4. NATURAL GAS

4.1. Applicable energy products

This chapter covers the reporting of natural gas.

4.2. List of aggregates

The following aggregates must be declared for natural gas.

4.2.1. Indigenous Production

All dry marketable production within national boundaries, including offshore production. Production is measured after purification and extraction of NGLs and sulphur. Excludes extraction losses and quantities reinjected, vented or flared. Includes quantities used within the natural gas industry, in gas extraction, pipeline systems and processing plants.

4.2.2. Imports (Entries)

4.2.3. Exports (Exits)

Note for imports and exports: Report all natural gas volumes which have physically crossed the national boundaries of the country, whether customs clearance has taken place or not. This includes quantities transiting your country; transit volumes should be included as an import and as an export. Imports of liquefied natural gas should cover only the dry marketable equivalent, including amounts used as own consumption in the regasification process. The amounts used as own consumption during regasification should be reported under Own use and losses of the natural gas industry (see 4.2.11). Any gas liquids (e.g. LPG) extracted during the regasification process of imported LNG should be reported under 'Receipts from other sources' of 'Other hydrocarbons' as defined in Chapter 3 of this annex (OIL AND PETROLEUM PRODUCTS).

4.2.4. Stock changes

A stock build is shown as a positive number and a stock draw is shown as a negative number.

4.2.5. Observed Gross Inland Deliveries

This category represents deliveries of marketable gas to the inland market, including gas used by the gas industry for heating and operation of their equipment (i.e. consumption in gas extraction, in the pipeline system and in processing plants); losses in transmission and distribution should also be included.

4.2.6. Opening levels of stocks held on national territory

4.2.8. Closing levels of stocks held on national territory

4.2.9. Opening levels of stocks held abroad

4.2.10. Closing levels of stocks held abroad

Note for levels of stocks: includes natural gas stored in gaseous form as well as in liquefied form.

4.2.11. Own use and losses of the natural gas industry

Quantities used by the gas industry for heating and operation of its equipment (i.e. consumption in gas extraction, in the pipeline system and in processing plants); includes losses in transmission and distribution.

4.2.12. Imports (entries) by origin and exports (exits) by destination

Imports (entries) should be reported by country of origin and exports (exits) by country of destination. The note made for imports and exports in section 4.2.3 also applies here. Imports and exports are to be declared only for the neighbouring country or country with a direct pipeline connection or, in the case of LNG, for the country where the gas has been loaded onto the transport ship.

4.2.13. Deliveries to power generation

4.3. Units of measurement

Quantities must be declared in two units:

4.3.1. in physical quantity, in million m³ (million cubic metres) assuming reference gas conditions (15 C, 101 325 Pa),

4.3.2. in energy content, in TJ (tera-joules), based on the gross calorific value.

4.4. Deadline for transmission of data

Within 55 days following the reported month.

ANNEX D

SHORT TERM MONTHLY STATISTICS

This Annex describes the scope, units, reported period, frequency, deadline and transmission arrangements for the short-term monthly collection of statistical data.

Annex A provides Explanations of terms not explained in this Annex.

The following provisions apply to all data collections specified in this Annex:

- a) Reported period: The reported period of declared data will be one calendar month.
- b) Frequency: Data should be declared on a monthly basis.
- c) Transmission format: The transmission format should conform to the relevant interchange standard specified by Eurostat.
- d) Transmission method: Data should be submitted or uploaded by electronic means to Eurostat's single entry point for data.

1. Crude oil imports and supply

1.1. Applicable energy products

This chapter covers the reporting of crude oil.

1.2. Definitions

1.2.1. Imports

Imports cover every quantity of crude oil which either enters the customs territory of the **Contracting Party** or comes from another **Contracting Party** for purposes other than transit. Crude oil used for stock building must be included.

Oil extracted from the seabed over which a **Contracting Party** exercises exclusive rights for the purposes of exploitation and entering the customs territory of the **Contracting Party** should be excluded from imports.

1.2.2. Supply:

Supply covers the crude oil imported and the crude oil produced in the **Contracting Party** during the reference period. The provision of crude oil from previously built stocks is excluded.

1.2.3. CIF price:

The CIF (cost, insurance and freight) price includes the FOB (free on board) price, which is the price actually invoiced at the port/place of loading in addition to the cost of transport, insurance and charges linked to crude oil transfer operations.

The CIF price of the crude oil produced in a **Contracting Party** is to be calculated free at port of discharge or free at frontier, i.e. at the moment when the crude oil falls under the customs jurisdiction of the importing country.

1.2.4. API gravity:

The API gravity is a measure of how heavy/light crude oil is compared to water. The API gravity is to be reported according to the following formula, with respect to the specific gravity (SG): $API = (141.5 \div SG) - 131.5$

1.3. List of aggregates

1.3.1. The following list of aggregates must be declared for crude oil imports split by type and geographical area of production:

1.3.1.1. the designation of the crude oil

1.3.1.2. the average API gravity

1.3.1.3. the average sulphur content

1.3.1.4. the total volume imported

1.3.1.5. the total CIF price

1.3.1.6. the number of reporting entities.

1.3.2. The following list of aggregates must be declared for crude oil supply:

1.3.2.1. the volume supplied

1.3.2.2. the weighted average CIF price

1.4. Units of measurement

bbl (barrel) for 2.3.1.4. and 2.3.2.1.

kt (thousand tonnes) for 2.3.2.1.

% (percentage) for 2.3.1.3.

° (degrees) for 2.3.1.2.

\$ (US Dollar) per barrel for 2.3.1.5. and 2.3.2.2.

\$ (US Dollar) per tonne for 2.3.2.2.

1.5. Applicable provisions

1. Reported period:

One calendar month.

2. Frequency:

Monthly.

3. Deadline for transmission of data:

4. Transmission format:

The transmission format should conform to the relevant interchange standard specified by Eurostat.

5. Transmission method:

Data should be submitted or uploaded by electronic means to Eurostat's single entry point for data.
