Governance in the 2030 Framework

Background

Commission's Communication on the 2030 Framework for Climate and Energy (January 2014)
- Three steps approach (iterative process)
- Mix of EU measures and national policies
- Governance may be set in legislation at a later date
- Systematic monitoring by key indicators

European Council conclusions (October 2014)
- Governance will be developed to meet 2030 targets
- Respect MS's flexibility
- Step up the role of consumers
- Streamline planning and reporting strands, building on existing
- Foster regional cooperation
"The Energy Union needs an integrated governance and monitoring process to make sure that energy-related actions at European, regional, national and local level all contribute to the Energy Union's objectives."

- Launches the process of national planning
- Explains the main steps from now until 2018
- Clarifies the roles of the MS and COM
### Principles:

- **Holistic approach** addressing all five dimensions of the Energy Union
- **Preserve** specific elements of existing plans where appropriate and build upon existing national strategies
- **Integrate** national energy and climate objectives and policies
- Greater **coherence and cooperation** among MS’s energy and climate policies
- **Long term predictability** and investor certainty

### Scope:

- Objectives and policies until 2030
  - Greater than **30%** GHG: Effort Sharing Decision
  - Greater than **27%** Renewable Energy
  - Greater than **27%** Energy Efficiency
  - **15%** Interconnection

- Long-term perspective until 2050
  - **≥ 27%** Energy Efficiency
  - **15%** Interconnection
Content of National Plans

a) Key elements

Current situation

Objectives, policies, measures for 5 dimensions of Energy Union

Integrated projections and indicators

National contributions to 2030 energy targets

Policies and measures to meet Effort Sharing Decision
<table>
<thead>
<tr>
<th>Energy security, solidarity and trust</th>
<th>A fully integrated internal energy market</th>
<th>Energy efficiency</th>
<th>Decarbonisation of the economy</th>
<th>Research, innovation and competitiveness</th>
</tr>

Regional Cooperation on National Plans

- **What?**
  - Coordination and cooperation of MS in *developing their energy policies and preparing national plans (regional consultations and review)*

- **Why?**
  - To address the *regions’ challenges* in the most secure and cost-effective way
  - To *assess the impact* of national energy policies on neighbouring MS and ways of strengthening regional cooperation
  - To *increase long-term predictability* and investment certainty

- **Which areas?**
  - All five dimensions
  - Development of *new energy resources* and *infrastructures*
Reports on implementation of the Plans and Updates

- **Biannual progress reports on implementation of national plans (from 2020)**
- **Annual State of the Energy Union**
- **Update of national plans (once in the period 2021-2030)**
