Regional Energy Efficiency Programme Plus 2017 - 2019 (REEP PLUS):

Policy Dialogue Theme 1

Toivo Miller (EBRD)
Siegfried Brenke (GFA)
Energy Efficiency Coordination Group
Energy Community Secretariat
Vienna, Austria
22 November 2017

This project is funded by the European Union

The Programme is funded by EU IPA, the European Western Balkans Joint Fund and EBRD Shareholders Special Fund, and implemented by EBRD in cooperation with the Energy Community Secretariat

REEP Overview

REEP is an integrated package of finance, technical assistance and policy dialogue, implemented jointly with the Energy Community Secretariat

Objective

Sustainable market for energy efficiency in the Western Balkans

Window 2

Intermediated financing &

Window 3

Direct financing

WeBSEFF II

- Credit line for local FI
- •For smaller scale EE & RE projects
- •For both public & private sector borrowers, including ESCOs
- •Grant funds support TA and investment incentives.

WeBSEDFF (extension)

- Direct financing facility
- •Medium scale RE and EE improvements implemented by private sector borrowers, incl. via ESCOs.

Window 1

ESCO support &
Policy dialogue

Energy Service Companies (ESCO)

- Legislative support
- Technical project preparation

Policy dialogue

- NEEAP and EPBD
- Utility EEO
- Procurement of EE goods

Structure of Presentation

- 1 Positive Development of Energy Services in the Region, but barriers still exist.
- 2 Intensified cooperation with key stake holders, updating of EPC Model Contract
- 3 WB5 Project for EPC and ESC Contract Templates
 - Legal Gap Analysis
 - Project Status and next steps

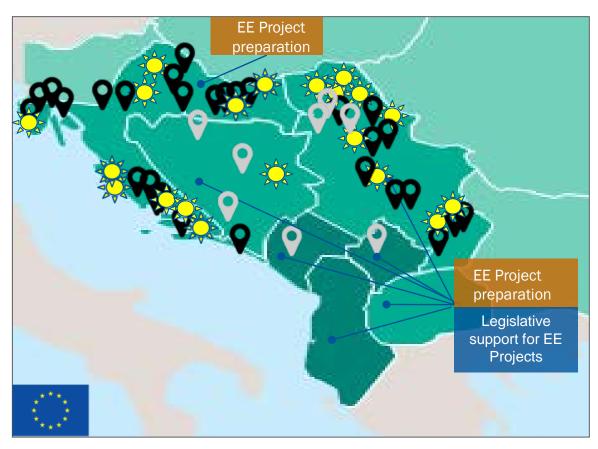

EBRD supports Project Pipeline Development in Western Balkans – positive developments in the region

Bosnia Herzegovina

- 1 hospital EE project
- 3 district heating ESCO projects
- 1 street lighting ESCO project

Serbia

- 16 street lighting projects
- 3 FS two street lighting and one district heating
- 1 ESC several buildings
- 2 hospital EE projects, 1 faculty building

Croatia

27 Street lighting ESCO projects

EU funded REEP supports the project preparation (www.wb-reep.org)

TC assignments

Energy efficiency (EE)
Project preparation

Feasibility studies

European Union policy support by Eurostat

Public accounting treatment supports ESCO project

- ESCO energy efficiency investments can be treated as no new public debt (off balance sheet).
- 19 September Eurostat provided guidance note: http://ec.europa.eu/eurostat/documents/1015035/7959867/Eurostat-Guidance-Note-Recording-Energy-Perform-Contracts-Gov-Accounts.pdf/

Scope

- Scope is all countries applying ESA 2010 (EU, EU accession, Switzerland and Norway)
- Investment scope fixed and movable assets

Requirements

- Majority of risks and rewards of ESCO energy efficiency investments to be with private contractor (ESCO).
- REEP contract templates should satisfy this requirement, to be confirmed by statistical units

Barriers are known and can be addressed (1/2)

Regulatory barriers

- Inconsistency between relevant laws (e.g. procurement versus PPP)
- Lack of incentives for EE.
- Constraints in the budget system law and accounting procedures regarding long-term commitments towards private partners.
- Conflicting ownership and maintenance roles (e.g. street lights owned by utilities or cities)

Technical barriers

- Lack of resources for baseline setting and tender preparation.
- Lack of consistent implementation and/or enforcement of ESCO bylaws.

Institutional barriers

- Frequent changes of politicians (e.g. elections)
- Lack of capacities for reviewing and approving EE projects.
- Energy efficiency is not a priority for the decision-makers
- No active cooperation of public authorities but EE affected by different policy areas.

Barriers are known and can be addressed (2/2)

Financial barriers

- Low energy prices
- Lack of budget resources for (co)financing of EE investments
- Budget Energy Efficiency Fund, subject of one year budgetary planning process and with limited volume
- No tax incentives for EE
- High debt level in municipalities does not facilitate municipal borrowing for EE.
- Lack of experience in financing EPC deals

Awareness and knowledge barriers

- Lack of awareness and knowledge regarding the benefits of EE and EPC
- Lack of awareness and knowledge about preparing and implementing public-private partnership projects
- Lack of technical knowledge, especially in smaller municipalities

Intensified cooperation with key stakeholders

- 1. The process of establishing favorable environment for ESCO projects requires cooperation of stakeholder.
- Most relevant group of stakeholders: national institutions, representatives of local level governments, financing institutions, ESCOs, technology providers
- 3. Support from MoF is crucial due to procurement, budgeting and contracting issues.
- 4. EUROSTAT: New definition of EPC projects = "possibly without effect on debt position of public clients"
- 5. The regional approach is taken by EBRD in order to facilitate market development and raise interest of ESCOs.

Serbia: Critical Stakeholders – overview

Group 1: Government Institutions - national level:

MoF

Public Procurement Agency

PPP Commission (Serbia specific, possibly similar institutions in other countries)

Full support needed for the concept of Energy Services by Ministry of Finance, the Public Procurement Agency and the PPP Commission

Group 2 - Government Institutions - regional / local level:

Local Government Associations

Individual Cities, Municipalities as pioneers

Regional Energy Efficiency Agencies – if available – for general support.

Group 3: Commercial Actors:

Banks and existing ESCOs

Feed-back from commercial side necessary in order to find private project partners. ESCOs to be included in developing of model contracts.

LGA Serbia – relevant laws

The most relevant primary legislation for Energy Services Projects in Serbia

- Law on Efficient Use of Energy
- Law on Energy
- Law on Planning and Construction
- Law on Public-Private Partnership and Concessions
- Law on Public Procurement
- Law on Budget System

Legal Gap Analysis – relevant regulatory issues

- Energy Services Contracting in public sector is considered to be PPP arrangement
- Governed by the provisions of Law on public- private partnership and concessions
- 3. The Duration of a PPP contract is between 5 and 50 years.
- 4. Each project has to be approved by the **PPP Commission**
- 5. However, the selection of best bidder on the basis of the **Law on public** procurement

Legal Gap Analysis: The Serbian approach

- Analysis done based on the "elements for an ESCO enabling environment"
- Identification of the relevant laws for EPC and ESC
- Identification of gaps different types of gaps
 - Basic gap = ESCO not permissible at all
 - organisational gap
 - Flexibility gap
 - Commercial Attractiveness gap
- Recommendations for action, e.g. Issuance of clarifications, amendments of legislation, etc.

Serbia: LGA – Identified Gaps

Organisational gap

- Energy supply contracting: Lack of statutory models (Work in progress)
- Lack of capacities and coordination in the public sector
- Multiple jurisdictions for a single project approval need streamlining
- Lack of clarity regarding specific registration for ESCOs, Serbia specific:
 Official opinion of the Statistics Bureau clarifies that existing
 registration can be used and no ESCO-specific registration is
 necessary.

Serbia: LGA – Identified Gaps

Flexibility gaps

- Need for official identification of obligatory and flexible elements in model contracts (rulebooks)
- Need for clarifying the scope of possible amendments to the ESCO agreement
- Need for clarification on method of determining the project value

Commercial attractiveness gaps

- Lack of clarity in handling grants or competing grants
- Timing of Vat payment unclear
- Budget System Law needs clarification/ revision concerning multi-annual budgeting
- Moment of ownership-transfer from private to public partner was resolved in latest revision of PPP law: Ownership transfer normally from ESCO to Client at the end of contract period. (exception: beneficiary finances investments)

WB5 Project: Status, next steps - EPC, ESC contract templates (REEP roll-out = WB5)

Serbia

- Revision of the EPC model contract (Rulebook) based on market development (incl. further harmonisation with the Law on PPP and Concessions)
- preparation of the ESC model contract to be enacted by the Ministry

FYR Macedonia

- Kick-off meeting held on 31 August 2017
- Detailed technical and legal analysis drafted (as part of Swisscontact IME project)
- Draft EPC Model contract template developed, based on the Serbian example (as part Swisscontact IME project)
- Necessary legal/regulatory action to be specified
- In-depth involvement of MoF and Procurement stakeholders pending

BiH - Republika Srpska:

- Kick-off meeting held on 18 September
- EPC Model Contract prepared based on Serbian Rulebook to be presented to the Ministry in December
- ESC Model Contract and LGA in preparation

WB5 Project: Status, next steps

Albania, BiH-Fed., Kosovo, Montenegro

- Work started with a parallel approach on
 - LGA
 - EPC Model Contract Template
 - ESC Model Contract Template
- Next steps and timing discussed in yesterday's meeting.
- Presentation of status and discussion as needed back to back with / during 16th EECG Session.

Lessons learnt

Barriers are known and can be addressed

High level public endorsement matters

- Municipalities engaged due to the government's endorsement of contract and project.
- Private companies stated that they engaged due to government's endorsement and due to their being contract templates.
- Standardise procurement and contracting documents reduce transaction costs.
 Important in Western Balkan countries which are small markets.
- Energy tariff increase makes investments more attractive.

Get on with projects matters to get to know "unknown unknowns"

- You have to implement a pilot project to eliminate barriers (e.g. when is VAT payable)
- Procurement versus PPP law
- Tender preparation needs to be supported.

Active engagement of all stakeholders helps

- Legislation changes over time, so regular reviews are good practice.
- Involve all stakeholders in review to reduce transaction costs for all stakeholders.

Thank you!
