative and in accordance with the objectives of the Energy Community Treaty, shall undertake the function of advising on statutory, technical and regulatory rules in the region to the Energy Community Treaty Institutions.

1.4 The ECRB shall provide advice to the Ministerial Council and the PHLG with regard to monitoring and assessing the operation of the regional energy networks and network energy market and issue recommendations to the Parties when so entrusted by the Treaty or the Ministerial Council.

1.5 The ECRB shall facilitate consultation, co-operation and co-ordination amongst regulatory authorities towards a consistent application of the acquis communautaire. The ECRB makes recommendations and reports with respect to the functioning of the energy markets.

1.6 The ECRB may decide, in accordance with the procedure laid down in 4.7 hereunder, to issue a request to the Ministerial Council pursuant to the provisions of Articles 90 and 92 of the Treaty.

Article 2
Members

2.1 In accordance with Article 59 of the Treaty, the ECRB is composed of one representative of the energy regulator of each Contracting Party and a representative of the European Commission representing the European Union (hereinafter: “Members” of the ECRB). The representative of the Regulatory Authority of the Contracting Parties shall be at the level of Head of the Energy Regulatory Authority or his nominated representative.

2.2 The European Commission is assisted by one regulator of each Energy Community Participant country
(hereinafter: “Participants” of the ECRB) and one representative of the Agency for the Cooperation of Energy Regulators (hereinafter: “ACER”). The representative of the Regulatory Authority of the Participants shall be at the level of the Head of the Energy Regulatory Authority or his nominated representative. The representative of ACER shall be at the level of the Director or his nominated representative.

2.3 Members of the ECRB shall abide by a Code of Ethics, which shall be adopted by the ECRB as a Procedural Act. The Code of Ethics shall set forth the criteria by which a representative to the ECRB, including the President of the ECRB may be removed or recalled.

2.4 The Members of the ECRB shall act in good faith and resolve to adhere to these Internal Rules of procedure.

**Article 3**

**President and Vice President**

Duties

3.1 The President of the ECRB carries out the tasks entrusted to her/him by the provisions below. The President shall fulfill a unifying role and ensure by his/her authority that all Members and Participants work with a common purpose towards the discharge of the tasks entrusted to the ECRB under the Treaty.

3.2 The President shall not represent his/her Institution but this task shall be undertaken by a suitable representative of the Contracting Party Regulatory Authority and this representative will exercise the Contracting Party Regulatory Authority vote.

3.3 In addition to exercising the powers conferred upon him/her elsewhere in these rules, the President, after consulting the Vice-President, shall declare the opening and closing of each ECRB meeting, shall direct the discussion, shall ensure the observance of these Rules, shall accord the right to speak and announce decisions. The President may also call a speaker to order if his or her remarks are not relevant to the subject under discussion.

3.4 The European Commission shall act as Vice-President. The Vice-President shall also fulfill a unifying role and ensure, by his/her authority that all the Members and Participants work with a common purpose towards the discharge of the tasks entrusted to the ECRB under the Treaty.

3.5 The Vice-President assists the President in accordance with the provisions set out below. In the event of absence, impediment or incapacity of the President, the Vice-President is empowered to replace and exercise the responsibilities of the President.

Election

3.6 The President is elected by the ECRB members by secret ballot and by a two third majority of the votes cast, provided presence of at minimum two thirds of its Members.

3.7 The nomination procedure shall be initiated by a Vice Presidency’s written call for applications addressed to the ECRB member, entailing a nomination period of at least two weeks.

3.7.1 The Head and / or Commissioners of Contracting Parties Regulatory Authorities are eligible for the ECRB Presidency.

3.7.2 In case no nominees from the Contracting Parties Regulatory Authorities’ candidate or are proposed,
the Vice-Presidency shall open a second application round entailing a nomination period of at least two weeks. In this case, also the Head and/or Commissioners of Energy Community Participant countries are eligible for the ECRB Presidency.

3.7.3 In case an ECRB President cannot be elected based on 3.7.1 and 3.7.2, the term of the existing President can be prolonged for up to six month. In this case the Vice Presidency shall initiate another nomination procedure in line with 3.7.

3.8 Any candidature or any proposal for candidature shall be put forward to the Vice President of the ECRB.

3.9 The Vice President brings the candidacies to the attention of the members of the ECRB.

3.10 The President’s term of office is two years and may be terminated upon decision of the ECRB or resignation. A President of the ECRB may not assume the Presidency more than two terms consecutively.

3.11 In the event of resignation, incapacity or recall of the President during his or her term of office, a new President shall be appointed in accordance with the above mentioned procedure, as soon as possible.

3.12 A decision of the ECRB as referred to in 3.10 requires presence of at minimum two thirds of its Members and two third majority of the votes cast. The decision of the ECRB must be duly justified and published.

**Article 4**

**Decision making process**

4.1 The Board acts within the mandate set forth in Article 58 of the Energy Community Treaty and takes Measures if so empowered by the Ministerial Council.

4.2 Each Member shall have one vote. Abstentions to voting from Members present shall not count as votes cast.

4.3 The Board may act in accordance with the provisions of Articles 4.4, 4.5 and 4.6 only if two thirds of Members are present.

4.4 Under Title II of the Energy Community Treaty, the Board shall act on a proposal from the European Commission, and each Contracting party shall have one vote.

4.4.1 The European Commission may alter or withdraw its proposal at any time during the procedure leading to its adoption.

4.4.2 The Board shall act by a majority of the votes cast.

4.5 Under Title III of the Energy Community Treaty the Board shall act on a proposal from a Party or the Secretariat. The Parties and the Secretariat are encouraged to consult their proposal with the European Commission four weeks before the meeting upon which the proposal shall be presented. The Board shall act by a two third majority of the votes cast, including a positive vote of the European Union.

4.6 Under Title IV of the Energy Community Treaty the Board shall act on a proposal from a Party. The Party or Parties interested in putting forward a proposal are encouraged to consult with the European Commission three weeks before the proposal is tabled to the Board for consideration. The Board shall act with unanimity.

4.7 The ECRB may decide by unanimity excluding any Party concerned, to issue the request pursuant to paragraph 4.1.

4.8 Proposals are submitted to the President and the Vice President of the ECRB.
4.9 The vote(s) against a proposal for a Measure that was adopted by the Board shall be, upon request by
the outvoted Member, recorded in the minutes and the conclusions of ECRB, together with the proposal
as adopted, according to Article 58 of the Energy Community Treaty.

4.10 The outcome of any votes has to be recorded in the minutes of the ECRB meetings.

4.11 The communication of opinions of Members and Participants is possible by electronic correspondence
in case of urgent matters but excluding Measures. The President may seek agreement to a position or
opinion by electronic procedure. In such cases, the President shall ensure that each Member is aware that
an agreement or opinion is sought by electronic procedure and shall set out a clear deadline for comments.

Article 5
Meetings

5.1 If a Contracting Party, Participant or Observer has established one regulator for gas and one regulator
for electricity, presence shall be determined taking into account the agenda.

5.2 The ECRB Section shall establish a register of Members and Participants and shall record attendance
at all official meetings.

5.3 Notwithstanding Article 71 of the Treaty, the Energy Community Secretariat shall be represented by
the Head of the ECRB Section of the Secretariat unless excused by the President.

5.4 The Observers’ regulatory authorities may attend ECRB meetings without participating in the discussions
and without voting rights, in accordance with the Energy Community Treaty, Title IX, Article 96. The Pres-
ident in agreement with the Vice-President may invite an Observer to make a statement. The President in
agreement with the Vice President may also decide that Observers be absent for specific points of the agen-
da due to confidentiality concerns. This will be specified as far as possible when the agenda is circulated.

5.5 The ECRB will be convened in principle four times a year and, extraordinarily when appropriate.

5.6 At its last meeting of a calendar year, the ECRB decides the dates of its meetings in the next calendar
year. These are published on the Energy Community website.

5.7 The ECRB meetings shall be convened by either the President or the Vice President.

5.8 An extraordinary meeting of the ECRB may be convened by the President or Vice-President. An ex-
traordinary meeting shall also be called at the request of at least of one fifth of the Members, within one
month of the receipt of the request by the ECRB Section.

5.9 Upon endorsement of the draft agenda by the President and Vice-President, the ECRB Section circulates
the proposed agenda to those entitled to attend the respective meeting of the ECRB. The draft agenda
shall indicate the subjects to be considered clearly.

5.10 The agenda shall be circulated to those entitled to attend the respective meeting of the ECRB at least
two weeks ahead of the meeting. In case of urgency the President may deviate from this rule.

5.11 All meeting related documents shall be made available in the Energy Community website’s ECRB
members’ area at least two weeks ahead of the meeting. In case of urgency the President may deviate from
this rule. In any case, documents related to agenda items scheduled for ECRB approval shall be submitted
to the ECRB 10 (ten) days before the ECRB the latest.
5.12 With the President’s permission, Members may be accompanied by experts.

**Article 6**

**Organization of work**

6.1 The ECRB shall adopt an annual work program in accordance with the procedure laid down in Article 11.2. The work program shall be published on the Energy Community web site.

6.2 At the beginning of every calendar year, the ECRB shall adopt an annual report of summarizing its activities over the preceding year, prepared by the ECRB Section.

6.3 Both documents referred to in 6.1 and 6.2 will be transmitted to the Ministerial Council.

**Article 7**

**Working Groups**

Organisation

7.1 The ECRB may set up working groups composed of Members, Participants and ACER and chaired by a Member, a Participant, or ACER, and mandates them to study specific subjects. The mandate may provide that the composition of the working groups will be flexible in order to involve other relevant authorities when necessary. The mandate shall be time limited and shall further specify in which way the working group will report back to the Board and how it will be assisted by the ECRB Section. The Members, Participants and ACER representatives involved in the working groups shall nominate their representatives and notify the Chair in a timely fashion prior to the start of the relevant working group.

7.2 The decision to establish a group and its terms of reference is taken by simple majority of the votes cast, including a positive vote of the Vice-President.

7.3 Unless decided otherwise by the ECRB for a specific working group, Observers’ representatives shall be allowed to participate in the working groups and be invited by the chairmen of the working groups.

Chairwomen / -men

7.4 Meetings of the Working Groups shall be convened by their Chairs. In addition to exercising the powers conferred upon him/her elsewhere in these rules, the Chair shall declare the opening and closing of each Working Group meeting, shall direct the discussion, shall ensure the observance of these Rules, shall accord the right to speak and announce decisions. The Chair may also call a speaker to order if his or her remarks are not relevant to the subject under discussion.

7.5 The Working Group Chairs are elected by the ECRB for a period of two years, which may be extended. Proposals for candidature shall be put forward to the President and Vice President of the ECRB including proof of support by the Head of the candidate’s authority. The nomination procedure shall be initiated by a President’s and Vice President’s written call for applications addressed to the ECRB member, entailing a nomination period of at least two weeks. The President brings the candidacies to the attention of the members of the ECRB in agreement with the Vice President.
7.6 The Working Group Chairs’ term can be terminated upon a decision of the ECRB pursuant to Article 7.7. In the case of resignation of the Chairperson during its term, a new Chairperson will be appointed under the same terms for a period of up to two years, which may be extended.

7.7 The election of Working Group Chairs by the ECRB requires the presence of two thirds of Members and simple majority of the votes cast.

7.7.1 If in the first voting round out of more than two candidates none reaches a simple majority of votes, a run-off ballot shall be executed between the two candidates who obtained the highest number of votes. In case the percentage of votes of one of those two applicants equals to the percentage a third candidate received in the first voting round, the latter shall also participate in the run-off ballot.

7.7.2 The procedure laid down in item 7.7.1 shall be repeated until any of the candidates reaches a simple majority of votes.

7.7.3 Candidates are entitled to withdraw their application at any stage of the voting procedure.

7.7.4 The rules laid down in item 7.7.1 shall not prevent ECRB to unanimously decide on the successful candidate in case the procedure pursuant to item 7.7.1 does not succeed to allocate a simple majority of votes to any of the applicants.

Deputy Chairwomen / -men

7.9 Each Working Group shall designate a deputy to the Chair. In the event of absence, impediment or incapacity of the Working Group Chair, the Deputy Chair shall be empowered to replace and exercise the responsibilities of the Working Group Chair. The Deputy Chair shall coordinate with the relevant Working Group Chair before executing her/his tasks.

7.10 The Deputy Chair is appointed by the Working Group members.

7.11 The term of the Deputy Chair is limited to the term of the relevant Working Group Chair and may be extended.

7.12 Articles 7.6 and 7.7 apply to the Working Group Deputy Chairs.

7.13 Working Groups can refrain from designating a Deputy Chair in case co-Working Group Chairpersons are appointed.

**Article 8**

**Communications and Exchange of Information**

8.1 Every Member, ACER representative, Participant and Observer shall appoint a communications officer. His/her task will consist of facilitating the relevant information exchange between his/her organisation and the other Members and the ECRB Section. This information is related to the work carried out by the ECRB or its working groups.

8.2 Members and Participants shall endeavour to keep the other national and regional energy regulators of their States informed about activities of the ECRB and, where necessary, make all appropriate arrangements to be in a position to speak as the competent energy regulator in the event that other national or regional regulators have an interest in the matter discussed.
Article 9

Conclusions and Minutes

9.1 Conclusions that record decisions taken shall be adopted at the following meeting by consensus.

9.2 The minutes of each meeting shall be drawn up by the ECRB Section. Opinions may be recorded in the minutes, when requested. The draft minutes shall ideally be sent to Members, Participants and ACER representatives within 15 working days after the meeting and shall be submitted to the next meeting of the ECRB or the working group for approval. Any comments on meetings’ draft conclusions shall be submitted by the (ECRB or the relevant working group) members prior to the next meeting in writing to the ECRB President and Vice President, respectively the Chairman in case of working groups, and the ECRB Section.

9.3 The minutes shall include:
- The scope of the agenda item (for discussion/information/approval);
- The related document(s);
- A brief reference to the core discussion points raised by members;
- The decision(s) taken and action points following including responsibilities and the timeline for completion;
- A summary table of the main conclusion(s).

The final minutes shall normally not exceed a maximum number of 5 (five) pages excluding annexes. External annexes, such as presentations, may be separately attached to the minutes.

9.4 The minutes of the ECRB and its working groups shall be treated confidentially and not be published. A summary table of the main conclusion(s) of the Board meetings shall be published on the Energy Community website.

9.5 The agenda of the ECRB meeting and its working groups established by ECRB shall not be considered confidential unless a specific decision is made and shall be published on the Energy Community website as soon as possible after a meeting.

9.6 Where the European Commission or a Contracting Party informs the ECRB that the advice requested or the question raised is of a confidential nature, Members, Participants, ACER representatives, Observers and any other person involved shall not disclose that information unless allowed by the Party raising the issue. The President may decide in such cases that only Members, Participants and ACER representatives may be present at meetings.

9.7 The ECRB can adopt its rules on confidentiality.

Article 10

Public Consultation and Transparency

10.1 The ECRB will use appropriate processes to consult consumers, market participants, system operators, market operators and interested parties which may include, inter alia: public hearings and roundtables, industry and the Energy Community Fora, the European Fora (including the European Electricity Regulatory Forum - “Florence Forum”, the European Gas Regulatory Forum - “Madrid Forum” and the European Citizen Forum - “London Forum”) and written and internet consultations.
10.2 The ECRB may publish on the ECRB web site consultative documents, statements of agreed principles, press releases, consultation procedures, summaries of responses to consultations and other documents which assist interested parties to understand the work of the ECRB. Comments shall be invited either individually or jointly to be addressed to the ECRB in written form, preferably by email. Comments received in response to consultation documents shall be published on the ECRB web site, unless a respondent explicitly requests that their submission is not made available to others on confidentiality grounds.

10.3 The ECRB may decide to meet interested parties to discuss matters of common interests. As appropriate, the President or the Vice-President may represent the ECRB at such a meeting or Members may be nominated to do so. The President or the Vice-President, where appropriate, will communicate the official position of the ECRB. The President may, on his own initiative, describe the work or explain the views of the ECRB to the press or other interested parties, in response to enquiries or otherwise in cases of urgency. Where a Member refers in public to the views or position of the ECRB it must do so in an accurate manner.

10.4 Presentations made on behalf of the ECRB at public events (conferences, workshops et al) shall only present formally approved and publically available positions of the ECRB in ECRB documents, conclusions or similar.

Article 11
ECRB Section of the Secretariat

11.1 There shall be specific staff of the Energy Community Secretariat devoted to the support of the ECRB (“ECRB Section”). The ECRB Section shall report to the Energy Community Secretariat Director with regard to management and employment issues. The Head of the ECRB Section shall direct the staff as to their substantive activities, in line with the ECRB work program. 1.2 The ECRB Section shall prepare the minutes of the meetings, assist the ECRB and the working groups in their functions and execute all other functions assigned to it by the Board, inter alia:

- Drawing up the ECRB annual work program for consideration and adoption by the ECRB upon agreement by the President and Vice-President;
- Preparing and presenting to the ECRB for adoption an annual review of the progress achieved;
- Preparing the agenda for the ECRB meetings to be submitted for agreement to the President and Vice President;

11.3 The ECRB Section acts as coordinator for consultations required to take forward the work of the ECRB or its working groups and assist the President and Vice-President in their public relations activities and representation functions.

11.4 The permanent or seconded staff of the ECRB Section is appointed by the Energy Community Secretariat Director pursuant to paragraph 22 of the procedural act of the Energy Community Ministerial Council on the Rules of Recruitment and working conditions of the staff of the Secretariat of the Energy Community. Specifically, the staff of the ECRB Section will operate as much time as needed in Athens in order to ensure the smooth and effective operation of the meetings of the Regulatory Board, which take place in Athens according to the Treaty establishing the Energy Community (Article 62).
Article 12
Accountability and links

12.1 The ECRB shall submit an Annual Report to the Ministerial Council.
12.2 The ECRB may participate or designate its representative in other European or international committees or groups when that is necessary for the work of ECRB.

Article 13
Publication and modification of the Rules of Procedure

13.1 The Regulatory Board Internal Rules of Procedures shall be made available on the ECRB website.
13.2 When necessary the ECRB shall agree on interpretation of the Rules of Procedure. These decisions require two thirds majority of Members voting, including a positive vote of the European Union.
13.3 Based on practical experience with these Rules, the President or Vice-President or any Member of the ECRB may propose to the Board any useful and necessary amendments to these Rules. In accordance with Article 60 of the Treaty, any amendments to these Rules are adopted by a Procedural Act of the ECRB, which shall act by two-third majority of the votes cast, including a positive vote of the European Union.

Article 14
Transitional and final provisions

14.1 These Internal Rules for Procedure come into force immediately upon adoption.
14.2 To the extent possible, the work agreed and done with the Council of European Energy Regulators South East Europe Working Group shall be continued by the Energy Community Regulatory Board.
14.3 Rules of procedures on the implementation of the tasks in Article 58(b) of the Treaty shall be adopted by the ECRB.
RULES of 11 December 2008 on the establishment of a security of supply coordination group

Procedural Act 2008/02/MC-EnC of 11 December 2008 on establishment of a security of supply coordination group as amended by Procedural Act 2021/03/MC-EnC

The adaptations made by Ministerial Council Procedural Act 2021/03/MC-EnC are highlighted in **bold and blue**.

The Ministerial Council of the Energy Community,

Having regard to the Treaty Establishing the Energy Community (“the Treaty”), and in particular Articles 46 and 87 thereof,

Having regard to the deliberations at the Permanent High Level Group and the input from the Contracting Parties,

Having regard to the proposal by the Secretariat,

Whereas securing energy supply through solidarity constitutes one of the main objectives of the Energy Community;

Whereas the implementation of Directives 2004/67/EC and 2005/89/EC requires the setting-up of a coordination mechanism in the Energy Community;

Whereas this objective requires a group of experts to advise Energy Community and national institutions as well as to coordinate crisis management measures;

Whereas such a group should be composed of all relevant stakeholders and should cover both electricity and gas so as to ensure utmost efficiency,

HAS ADOPTED THIS PROCEDURAL ACT:

**Article 1**

Security of Supply Coordination Group

A Security of Supply Coordination Group is hereby established.

**Article 2**

Composition

(1) The Security of Supply Coordination Group shall be composed of representatives of the Parties and representative bodies of the industry concerned and of relevant consumers. The composition of the Group may differ for gas and electricity respectively.

(2) Participant and Observer countries may be represented in accordance with Articles 95 and 96 of the
The Member States of the European Union may, under the coordination of the European Commission, participate in the Security of Supply Coordination Group with regard to all matters with which they are concerned.

(3) The Security of Supply Coordination Group shall be chaired by the European Commission in cooperation with the Energy Community Secretariat.

(4) Each Party shall nominate its representatives and inform the Energy Community Secretariat. The list of representative bodies of the industry concerned and of relevant consumers shall be established and updated by the Permanent High Level Group upon a joint proposal by both the European Commission and the Energy Community Secretariat. The agenda and the draft conclusions of each meeting of the Security of Supply Coordination Group shall be agreed by the European Commission and the Energy Community Secretariat prior to circulating.

(5) The Security of Supply Coordination Group shall establish subgroups for gas and electricity.

Article 3

Tasks

(1) The Security of Supply Coordination Group shall facilitate the coordination of security of supply measures and advise the Energy Community institutions on issues relating to gas and electricity security of supply.

(2) The Security of Supply Coordination Group shall regularly monitor the state of security of supply of network energy within the Energy Community share experience on security of supply mechanisms and develop comprehensive risk analysis. The conclusions of the Group’s annual meetings shall be submitted to the Ministerial Council, the Permanent High Level Group and the Regulatory Board.

(3) The tasks of the Security of Supply Coordination Group are without prejudice to the obligations of the Parties to adopt and update security of supply statements in accordance with Article 29 of the Treaty. The Security of Supply Coordination Group shall support the Parties in the preparation and updating of national emergency measures.

(4) In the event of an existing or imminent threat to security of supply or in the event of a supply disruption affecting a Party and involving another Party or a third country, the Security of Supply Coordination Group shall, where appropriate, coordinate measures taken at national levels. In doing so, it shall follow the principles established by Regulation (EU) 2017/1938, as adapted and adopted by Decision of the Ministerial Council 2021/15/MC-EnC, and Regulation (EU) 2019/941, as adapted and adopted by Decision of the Ministerial Council 2021/13/MCEnc, in the gas and electricity sectors respectively.

(5) In the cases mentioned in paragraph 4, the Chair of the Security of Supply Coordination Group or any Party directly affected may request an ad-hoc meeting of the Ministerial Council to take measures in response to the existing or imminent threat to security of supply.

(6) The activities of the Security of Supply Coordination Group may relate to, but are not restricted to, all issues falling within the scope of Regulation (EU) 2017/1938, as adapted and adopted by Decision of the Ministerial Council 2021/15/MC-EnC, and Regulation (EU) 2019/941, as adapted and adopted by Decision of the Ministerial Council 2021/13/MC-EnC, as well as mutual assistance within the meaning of Chapter IV in Title IV of the Treaty and the
handling of unilateral safeguard measures in accordance with Article 39 of the Treaty.

(7) The activities of the Security of Supply Coordination Group shall not have legally binding effects.

Article 4
Meetings

(1) The Security of Supply Coordination Group, or its subgroups, shall meet regularly and at least once per year.

(2) Ad hoc meetings of the Security of Supply Coordination Group shall be convened by the Chair in case of existing or imminent threat to security of supply on its own initiative or upon request of a Party to the Treaty.

(3) Upon agreement of the European Commission and the Energy Community Secretariat, the Security of Supply Coordination Group may hold additional ad hoc joint sessions with the European Community Gas Coordination Group to discuss issues of common interest.

Article 5
Review

Within three years of the date of its entry into force, this Procedural Act shall be reviewed in order to assess the functioning of the cooperation mechanisms it establishes. This review may provide for the conferral of powers to take interim measures to the Permanent High Level Group, as foreseen in Article 46 of the Treaty.

Article 6
Addressees

This Procedural Act shall enter into force on the day of its adoption and is addressed to the Parties.

For the Ministerial Council

Presidency

Tirana, 11 December 2008
RULES OF PROCEDURE of 16 October 2015 on dispute settlement under the Treaty

The Ministerial Council of the Energy Community,

Having regard to the Treaty Establishing the Energy Community, and in particular Articles 90 to 94 as well as Articles 47(c), 86, 87, 82 and 83 thereof,

Having regard to the proposal by the Secretariat,

Whereas it is of crucial importance that the provisions of the Treaty, including the Decisions adopted thereunder, are properly implemented in the national legal orders of the Parties and correctly applied by their authorities,

Whereas each Party to the Treaty is responsible for the timely implementation and correct application of Energy Community law within its own legal system,

Whereas the Treaty establishes a system of dispute settlement within the Energy Community by decision of the Ministerial Council,

Whereas the procedure leading up to such a decision may be initiated by a Party, the Secretariat or the Regulatory Board,

Whereas the Treaty gives private bodies the right to approach the Secretariat with complaints,

Whereas a Party concerned has the right to make observations in response to the request or complaint,

Whereas the Ministerial Council may decide on the existence of a breach by a Party of its obligations,

Whereas the Ministerial Council may further decide on the existence of a serious and persistent breach and on possible sanctions resulting therefrom,

Whereas the Treaty provisions establish a framework which requires more detailed procedural rules for practical implementation,

Whereas the institutions of the Energy Community shall interpret any term or other concept used in the Energy Community Treaty that is derived from European Community law in conformity with the case-law of the Court of Justice of the European Union, including its General Court,

Upon review as envisaged by Article 47 of this Procedural Act,

Whereas the Ministerial Council already on 29 June 2007 concluded that a formal process at a level below the Ministerial would have to be considered for the issue of non-implementation of Treaty commitments by Parties to the Treaty,

Whereas the European Commission in 2011 demanded “more effective implementation and enforcement” in the Energy Community”\(^1\); the European Parliament in 2013 requested “adapting [the Energy Community’s] decision-making to future challenges, including by setting up legal control mechanisms to deal with

PART III
MEASURES AND ACTS / Procedural Act 2008/01/MC-EnC

deficient acquis implementation”²; and the European Council in 2014 called for the Energy Community to “be reinforced so as to ensure the application of the acquis in those countries”³,

Whereas the High Level Reflection Group mandated by the Ministerial Council concluded that “Weak enforcement mechanism constitute one of the major obstacles to implementation of the acquis communautaire in the Contracting Parties”⁴ and considered that “a refurbishment of the institutional architecture is necessary, in particular to enable the enforcement of the far-reaching commitments the Parties accepted under the Treaty”⁵,

Whereas the Permanent High Level Group, at its meetings on 15 October 2015 endorsed the present Procedural Act, as amended,

HAS ADOPTED THIS PROCEDURAL ACT:

Article 1
Purpose

These rules specify the procedure to be followed in cases of failure by a Party (hereinafter “the Party concerned”) to comply with a Treaty obligation or to implement a Decision or Procedural Act addressed to it within the required period (hereinafter “Energy Community law”) as established by Articles 90 to 93 of the Treaty (hereinafter “dispute settlement procedure”, Titles II-IV), as well as a cooperation mechanism between national authorities or courts and the Secretariat in cases concerning the interpretation or application of Energy Community law without prejudice to Article 94 of the Treaty (Title I).

Title I

COOPERATION BETWEEN NATIONAL AUTHORITIES OF THE CONTRACTING PARTIES AND THE SECRETARIAT

Article 2

Cooperation between national authorities of the Contracting Parties and the Secretariat

(1) Where a question concerning the interpretation or application of Energy Community law is raised in proceedings before a national authority of a Contracting Party, such authority, upon request of a party to the procedure before it or on its own motion, notifies the Secretariat in writing at the earliest stage possible in the procedure. The Secretariat shall ensure the confidentiality of all information received.

(2) Contracting Parties shall ensure that, where a question concerning the interpretation or application of Energy Community law is raised in proceedings before a national court, such court, upon request of a party to the procedure before it or on its own motion, may notify the Secretariat in writing at the earliest

⁴ An Energy Community for the Future, p. 19.
⁵ An Energy Community for the Future, p. 19.
PART III  MEASURES AND ACTS / Procedural Act 2008/01/MC-EnC

stage possible in the procedure. The Secretariat shall ensure the confidentiality of all information received.

(3) Where the coherent interpretation or application of Energy Community law so requires, the Secretariat shall submit its opinion to the national authority or court of the Contracting Party in writing within the timelines set by national procedural rules, but not later than within four weeks. It may consult the Advisory Committee before submitting an opinion. The Secretariat's opinion must be in conformity with the case-law of the Court of Justice of the European Union.

(4) In its final decision or judgment, the national authority or court of the Contracting Party takes into account of the opinion submitted by the Secretariat.

(5) The Secretariat shall submit to the Ministerial Council an annual report on the application and interpretation of Energy Community law by national authorities of the Contracting Parties.

Title II  PROCEDURES UNDER ARTICLES 90 TO 93

Article 3  Failure to comply

(1) A Party fails to comply with its obligations under the Treaty if any of its measures (actions or omissions) are incompatible with a provision or a principle of Energy Community law.

(2) Failure by a Party to comply with Energy Community law may consist of any measure by the public authorities of the Party (central, regional or local as well as legislative, administrative or judicative), including undertakings within the meaning of Article 19 of the Treaty, to which the measure is attributable.

Article 4  Burden of proof

The burden of proving the allegation of non-compliance by a Party with Energy Community law and to place before the Ministerial Council the information needed to enable it to determine whether the obligation has not been fulfilled shall rest on the initiator of the proceedings. Where, however, the Party invokes an exemption to a rule or general principle of Energy Community law, it is incumbent upon the Party concerned to prove that the requirements for such exemption are fulfilled.

Article 5  Dispute settlement procedures and private disputes

Dispute settlement procedures must relate to a violation by a Party of Energy Community law and may not concern disputes between private parties.
Article 6

Case register

(1) The Secretariat keeps a case register at its premises under the control of the Legal Counsel.

(2) Each dispute settlement procedure case shall be assigned an official case number. Incoming and outgoing documents shall be registered under this number in the case file. If several pending cases concern the same subject matter, they may be consolidated and processed under the same case number.

(3) The representatives of the Energy Community institutions and their staff shall not disclose information acquired or exchanged by them pursuant to this Procedural Act and of the kind covered by Energy Community Staff Regulation 3.5. a), unless the present Rules permit such disclosure.

Article 7

Access to the case file

(1) At their request, Parties, Participants and Observers to the Treaty, the complainant as well as private or public bodies with a legitimate interest (hereinafter “interested parties”) shall have access to the case file, subject to an eventual request by complainants to confidential treatment.

(2) In cases of doubt, the Director of the Secretariat shall take a decision on the existence of a legitimate interest of private or public bodies requesting access to the case file.

(3) The Secretariat shall adopt a Procedural Act laying down specific rules on access to the case file.

Article 8

Procedural documents

(1) The language of the procedure is English. Any procedural documents expressed in another language shall be accompanied by a translation into English.

(2) All procedural documents shall bear a date, the case number and the name and the address of the sender.

(3) The original of every procedural document shall be signed by a person authorised to represent the sender by law, by its constitution or by authorisation.

(4) If a procedural document does not comply with the requirements set out in paragraphs 1 to 3, the Secretariat shall prescribe a reasonable period within which the sender is to comply with them.

Article 9

Costs

Costs incurred by all parties to or persons participating in the procedure are not recoverable.

6 Procedural Act 2018/06/ECS-EnC of 10 December 2018 on Rules on access to the case file
Article 10

Time-limits

(1) Unless otherwise indicated, time-limits established by these Rules and time-limits prescribed by the competent institutions shall be binding.

(2) Time-limits shall be prescribed so as to specify the precise date on which the required action is to take place rather than expressing periods in days, weeks, months etc. Where that day is a Saturday, Sunday or an official holiday, the deadline shall be extended until the end of the first following working day.

(3) Time-limits may be extended by the institution that prescribed it upon a reasoned application.

(4) Communication by telefax and email shall be deemed sufficient for the purposes of compliance with the time-limits.

Title III

THE COURSE OF DISPUTE SETTLEMENT PROCEEDINGS

Chapter I - Preliminary Procedure

Article 11

Scope and purpose

(1) When initiating a dispute settlement procedure within the meaning of Article 11, the Secretariat shall carry out the preliminary procedure set out in this Title. A Party or the Regulatory Board shall initiate dispute settlement procedures either by notification to the Secretariat or directly by submitting a reasoned request to the Ministerial Council in accordance with Article 29 below.

(2) The purpose of the preliminary procedure is to establish the factual and legal background of cases of alleged non-compliance, and to give the Party concerned ample opportunity to be heard. In this respect, the preliminary procedure shall enable the Party concerned to comply of its own accord with the requirements of the Treaty or, if appropriate, to justify its position.

(3) Where the Secretariat initiates a dispute settlement procedure on the grounds that a Party has failed to fulfil its obligation to notify measures transposing a Decision addressed to it within the deadline specified in that Decision, the Secretariat shall submit a reasoned request to the Ministerial Council without preliminary procedure.

Article 12

Initiation of a dispute settlement procedure by the Secretariat

(1) A dispute settlement procedure may be initiated by the Secretariat by way of an opening letter in accordance with Article 13 below.
(2) The Secretariat initiates procedures in response to alleged non-compliance arising from either a complaint by a private body, a notification by a Party or by the Regulatory Board or by its own initiative. Within the Secretariat, the Legal Counsel shall coordinate the procedure.

(3) The decision to initiate a dispute settlement procedure shall be made publicly available on the Energy Community website, stating the date of sending out the opening letter, the Party concerned and a brief summary of the subject matter.

Article 13
Opening letter

(1) If the Secretariat considers that a possible non-compliance of which it has become aware or issues raised in a complaint warrant the opening of a dispute settlement procedure, it addresses an opening letter to the Party concerned, requesting it to submit its observations within a specified time period. This period shall normally be two months.

(2) The Party concerned is requested to adopt a position on the points of fact and of law raised in the opening letter.

Article 14
Reasoned opinion

(1) In the light of the reply or absence of a reply from the Party concerned, the Secretariat may address a reasoned opinion to that Party. The reasoned opinion must contain a coherent and detailed statement of the reasons which led the Secretariat to conclude that the Party concerned failed to fulfil its obligations under the Treaty.

(2) The reasoned opinion shall call on the Party concerned to comply with the law within a specified time period. This period shall normally be two months.

Article 15
Submission to the Ministerial Council

In the light of the reply or absence of a reply from the Party concerned, the Secretariat may bring the matter to the attention of the Ministerial Council by way of a reasoned request in accordance with Article 29 below.

Article 16
Request for information

(1) The Secretariat may, by simple request, require any authority of the Party concerned to provide all necessary information at any stage of the preliminary procedure.

(2) The Secretariat may also request information from other natural or legal persons.
(3) The Secretariat may ask national authorities of Contracting Parties to conduct inspections of undertakings and associations of undertakings in line with the respective authorities’ competences under national law.

**Article 17**

**Interested parties**

(1) Interested parties may submit written observations to the Secretariat at any stage of the preliminary procedure.

(2) Private and public bodies other than Parties, Participants and Observers shall substantiate the required legitimate interest.

(3) Any written observations received shall be immediately forwarded to the Party concerned and shall be attached to the reasoned request referred to the Ministerial Council.

**Article 18**

**Urgency**

(1) In cases of urgency due to the risk of serious and irreparable damage to an objective of the Treaty, the Secretariat may, on the basis of a *prima facie* finding of non-compliance, refer a reasoned request directly to the next possible meeting of the Permanent High Level Group.

(2) The Permanent High Level Group may take appropriate and proportionate interim measures upon request by the Secretariat. The Permanent High Level Group shall review the existence of urgency.

(3) For the application of this article, the Permanent High Level Group shall adopt guidelines determining the criteria for urgency, the procedure for adoption as well as the scope and limits of interim measures.

**Article 19**

**Suspension and discontinuance of the procedure**

(1) The Secretariat may, at any point of the preliminary procedure, decide to suspend or discontinue the procedure, in particular where the Party brings the state of non-compliance with Energy Community law to an end or where it makes credible commitments as to its intention to amend its legislation, administrative or judicial practice. Such decision may also be taken where the Party concerned successfully refutes factual assumptions or convincingly counters the legal arguments made by the initiator.

(2) To achieve the results described in paragraph 1, the Secretariat may enter into informal bilateral discussions with the Party concerned. A short report on the results achieved shall be submitted by the initiator to the Ministerial Council upon closure of the file and be included to the case file.

(3) The Secretariat may reopen the procedure where there has been a material change in any of the facts on which the decision was based, where the Party concerned acts contrary to its commitments or where the decision was based on incomplete, incorrect or misleading information provided by that Party.
Chapter II - The role of private bodies

Article 20
Right to approach the Secretariat

(1) Private bodies may lodge a complaint with the Secretariat against a Party arising from any measure the complainant considers incompatible with Energy Community law.

(2) The notion of private body encompasses all natural and legal persons as well as companies, firms or associations having no legal personality.

Article 21
Subject matter

(1) A complaint has to relate to a failure to comply with Energy Community law by a Party as defined above in Article 3.

(2) A complaint against an EU Member State will be passed on to the European Commission. The Secretariat will inform the complainant and the Permanent High Level Group of the transfer to the European Commission. Such transfer shall be without prejudice to the obligations arising from Title III and IV of the Treaty.

Article 22
Form of the complaint

(1) A complaint shall be made to the Secretariat in writing, by letter, fax or e-mail.

(2) Complainants should send supporting documentary evidence, if available, and copies of relevant correspondence with the national authorities of the Party.

Article 23
Acknowledgment of receipt

(1) Following registration by the Secretariat and assignment of a case number, an acknowledgement will immediately be sent to the complainant.

(2) The complainant shall be asked to indicate whether he/she wishes their complaint to be treated in a confidential or non-confidential manner. The Secretariat will abide by the choice a complainant has made regarding confidentiality, i.e. disclosure of his/her identity, in its communication with the authorities of the Party concerned, other interested parties or the general public. Where a complainant has not indicated his/her choice, the Secretariat shall presume that the complainant has opted for non-confidential treatment.

(3) The Secretariat will keep the complainant informed of the course of the procedure.
Article 24

Information of the Party concerned

In its opening letter, the Secretariat shall inform the Party concerned that it is acting on the complaint.

Article 25

Request for information

The Secretariat may, by simple request, require the complainant to provide all necessary information at any stage of the preliminary procedure.

Article 26

Reaction by the Secretariat

(1) If the Secretariat takes the view that the subject matter of the complaint gives rise to a breach of Energy Community law, it shall initiate a preliminary procedure by way of an opening letter within six months upon registration of the complaint, with the aim to either resolve the dispute or to submit a reasoned request to the Ministerial Council.

(2) If the Secretariat takes the view that the subject matter of the complaint does not give rise to a breach of Energy Community law, it shall notify the complainant the reasons for not pursuing the case further. The complainant may bring its case to the Permanent High Level Group. The latter may request the Secretariat to initiate a preliminary procedure.

Article 27

Withdrawal of the complaint

Withdrawal of the complaint shall not affect the right of the Secretariat to pursue the procedure further.

Article 28

Notification by a Party or by the Regulatory Board

Articles 22 to 27 shall apply by analogy to cases where the Secretariat initiates a preliminary procedure upon notification by a Party or the Regulatory Board.
Title IV
PROCEDURE BEFORE THE MINISTERIAL COUNCIL

Chapter I - Breaches by a Party of its obligations (Article 91 of the Treaty)

Article 29
Reasoned request

(1) A reasoned request for a decision of the Ministerial Council pursuant to Article 90 of the Treaty may be submitted by the Secretariat either upon complaint, upon notification by a Party or the Regulatory Board, or on its own initiative. In these cases, the reasoned request shall be preceded by a preliminary procedure in accordance with the provisions laid down in Title III, save as otherwise provided for in these Rules of Procedure.

(2) A reasoned request may also be submitted by a Party or the Regulatory Board directly. In that case, the Party or the Regulatory Board may ask the Secretariat for factual information and legal advice before submitting the reasoned request.

(3) The reasoned request shall be based on concrete factual findings and backed up by sufficient legal analysis. The reasoned request including annexes shall be sent to the Party concerned, to the Presidency and the Vice-Presidency as well as to the President of the Advisory Committee. A copy of the reasoned request shall be sent to the Secretariat in case the latter is not the initiator.

(4) The reasoned request shall contain a proposal for the decision to be taken by the Ministerial Council pursuant to Article 91 of the Treaty.

(5) The reasoned request shall be published on the Energy Community's website providing for confidentiality of the complainant, where applicable.

Article 30
Scope of the decision

(1) The Ministerial Council decides on the proposal made in the submitted reasoned request. It applies Energy Community law including these Rules.

(2) In its decision, the Ministerial Council shall either establish the existence of a breach by a Party of its obligations arising from Energy Community law according to the proposal or dismiss the request entirely or partially.

Article 31
Reply by the Party concerned

(1) Within two months following receipt of a copy of the reasoned request, the Party concerned may reply in writing to the Secretariat.

(2) The Secretariat shall notify all Parties and Participants, the Regulatory Board, the Advisory Committee...
as well as persons and bodies participating in the preliminary procedure of the reasoned request as well as any reply to it. Within two months of this notification, they shall be entitled to submit written observations to the Secretariat. The Regulatory Board and the Secretariat may submit written observations where they are not the initiator of the case.

**Article 32**

Advisory Committee

(1) Before taking the decision pursuant to Article 91 of the Treaty, the Presidency and the Vice-Presidency shall ask an Advisory Committee for its opinion on the reasoned request, taking into account any reply by the Party concerned. The Ministerial Council shall not be bound by the opinion of the Advisory Committee.

(2) The Advisory Committee shall be independent from the authorities of the Parties and the institutions established under the Treaty. It shall be bound by Energy Community law, including these Rules, and in particular Article 94 of the Treaty.

(3) The Advisory Committee shall be composed of five members appointed by the Ministerial Council by unanimity for a renewable term of four years, including one member representing the European Union. Members shall be chosen from persons whose independence is beyond doubt and who possess the qualifications required for appointment to the highest judicial offices in the respective Party.

(4) The procedure before the Advisory Committee shall not last longer than five months upon being tasked in accordance with paragraph 1 of this Article. Based on the reasoned request and taking into account a reply by the Party concerned as well as the written observations received and after having conducted a public hearing, the Advisory Committee of the Energy Community shall adopt an opinion on the reasoned request.

(5) The Advisory Committee shall adopt its opinion by majority of its members. The opinion shall propose to uphold or dismiss the reasoned requests entirely or partially. The President of the Advisory Committee shall forward it to the President of the Permanent High Level Group the Party concerned and the Secretariat within five working days upon its adoption.

(6) The Advisory Committee shall adopt its internal rules of procedure. The members of the Advisory Committee shall elect among themselves a President for the period of two years.

**Article 33**

Proceedings of the Permanent High Level Group

(1) The President of the Permanent High Level Group shall circulate the opinion of the Advisory Committee to the members of the Permanent High Level Group. The opinion of the Advisory Committee shall be made publicly available on the Energy Community website not later than three days upon its adoption.

(2) At the next meeting after the adoption of the Advisory Committee’s opinion, the Permanent High Level Group shall hear both parties to the dispute as well as the President of the Advisory Committee. The Permanent High Level Group shall include the reasoned request on the agenda of the next meeting of the Ministerial Council. If it agrees with the reasoned request, it may include it as an “A” item on the agenda of the Ministerial Council in line with its Rules of Procedure.
**Article 34**

**Decision by the Ministerial Council**

(1) At its meeting, or, as the case may be, by correspondence, the Ministerial Council takes its decision in accordance with Article 30(2).

(2) The decision by the Ministerial Council shall be taken in accordance with the rules laid down in Article 91(1) of the Treaty.

(3) The decision shall be signed by the Presidency. It shall be sent to the Party concerned, the submitted of the reasoned request and the Secretariat. The Advisory Committee’s opinion shall be appended to the Ministerial Council’s decision.

**Article 35**

**Decision in the absence of a reply**

Where the Party concerned, after having been duly informed, fails to reply in its defence on time, a decision shall be taken based on the facts submitted in the reasoned request alone.

**Article 36**

**Publication of the decision**

The decision taken by the Ministerial Council shall be made publicly available on the website of the Secretariat.

**Article 37**

**Binding nature of the decision**

The decision by the Ministerial Council shall be binding on the Parties concerned from the date of its adoption.

**Article 38**

**Consequences of a decision establishing failure to comply**

(1) Where the Ministerial Council establishes the existence of a breach of a Party’s obligation pursuant to Article 91 of the Treaty the Party concerned shall take all appropriate measures to rectify the breach and ensure compliance with Energy Community law.

(2) The Secretariat, in accordance with Article 67(b) of the Treaty, shall review the proper implementation by the Party concerned of the decision, and may bring the matter directly before the Ministerial Council on the grounds of a failure to take the necessary measures to comply with the decision.
Chapter II - Serious and persistent breaches (Article 92 of the Treaty)

Article 39
Serious and persistent breach

The Ministerial Council shall establish the existence of a serious and persistent breach by a Party of its obligations under the Treaty taking into account the particularities of each individual case.

Article 40
Request

(1) A Party, the Secretariat or the Regulatory Board may request the Ministerial Council to determine the existence of a serious and persistent breach without a preliminary procedure.

(2) The request may follow up on a prior decision taken by the Ministerial Council under Article 91 of the Treaty or raise a new issue.

(3) The request shall set out the allegations against the Party concerned in factual and legal terms. It shall also contain a proposal as to concrete sanctions to be taken in accordance with Article 92(1) of the Treaty.

(4) The request shall be submitted to the Presidency and the Vice-Presidency at least 60 days before the respective meeting. A copy shall be submitted to the Secretariat for registration. The request shall not be made public.

Article 41
Decision-making procedure

(1) The Presidency shall, within seven days after receiving it, forward the request to the Party concerned and ask it for a reply to the allegations made in the request.

(2) The Presidency and the Vice-Presidency may ask the Advisory Committee for its written opinion.

(3) The decision by the Ministerial Council on the existence of a serious and persistent breach shall be taken in accordance with Articles 92(1) and 93 of the Treaty.

(4) The decision taken by the Ministerial Council shall be made publicly available on the Secretariat’s website.

Article 42
Measures under Article 92

(1) In the decision establishing the existence of a serious and persistent breach, the Ministerial Council shall determine measures in accordance with Article 92(1) of the Treaty and specify a time-limit.
(2) The obligations of the Party concerned under the Treaty shall in any case continue to be binding on that Party.

(3) The Ministerial Council shall at each subsequent meeting verify that the grounds continue to apply on which the decision establishing the existence of a serious and persistent breach was made and sanctions were imposed.

Chapter III - Revocation of decisions

Article 43
Procedural aspects

(1) The Ministerial Council, in accordance with Articles 91(2) and 92(2), may decide by simple majority to revoke decisions taken under Articles 91(1) and 92(1) respectively. Revocation of a decision may be proposed by any Party.

(2) Before taking the decision to revoke decisions taken under Articles 91(1) or 92(1) of the Treaty, the Ministerial Council shall ask the Secretariat and the Party concerned for their reports on the factual circumstances, as well as a legal opinion by the Advisory Committee based on the two reports.

(3) The Ministerial Council shall give reasons for its decision to revoke a previous decision and shall make the revocation decision publicly available on the Energy Community website.

(4) A revocation shall not affect decisions taken within the domestic legal orders following up the initial decision by the Ministerial Council.

Title V
FINAL PROVISIONS

Article 44
Amendments to Rules of Procedure of the Ministerial Council

(1) In Item VII.5. of Procedural Act 2006/01 on Internal Rules of Procedure of the Ministerial Council of the Energy Community, the text after the semicolon is deleted. The semicolon is replaced by a full stop.

(2) In Item VII.6. of Procedural Act 2006/01 on Internal Rules of Procedure of the Ministerial Council of the Energy Community, the last sentence is deleted.

Article 45
Addressees

This Procedural Act is addressed to and shall be binding on all Parties to the Treaty and institutions set up under the Treaty.
**Article 46**

Entry into force

(1) This Procedural Act shall enter into force upon adoption.

(2) Cases initiated already before 16 October 2015 shall be dealt with in accordance with the Procedural Act applicable before the amendments adopted on that date.

**Article 47**

Review

The Rules of Procedure in this Procedural Act shall be reviewed in the light of experience upon proposal by the Secretariat in 2016. The review shall include the approach towards measures under Article 92 of the Treaty and the institutional set up for dispute resolution.

**Article 48**

Publication

The Director of the Energy Community Secretariat shall make this Procedural Act available to all Parties and institutions under the Treaty within 7 days of its adoption and to the public on the website of the Energy Community.

Done in Tirana on 16 October 2015
RULES of 16 October 2015 on strengthening the role of civil society

Procedural Act 2015/03/MC-EnC of 16 October 2015 on strengthening the role of civil society.

The Ministerial Council of the Energy Community,
Having regard to the Treaty establishing the Energy Community (hereinafter referred to as the Treaty), and in particular Articles 86, 87, 82 and 83 thereof,
Having regard to the report of the High Level Reflection Group, which concluded that the role of civil society in the Energy Community institutions should be strengthened,
Whereas enhancing the role of civil society organisations will render the Energy Community’s institutions and bodies more transparent,
Whereas strengthening the role of civil society organisations will make the Energy Community better equipped to meet its objectives, notably by increasing its transparency, public acceptance as well as providing additional expertise to the implementation of the acquis if necessary,

HAS ADOPTED THIS PROCEDURAL ACT:

Article 1

1. Representatives of Civil Society Organisations may attend the meetings of Working Groups and Task Forces upon invitation of the chairman of a Working Group or a Task Force.

Article 2

1. Representatives of Civil Society Organizations may be invited to attend specific agenda items of meetings of the Ministerial Council or the Permanent High Level Group as observers.
2. Such invitations may be issued in particular to seek information from the Civil Society Organizations, for instance as regards new legislative initiatives planned in the Energy Community.
3. The procedure to issue such an invitation shall be determined in the Rules of Procedure of the Ministerial Council and the Permanent High Level Group respectively.

Article 3

1. A Civil Society Day shall be convened once a year to increase the transparency of the activities of the Ministerial Council and the Permanent High Level Group towards Civil Society Organizations. The meeting shall be prepared by the Secretariat.
Article 4

This Procedural Act enters into force upon the day of its adoption.

Done in Tirana on 16 October 2015.
RULERS of 16 October 2015 on establishment of Energy Community parliamentary plenum meetings

Procedural Act 2015/05/MC-EnC of 16 October 2015 on establishment of Energy Community parliamentary plenum meetings.

The Ministerial Council of the Energy Community,

Having regard to the Treaty establishing the Energy Community and in particular Articles 90 to 93 as well as Articles 86, 87, 82 and 83 thereof,

Whereas participation of representatives of parliaments would make the Energy Community better equipped to meet its objectives, notably by increasing political support for the implementation of the Energy Community acquis and the sense of ownership of the organisation,

Whereas it is fitting to increase transparency of the organisation and improve knowledge of the parliaments regarding the Energy Community processes,

Whereas it shall improve through dialogue, better acceptance of the Energy Community and its objectives in the Parties to the Treaty,

Whereas bringing together elected representatives of the national parliaments of the Contracting Parties and the European Parliament would help to address shared challenges, and support to build a fully functioning pan-European energy market which works to the benefit of citizens,

HAS ADOPTED THIS PROCEDURAL ACT:

**Article 1**

1. The Parliamentary Plenum meetings shall be organized up to two times a year.

Parliaments of Contracting Parties may appoint two representatives from each national parliament, preferably from the governing political spectrum and opposition. The European Parliament may send up to 16 representatives.

2. The meetings take place under the chairmanship of the Member of the Parliament of the Contracting Party holding the Presidency of the Ministerial Council.

3. The meetings of the Parliamentary Plenum shall be administered by the Secretariat.

**Article 2**

1. The participants in the Parliamentary Plenum meetings may express views and opinions on all matters falling within the scope of the Treaty in the form of reports or resolutions, as appropriate, with the exception of dispute settlement under Articles 90-93 of the Treaty. They are invited to prepare a report on the annual progress report prepared by the Secretariat in accordance with Article 67(b) of the Treaty, to be
submitted to the Ministerial Council.

2. The participants in the Parliamentary Plenum meetings may pose questions to the institutions of the Energy Community.

3. The chairperson of the Parliamentary Plenum meetings is invited before the Ministerial Council.

4. Representative of the Contracting Party holding the Presidency of the Energy Community or the Director of the Energy Community Secretariat may be invited to take part in the meetings of the Parliamentary Plenum.

5. The Secretariat is invited to propose organizational rules and procedures of the Parliamentary Plenum meetings for adoption by the Ministerial Council upon the consultation with the Parliamentary Plenum meeting.

**Article 3**

This Procedural Act enters into force upon the day of its adoption.

Done in Tirana on 16 October 2015.
RULES of 25 October 2018 on the establishment of the Energy Community Secretariat’s dispute resolution and negotiation centre

Procedural Act 2018/05/ECS of 25 October 2018 on the establishment of the Energy Community Secretariat’s Dispute Resolution and Negotiation Centre

THE ENERGY COMMUNITY SECRETARIAT,

Having regard to the Treaty establishing the Energy Community, and in particular Article 67(e) thereof;

Given that the challenges of energy reform in many countries entail disputes between various actors in that process, and that such disputes involve in particular the states, their public authorities, market participants, civil society and investors;

Considering that the Energy Community’s objective of creating stable regulatory and market frameworks capable of attracting investment requires structures suitable for rational, neutral, quick, efficient and sustainable resolution of such disputes;

Taking into account experience showing that most jurisdictions lack such structures and that the prevailing international mechanisms, be it investor-state arbitration or commercial arbitration, are expensive, sometimes politicized, time-consuming and often too adversarial to resolve energy disputes in a sustainable and cost-effective manner, and in particular they do not suit the needs of consumers and the interests of small and medium enterprises, and therefore may not be the appropriate forum to resolve energy disputes in general and smaller-scale disputes in particular;

Convinced that institutional negotiation and mediation can play an important role not only in the resolution of commercial and investments disputes, but also in the framework of dispute settlement under the Treaty, in particular during the preliminary procedure established under the Dispute Settlement Rules of Procedure which aims at resolving disputes at an early stage before they reach the Ministerial Council;

Noting that alternative dispute settlement methods such as mediation and conciliation are gaining importance as alternatives to litigation and arbitration, especially due to their focus on preserving the relationship between the parties, their flexible approach and their minimal costs;

Building on the expertise gained by the Secretariat not only in the understanding of energy markets in transition, but also in negotiating and mediating mutually beneficial solutions in several high-profile investor-state disputes to date;

Considering that in order to avoid energy disputes in the first place, the capacity of national authorities to negotiate agreements as diverse as international agreements, finance agreements, project agreements, supply agreements, investment contracts etc. needs to be improved;

Intending to establish a forum for dispute resolution and negotiation, as well as to offer dispute resolution and negotiation facilitation services for the benefits of national authorities, market participants, civil society and investors;
ADOPTS THE FOLLOWING PROCEDURAL ACT:

**Title I**  
**Scope of application and definitions**

**Article 1**  
**Establishment of the Energy Community Secretariat’s Dispute Resolution and Negotiation Centre**

1. A Dispute Resolution and Negotiation Centre is hereby established within the Energy Community Secretariat (hereinafter “the Centre”).

2. The purpose of the Centre shall be to promote and provide facilities for the resolution of disputes within the Energy Community between states and national authorities on the one hand, and private parties on the other; commercial disputes between private parties; disputes between states and national authorities; or disputes between the Parties to the Energy Community Treaty and the Secretariat.

3. The Centre shall offer facilities for the settlement of disputes in the following constellations:
   a. Facilitation of negotiations or mediation between private parties, between private parties and states and/or their national authorities, and between states and/or their national authorities (“third-party disputes”);
   c. Assisting negotiations by Parties, Participants or Observers to the Treaty and/or their authorities and public companies with other states and international organizations, their authorities, public companies or private parties (“negotiation support”).

4. Article 1(3) does not exclude any other form of dispute settlement which may, in the future, be offered by the Centre, such as, but not limited to, arbitration of disputes between private parties, between private parties and states and/or national authorities, and between states and/or national authorities of other states.

5. Upon a reasoned request by a Party or Observer to the Treaty to the Chair of the Centre, a certain dispute class or classes of disputes may be excluded from the range of activities covered by paragraphs 3 and 4, to the extent any support to their resolution by the Centre is prohibited under national or international law.

**Article 2**  
**Definitions**

For the purposes of this Procedural Act,

1. “Arbitration” means the settlement of a dispute by an arbitrator or an arbitration tribunal based on an arbitration agreement between the disputing parties and on procedural arbitration rules to be adopted by the Chair of the Centre;
2. “Dispute” means a conflict between two or more parties related to the production, transportation, distribution, sale and purchase, or consumption of energy (including the associated products, services, capital etc.), as well as consumer protection and environmental issues in the field of energy, arising out of an agreement, an investment, obligations under national or international law etc., regardless of whether they are already subject to litigation or arbitration or other kinds of dispute settlement mechanisms;

3. “Disputing party” means a state, a natural person, a private or a public entity, an association etc. subject to a dispute;

4. “Facilitated negotiations” means the service offered by the Centre to lead and support the process of negotiation of a dispute under terms and conditions agreed with the disputing parties in a Memorandum of Understanding (Article 8), with a view to reach a settlement of their dispute. The purpose of the facilitation is to reach a settlement mutually acceptable by and agreeable to the disputing parties;

5. “Mediation” means a form of facilitation which includes a more active involvement by the mediator, including by making concrete proposals for the settlement of a dispute by the mediator;

6. “Party”, “Participant” and “Observer” have the meaning accorded to these terms by the Treaty establishing the Energy Community;

7. “Third party” means a natural person or a legal entity which is not a disputing party under Articles 1(3)(a) and 1(3)(b) of the present act, but which has a connection or has been involved in the facts giving rise to the respective dispute.

Article 3
Management of the Centre

1. The Centre shall be functionally attached to the Legal Unit. It shall be chaired by the Head of the Legal Unit who will also serve as Chair. A staff member of the Legal Unit shall perform the function of registrar.

2. The Centre shall be supported by a group of five distinguished individuals with experience in the areas covered by the Centre. Members of this group shall serve without remuneration.

3. The Centre shall not aim for or make any profit.

4. The Centre shall not charge for the use of its facilities and services. This is without prejudice to fees for mediators, arbitrators, experts, interpreters and translators, and any other persons which are not employees of the Secretariat and whose contribution is required during the facilitated negotiations or mediation. Any such costs can only be incurred as long as envisaged by this Procedural Act and the procedural rules adopted under Article 4.

Article 4
Procedural Rules

1. Upon consultation with the group established according to Article 3(2), the Centre shall develop procedural rules for the activities performed by the Centre in accordance with Article 1(3) and 1(4) of this Procedural Act.
2. The Centre shall also develop templates for a Memorandum of Understanding, settlement agreement, expert determination, standard mediation and arbitration clauses, as well as a code of conduct for facilitators and mediators, on the one hand, and disputing parties, on the other.

3. Such rules shall be adopted by the Chair of the Centre and published on the website of the Centre.

**Title II**

**Facilitated Negotiations or Mediation of Third-Party Disputes (Article 1(3)(a))**

**Article 5**

**Request for Facilitated Negotiations or Mediation**

1. Any disputing party wishing to submit a dispute to the Centre for facilitated negotiations, mediation or any other type of dispute settlement, may address a request to that effect to the Centre. The request can also be sent by the disputing parties jointly.

2. The request shall contain the following information:
   a. the name and address of the disputing parties;
   b. a short summary of the dispute, including claims made by either party and any relief sought and damages claimed;
   c. a short summary of the course of any pending proceedings, in case the dispute is already subject to litigation, arbitration, or any other form of dispute settlement;
   d. any other documents deemed necessary for the purpose of the negotiation.

3. The registrar shall register the request. In case the request was submitted by one disputing party, a copy of the request will be sent upon registration to the other disputing party/parties.

**Article 6**

**Post-award Facilitation**

1. Disputing parties may also request, and arbitration institutions or tribunals may decide, to involve the Centre in the facilitation of elements of disputes not or not entirely resolved by an arbitral award. Parties to a dispute may also request the Centre to assist them with the implementation of an arbitral award, including with regard to the technical, economic or legal aspects of such implementation.

2. The request for post-award facilitation under Article 6 shall also contain a copy of the award.

3. Post-award facilitation is not meant to be an appeal against a final arbitral award. It will not re-judge a dispute, but it will offer the support of a facilitator for those elements of the dispute, arising after the award had been issued. Post-award facilitation will be without prejudice to any appeal, annulment or any recourse against an arbitral award provided by the applicable legal framework.
Article 7
Appointment of a Facilitator/Mediator

1. Depending on the nature and scope of the dispute, the facilitator/mediator shall be selected by agreement of the disputing parties and the Centre from the experienced staff of the Secretariat or from the Energy Community’s Panel of Mediators established according to Article 27 of the present Procedural Act.

2. The registrar of the Centre shall send a list of three potential facilitators/mediators, taking into account their qualifications and experience, as well as the particularities of the dispute. If no agreement is reached by the disputing parties, the Chair of the Centre shall appoint the facilitator/mediator.

3. The facilitator/mediator may be supported by other staff of the Secretariat. In such case, all the duties of the facilitator/mediator (including the duty of confidentiality) shall extend to the supporting staff of the Secretariat.

4. Before commencement of the negotiations, the facilitator/mediator shall disclose any circumstances likely to give rise to justifiable doubts as to his or her impartiality of independence. This obligation remains throughout the facilitated negotiations or mediation.
   a. The 2014 IBA Guidelines on Conflicts of Interest in International Arbitration will serve as guidance as to what circumstances require disclosure. In any case, Red List and Orange List circumstances shall at all times be disclosed.
   b. When in doubt whether a circumstance should be disclosed or not, disclosure should always prevail. Following disclosure, the disputing parties may request the Centre to appoint another facilitator/mediator.

Article 8
Memorandum of Understanding

1. Following the appointment of the facilitator/mediator, the Centre shall provide the facilitator/mediator with a draft Memorandum of Understanding to be signed by all disputing parties consenting to the facilitation/mediation of the dispute, the facilitator/mediator and the chair of the Centre.

2. Signing a Memorandum of Understanding is not compulsory, and it is within the discretion of the facilitator/mediator to decide whether the Memorandum of Understanding may be used in the proceedings. At all times, the facilitator/mediator shall give priority to the swift resolution of the dispute, and a Memorandum of Understanding shall not be signed if this would delay the proceedings.

3. For the cases when a Memorandum of Understanding will be concluded, the Centre shall develop and publish a model Memorandum of Understanding. The Memorandum of Understanding shall include provisions regarding the place of negotiations/mediation, the proposed timeframe, confidentiality, effect on pending legal disputes, role and powers of the facilitator/mediator, a draft schedule of the proceedings etc.

4. The disputing parties, the facilitator/mediator and the Chair of the Centre may amend the Memorandum of Understanding, for example by extending the timeframe by mutual consent at any stage of the procedure. Any amendment of the Memorandum of Understanding shall be made in writing.
Article 9

Conduct of the Facilitated Negotiations/Mediation

1. The facilitated negotiations/mediation will be conducted in accordance with the procedural rules adopted as per Article 4 of this Procedural Act. The rules shall not prevent the disputing parties, together with the facilitator/mediator, to agree on an alternative manner in which the negotiations shall be conducted.

2. In all cases, the facilitator/mediator will pay particular consideration to the circumstances of the case, the positions and interests of the disputing parties, to the applicable legal framework and will aim for a swift resolution of the dispute.

3. The facilitator/mediator may also, upon request of the disputing parties or out of own initiative, arrange bilateral meetings with disputing parties separately.

4. All information exchanged during the facilitated negotiations/mediation between the disputing parties and the facilitator/mediator shall remain confidential. The information exchanged during a bilateral meeting shall not be disclosed to the other disputing party/parties, unless the disputing party/parties engaged in the respective meeting expressly agree/s to the disclosure.

5. Unless expressly agreed by the disputing parties, all correspondence and information exchanged during the facilitated negotiations/mediation shall be without prejudice to any litigation or arbitration proceedings on the same subject-matter.

6. Unless the disputing parties and the Centre agree to a longer period, negotiations shall take place within a period of three months. In all cases, the purpose of the facilitated negotiations or mediation is to reach a settlement as soon as possible in order to minimize the costs and adverse effects of a dispute.

7. Unless the disputing parties and the facilitator/mediator agree otherwise, the place of the facilitated negotiations/mediation shall be at the premises of the Energy Community Secretariat in Vienna. Facilitated negotiations/mediation may also take place by videoconference or other means of telecommunication if the disputing parties and the facilitator/mediator so agree.

8. The disputing parties may also, upon written notification to the facilitator/mediator and to the Centre, expand the scope of the facilitated negotiations/mediation in order to cover related disputes or disputes which arose after the commencement of the facilitated negotiations/mediation, or extend the three-months deadline.

9. The facilitator/mediator does not have the authority to impose upon the disputing parties a solution to their dispute.

Article 10

Expert Determination

1. At any time during the facilitated negotiations/mediation, the disputing parties jointly may refer the dispute or a part of it to an expert to make a determination on one or more technical points disputed by the parties. The expert will be part of the Secretariat’s staff, or an expert from the Secretariat’s Roster of Experts. The determination will be binding for the disputing parties and for the facilitator/mediator. The expert determination report shall be made in writing, it shall include a description of the issue referred
for determination, state the reasons on which the finding of the expert is based, and it shall be signed and dated.

2. If the determination is made by an expert from the Secretariat’s staff, it will be free of charge. If an expert from the Roster of Experts will be engaged, the expert’s costs will be equally divided between the disputing parties. A cost overview will be provided, free of charge, before commencing the expert determination.

**Article 11**

**Termination and Outcome of the Facilitated Negotiation/Mediation**

1. The facilitated negotiations/mediation are considered terminated in one of the following circumstances: when a settlement agreement is reached by the disputing parties; when one of the disputing parties, or all the disputing parties jointly, submits a note to the facilitator/mediator, the Centre and the Secretariat, that the facilitated negotiations/mediation are terminated; and upon expiry of the deadline as per Article 9(6) or any other deadline agreed upon, and no extension has been agreed as per Article 9(8) above.

2. Unless the disputing parties agree otherwise, the objective of facilitated negotiations/mediation is to settle a dispute by agreement of the disputing parties. The facilitator/mediator’s consent is not a prerequisite for the agreement.

3. At all times, the facilitator/mediator shall work towards compliance of the outcome with Energy Community law during the facilitated negotiations/mediation.

4. Upon request of one or both disputing parties, the Centre will confirm the transparency and correctness/fairness of the negotiations.

**Article 12**

**Follow-up measures**

The disputing parties may engage the Secretariat in follow-up measures such as the implementation of any settlement agreement upon consent of the Chair of the Centre.

**Title III**

**Facilitated Negotiations/Mediation during the Dispute Settlement Procedure (Article 1(3)(b))**

**Article 13**

**Compliance with Energy Community Law**

1. The following rules are meant to implement Article 19(2) of the Dispute Settlement Procedure and facilitate the swift closure of dispute settlement cases during the preliminary procedure established therein.

2. Their application may not compromise the full implementation, applicability and primacy of Energy
Community law in the Party concerned, nor affect any other national or international procedures in which compliance with Energy Community law is relevant.

**Article 14**

**Facilitated Negotiations before Opening a Dispute Settlement Procedure**

1. Before the Secretariat opens a dispute settlement procedure against a Party to the Treaty in a case of non-compliance, the Centre shall review whether the case is suitable for a settlement. A case is suitable for a settlement in particular where compliance can be reached within a commonly agreed timeframe, and/or where the Party concerned can reach compliance with the assistance of the Secretariat. The suitability assessment shall be included in the case file.

2. If the case is considered suitable for a negotiated settlement, the Opening Letter sent in accordance with Article 13 of the Consolidated Rules of Procedure for Dispute Settlement under the Treaty shall include an invitation to the Party concerned to request negotiations using the facilities of the Centre and propose a procedural calendar for facilitated negotiations.

**Article 15**

**Mediation after the Reasoned Opinion**

1. If the facilitated negotiations carried out in accordance with Article 14 of the present Procedural Act do not lead to a settlement of the case, or if no such negotiations take place and a Reasoned Opinion is issued by the Secretariat, the Centre may offer to the Party concerned, or the Party concerned may request that the dispute be mediated by a neutral third-party mediator.

2. Such mediation shall be agreed upon in writing between the Secretariat, the Party concerned and the mediator within the deadline for reply set in the Reasoned Opinion. The agreement shall specify the scope and timeframe of the mediation as well as the role of the mediator in line with the Procedural Rules to be adopted under Article 4.

3. Unless the agreement between the Secretariat and the Party concerned provide otherwise, the costs of mediation (including the fee of the mediator if applicable, as well as reasonable travel and accommodation costs) shall be shared equally between the disputing parties.

4. The mediator shall actively help find a solution to the dispute settlement case in the broadest possible manner and not limited by the subject-matter of the case. This may include commitments to assistance by the Secretariat, commitments to future regulatory and legislative changes by the Party, and commitments made by the complainant where applicable. The solution may also include commitments for support by third parties such as international organizations, donors or domestic parties.

5. Solutions agreed upon by the Secretariat and the Party concerned in the course of the mediation shall be reflected in an agreement or memorandum which gives credible assurances of the solution being implemented.

6. The mere signature of an agreement or memorandum shall not give any expectations that the case shall be closed by the Secretariat, unless specifically mentioned in the respective agreement or memorandum.
**Article 16**  
**Place of Negotiations and Mediation**

1. Negotiations under Title III shall be preferably held at the Centre’s premises in Vienna or, if more appropriate, in the Party concerned or at any another place.

2. The costs associated with the participation in the negotiations cannot be reimbursed by the Secretariat.

**Article 17**  
**Representation of the Centre**

1. The Centre shall be represented by the Head of Legal Unit or the Senior Energy Lawyer and the rapporteur in the case concerned. The Party concerned shall decide about its representatives.

2. The Centre may request other public or private parties to be present if deemed beneficial for the settlement of the dispute.

**Article 18**  
**The Role of the Complainant**

In cases initiated upon complaint, the Centre shall also invite the complainant to be present in negotiations and mediations under Title III, unless the Party concerned objects based on legitimate reasons of overriding interest.

**Article 19**  
**Publication**

Regular updates on the status of the facilitated negotiations/mediation shall be published on the webpage of the Centre.

**Title IV**  
**Negotiation Support Provided to Parties, Participants or Observers to the Treaty (Article 1(3)(c))**

**Article 20**  
**The Network of Negotiators**

1. The Centre shall establish a network of negotiators involving energy negotiators representing the governments of Parties, Participants or Observers to the Treaty.
2. The Centre shall organize regular exchanges of experience and best practices (including model clauses), trainings and disseminate relevant information to the network.

3. The members of the network shall be invited to exchange information between them and the Centre with regard to the negotiations for public or private law contracts and agreements as well as non-binding instruments in areas such investments, project financing, supply or transit agreements, international relations etc in the energy sector.

**Article 21**

**Requesting Negotiation Support**

1. When a Party, Participant or Observer intends to enter into negotiations for an agreement or non-binding instrument of the kind described in Article 20(3) above, it may inform the Centre and may request advice and support in the negotiations.

2. The request shall be in writing and specify whether the support should be provided by the Centre and/or other members of the network.

3. Unless excluded by the Party, Participant or Observer, the Centre and/or members of the network may participate in the negotiations.

4. Any expenses associated with negotiation support shall be borne by the Party, Participant or Observer requesting the support.

**Title V**

**Final Provisions**

**Article 22**

**Compliance and Impact Assessment**

1. At any point before the closure of facilitated negotiations or mediation, the Party, Participant or Observer concerned may notify to the Secretariat the draft agreement or non-binding instrument and request an assessment of compliance with Energy Community law and/or its impact on the Energy Community Single Market, the environment and security of supply in the Energy Community.

2. The Secretariat shall provide its assessment within four weeks following the request.

**Article 23**

**Confidentiality**

1. The Centre, the staff of the Secretariat, the mediators from the Panel of Mediators and the members of the Network of Negotiators shall respect the confidentiality of all information exchanged under this Procedural Act.
2. If so requested by any of the disputing parties, all the participants to facilitated negotiations/mediation shall sign non-disclosure agreements.

3. The general obligation of confidentiality shall apply without prejudice to the publication, on the Centre’s website, of general information regarding the subject-matter of the case, the name of the disputing parties and of the facilitator/mediator, as well as the status of the proceedings.

**Article 24**

**Third parties**

At the invitation of the Centre or of the facilitator/mediator, third parties may participate in any meetings or to submit written positions regarding the subject-matter of the dispute. They may also be involved actively in the facilitated negotiations/mediation.

**Article 25**

**Costs**

1. The services of the Centre shall be free of charge.

2. If the facilitator/mediator is part of the staff of the Secretariat or the Centre, his/her services shall also be free of charge.

3. With regard to facilitators/mediators from the Panel of Mediators and of the Network of Negotiators, their fees (if the case) and reasonable costs for transport and accommodation shall be agreed upon between the disputing parties and the facilitator/mediator and shall be borne equally between the disputing parties.

4. The fees of the facilitators/mediators, as well as any costs incurred by disputing parties, their agents, counsel, advocates as well as witnesses and experts shall not be recoverable.

**Article 26**

**Legal aid**

1. The Centre shall analyze the possibility for the establishment of a legal aid fund for Parties concerned by dispute settlement procedures under Article 90 of the Treaty and for any disputing parties within the meaning of the present Procedural Act. Such legal aid fund shall be established upon decision of the Head of the Legal Unit of the Secretariat.

2. The Head of the Legal Unit of the Secretariat shall also adopt rules of procedure for the legal aid fund.
Article 27
The Energy Community Panel of Mediators

1. The Centre shall establish a Panel of Mediators of high moral character and recognized competence in the fields of energy negotiations from which the Secretariat and the Party concerned may choose a person by consensus.

2. The Panel shall include experienced mediators, members of the Network of Negotiators (see Article 20 above), representatives of companies and investors and civil society organizations in a well-balanced manner. The composition of the Panel shall be published on the website of the Secretariat.

Article 28
Entry into force

This Procedural Act shall enter into force upon adoption.

Article 29
Publicity

The Secretariat shall make this Procedural Act and any amendments available on its website.

Done in Vienna, 25 October 2018
RULES OF PROCEDURE of 29 November 2018 of Energy Community
parliamentary plenum

I. Participation

Members of National Parliaments of the Contracting Parties
1. Participants in the Parliamentary Plenum meetings shall be members of their national parliaments.
2. Participants in the Parliamentary Plenum meetings shall be appointed by their national parliaments or its respective body. National parliaments may appoint two representatives. Participants should be appointed so as to ensure a fair representation of the political parties in their parliaments. Preferably one participant should be from the governing political spectrum and one from the opposition.
3. National parliaments may also appoint two alternative participants, who may take the place of a participant who is unable to attend a meeting when the Secretariat has been duly informed.
4. A participant standing for re-election to a national parliament will be considered a member of that parliament until the election is decided and may continue to be a participant in the Parliamentary Plenum meetings until his or her successor has been designated, provided he or she is still a member of the national parliament.

Members of European Parliament
5. The European Parliament may send an equal number of representatives as representatives from the Energy Community Contracting Parties.

II. Chair and Vice-Chairs

1. The chairmanship of the Parliamentary Plenum meetings shall be rotating and shall be held by the member of the National Parliament of the Contracting Party holding the Presidency of the Energy Community Ministerial Council.
2. Out of the two participants in the Parliamentary Plenum meetings of the Contracting Party holding the Presidency,
   a) The Chair of the Parliamentary Plenum meetings shall be the Chairperson of the principle Committee in charge of energy issues in his or her National Parliament.
   b) In case neither of the two appointed participants of the Parliamentary Plenum meetings is a Committee Chairperson, then the most senior participant, in terms of mandates served in national parliament, will be Chairperson.
   c) In case of disagreement, the Chair shall be decided by draw.
3. The Chair calls for, proposes an agenda and chairs the meetings of the Parliamentary Plenum; ensures observance of the Rules of Procedure; ascertains whether a quorum exists, puts questions to vote and announces the results of votes. The chairperson of the Parliamentary Plenum meetings is invited before the Energy Community Ministerial Council.
4. The chairperson shall continue to act as Chair until a new chairperson of the Parliamentary Plenum
meetings has taken up his or her duties.

5. The Parliamentary Plenum meetings may have three Vice-Chairs, one from the incoming and one from the outgoing Presidency of the Energy Community Ministerial Council and one from the European Parliament. Vice-Chairs may take over the responsibilities of the Chair if requested by him or her or in the chairperson’s absence.

6. The same procedure will apply for appointment of the Vice-Chairs from the national parliaments of the Contracting Parties as for the Chair of the Parliamentary Plenum meetings. The European Parliament will designate the Vice-Chair according to its own arrangements.

**III. Meetings**

1. The Parliamentary Plenum meetings shall be organized up to two times a year. The dates, duration and location of the meetings and the draft agenda will be established by the Chair in consultation with the Energy Community Secretariat. The meeting details shall be communicated by the Energy Community Secretariat at least two months prior to the meeting.

2. Reports and resolutions expressing the views and opinions of the participants in the Parliamentary Plenum meetings can only be adopted when at least 11 participants from 6 parliaments are present. The quorum will be determined by the Chair.

3. The meetings of the Parliamentary Plenum are public, unless the participants in the Parliamentary Plenum meetings decide otherwise.

4. The official language of the Parliamentary Plenum meetings is English.

5. Any participant wishing to use a language other than English shall be responsible for arranging translation and simultaneous interpretation from and into English.

6. The meetings of the Parliamentary Plenum shall be administered by the Energy Community Secretariat. Among its duties, the Energy Community Secretariat will write minutes of the meeting, recording attendance and reports and resolutions reached. Upon completion, the minutes will be sent to all participants and subsequently published, subject to point 3 of this Section.

**IV. Questions**

1. The participants in the Parliamentary Plenum meetings may pose questions to the institutions of the Energy Community, including the Ministerial Council.

2. When a representative of the Contracting Party holding the Presidency of the Energy Community is invited to attend the meetings of the Parliamentary Plenum, there will be a time limited question and answer session the length of which is to be determined by the Chair.

3. Any participant in the Parliamentary Plenum meetings may submit, through the Energy Community Secretariat, one written question a year in total to the institutions of the Energy Community.
V. Resolutions and Reports

1. The participants in the Parliamentary Plenum meetings may adopt reports or resolutions expressing their views and opinions on all matters falling within the scope of the Energy Community Treaty, with the exception of dispute settlement under Articles 90-93 of the Treaty.

2. The participants in the Parliamentary Plenum meetings may elect, by the majority of votes cast, a Rapporteur, who shall be responsible for the preparation of a draft report and its presentation to the participants in the Parliamentary Plenum meetings. A Co-Rapporteur from another parliamentary body may be appointed.

3. The Rapporteur shall make available his or her report at least one month before the Parliamentary Plenum meeting where the report will be put to vote.

4. The theme of the reports should be decided by the Chair in consultation with the Vice-Chairs and the Energy Community Secretariat. Participants may submit proposals for consideration by the Chair.

5. Any participant in the Parliamentary Plenum meetings may table a motion for a resolution providing he or she has the support of two representatives of at least two other parliaments. The participant shall make available his or her resolution at least one month before the meeting where the report will be put to vote.

6. Each participant in the Parliamentary Plenum meeting shall have one vote. A simple majority of the votes cast is required to adopt a report and a resolution.

7. The reports and resolutions adopted in the Parliamentary Plenum meetings shall be transmitted to the Ministerial Council and the parliaments via the Energy Community Secretariat.

VI. Costs

1. The travel expenses of representatives and officially designated alternative representatives of Contracting Party parliaments, in total a maximum of two representatives per Contracting Party, shall be borne by the Energy Community Budget in line with the applicable travel reimbursement rules. This provision does not apply to members of the host Parliament and to members of the European Parliament.

2. Other expenses related to the meetings or other activities of the Parliamentary Plenum meetings will be met by the host Parliament.

3. The costs for interpretation and translation shall be borne by the participant requesting such interpretation and translation in accordance with Section III/5 above.

VII. Amendments to the Rules of Procedure

1. Without prejudice to the rights of proposal under the Treaty establishing the Energy Community, participants in the Parliamentary Plenum meetings may make suggestions for revision of the Rules of Procedures. They may be assisted by the Energy Community Secretariat that may present drafts for such suggestions.

2. Suggestions for a revision shall be put for voting on the agenda of the first Parliamentary Plenum meeting following the presentation of the proposal.
3. Adoption of the suggestions requires a quorum of two thirds of the participants and respective parliaments present. Each participant has one vote.

Done at Skopje, on 29 November 2018
RULES of 29 November 2018 on the establishment of a coordination group of the Energy Community distribution system operators for electricity

Procedural Act 2018/01/MC-EnC on the establishment of a coordination group of the Energy Community distribution system operators for electricity

THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY,

Having regard to the Treaty Establishing the Energy Community, and in particular Articles 86 and 87 thereof,

Whereas Directive 2009/72/EC of 13 July 2009 concerning common rules for the internal market in electricity, as incorporated in the Energy Community by Ministerial Council Decision 2011/02/MC-EnC of 6 October 2011, and in particular Articles 3, 24-31, and 41 thereof, set out the rules applicable to distribution system operators and retail markets;

Whereas the Treaty Establishing the Energy Community pursues the aims of developing and attracting investments in energy networks, reforms of energy sectors and integration of energy markets as instruments for stable and continuous energy supply and provision of energy to citizens,

Whereas distribution system operation and the development of retail markets plays a key role for achieving these aims,

Whereas distribution system operators develop, maintain and operate the networks, provide network access and services under regulated conditions and tariffs and secure energy supplies and support to consumers,

Whereas the evolution of markets in the Energy Community and progressing retail market opening in compliance with the acquis requires coherent rules and methodologies as well sharing best practices among distribution system operators,

Whereas the increasing use of renewable energy, digitalisation and smart technologies, deployment of production units within the distribution networks, entry of prosumers but also the continuous challenges of legal and functional unbundling, energy poverty, high level of losses etc. call for intensified and structured efforts to enhance the exchange information and experience between the Energy Community distribution system operators and building of their capacity,

Whereas the Energy Community Distribution System Operators in Electricity (ECDSO-E) coordination group, established informally and supported by the Secretariat, enables such communication and coordination already for several years,

Whereas the work of ECDSO has reached a level of maturity which calls for formalisation within the existing structures of the Energy Community,

Whereas the proposed approach was welcomed by the high-level representatives of the companies represented in ECDSO-E and supported by the Permanent High Level Group,
Upon proposal of the Secretariat,
HAS ADOPTED THIS PROCEDURAL ACT:

**Article 1**

1. A coordination group of the Energy Community Distribution System Operators for Electricity (“ECDSO-E”) is hereby established.
2. The activities of ECDSO-E shall be governed by Terms of Reference stipulated in the Annex to this Procedural Act.

**Article 2**

This Procedural Act shall enter into force on the day of its adoption and is addressed to the Parties to the Energy Community.

Done in Skopje, on 29 November 2018
This document describes the organizational structure, activities and the responsibilities of all parties concerned within the Coordination Group of distribution system operators in electricity from the Energy Community (ECDSO-E).

1. General
ECDSO-E is established as a group of experts from electricity distribution network operator (DSO) undertakings in the Energy Community Contracting Parties.
It is open for participation of distribution system operators from Observer and Participant countries. Participation of the DSOs from the Energy Community in the ECDSO-E is voluntary.

2. Structure
The operational structure of the ECDSO-E comprises:
a) The ECDSO-E Coordination Group plenary
b) ECDSO-E Task Forces
c) Technical Networks.

This document gives guidance to conveners and members of the ECDSO-E bodies, with the aim of harmonizing their activities, avoiding duplication of work and ensuring that their activities are carried out in the most efficient way in line with the Energy Community Treaty.

3. Format
ECDSO-E shall function in an open format with free access to events and activities by its members.
ECDSO-E shall take part in the meetings Energy Community Security of Supply Coordination Group and in its activities, where appropriate.
ECDSO-E shall organize meetings, and electronically or web based coordination and activities, facilitated by the Secretariat.
Access to specific data and files of ECDSO-E, in particular access to consultation papers and database may be limited where required. Limitations may be requested by reasoned request of a participating DSO.

4. Tasks
ECDSO-E provides the format for discussion of all questions pertinent to DSO operation and functioning related to implementation of provisions of the Energy Community Treaty.
In particular its tasks will be:
a) to facilitate and harmonize the implementation of the Directive 2009/72/EC and Directive 2005/89/EC and to elaborate guidance documents where necessary;
b) to follow up conformity of practices, processes and activities in the field relevant for DSO operation and issue assessments and official positions;

c) to discuss and, where appropriate, to develop a common view on issues to be discussed and agreed upon in the ECDSO-E and to be presented to other stakeholders;

d) to support individual DSOs in the implementation of their tasks and obligations agreed upon by ECDSO-E and to coordinate related activities where appropriate;

e) to follow up development of new rules and regulations and issue recommendations for implementation;

f) to support DSOs in the management of transition (guidelines, recommendations of best practices, peer to peer consultations);

g) to establish and maintain liaisons with other European and/or regional cooperation bodies by appointing a dedicated liaison person;

h) to cooperate with relevant stakeholders of the Energy Community, especially as far as the implementation of the provisions pertinent to DSOs is concerned;

i) to cooperate with the institutions and bodies of the Energy Community;

j) to nominate representatives to joint working groups with other stakeholders, and to maintain liaison as required;

k) to set up, develop and maintain the DSO electronic platform, by:

- maintaining the annual questionnaire dataset for benchmarking database;
- developing and making available other datasets in the content and format agreed upon by ECDSO-E, such as quality of service indicators, network costs and tariffs, investment dynamic and structure, connection of small installations.

5. Composition

5.1. Membership in the ECDSO-E Coordination Group is defined as follows:

- representatives of all interested DSO from the Energy Community, including Observers and Participants to the EnC Treaty, nominated to the Group;
- experts and officials of the Secretariat and the European Commission;
- representatives of other stakeholders nominated to liaise with the ECDSO-E or invited by the Chairperson or by the Secretariat;

5.2. The Secretariat shall provide overall logistic support for ECDSO-E.

5.3. The ECDSO-E Coordination Group may decide to establish special task forces, with an appointed convenor, and to study a precisely defined problem and report back on it. The task forces are automatically disbanded after presenting their final results.

5.4. All conveners of the task forces are nominated by the ECDSO-E for a defined period. Candidates are proposed by the members of ECDSO-E to the Chairperson.

5.5. ECDSO-E shall nominate members for the Joint Working Groups and upon request, to the Technical Networks task forces.
6. Governance

6.1 ECDSO-E shall nominate and appoint a Chairperson and two Vice Chairpersons for a period of two years.

6.2 One expert appointed by the Secretariat shall be the Moderator of ECDSO-E activities.

6.3 The work of ECDSO-E is led by a team consisting of the Chairperson, Co-Chairs and the Moderator. They shall normally communicate by means of telecommunication.

7. Meetings of ECDSO-E

7.1 ECDSO-E will meet when considered necessary upon a motion of the Chairperson of ECDSO-E, the Secretariat, or at least one third of ECDSO-E’s members. ECDSO-E will normally meet twice a year.

7.2 The Secretariat will provide logistic support and expert assistance for ECDSO-E meetings.

7.3 A draft agenda will be distributed at least two weeks before each meeting. Draft conclusions will be distributed within two weeks after the meeting for approval by the members.

7.4. The Secretariat will prepare and organize workshops, when considered useful, following the conclusions of ECDSO-E.

8. Task Forces

8.1 Task Forces can be established for well-defined tasks. Terms of Reference will be defined by ECDSO-E. Task Forces will report to ECDSO-E at each meeting. A clear time frame for each task shall be defined.

8.2. Convenors are nominated by ECDSO-E.

8.3. Members of the Working Groups may be representatives of DSOs, representatives from interested parties and other stakeholders, including transmission system operators, generators and regulatory authorities. They are invited by the Convenors.

8.4. The Task Forces will be disbanded as soon as their tasks are carried out.

8.5. The Task Forces will co-ordinate their activities with the activities of other working groups within the Energy Community framework, as well as other regional and European cooperation institutions and initiatives. They will exchange results with these groups whenever possible.

8.6. Task Forces will meet when considered necessary by their convenors or by the Secretariat or by ECDSO-E. Meetings can be web meetings, as considered appropriate by Convenors. Invitations to the meetings will be distributed among the members of the groups and sent to all members of ECDSO-E at least two weeks before each meeting.

8.7. Task Forces will send copies of their minutes to the ECDSO-E Chair for distribution to ECDSO-E members within two weeks after the meeting and report to ECDSO-E at each meeting.

8.8. The ECDSO-E Moderator will keep a list of the active task forces, their tasks and composition.

8.9 Joint Working Groups are expert teams working jointly with other organizations or bodies of the Energy Community under the work plan of the SoS CG. They will follow the same rules as Task Forces, unless otherwise agreed upon by the organizations concerned.
9. Technical networks (TNs)

9.1 The TNs are established to stimulate discussion and harmonisation in selected technical fields. The TNs operate by suitable electronic means and are moderated by the Secretariat.

9.2. The TNs offer to the ECDSO-E members an informal platform for discussion and exchange of experience and of technical expertise and assessors. TNs can hold a physical meeting when necessary, with the logistics support of the Secretariat.

9.3. The members of the TNs are the nominated persons actively engaged in the particular field of the TN.

9.4. The ECDSO-E evaluates the work of and the need for TNs biannually. New TNs are established based on the need and interest of the ECDSO-E members following the conclusion of the meetings.

9.5. The Secretariat will keep a list of the active networking groups, their tasks and composition.
RULES of 29 November 2018 on the establishment of an Energy Community coordination group for cyber-security and critical infrastructure

Procedural Act 2018/02/MC-EnC of 29 November 2018 on the establishment of an Energy Community coordination group for cyber-security and critical infrastructure

THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY,

Having regard to the Treaty Establishing the Energy Community, and in particular Articles 86 and 87 thereof,

Having regard to Articles 2 and 3 of the Treaty Establishing the Energy Community calling for the enhancement of the security of supply of the single regulatory space in the Energy Community, and access for all Contracting Parties to a stable and continuous energy supply that is essential for economic development and social stability;

Whereas due to the proliferation of information and communication technologies in the energy sector, cyber-security matters have become an intrinsic part of a number of existing Energy Community acquis, that deal with the security of supply or safe operation of energy systems,

Whereas the stabilization and association agreements of the European Union and its Member States with Albania, Bosnia and Herzegovina, former Yugoslav Republic of Macedonia, Kosovo*, Montenegro, and association agreements with Georgia, Moldova and Ukraine require these Contracting Parties adopt a series of European Union legislation on cybersecurity matters and protection of critical infrastructure, including in the energy sectors,

Whereas there are certain critical infrastructures in the Energy Community, the disruption or destruction of which would have significant cross-border impacts or cross-sectoral effects resulting from interdependencies between interconnected infrastructures and systems, which require the setting-up of a coordination mechanism at Energy Community level,

Whereas timely and effective response to incidents relies on the existence of previously established and, to the extent possible, well-rehearsed cooperation procedures and mechanisms having clearly defined the roles and responsibilities of the key actors at national and Energy Community level,

Whereas an effective organizational framework for a high level of security of information systems and critical infrastructures requires taking an all-hazard approach where man-made, technological threats and natural disasters need all to be taken into account in the protection process,

Whereas a Community approach will encourage private sector involvement in overseeing and managing risks, business continuity planning and post-disaster recovery,

Whereas existing sectoral measures at national level require coordinated regional action through Community mechanisms, with a view to enhancing effectiveness, avoid duplication of, or contradiction between, different acts or measures,

Whereas cyber-security calls for a group of experts to advise the Energy Community, the national institutions as well as to coordinate incident and crisis management measures,

Whereas such a group should be composed of all relevant stakeholders and should cover electricity, gas and oil sectors, encompassing generation, distribution, transmission and supply,

1 This designation is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICI Opinion on the Kosovo.
Upon proposal of the Secretariat,
HAS ADOPTED THIS PROCEDURAL ACT:

**Article 1**

1. To promote a high level of security of network and information systems and of critical infrastructures within the Energy Community, a coordination group for cyber-security and critical infrastructure ("Cyber-CG") is hereby established.

2. Each Party shall designate and notify to the Energy Community Secretariat one or more national competent authorities as well as a single point of contact for the security of network and information systems and of critical infrastructures (‘competent authority’ and ‘single point of contact’), covering at least the sectors referred to in point 2. e) of the Annex.

3. Each Party shall designate and notify to the Energy Community Secretariat one or more national computer security incident response teams (‘CSIRTs’).

4. The CyberCG shall
   (a) perform its tasks as described in the Annex to the present Procedural Act;
   (b) liaise with a network of CSIRTs as described in the Annex to the present Procedural Act;
   (c) liaise with security liaison officer for each critical infrastructure in Contracting Parties.

5. The activities of the CyberCG shall be governed by Terms of Reference stipulated in the Annex to this Procedural Act.

6. This article is without prejudice to the actions taken by the Parties to safeguard their essential State functions, in particular to safeguard national security, including actions protecting information the disclosure of which Parties consider contrary to the essential interests of their security, and to maintain law and order, in particular to allow for the investigation, detection and prosecution of criminal offences.

**Article 2**

This Procedural Act shall enter into force on the day of its adoption and is addressed to the Parties to the Energy Community.

Done in Skopje, on 29 November 2018
ANNEX

Terms of Reference of the Energy Community cyber-security and critical infrastructure cooperation group (CyberCG)

This document describes the organizational structure, activities and the responsibilities of all parties concerned within the coordination group for cyber-security and critical infrastructure ("CyberCG").

1. General

The CyberCG aims to support and facilitate strategic cooperation and the exchange of information within the Energy Community and to develop trust and confidence, and with a view to achieving a high common level of security of network and information systems and of critical infrastructures in the Energy Community.

2. Definition of Terms

For the purposes of the present Annex, the following definitions apply:

a) ‘network and information system’ means: (a) an electronic communications network within the meaning of point (a) of Article 2 of Directive 2002/21/EC; (b) any device or group of interconnected or related devices, one or more of which, pursuant to a program, perform automatic processing of digital data; or (c) digital data stored, processed, retrieved or transmitted by elements covered under points (a) and (b) for the purposes of their operation, use, protection and maintenance;

b) ‘security of network and information systems’ means the ability of network and information systems to resist, at a given level of confidence, any action that compromises the availability, authenticity, integrity or confidentiality of stored or transmitted or processed data or the related services offered by, or accessible via, those network and information systems;

c) ‘national strategy on the security of network and information systems’ means a framework providing strategic objectives and priorities on the security of network and information systems at national level in accordance with requirements of Article 7 of Directive 2016/1148/EU;

d) ‘operator of essential services’ means a public or private entity which provides an energy service that (i) is essential for the maintenance of critical societal and/or economic activities, (ii) the provision of that service depends on network and information systems, (iii) and an incident would have significant disruptive effects on the provision of that service, in accordance with the criteria laid down in Article 5(2) of Directive 2016/1148/EU;

e) ‘energy services’ comprise (i) electricity generation, supply, market operation, distribution, transmission, and storage, (ii) natural gas production, supply, market operation, transmission, distribution, storage and LNG, (iii) oil production, refining and treatment facilities, market operation, storage and transmission, (iv) monitoring and control of pollution and emissions from energy combustion and (v) digital services and electronic communication services, in case and to the extent that the latter provide services to operators of essential services of the energy sectors, and/or that provide services that are essential to the functioning of the energy sector”;

f) ‘critical infrastructure’ means an asset, system or network or part thereof within the energy sector or interdependent with the energy services referred to in point e), located in Contracting Parties which is es-
essential for the maintenance of vital societal functions, health, safety, security, economic or social well-being of people, the disruption or destruction of which would have a significant impact in a Contracting Party as a result of the failure to maintain those functions;

g) ‘Energy Community critical infrastructure’ means critical infrastructure located in Contracting Parties the disruption or destruction of which would have a significant impact on at least two Contracting Parties and/or Member States. The significance of the impact shall be assessed in terms of cross-cutting criteria. This includes effects resulting from cross-sector dependencies on other types of infrastructure;

h) ‘owners/operators of critical infrastructures’ means those entities responsible for investments in, and/or day-to-day operation of, a particular asset, system or part thereof designated as a critical infrastructure in the relevant Contracting Parties. For the avoidance of doubt, the definition of an operator of critical infrastructure encompasses and is broader than that of an operator of essential services, as it covers also critical infrastructures that do not depend on information network and systems;

i) ‘incident’ means any event having an actual adverse effect on the security of network and information systems within the meaning of Directive 2016/1148/EU or any event causing a disruption or destruction of critical infrastructure installations within the meaning of Directive 2008/114/EC;

j) ‘incident handling’ means all procedures supporting the detection, analysis and containment of an incident and the response thereto, as provided under Directive 2016/1148/EU and related implementing acts;

k) ‘risk’ means any reasonably identifiable circumstance or event having a potential adverse effect on the security of network and information systems, as provided under Directive 2016/1148/EU and related implementing acts, or having the potential of causing a disruption or destruction of critical infrastructure installations as provided under Directive 2008/114/EC, including cyber-attacks, natural disasters, terrorist attacks or any other sources of attack.

l) ‘risk analysis’ means consideration of relevant threat scenarios, in order to assess the vulnerability and the potential impact of disruption or destruction of critical infrastructure or network and information systems;

m) ‘protection’ means all activities aimed at ensuring the functionality, continuity and integrity of critical infrastructures in order to deter, mitigate and neutralize a threat, risk or vulnerability;

n) ‘standard’ means a standard within the meaning of point (1) of Article 2 of Regulation No 1025/2012/EU;

o) ‘specification’ means a technical specification within the meaning of point (4) of Article 2 of Regulation No 1025/2012/EU.

3. Composition

3.1. The CyberCG consists of representatives of the Parties (competent authorities and single point of contacts), the CSIRTs network, security liaison officers, the Secretariat, the European Commission, and the European Union Agency for Network and Information Security (“ENISA”).

3.2. Representatives of Observer and Participant countries may participate in the CyberCG.

3.3. Where appropriate, the CyberCG may invite representatives of the relevant stakeholders to participate in its work.

3.4. The Secretariat shall provide assistance and logistical support to the CyberCG.
4. Single points of contact

4.1. The single points of contact exercises a liaison function to ensure cross-border cooperation of Parties’ authorities and with the relevant authorities in other Parties, with the CyberCG and the CSIRTs network. Tasks of the single point of contact may be assigned to the competent authority.

4.2. Single points of contact notify and report to the CyberCG, the CSIRTs network and the Secretariat, by 15 January 2019, and every year thereafter, on provisions of national law and measures in the fields covered by point 2. e) of this Annex, including but not limited to:

a) adoption of a national strategy on the security of network and information systems covering at least the sectors point 2. e) of this Annex, in compliance with requirements set forth in Article 7 of Directive 2016/1148/EU, and adoption of security strategies or equivalent instruments on the protection of critical infrastructures from other risks, not covered by national strategy on the security of network and information systems, in compliance with requirements laid down in Directive 2008/114/EC;

b) on the identification of operators of essential services for sectors and services referred to in point 2. e) of this Annex, in compliance with requirements of Articles 5 and 6 of Directive 2016/1148/EU; on security and incident notification requirements that those operators of essential services shall implement, in compliance with requirements laid down in Article 14 of Directive 2016/1148/EU; as well as on enforcement powers and means given to competent authorities in this respect, in compliance with requirements laid down in Article 15 of Directive 2016/1148/EU;

c) on security requirements and incident notification obligations that entities operating organized energy trading and balancing services’ platforms as referred to in point 2. e) of this Annex implement, in compliance with requirements laid down in Directive 2016/1148/EU; or in compliance with security requirements equivalent to those laid down in Directive 2014/65/EU on markets in financial instruments, supplemented by any implementing acts, or equivalent to those laid down in Regulation 600/2014/EU, as supplemented by any implementing acts, as well as national provisions on enforcement powers and means given to competent authorities in this respect;

d) on security requirements and incident notification obligations that digital service providers referred to in point 2. e) of this Annex implement, in compliance with requirements laid down in Article 16 of Directive 2016/1148/EU; as well as national provisions on enforcement powers and means given to competent authorities in this respect, in compliance with requirements laid down in Article 17 of Directive 2016/1148/EU;

e) on security requirements and incident notification obligations that electronic communications operators referred to in point 2. e) of this Annex implement, in compliance with requirements laid down in Articles 13a and 13b of Directive 2002/21/EC; as well as national provisions on enforcement powers and means given to competent authorities in this respect, in compliance with requirements laid down in Articles 13a and 13b of Directive 2002/21/EC;

f) on the identification of critical infrastructures located on the territory of the concerned Contracting Party, on security measures and operational plans that are implemented to ensure a level of security and protection of critical infrastructures for sectors and services referred to in point 2. e) of this Annex, in compliance with requirements equivalent to those laid down in Article 5 and Annex II of Directive 2008/114/EC, for risks and incidents that are not covered by the above-mentioned from b) to e), as well as on enforcement powers and means given to competent authorities in this respect.
5. Tasks

5.1. The CyberCG covers the following tasks:

a) providing strategic guidance for the activities of the CSIRTs established and the CSIRTs network;

b) exchanging best practice on the exchange of information related to incident notification within the meaning of or equivalent to provisions in Article 14(3) and (5) and Article 16(3) and (6) of Directive 2016/1148 EU, and/or to the identification of critical infrastructures in the Contracting Parties for at least the sectors referred to in point 2. e) of this Annex;

c) exchanging best practice between Parties and other stakeholders involved;

d) assisting Contracting Parties in building capacity to ensure the security of network and information systems, and in securing critical infrastructures;

e) discussing capabilities and preparedness of the Contracting Parties, and evaluating national strategies on the security of network and information systems and the effectiveness of CSIRTs, and of critical infrastructures protection and identifying best practice;

f) exchanging information and best practice on awareness-raising and training;

g) exchanging information and best practice on research and development relating to the security of network and information systems and to the protection of critical infrastructures;

h) where relevant, exchanging experiences on matters concerning the security of network and information systems and of critical infrastructures, with relevant Energy Community institutions, in particular the Secretariat and the Energy Community Security of Supply Coordination Group;

i) discussing the standards and specifications with relevant stakeholders and with relevant organizations where appropriate;

j) collecting best practice information on risks and incidents;

k) examining, on an annual basis, the reports submitted;

l) discussing the work undertaken with regard to exercises relating to the security of network and information systems and of critical infrastructures, education programmes and training;

m) exchanging best practice with regard to the identification of operators of essential services by the Contracting Parties, identification of critical infrastructures, including in relation to cross-border dependencies, and cross-sectoral dependencies regarding risks and incidents, where appropriate with the assistance of the Energy Community Security of Supply Coordination Group, building on the best practice of ENISA;

n) engaging in discussions with the Contracting Party, or Contracting Parties and Member States on whose territory a potential critical infrastructure is located, and with the other Contracting Parties and Member States which may be significantly affected by the potential critical infrastructure, providing guidance for the identification of critical infrastructures or of operator of essential service and where necessary facilitating agreements between the concerned Contracting Parties and Member States on common security and protection measures;

o) discussing modalities for reporting notifications of incidents;

p) developing common methodological guidelines for carrying out risk analyses in respect of Energy Community critical infrastructures. The CyberCG shall support, through the relevant Contracting Party’s competent authority/single point of contact, the owners/operators of critical infrastructures by providing access to available best practices and methodologies as well as support training and the exchange of
information on new technical developments related to critical infrastructure protection;
q) promoting convergent implementation of security requirements of network and information systems and of critical infrastructures, without imposing or discriminating in favour of the use of a particular type of technology,
r) encouraging the use of European or internationally accepted standards and specifications relevant to the security of network and information systems.

5.2. The CyberCG shall carry out its tasks on the basis of biennial work programmes. The work programme shall outline actions to be undertaken to implement the CyberCG’s objectives and tasks.

5.3. The CyberCG shall take part in the meetings and activities of the SoS CG, where appropriate.

5.4. The CyberCG shall prepare a report assessing the experience gained with the strategic cooperation by October 2019, and every year thereafter, and submit it to the Secretariat, so that the latter uses it for the preparation of its implementation report for the Ministerial Council.

6. Chairs
The Cyber-CG shall nominate and appoint a Chairperson and two Vice Chairpersons for a period of two years.

7. Meetings of the Cyber-CG
7.1. The Cyber-CG will meet when considered necessary upon a motion of the Chairperson, the Chairperson of Energy Community Security of Supply Coordination Group, the Secretariat, or ENISA. The Cyber-CG will normally meet twice a year.

7.2. A draft agenda will be distributed at least two weeks before each meeting. Draft conclusions will be distributed within two weeks after the meeting for approval by the members.

7.3. The Secretariat will prepare and organize workshops, when considered useful, following the conclusions of the Cyber-CG.

8. Computer security incident response teams (CSIRTs)
8.1. CSIRTs designated by Contracting Parties covering at least the sectors referred to in in point 2. e) of this Annex, responsible for risk and incident handling in accordance with a well-defined process. CSIRTs could also be established within the competent authority.

8.2. CSIRTs should have access to an appropriate, secure, and resilient communication and information infrastructure at national level in accordance with requirements of Directive 2016/1148. 8.3. Contracting Parties shall inform the Secretariat and the CyberCG about the remit, as well as the main elements of the incident-handling process, of their CSIRTs.

8.4. Contracting Parties may request the assistance of the CyberCG in developing national CSIRTs.

9. CSIRTs Network
9.1. In order to promote swift and effective operational cooperation in cases of risks or incidents to information and communications networks and systems, a network of the national CSIRTs is established.
9.2. The CSIRTs Network shall be composed of representatives of the Contracting Parties CSIRTs. The Secretariat shall participate in the CSIRTs network.

9.3. The CSIRTs network shall have the following tasks:

a) exchanging information on CSIRTs’ services, operations and cooperation capabilities;

b) at the request of a representative of a CSIRT from a Contracting Party potentially affected by an incident, exchanging and discussing non-commercially sensitive information related to that incident and associated risks; however, any Contracting Party’s CSIRT may refuse to contribute to that discussion if there is a risk of prejudice to the investigation of the incident;

c) exchanging and making available on a voluntary basis non-confidential information concerning individual incidents;

d) at the request of a representative of a Contracting Party’s CSIRT, discussing and, where possible, identifying a coordinated response to an incident that has been identified within the jurisdiction of that same Contracting Party;

e) providing Contracting Parties with support in addressing cross-border incidents on the basis of mutual assistance, including under Chapter IV, Title IV of the Energy Community Treaty

f) discussing, exploring and identifying further forms of operational cooperation, including in relation to:

(i) categories of risks and incidents; (ii) early warnings; (iii) mutual assistance; (iv) principles and modalities for coordination, when Contracting Parties respond to cross-border risks and incidents;

g) informing the CyberCG of its activities and of the further forms of operational cooperation discussed pursuant to point (f), and requesting guidance in that regard;

h) discussing lessons learnt from exercises relating to the security of network and information systems, including from experience shared by ENISA;

i) at the request of an individual CSIRT, discussing the capabilities and preparedness of that CSIRT;

j) issuing guidelines in order to facilitate the convergence of operational practices and operational cooperation;

k) developing a blueprint for cooperation at Energy Community level in case of incidents or crisis affecting one or more Contracting Parties to such an extent that an intervention at Energy Community level is required.

9.4. The CSIRTs network produces an annual report assessing the experience gained with the operational cooperation, including conclusions and recommendations. That report shall be submitted to the CyberCG.

9.5. The CyberCG and the Secretariat shall actively support the cooperation among the CSIRTs. The CSIRTs shall build on best practice of ENISA in performing its tasks and duties, and where appropriate and possible may seek assistance from ENISA.

10. Closed-CSIRT network

10.1. Within the CSIRT network, a closed-CSIRT network is established to treat such a threat and risk landscape and incidents that are considered as classified information by the Contracting Parties concerned. The closed-CSIRT network is composed of a representative from each Contracting Party which shall have an appropriate level of security vetting and clearance equivalent to that of handling classified information at European Union level.
10.2. The closed-CSIRT network shall make use of specific certified communication means that provide a secure way to communicate the classified information. The same applies to non-written information exchanged during meetings of the closed-CSIRT network.

11. Security liaison officer for critical infrastructures
11.1. Contracting Parties should designate one security liaison officer for security issues for each critical infrastructure. The security liaison officer functions as the point of contact between the owner/operator of the Energy Community critical infrastructure, the relevant Contracting Party’s competent authority/single point of contact and the Cyber-CG.
11.2. Contracting Parties shall inform the Energy Community Secretariat and the Cooperation Group about the remit, as well as the main elements of the incident-handling process, of their security liaison officers.

12. Competent authorities, single point of contacts, CSIRTs and security liaison officers
12.1. Competent authorities, single points of contact, CSIRTs and security liaison officers should have adequate resources to carry out, in an effective and efficient manner, the tasks assigned to them.
12.2. Competent authorities, single points of contact, CSIRTs and security liaison officers, whenever appropriate and in accordance with national law, consult and cooperate with the relevant national law enforcement authorities and national data protection authorities.

13. Cooperation with ENISA (European Union Agency for Network and Information Security)
By 1 July 2019, the CyberCG shall explore possibilities and options for Contracting Parties and the Secretariat to engage as observer with ENISA on issues related to cybersecurity in Network Energy, and participate in the international activities organized by ENISA.
RULES of 21 June 2012 governing the adoption of guidelines and network codes in the Energy Community

The Permanent High Level Group of the Energy Community,

Having regard to the Treaty establishing the Energy Community ("the Treaty"), and in particular Articles 87 and 82 thereof,

Following up on the task assigned to the Permanent High Level Group in Articles 27(3) and 28(3) of Decision 2011/02/MC-EnC to prepare a Procedural Act laying down the procedure for the incorporation of Guidelines and Network Codes adopted within the European Union,

Recognizing the importance of a synchronous evolution of the Energy Community acquis communautaire for the creation of an interconnected internal market throughout the Energy Community,

Acknowledging the necessity to transpose Guidelines and Network Codes into domestic legal orders as timely and truly to the original as possible, and to implement and enforce them vigorously,

Having regard to the Secretariat’s proposal,

Taking into account the discussions at the meetings of 14 December 2011, 23 March 2012 and 21 June 2012,

HAS ADOPTED THIS PROCEDURAL ACT:

Article 1
Subject-Matter

These rules lay down the procedures for the adoption of Guidelines and Network Codes by Decision of the Permanent High Level Group of the Energy Community upon proposal of the European Commission, as required by Articles 27 and 28 of Decision 2011/02/MC-EnC.
Article 2

Definitions

For the purpose of this Procedural Act

Article 3

Procedure

(1) The Presidency and the Vice-Presidencies shall include the European Commission’s proposal on the adoption of Guidelines or Network Codes in the agenda of the next possible meeting of the Permanent High Level Group. The text of the proposal shall be circulated by the Secretariat to all members at least 30 days before the relevant meeting.

(2) If the next possible meeting of the Permanent High Level Group is to take place later than two months following the receipt of the above-mentioned proposal of the European Commission by the Secretariat, or later than three months, where it concerns the adoption of Network Codes, the Presidency, after consultation and in agreement with the Vice-Presidencies, may opt for decision-making by correspondence in line with the Rules of Procedure of the Permanent High Level Group.

(3) Where the European Commission’s proposal concerns the adoption of Network Codes, the Secretariat shall forward it to the President of the Regulatory Board and request the opinion of this institution within an appropriate timeframe not exceeding 30 days. The President of the Regulatory Board shall transmit its opinion officially to the Secretariat, who shall notify it to the members of the Permanent High Level Group without delay. Where the Regulatory Board fails to submit an opinion within the specified timeframe, the Permanent High Level Group shall proceed without such opinion.

(4) The Permanent High Level Group shall take its Decisions under this Procedural Act in accordance with Articles 78 to 81 of the Treaty.

(5) Decisions of the Permanent High Level Group shall:
   a. Specify the period within which the Contracting Parties shall transpose Guidelines and Network Codes, as adopted by the Permanent High Level Group’s Decision, into their domestic legislation and require that the Guidelines and Network Codes be transposed without changes to their text or their structure of the Decision, other than translation.
   b. Require the Contracting Parties to ensure that the Guidelines and Network Codes, as adopted by the Permanent High Level Group’s Decision, are binding on market participants, and task the national regulatory authorities with monitoring and enforcing compliance.
   c. Require the Contracting Parties to notify the Secretariat of the measures transposing the Permanent High Level Group’s Decision, and of any subsequent changes made to those measures, within two weeks of the adoption of such measures.
(6) The Secretariat shall make Decisions available to all Parties within seven days of their adoption.

Article 4
Addressees and entry into force

This Procedural Act is addressed to the Parties and institutions of the Treaty. It shall enter into force upon adoption.

Article 5
Availability of these rules

The Secretariat shall make this Procedural Act available to all Parties within seven days of its adoption.

Done in Vienna on 21 June 2012.

The Ministerial Council of the Energy Community
Having regard to the Treaty establishing the Energy Community ("the Treaty"), and in particular Articles 2, 25, 76 and 79 thereof,
Having regard to the proposal from the European Commission¹

Whereas:
(1) Article 2 of the Treaty defines the improvement of the environmental situation related to Network Energy in the Contracting Parties as one of its key objectives;
(2) In accordance with Article 1(2) of Ministerial Council Decision 2008/03/MC-EnC, “Network Energy” as mentioned in Article 2(2) of the Treaty shall be understood as to include the oil sector, i.e. the supply, trade, processing and transmission of crude oil and petroleum products falling within the scope of Directive 2006/67/EC and the related pipelines, storage, refineries and import/export facilities;
(3) Petrol and diesel fuels covered by the scope of Directive 98/70/EC are significant contributors to emissions into the air and therefore there are strong links between related regulation and the environmental objective enshrined in Article 2 of the Treaty;
(4) For their full and legally binding incorporation in the Energy Community, provisions contained in Directive 98/70/EC would need to be adapted in accordance with Article 24 of the Treaty;
(5) The framework for regional cooperation established by the Energy Community and the assistance offered by its institutions and bodies can be essential in preparing the successful implementation of Directive 98/70/EC;
(6) The Environmental Task Force, at its meetings of 8 June 2017 and 25 October 2017, discussed and endorsed the present Recommendation;
(7) The Permanent High Level Group, at its meeting of 30 June 2017, discussed and endorsed the present Recommendation,

HEREBY RECOMMENDS:

**Article 1**

1. Contracting Parties should prepare the legal and institutional preconditions for the implementation of the core elements of Directive 98/70/EC in their jurisdictions.

2. The Secretariat should assist the Contracting Parties’ efforts in this respect. It should report to the Ministerial Council on the progress annually.

**Article 2**

1. In the framework of the Environmental Task Force, the Contracting Parties, the Secretariat and the European Commission should identify the provisions of Directive 98/70/EC suitable for incorporation in the Energy Community, the necessary adaptations as well as appropriate deadlines.

2. The European Commission should regularly inform the Contracting Parties and the Secretariat on possible amendments to Directive 98/70/EC.

**Article 3**

Subject to a proposal by the European Commission, the Ministerial Council will decide on the adoption of a decision incorporating suitable provisions of Directive 98/70/EC.

**Article 4**

This Recommendation enters into effect upon its adoption by the Ministerial Council.

**Article 5**

This Recommendation is addressed to the Contracting Parties and institutions of the Treaty.

Done by written procedure on 3 January 2018
