Micro Solar – what’s the issue?

- ⚡ **Serious potential, which is seriously under estimated**
- ⚡ **Serious transparency issues**
- ⚡ **Serious regulatory bottle necks**

SEE 2050 Calculator

The examples that illustrate the challenge

- ♦ “Meša Selimović”, Sarajevo, BIH – feed-in tariffs
- ♦ Kastel Elementary School, Split, CRO – crowd sourcing
- ♦ UN Eco Premises, Podgorica, MNE – double metering
- ♦ “Rade Končar”, Belgrade, SRB – savings

Micro Solar – don't get caught on the wrong side of history

- ☛ The price is going to burst the dam
- ☛ The network fallacies need to be addressed
- ☛ Regulatory bottle necks need to be turned into policies for managing an all electric future

Solar resource

FIGURE 6. Solar resource for South East Europe developed by the European Commission. For further information on solar data—please see <http://re.jrc.ec.europa.eu/prg/is/cmapp/eez.htm>
